It was 2 months after that, on November 18, 1943, that Secretary Hull came before the House fresh from his diplomatic triumphs at Moscow, and said, "As the provisions of the four-nation declaration are carried into effect, there will no longer be need for spheres of influence, for alliances, for balance of power, or any other of the special arrangements through which, in the unhappy past, the nations strove to safeguard their security or promote their interests."

In the light of all that has happened since these words were spoken, they sound fairly hollow. It is putting it rather mildly to say that the Baltic and Balkan countries have become, at least de facto, spheres of Russian influence. Whatever you may think of Mr. Churchill's policy in Greece, the British have certainly been using more influence of a certain type in that unhappy country than anybody else. General de Gaulle is prudently making some alliances for France.

If the United States is actively doing anything to arrest these deteriorative processes, these steps backward from peace, then its citizens are not advised of them. On the other hand, Mr. Churchill, in discussing the Polish question before the House of Commons on December 15, complains, "I find great difficulty in discussing these matters because the attitude of the United States has not been defined with the precision which the British Government have thought it wise to use." This is a polite way of saying that we had been hopelessly noncommittal.

Three days later, prodded, perhaps, by the Prime Minister's speech, Secretary Stettinius said that the United States favored "a strong, free, and independent Polish state." He repeated, however, that "questions relating to boundaries should be left in abeyance until the termination of hostilities." This is in effect saying, "Yes, my darling Poland, swim, by all means; hang your clothes on the Curzon line; but until after the war don't go near the water." How can a nation be strong and free and independent without the frontiers to make her so? Would the United States be strong and free and, in our eyes, independent if New York and New England were ceded to Germany or California and Oregon to Japan?

Not content with this contradictory utterance, Secretary Stettinius goes on to say that, "if a mutual agreement is reached by the United Nations directly concerned" about the future frontiers of Poland "this Government would have no objection to such an agreement which could make an essential contribution to the prosecution of the war against the common enemy." Who are the United Nations directly concerned? If, as the Secretary admits, an agreement on Polish frontiers would make an essential contribution to the prosecution of the war, are not we, the United States, directly concerned? If we aren't directly concerned, who is? What the Secretary of State, as the spokesman of our Nation says, is that the question of the Polish frontier is a difficult one which essentially affects the prosecution of the war and we wash our hands of it, releasing our interests to any United Nation which may be deemed directly concerned. Many happy returns to Poland so long as we don't have to bother with making any of the birthday cake.

If Mr. Churchill complained on December 15, of our noncommittal attitude about Poland, I don't think he can have been entirely satisfied when a few days later he read Secretary Stettinius' statement of the 18th.

It is no wonder that Sumner Welles, certainly not an unfriendly critic of the present administration, complained on December 27, "There has become evident a wide, and growing rift in the basic political understanding between the three major allies. Unless that rift is repaired, unless unity of policy and unity of purpose between the United States, Great Britain, and the Soviet Union can be restored, not only can no valid international organization be established, but no lasting peace settlements can be concluded."

The United Nations Council has never been set up and our failure to insist on setting it up, again to quote Mr. Welles, "is now bearing its bitter fruit." The plain fact of the matter is that there never was a time either in 1919 or at any time in the Harding-Coolidge epoch when we shirked our responsibilities more flagrantly than we have shirked them in the last 4 months.

At Dumbarton Oaks, as at Moscow, we made progress toward the formation of an international collective security organization. I personally welcomed the proposals at Dumbarton Oaks—"Proposals" is what they were officially called—as a long step toward the goal of peace. But Dumbarton Oaks, like the four nations declaration at Moscow, is a mere landmark on the path of peace. And it seems doubtful whether these landmarks are going to be kept in any better repair than the Atlantic Charter which after all, is only 4 years old and is now almost as depreciated as the Wilsonian League of Nations.

Under chapter XII of the Dumbarton Oaks proposal it was agreed that the states parties to the declaration should consult with one another and, as occasion arises, with other members of the organization with a view to such joint action on behalf of the organization as may be necessary for the purpose of maintaining international peace and security. Yet we have not consulted. All the consulting that has been done, so far as I know, since October 8, 1944, has been between Churchill and Stalin and various representatives of Poland. It is apparent from the Prime Minister's great speech of January 18, that he settles things with Stalin and not with us. Note this language: "In practice I exchange telegrams on behalf of the British Government personally with Marshal Stalin about difficulties which arise and what is the best thing to do. We keep President Roosevelt constantly informed." In other words, to use an old expression, that isn't asking the President, it's telling him.

We are now promised that a meeting of the Big Three is shortly to be held somewhere. It would probably have been held before this but for the November election and the inauguration. The Big Three, if they will, can doubtless do a great deal to repair the mischief that has already been done. But let us hope that they will not proceed as at Teheran through secret covenants secretly arrived at. "The conference held at Teheran," says F. A. Voigt, editor of the British Nineteenth Century and After, "was the signal for a great military advance * * * and for a great political retreat."

No matter when the Big Three meet or what they do, such relatively infrequent meetings as those held furtively by chiefs of state afford no adequate machinery for the steady consultation which is needed if we are to achieve the just and lasting peace desired by President Roosevelt and by all our people. What we need is a group of humbler people endowed with appropriate powers in steady contact and consultation at some particular safe place reasonably accessible to all.

What are we to do about this situation? On January 10 Senator VANDENBERG made a speech in the Senate which achieved the dignity of a national event. It was a piece of bold, constructive, logical thinking. It advanced the solution of our international problems. But in some quarters of the administration it was churlishly received, and there was an intimation that all thinking on international questions should either be suspended altogether or else cleared through the Senate Committee on Foreign Relations, which sat like a Delphic priestess on a tripod, saying nothing intelligible.

I am satisfied that unless there is Congressional leadership for the lasting peace which

is now the highest appetite of mankind, we shall flounder hopelessly about, reading in our newspapers of bloodshed and disorder that could have been avoided by a united attitude of the United Nations. If there is no such united attitude, the United States are mostly to blame.

Despite the Double Talk, It's the Army for Skilled Farm Youth

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. CRAWFORD. Mr. Speaker, in my opinion Congress is being given the run-around in connection with recent orders pertaining to the draft of young men on the farms. We are told in one breath that the administrators had no idea of circumventing the Tydings amendment, but while they say this their underlings are out in the field putting the pressure on local boards to induct these skilled farmers because the President has said "agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and the Navy for more young men."

As a Presidential candidate, Mr. Roosevelt boasted at Shibe Park, Philadelphia, October 27, while seeking votes, that he and his administrators "had planned far in advance precisely how many men would be needed." But he did not reveal then any plans to take the best trained and most able-bodied men from the farms.

Despite their talk even the Washington Selective Service administrators are ignoring appeals sent here by farmers. Typical is a letter I have received from Mr. Walter Nobis, a farmer in Clinton County, Mich. Some days ago he wrote me as follows:

FOWLER, MICH., *January 31, 1945.*
Representative FRED L. CRAWFORD,
Washington, D. C.

DEAR SIR: Several days ago we contracted 19 acres of sugar beets; last year we had in 12½ acres. Sugar Beet Agent Raymond Bradley was here today and said we should write or wire you immediately, that you would help us out of our crisis. Am sending on separate paper our farm set-up. Have sent one to Hershey, but no answer. According to the Tydings amendment, these boys should be left on the farm. We have done everything we can in appealing our case, but to no avail. The one boy is called to leave for camp February 9; the hired man is in I-A; and the other boy will be next, as he has already had his physical test. The local board has told us that we have met all requirements in production and more, but still they are taking these farm boys. We have a complete line of tools—$14,000 invested in farm machinery. If they take one we will be at a loss as how to continue, for no man but an experienced man can step in here and operate this machinery, which is so hard to repair or impossible to get new.

The boy being called next week is Walter Garhard Nobis, and is being called by the local draft board of Clinton County, at St. Johns, Mich.

Respectfully yours,

WALTER NOBIS & SONS.

The hired man is Charlie Boak, and the other farm partner is Paul William Michael Nobis.

Mr. Speaker, please note that this man could not even get an acknowledgment from the office of General Hershey. After he had received my letter he wrote me again on February 9, as follows:

FOWLER, MICH., *February 9, 1945.*
Representative FRED L. CRAWFORD,

DEAR CONGRESSMAN: I received your letter several days ago in regards to the drafting of our farm boys. My son Walter G. Nobis went to induction camp today; our draft board disregarded all his qualifications. Tomorrow, February 10, I have a hearing with our local board in regards to our hired man, who has farmed it all his life, and has worked for us (Walter Nobis & Sons) for the past 4 years. We will soon be all washed up as farmers and producers. We haven't sold any livestock yet. We are just holding on to see if we can't get help from Washington on this situation.

Our neighbor had two sons in the Army and the draft board put his last son in I-A. He has now enlisted and they are selling their livestock. The father is not well. His land will all lay idle, as many more acres will if this isn't stopped.

If this is what our Government wants, I guess they are going to get it. We are not intending to quit if we can get this boy back out of the Army—back on the farm, where he should be according to the Tydings amendment. I am not a quitter. I will fight for the right. God help me.

WALTER NOBIS.

Mr. Speaker, the story is pretty well summed up in Mr. Nobis' statement that "we will soon be all washed up as farmers and producers."

The point is that these boys are not backyard farmers. They have grown up on the farm. They have learned about farming from the time they were old enough to lift a hoe. They belong to the family type farming group the Secretary of Agriculture talks about. They are in the same category as the skilled chemist, the designer, the engineer or the aeronautical expert. They are specialists.

Liberated countries will be busy enough feeding their own people without us planning on any food from them. It is time we put a stop to robbing our farms of their best producers that is if we expect to produce the food for our military forces, our civilians and for liberated nations to whom we are promising everything under the sun.

International Security

EXTENSION OF REMARKS

OF

HON. CHARLES SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. SAVAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the C. I. O. News of February 12, 1945, entitled "International Security":

By one of those rare historical coincidences, the World Labor Congress in London is taking place at the same time as the Big Three meeting of Roosevelt, Stalin, and Churchill, which is mapping the final end of the Axis and the new world of peace and security.

The London meeting also takes place as the armies of the great alliance—the United States, the Union of Soviet Socialist Republics, and Britain—sweep toward the climax of the war in the destruction of the Nazi military machine. The great victories over Japan in the Philippines further mark the final end of the Axis threat to world freedom.

The workers of the United States, represented by the C. I. O. under the leadership of Philip Murray, of our allies in the Soviet Union, in Britain, and our brothers in Latin America and the other countries at the London meeting have worked long and hard for this meeting.

They have worked for international labor unity because they know that it is the key to complete destruction of fascism and to a world of security after the victory is won. These are the objectives of the war against German and Japanese aggression. These are the reasons why labor in all the anti-Axis countries supports this war with the blood of sons in the front lines and the sweat of its people on the production lines.

The World Labor Congress in London is mapping future world security and freedom just as the meeting of Roosevelt, Stalin, and Churchill is mapping it somewhere in the Black Sea area.

The achievements of the London Labor Congress will place an additional responsibility on us here at home. Within the next few weeks Congress will be called on to ratify the United Nations agreements worked out at Bretton Woods and Dumbarton Oaks.

The creation of a new world labor federation at the London meeting will provide a powerful backing for world security plans being outlined now and previously agreed upon.

Our job at home is to back up the work being done in London and in the meeting of the three great political leaders now going on.

Bipartisan Responsibility for the Peace

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. HAYS. Mr. Speaker, on January 3 the gentleman from Minnesota [Mr. JUDD] and I introduced identical resolutions—House Concurrent Resolutions 3 and 11—providing that the majority and the minority parties shall share joint and equal responsibility for the peace. About the time these resolutions were introduced we discussed their purpose in radio addresses in the studio of the National Broadcasting Co.

We have received letters from practically every part of the United States endorsing our plan and the response to our explanation of this measure indicates that the people would applaud this demonstration that Congress is prepared to lay down the weapons of party warfare when our men are enabled

through victory to lay their weapons aside.

The response comes from members of both parties. For example, Mr. Eugene Underwood, New York City attorney and nephew of Oscar W. Underwood, writes:

I wish to compliment you on the splendid idea advanced by you and your Republican associate. I sincerely hope you can put it across.

And Mr. Walter T. Fisher, Chicago attorney and the son of President Taft's Secretary of the Interior, says:

I am heartily in favor of the position taken by you and Mr. JUDD.

I also quote the following from other messages:

Maj. C. L. Gardner, Medical Corps:

Because it meets so heartily with my approval I want to thank you for taking such a step. Keep up the fight there and we will do our best here overseas.

Mrs. C. Lynn Peterson, Salt Lake City:

My husband and I heard you and Representative JUDD speak over N. B. C. on bipartisan cooperation in world affairs. Your discussions gave us new hope and courage. May your efforts prove successful. We are for you 100 percent.

W. W. Alexander, Chapel Hill, N. C.:

I congratulate you and send my best wishes.

Arthur Clarendon Smith, Smith Transfer & Storage Co., Washington, D. C.:

You are on the right track. We of America and Congress must follow your advice.

Eli W. Collins, insurance executive, Little Rock, Ark.:

I hasten to congratulate you upon the solid position you take in the matter.

J. R. Grant, president, Ouachita College, Arkadelphia, Ark.:

You and Congressman JUDD have started something that should help guide statesmen in their plans to settle such questions as lasting peace.

T. M. Bragg, Albuquerque, N. Mex.:

I heartily approve of your efforts.

Gus Daniel, labor union official, North Little Rock, Ark.:

I am highly in favor of your explanation.

C. E. Crossland, banker, Little Rock, Ark.:

Good luck to you in this effort.

Ellis D. English, sales manager, Kansas City, Mo.:

Keep the good work going.

Robert J. Fischer, Belvidere, Ill.:

It is timely that such action take place.

E. J. Bodman, Oklahoma City, Okla.:

I am glad to see that you are broad enough to join hands with the Republicans in trying to bring about a peace that will be an enduring one.

Rev. W. B. Zimmerman, western Nebraska:

You are both to be congratulated on your stand.

Mrs. Helen Vail, Windham, N. Y.:

More power to you, and sincere thanks from one serviceman's wife.

E. H. Wendland, Deer Lodge, Mont.:

May I say, in those brief statements and the joint resolution you read, there was a ray of hope for a decent world.

Nurse Draft Need

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which indicates clearly that the nurse shortage in the armed forces may not be all that it is said to be. The letter from Miss Axelson follows:

PASADENA, CALIF., *February 7, 1945.*

Representative CARL HINSHAW,
Washington, D. C.

DEAR SIR: I, as a graduate registered nurse, am asking you to vote "no" on any bill proposing to draft nurses. Since there are continuous appeals in papers and over the radio for women to join the WAC's, WAVES, and SPARS, why not draft all women and then all needs in all branches of the service could be filled?

Do you know, Mr. HINSHAW, that the nursing abilities of many nurses both in the Army and in the Navy are not being utilized? Are you aware of the fact that nurses are acting as dietitians, that nurses are working in linen rooms where they never see a patient, that nurses are used for clean-up detail? Do you know that nurses are overseas for many months before their nursing services are put in use? I hear from many nurses (both directly and indirectly) and most all of them complain that they are not working. Most of these nurses have gone over since D-day and if units of 12 to 75 nurses do not engage in nursing for 2 to 4 months after their arrival it seems to me that many nursing hours are wasted. The nurses who arrive overseas feel that they are ready to do nursing shortly after their arrival. Nurses have had their training days and know their work and duties long before they ever enter the Army or the Navy, and it seems to me that their services should be utilized instead of spending weeks and months drilling and marching awaiting actual nursing. The following is from a clipping sent to me by a nurse in England:

"(From the B-Bag, vol. 5, No. 57, January 9, 1945)

"NURSING POWER

"JANUARY 3, 1945.

"To the B-Bag:

"Nursing power is definitely wasted in the European Theater of Operations. Hundreds of nurses are sitting around in replacement pools, camps, etc.

"It seems to us strange that nurses who have spent some time in Army hospitals at home, and are familiar with Army routine and procedure, must wait about for many weeks in muddy camps before doing nursing.

"The previous letter did not mention the resultant drop in morale due to useless waiting, illness contracted because of mode of living, lack of proper nursing care for these ill nurses, continual prohibitions and restrictions so that one felt as though one were an infant and not a mature woman who is credited with a sense of responsibility as well as some common sense.

"We know that nurses are needed. We also know that they are already on hand. Our suggestion is that nurses be kept at home at work until installations are provided, and then sent to the United Kingdom and put immediately on detached service so that they would be working. Our personal experience proves that we have enough in our hand luggage for our work. Our bed rolls, etc., could follow us.

"TWO NURSES IN REPLACEMENT POOL."

"JANUARY 4, 1945.

"To the B-Bag:

"We are a general hospital and we heartily second the 'common sense in hospitals' letter. May we add that in some cases patients are neglected. Nurses can only do so much, as the human body can only generate so much energy.

"On arrival in this slap-happy European Theater of Operations we were told by the orientation officer—a doctor and a lieutenant colonel—'We are not interested in the nursing care you can give; that is taken for granted; we are primarily interested in how clean you can keep the wards.'

"INSPECTION-CRAZY NURSES IN THE EUROPEAN THEATER OF OPERATIONS."

"JANUARY 2, 1945.

"To the B-Bag:

"I would like to give a vote for the nurses who recently mentioned the extra things like standing retreat. I just returned from a general hospital and saw those things happen, even though the girls came on at 7 a. m. and seldom left us until 8:30 p. m.

"We do not have to drill them. They work because they have an inborn feeling of responsibility to help any of us back to health, regardless of the cost to them.

"Capt. BURDEAN WALKER, A. C."

Therefore, Mr HINSHAW if the nursing services of the majority of nurses I know in the Army and in the Navy show such a great waste, and other of my friends hear of the same waste from their nurse friends in the two branches of the service, is it not reasonable to expect that much nursing service already available in the Army and in the Navy is wasted? If nurses are actually needed, then draft all womanpower and utilize that womanpower as needed. Why couldn't anyone with a small degree of intelligence have charge of a linen room? Why couldn't dietitians be drafted to fill the positions of nurses acting as dietitians and relieve that nurse to do nursing? Why not fill nonnursing services by women who could be drafted for the job that does not require nursing intelligence?

In the Los Angeles Times of February 2, 1945, I noted the results of a poll taken on the drafting of nurses. The poll was 73 percent in favor of drafting nurses, but the general public does not know the existing conditions in the Army and Navy Nurse Corps because such information is not publicized.

If women are needed, then I favor the drafting of all women and not single out one group of women; therefore, Mr. HINSHAW, I am again asking you to vote "No" on any proposal to draft nurses.

Respectfully yours,

MILDRED O. AXELSON, R. N.,
Pasadena, Calif.

Address of Maj. Gen. J. G. Ord

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. O'NEAL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Maj.

Gen. J. G. Ord to the nineteenth Women's Patriotic Conference on National Defense, January 12, 1945, Washington, D. C.:

Mme. Chairman, distinguished guests, and delegates to the Women's Patriotic Conference on National Defense: I realize that the 750 ladies assembled here represent 2,500,000 organized women who are performing a great patriotic service by their active support of the war effort of our country. It is, therefore, an honor as well as a personal pleasure to speak to you today as a representative of the War Department, and to bring you some facts and impressions about this war and the part which our Latin-American allies and neighbors are playing in it. This is a war of bold and spectacular developments, a war which we at home are sometimes apt to picture primarily in terms of today's headlines. Yet in the complete picture, behind the immediate pattern of combat, are a great many fine details which give the picture its background and perspective. I am going to ask you for a few minutes to forget the headlines and to think that at this very moment, perhaps as I speak these words, Brazilian soldiers are pushing through the snow and mud of Italy beside our own men, Brazilian flight nurses are flying the Atlantic to look after their wounded, Mexican aviators are training for combat in Texas, Chilean sailors are patrolling our shipping lanes, and Bolivian explorers are working through the jungle looking for quinine to send us.

Why are they doing all this? Well, primarily they are doing it because they have realized that one of the things at stake in this war is the freedom and the future of the American Republics—all 21 of them. They knew that Pearl Harbor was only one step in an offensive which, if it had been allowed to succeed, would eventually have overrun all of them. This knowledge is nothing new. The American Republics helped each other gain independence, and, in spite of a few family quarrels, they have generally stood together against outside interference ever since. The people of the American nations, especially in recent years, have realized that geography, interlocking national economies and common ideals have made them natural partners. I think that most of them now realize that they must pull together for their common progress and security

So it isn't surprising that the Latin-American nations lined up on our side when we were attacked. Many people in the United States do not appreciate the degree of assistance we have received from our sister republics to the south. This help has been considerable, and has included moral support, material assistance, political and military cooperation.

By moral support I mean that the people of Latin America have been cheering for us from the start, and that the feelings of the people have been translated into political action which has been of great practical assistance to us—in fact, this moral support probably has been the greatest of all Latin-American contributions to our united cause. Even if the Latin-American nations were making no further contributions to the war, it would be more than reassuring to know that today all of them have broken relations with both Germany and Japan, that 13 of them are at war with Germany, and that 11 are at war with Japan. Even in the early days of the war, when some of them still maintained relations with the Axis, they all opened their ports to United States warships by giving us nonbelligerent status. That meant that United States warships could call at any port in this hemisphere and stay as long as necessary for repairs. You'll understand the importance of this arrangement if you remember that a couple of years ago the German pocket battleship *Graf Spee*, damaged but still dangerous, was scuttled off Uruguay because that nation refused to let it stay in Montevideo harbor to make repairs. Latin-American nations have given us data and have cooperated in the suppression of sabotage, espionage, and Axis smuggling; they have helped stamp out the Nazi press, Nazi organizations and societies, and Axis-controlled air lines; and they have shipped thousands of Axis workers to the United States of America for internment. The moral support of the Latin-American nations has been shown also in scores of inter-American organizations which have been set up to help plan our cooperation in the war and in the peace that will follow. Among these is the important Inter-American Defense Board, a purely military group of army, navy, and air force representatives from all 21 of the American republics. This board is charged with making recommendations for the defense of our hemisphere and is the only continuing military body of its kind in the world today.

Raw materials have been coming to the United States in ever-increasing quantities, and their delivery has been speeded by the fact that Latin-American nations with merchant marines voluntarily putting their ships under our War Shipping Administration quota system to assure the best possible use of every cubic foot of cargo space. Because of this flow of raw materials, a United States bomber flying over Germany today may have been built with tin from Bolivia; chrome from Cuba, Guatemala, or the Dominican Republic; manganese from Cuba or Brazil; copper from Chile; vanadium from Peru; platinum from Colombia, and zinc from Mexico. It may be powered by petroleum from Venezuela or Mexico, and its radio equipment and bomb sights probably have quartz crystal from Brazil. The rubber in its tires and the oils used to make its explosives may have come from Brazil, Haiti, Nicaragua, El Salvador, Honduras, or Panama.

These are only a few of the raw materials which we obtain from Latin America. I could not begin to give you the complete list, for it includes thousands of items ranging from rope fibers and canned food to strategic materials like tantalite, a rare mineral used in secret military devices. Although some processed goods are imported from Latin America, by far the greater part of our imports has been in raw materials. Latin-American nations are not highly industrialized, and they have to keep the products of their factories to help meet their own minimum civilian requirements. As it is, most of them are suffering greater civilian shortages than we are. In Rio de Janeiro, for example, supplies of meat often are so short that it can be sold only twice a week. But Latin America has supplied us generously with the things she has to spare, and this has paid dividends not only in the increased supplies available to us, but also in the amounts denied to the Axis. For example, Brazilian and Venezuelan industrial diamonds, which are used in cutting and grinding the hardest steel, have been denied to Germany. This has cut German production of guns and tanks, and saved the lives of American soldiers on the battlefields.

Of course, I don't mean to imply that Latin-American nations have presented their raw materials to us as gifts. Latin-Americans are good businessmen, and they are just as interested in profits as we are. I do believe, however, that in selling their raw materials to us they have gone beyond ordinary commercial cooperation. They have welcomed the experts we have sent down to tell them how to increase their production, and they have been just as pleasant and patient with our experts when they were wrong as when they were right.

Latin-American military cooperation has been greater than is generally known, and began early in the war when our sister republics permitted us to build naval and air bases from which to defend our shores and our shipping routes. Gradually the Latin-American nations have begun active military operations; Brazil already has troops at the front, and Mexico is taking steps in that direction. Many Latin-American countries maintain sea and air patrols to protect our joint shipping routes. United States Coast Artillery guns in Latin America, which at first were manned by United States crews, have been taken over by Latin-American soldiers, and our own men have been freed for duty elsewhere.

Because of my work with the Joint Brazil-United States Defense Commission, I have had a close-up view of the Brazilian war effort. I can assure you that the Brazilian Expeditionary Force now fighting beside our troops in Italy is not just a token force—it is a large and well-trained force, with both ground and air elements. Brazilian units are right up in the front lines, and they have taken ground from the Germans. The Brazilians are good fighters, their staff work is excellent, and they have mastered our modern mechanical weapons.

The Brazilians get along very well with the Italian partisans, and because of this their information on enemy positions and movements is exceptionally good. Of course, they have some special problems. Because they come from a tropical climate, they hate the winter weather in Italy. They are not accustomed to what we in the United States consider a balanced diet, so they are now getting extra beans and rice to add to our standard Army food. Incidentally, I know of one Brazilian unit in Italy that still won't eat our C rations. This unit started out by making a long jump by sea in small landing craft, and all its food was in C rations. After their first meal, the Brazilians all got seasick in a storm, and they still shudder at the sight of a can of C rations.

In the past Latin Americans generally have considered that a woman's place was in the home, and because of this feeling the women of Latin America have not taken as active a part in the war as have the women of the United States. However, this old idea of a woman's place is beginning to change, and in many countries women are making important public contributions to the war effort. In Brazil, for example, the Central Railway is training women as machinists and electricians, and thousands have taken Red Cross courses in first aid and nursing. Brazilian flight nurses are regularly taking care of wounded soldiers on hospital planes flying between Africa and Brazil. Senhora Vargas, the wife of the President of Brazil, was influential in organizing the Brazilian Assistance Legion, which supplies clothing, food, and money to needy families of soldiers and arranges recreation for the troops themselves. She also helped start a service which sends packages at regular intervals to Brazilian soldiers overseas. The Red Cross of Brazil is well organized and is now starting a blood-plasma program. During practice black-outs in Rio de Janeiro uniformed women air-raid wardens help patrol the city. Women are taking some part in civilian defense in almost all of the Latin-American nations.

The different customs under which Latin Americans live have led to some amusing situations. Soon after the United States built bases in northeastern Brazil our U. S. O. planned a dance for the boys and sent out invitations to most of the attractive young ladies in town. A couple of days later the whole town was in an uproar. It seems that no one had remembered that when Latin-American girls go out they are always accompanied by an individual chaperon, usually their mothers. No one had thought of inviting the mothers, and it took a lot of explaining to convince the Brazilians that in the United States it would be perfectly proper

for a girl to go to a dance without taking along her own special chaperon. Of course once we found out our mistake we invited all the mothers, and when the first dance was held most of the fathers showed up too, just to make sure that everything was all right.

There is much more I would like to tell you about the Latin-American contribution to our war effort, but before I leave tonight I would like to speak briefly about some of the aspects of the war in the Pacific. Many people attempt to judge our war against Japan on the basis of our experiences against Germany. This cannot be done, for Japan is in an entirely different strategic position.

Great Britain was available to us as a base for our attacks on Germany, and, as a result, distances in this theater of war were measured in scores of miles. Distances in the Pacific, on the other hand, are measured in thousands of miles. Flying Fortresses based in Britain can bomb the farthest points in Germany, but in the vast Pacific, Japan is still out of range of our B–17's and B–24's. Japan's main industries are thousands of miles from our closest base, and they can be attacked only by the new B–29 Super-Fortresses until the Allies can establish bases within 500 or 600 miles of Japan. For the present at least, Japan can continue to supply her troops with a steady flow of guns, tanks, planes, and all the other necessities of a bitter and difficult war.

Take shipping: We have no base in the Pacific right now that could begin to offer the ports, the roads, and the accessibility of England, and the bases which we do have are so far away that it takes a ship 5 months to make a round trip. Let us suppose that a ship is being loaded tonight in a United States port. Many months from now this ship will deliver gasoline to a bomber squadron in the Philippines. Some of the planes in that squadron may still be on the production lines today, and some of the crews are still in training. Three months from now these planes and crews will fly to the Philippines, but the gasoline that they will need at the bases there has to leave tonight.

Pearl Harbor, our best Pacific base, is so far from Tokyo that a million large trucks lined up bumper-to-bumper would just reach from one to the other. The end of the European war will release some shipping, but it will be a matter of many months before this can be transferred to the Pacific. The speed with which we can defeat Japan is based on the speed of our supply system. The bullet that killed a Jap on Luzon today took more than 3 months to reach him.

That is what we mean when we say: "Geography fights on the side of the Japanese."

One objective of Allied strategy has been the opening of safe ocean routes to China. Our own fighting ships have done a masterful job of reducing the threat of the Japanese Navy, but even with our eventual domination of the sea lanes it is a tremendous operation to land successfully on the Chinese coast. To land and maintain a force of only 250,000 men on a hostile shore for a 30-day period, more than 300 Liberty ships would have to deliver an initial 2,000,000 tons of supplies. All the ports of China are not now capable of handling such a fleet at one time. Should we eventually land troops on the Chinese coast, it will be necessary for us to deliver not only men and guns, but also the port facilities necessary to unload the ships. However, as the Allies proved in Normandy, this can be done.

Hirohito and his subjects control the second largest empire in the world, with 400,000,000 people and much of the world's natural wealth. Japan has all of the things she needs for a long war—tin, rubber, oil, iron, coal—and she has them in sufficient quantity to wage this war. Take rubber, for instance; while we must ration it carefully, Japan is reported to have so much rubber that she is paving some of her streets with rubber.

Of course these vast resources must be processed, but according to the Foreign Economic Administration, Japan in all probability has not yet reached the peak of her industrial production. Her industry has been converted almost entirely for war, at the expense of even her low peacetime standard of living. A dish of ice cream for dessert is quite normal in an ordinary American home today, but in Japan only the Emperor or some high official could hope to enjoy such a scarce delicacy.

This empire of Japan's did not happen by chance. We are dealing with no amateurs at aggression. Japan's history over the last 50 years is one of thievery, rape, and murder relentlessly pursued throughout the whole of Asia. Wherever opportunity offered, the fanatic Japanese extended their strength and influence.

Japan's manpower situation is one of her strongest points. A million and a half Japanese men of military age, between 20 and 39, still have not been called into service because they are not needed. In addition, they have about 1,400,000 men between 17 and 20 who recently became subject to conscription. Each year about half a million more young men become available for service. Although it is hard to say exactly how many men Japan has lost in this war, she probably has been able to replace her losses from this supply of younger men alone.

Although Japanese leaders must realize that the best they can now hope for is a negotiated peace, the common Japanese people, and especially the soldiers, are confident of victory. These ordinary Japanese believe that the United Nations have already been defeated and that it is just a question of time until our weaknesses become so acute that we will have to ask for an armistice. Consequently, before we can hope for victory in the Pacific we will first have to defeat 4,000,000 fanatical Japanese soldiers who look on their Emperor as a god and who would rather die for him than surrender. We will have to defeat them with bullets, bombs, flame throwers, and the cold steel of our bayonets. Their fanatic morale will not crack. I have shown you some of the difficulties we face in the Pacific, but I know we can overcome them because our leaders have devised a system of combat which makes maximum use of our superior quantity and quality of fighting men and combat matériel. We will win our victory with a minimum of casualties—the ratio of Japanese to American casualties is more than 10 to 1 at present. You may rest assured that our leaders will continue to use American skill and American matériel in such a way as to achieve maximum results with the lowest possible loss of American lives.

But our coming victory must be based on what we call the will to win.

This will to win is not a creation of the armed forces. The spirit of the soldier is a direct reflection of the spirit of the country and the roots of our country are in the home. We all know that the tone of the home is set by the wives and mothers. They can preserve our will to win better than any other group.

Our ultimate victory over both Germany and Japan depends in large measure on the active and continued support of our military effort by the women of the United States. You ladies assembled here can take this message back to your influential clubs and societies, and personally advance among the women of America an unfaltering determination to resist all efforts to weaken our spirit. You can do a great part in making the homes of America an unfailing reservoir of spiritual support. The men who are carrying the force of arms against our enemies will be immeasurably strengthened by the knowledge that here at home the will to win will never falter.

Letter From J. W. Burch

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from J. W. Burch, director, University of Missouri College of Agriculture, Agricultural Extension Service, Columbia, Mo.:

UNIVERSITY MISSOURI,
COLLEGE OF AGRICULTURE,
Columbia, Mo., February 9, 1945.

Hon. A. S. J. CARNAHAN,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN CARNAHAN: The farm people of this State, particularly those unselfish men and women who are always thinking and working for the betterment of their communities, are very much interested in S. 383, introduced by Senator BANKHEAD, of Alabama, and the companion bill, H. R. 1690, introduced by Representative FLANNAGAN, of Virginia. These bills were referred to the respective Agricultural Committees. I would personally appreciate it very much if you would study this bill and let me have your opinion as to the best way to get early and effective action with respect to it.

I am convinced that in the years ahead, education for all people in all walks of life is of paramount importance. As you know, the Agricultural Extension Service carries the findings of the State experiment station and the United States Department of Agriculture to farm families, men, women, and the children. It is, without question, the most effective adult education organization in the world. It is a teaching agency that uses real life situations in its teaching process. It teaches the farmer how to build terraces and how to apply soil treatments when he wants to know those things on his own farm.

The great problem is the teaching load in the counties. The average Missouri county has something over 2,000 farm families. They will average 4 people to the family. This means a class of 2,000 men for the county agent, 2,000 women for the home demonstration agent, and 4,000 young people for the two of them, who should have the advantages of the great character-building work done through 4–H Clubs and the older youth groups.

Last September farm people in this State elected an extension service advisory committee of 20 people, at sectional meetings over the State, in which every county was represented. This advisory committee met in Columbia and instructed the State Extension Service to work upon four major problems throughout the year 1945. These problems are as follows:

1. Development of a complete farm and home plan upon as many farms in each county as possible. This is known as the balanced-farming program, and combines the best soil conservation practices and the best methods of handling crops and livestock into a program that will give the greatest net income for the farm family.

2. Work with rural youth in 4–H Club work and with the older, out-of-school youth between the ages of 16 and 26. This latter group is not now being effectively reached by Agricultural Extension or any other agency. It is the group which will be joined by the returning veterans. They have great promise for good, if wise leadership can be afforded them.

3. Guidance in improving farm homes and other buildings. Only 11 percent of the farm homes in Missouri have water in them. Eighty-nine percent of the farm women of the State of Missouri still carry water from the well or from the spring into the house. We think this is a disgrace, and we pledge ourselves to give the leadership to do something about it in the post-war years, when farmers have money, and business needs additional activity, as would be afforded by the many things that the improvement of farm homes would require.

4. An explanation to farm people of the economic problems facing agriculture, so that those closest to these problems could meet community by community, discuss them, and offer their suggestions as to the solution.

You will note that the bill mentioned sets forth certain special purposes for which these funds may be used, and that the very problems that our farm people in Missouri want help upon are those for which this bill provides funds.

It is obvious that the need for these funds is to hire additional workers for the counties. We expect to spend this money in the counties in this State. The bill provides that we should. It will give us money enough to make home demonstration agents available for every county in the State. It will also give us money enough to provide an assistant agent for all counties. Some counties are not ready for an assistant, but others of the more populous counties badly need two assistant agents.

I am convinced that this is one of the most constructive and conservative things that could be done to put farm people in position to help themselves to withstand the depression years that may be ahead and to build the type of citizenry our Nation needs.

I would appreciate very much your suggestions with respect to this bill.

Very truly yours,

J. W. BURCH, *Director.*

McCarran-Sumners Bill

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of Arizona:

Senate Joint Memorial 3

Joint memorial requesting Congress to pass the McCarran-Sumners bill

To the Senate and House of Representatives of the United States Congress:

Your memorialist respectfully represents:

In view of the numerous regulatory and administrative agencies, possessing quasi-judicial functions, which have in recent years been added to the administrative branch of the Federal Government, and because of the many rights of citizens affected by the regulations and decisions of these agencies, it is deemed of the highest importance that legislation be enacted prescribing fair and impartial procedure by which these agencies shall be governed in the discharge of their functions, and providing for adequate judicial review of their rulings.

Such legislation is proposed in the McCarran-Sumners bill (S. 7, H. R. 1203), pending before the Congress.

Wherefore your memorialist, the Legislature of the State of Arizona, requests:

1. That the Congress enact the McCarran-Sumners bill.

Adopted by the senate January 19, 1945.
Adopted by the house January 31, 1945.
Approved by the Governor February 8, 1945.

The Wallace Issue

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein two separate articles on the important subject of the fitness or ability of Mr. Henry A. Wallace. One of these articles is a very able analysis by the distinguished columnist Walter Lippmann. This article from the Washington Post of February 13, clearly shows that in their antagonism to Mr. Wallace, certain Members of Congress are going far beyond the prerogative of the legislative body and are transgressing on the Executive function; that is, the naming of the members of the President's Cabinet.

Mr. Lippmann's article follows:

UNCONSTITUTIONAL IN PORPOSE

(By Walter Lippmann)

An issue affecting the fundamental structure of the American Government is now being agitated by men like Mr. TAFT in the Senate. It is whether the head of an executive department, in this instance the Secretary of Commerce, is to continue to be what he has always been, an assistant of the President, or whether he is to become—through control of the appointment—an agent of the legislature.

Mr. TAFT, and those who think as he does, wish to reject Mr. Wallace on the ground that he does not have the confidence of a majority of the Senate. This is, I submit, a radical departure from the American constitutional system, wholly unworkable, and profoundly dangerous. It is no wonder that the true conservatives like Senator GEORGE will have none of it.

If the Senate asserts the power to reject Mr. Wallace on the ground that it does not agree with him, then it is claiming the power to appoint the Secretary of Commerce. If it says to the President: "You cannot have Henry Wallace in your Cabinet because we do not like him," then it can say the same thing to the next man and the next man after that whom the President nominates. It can say to the President: "The only man we are willing to confirm is a man that we, not you, have named."

No such power is vested in Congress. The Senate's power to confirm has never been regarded as meaning the power to control the selection of the President's Cabinet. The limits of the power of Congress are clearly indicated by the fact that it has no power to remove a Cabinet officer except by impeaching him and convicting him of "treason, bribery, or other high crimes and misdemeanors." If Congress cannot remove a Cabinet official because it does not agree with him, then it has no constitutional ground for refusing to confirm him because it does not agree with him.

The attempt to reject Mr. Wallace is, to put it bluntly, a usurpation of power which, if it succeeded, would establish the right of Congress, by rejecting anyone it had not chosen, to appoint the executive officers of the Government. The American system would be unworkable if Congress assumed the power to appoint the officials through whom the President performs his duties. For under our system Cabinet officers are merely his assistants, and their acts are the President's acts.

If Congress has the power to control the selection of the President's Cabinet, then what is to happen if the President wants Henry Wallace and Congress refuses to confirm him? How is the deadlock to be broken, and the business of governing carried on? Under the British parliamentary system, if the legislature votes no confidence in a member of the Cabinet, the Prime Minister has the right to dissolve Parliament, hold an election, and let the country resolve the conflict. But the President does not have that power. Unless he does have it, the Cabinet cannot be made the creature of Congress without paralyzing the Government.

As long as we have a Government based on the separation of powers, we must, as Madison said when the question was debated in the Philadelphia Convention, insist that the executive and the legislature "be independent of each other." This independence would disappear if the Senate asserted the right of controlling the appointment of Cabinet officers.

It was an error of principle on the part of the President not to divorce the lending power from the Department of Commerce before he nominated Mr. Wallace. For Mr. Wallace is the exponent of a new policy, and the lending power was vested in Mr. Jesse Jones for purposes which are different from those which Mr. Wallace proposes. Congress has a right and a duty to pass on the new policy, and it would in some measure have lost that right if Mr. Wallace had inherited all of Mr. Jones' powers.

The George bill cures this error. But those who want to go beyond the George bill and reject Mr. Wallace because they disagree with his policies, have fallen into an error which is at least as great as the President's original error. They should reconsider their position. For they are, in the heat of partisanship, proposing to defend conservative principles by resorting to acts that are radically alien to the American system, and would if they succeeded, mark a deep revision of the Constitution.

As Mr. Lippmann's article expresses the viewpoint of a nationally known columnist on one phase of the Wallace issue, I wish also to append to my remarks an article which appeared in one of the neighborhood newspapers in my district. While the writer of this article is less well known than Mr. Lippmann, I submit that she is equally sincere. Margaret Wildrick, the columnist who wrote this article in the Bell Gardens Herald has expressed, I believe, many of the thoughts which are running through the minds of the common people of the United States.

The common people need a champion and they have their eyes on Henry A. Wallace. Let those who are blinded by their hatred of the former Vice President beware of their intemperate opposition. The American people usually stand for fair play and if they once get the idea that a person is being persecuted, they are prone to come to his rescue. The unjust treatment of a great American in this instance will, I am confident, boomerang on its mistaken and short-sighted authors.

The article by Margaret Wildrick follows:

IF

(By Margaret Wildrick)

If Henry Agard Wallace were in charge of administering the huge sums of money now found in the hands of the Reconstruction Finance Corporation, there is a strong indication that a great part of these funds would go to the aid of small business rather than to the aid of the enormous financial powers.

Thereby we find the substance of the dividing issue on the confirmation of his appointment as Secretary of Commerce. Is the Senate of these United States interested in helping provide the necessary 60,000,000 jobs required in the post-war era, or are their objectives the means of encouraging the financial interests of the country to flourish more rapidly than at present?

Those who are opposing his appointment state that they are doing so because they doubt his ability to properly administer the spending of some $14,000,000,000. They say, in effect, "We may decide to confirm the appointment of Henry A. Wallace, but only if we are allowed to strip the Commerce office of a great part of its present powers." Which, from here, seems a little like saying to a soldier, "Go out and fight the forces of evil in the world but leave your rifle and machine gun with us."

It just doesn't add up. Wallace has demonstrated by his successful administration of the duties as Secretary of Agriculture that he is fully capable of doing the very things that his opponents attempt to question his ability to do as Secretary of Commerce. A far greater percentage of money has been loaned to small farmers by the Department of Agriculture than the R. F. C. has loaned to small business. And, incidentally, the percentage of collected returns, on such investments run higher than the collected returns by the R. F. C., under Jesse Jones. It is also interesting to note, in connection with aid to small business, that only 1.7 percent of the total loans by the R. F. C., under Jones, have been for less than $10,000 each and that the biggest proportion of loans have been for more than $1,000,000 each. These figures would seem to indicate that the money has not been going to aid the small businessman.

It seems then the same old question of whether the people of America are going to have anything to say relative to the spending of government money or whether, as far too often in the past, Wall Street financiers will set the pace. If such is the case it will mean that the President's aim at establishing an eight-point economic bill of rights will very likely be stymied before it gets a chance to be put into effect. It may also mean that we will have nothing more to look forward to in the post-war period than we had in the last days of the Hoover administration.

We do not claim that Mr. Wallace could solve all the post-war problems by himself. There is no individual capable of such an undertaking but it does seem that he is on the right track and doing the right kind of thinking about such things.

The opportunity of meeting Henry A. Wallace, at the Chicago convention, was one of the most outstanding experiences that the writer has had. No one fortunate enough to listen to Mr. Wallace could fail to be impressed with his sincerity or determination of purpose. In his quiet, modest sort of way he seems to be able to express the thoughts of the common man. It is my opinion that the American people, not Henry Wallace, will lose a great opportunity if his appointment is not confirmed. The people have a champion they have long needed, and will continue to need, in Henry Wallace. A statement made at the Democratic convention in Chicago could also be used very appropriately in this case. During a caucus of the California delegation on the selection of a candidate for the office of Vice President the question was raised as to the amount of support behind Wallace. Whereupon Helen Gahagan Douglas, then national committeewoman from California, replied in unforgettable tones: "Poor Henry Wallace—he has no one behind him except the President of the United States and the people."

Why Join the Farm Bureau?

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by E. L. Dean, of Jonesboro, Ark.:

WHY JOIN THE FARM BUREAU FEDERATION?

(By E. L. Dean)

As the time of year approaches for the Farm Bureau to make its annual membership drive, the above question will be in the minds of many. Not only is it an important question confronting "dirt farmers" but it is equally important to every American citizen who likes the American way of life and wants this country to live long and keep healthy. This article attempts to point out why.

The greatest strength comes only with internal soundness and complete equality and coordination of all parts.

Though America has offered magnificent opportunity for individual enterprise and development we have not given sufficient thought to national soundness and planning for the future. America's strength today is due more to the strength of youth than to wise, unselfish, national planning. We have done a poor job of national planning. As America grows older her health must be better guarded. The history of other countries, in this ever-changing world, is that as they grow old they grow weak. Does that thought frighten you? Is it inevitable that America should grow weak in years to come? The Farm Bureau Federation answers "No." It believes that, with wise and unselfish planning greater and ever-increasing strength can and will come with age.

Whether we like it or not, American interests and American activities are divided into groups. Prominent among them are: Industrial group, commercial group, labor group, professional group, salaried group, and agricultural group.

For the best interests of America it is essential, in fact it is imperative, that equality always be maintained between groups; equality of opportunity, which affords equality of income, of education, of luxury, of recreation, of leisure, etc. In brief, there must be equality of American standards of living for all groups.

Group equality would not detract from our rugged individualism. On the contrary, it would strengthen it. It offers a more perfect field for our much-cherished free enterprise. It in no way lessens the reward for individual merit. It merely demands respect and regard for the rights of others, without which no country can grow strong and be happy.

Granting that all agree to this philosophy, in a democracy, it can be carried out only by get-together meetings; by representatives from all groups pleading their cases and threshing out their difficulties around the council tables. Other groups are well represented. It is the particular business of the Farm Bureau to get the very best possible representation for agriculture in our national planning.

IS THERE URGENT NEED FOR STRONGER REPRESENTATION FOR AGRICULTURE?

Let us analyze past and present conditions.

In the early days of America, when there were always more and fertile acres to cultivate, agriculture fared well by taking up more acres and robbing them of fertility. Such a policy could not always continue. In those days, industry, then young and weak, organized and through its representatives in Washington sought special favors to get it started. Agriculture faring well at the time, did not oppose such favors. Thus while agriculture looked on industry succeeding in getting many and important laws and rulings that gave to it many tremendous advantages. Most conspicuous among these advantages were the high protective tariff laws, favorable freight rates, franchises, Government grants, guaranteed profits, trusts, monopolies, trade agreements, labor and trade union, etc. All were used effectively to increase industrial profits. But those very advantages to industry diverted an ever growing portion of the national income away from agriculture. Agriculture suffered. For each dollar's worth of goods agriculture bought it paid an added subsidy to industry of approximately 50 cents as a result of these advantages. In a few years this heavy drain caused the farmer's portion to decrease from 50 percent to 10 percent of the national income. The average individual farmer's income decreased from 100 percent of the American average to 20 percent of that average. A hundred years ago 50 percent of the population were engaged in agriculture and received 50 percent of the national income. Today the 30 percent engaged in agriculture get 9 percent of the national income.

The situation got so bad that with few exceptions farmers found themselves entirely unable to live according to American standards set by other groups. Their debts increased. Worst of all, in their dilemma they lived by rapidly depleting the fertility of their soil and by consuming their capital investment.

Owing to the isolation of the individual it was difficult for farmers to organize. But, finally much too late and in spite of these difficulties, farm leaders got together approximately 35 years ago and formed the Farm Bureau Federation. They were determined that agriculture should share equality with other groups.

They believed that: Any country to successfully live must maintain a fertile soil and a contented rural population: That on the extent of that fertile soil and the number and prosperity of the rural population depend the strength and future of the nation.

Since the Nation depends on it, it follows that maintaining a fertile soil becomes a national must rather than merely a farmer's prerogative.

Soil fertility being a national problem, it could best be solved by fixing conditions so that it would be to the farmer's interest to maintain fertility, a requirement that must be met by national planning.

Not only was agriculture suffering from legislative favoritism bu a study of conditions revealed that it also suffered a fundamental handicap that made it an exception to an important economic law. The law of supply and demand did not work for farmers.

It was known that efficiency on the farm was at a much lower stage than efficiency in industry. There was a reason for it other than incompetence. As proof it was pointed out by farm leaders that fluctuations of the prices of farm commodities was so wide that efficiency was lost sight of and farming was a gamble rather than an efficient, well organized, business. Comparison showed that the fluctuation of the price of manufactured goods, the wage of labor or of commerce was rarely during a years' time more than 5 per-

cent. Yet farm commodity prices almost every year fluctuated as much as 100 percent of the low. Cotton, for example, that was frequently 20 cents per pound at planting time dropped to 12 cents or 10 cents or even 5 cents per pound at selling time. It was plain that there could be no efficiency with such an unstable selling price. What could be done about it to put it on a par with industry?

Economists had taught that the law of supply and demand stabilized prices. For industry it did. How it worked was simple. For example, a man wanted to be a manufacturer. The procedure was first: Determine what it would cost to make the article selected. Then determine what it could be sold for. That being done he must decide whether the margin between cost and selling price was sufficient to be an acceptable reward for his services. If he decided it was he started the wheels turning.

But, as he proceeded he constantly kept his eyes on cost and selling price. If for any reason either the cost or the selling price changed so that his margin was too small, he, with all other manufacturers of that article, slowed down the machinery. This slowing down created a scarcity sufficient to boost the price back to normal. The buying public was also well protected by the same law. If the selling price got too high, to reap their reward, the manufacturer speeded up the machinery. The increased supply resulting brought the price back to normal again.

For industry the law worked perfectly when let alone. Economists especially, and the public in general, were slow to believe that the law would not do the same for agriculture. But the Farm Bureau leaders said "No." They pointed out that for industry the law worked only because the operator was free to start, stop, slow down, or speed up at will and could thereby control the price which was all important by controlling the supply. They further pointed out that because of the nature of their business farmers could not slow down or speed up at will. They planted once a year and gathered months later.

Since they could not control the supply they could not control the price. They had no bargaining power which power is essential to business efficiency.

Instead of loss and failure driving farmers away from the farm and into industry, the lure of gambling involved by the wide fluctuations kept it overcrowded. The gambling instinct kept many farming at a loss hoping to hit a high price later.

To be on a par with industry a control must be set up that would remove the gamble, stabilize the prices, and release the supply to the consumer only when there was a margin of profit between costs and selling price for the producer.

Since the law of supply and demand did not work for agriculture the leaders urged that the Government take steps to remove this disadvantage. They recommended a "crop reserve and a floor under prices." That has been done with great help both to farmers and consumers.

It was not easy sailing. The farm leaders met great obstacles in their efforts. Not only did they have the tasks of working out solutions for the many problems confronting agriculture but they found it to be a far greater task to get their ideas put over to the public and to the Nation. Senators and Representatives in Washington were not prone to listen. Even those from strictly agricultural districts were many times the last to give aid. The leader's insistence that their efforts were only attempts to equalize opportunity and remove handicaps fell on deaf ears. Economists, public speakers, journalists, industrial leaders, even Presidents of the United States, ridiculed the idea that soil conservation or price stabilization were problems for national legislation.

The great difficulty was to get enough numbers in the organizations to command attention. It was an up-hill drive. Sound logic, an unselfish approach, and an everlasting persistence has won support. From the small beginning 30 years ago the membership has increased so that it now approaches the million-member mark. This is approximately 10 times as many members as claimed by any other farm organization that speaks for agriculture. Its membership includes tenant farmers, small and large landowners, and businessmen, having the interest of America at heart.

THINGS THE FARM BUREAU HAS ACCOMPLISHED

The ten following are some of the more important things the Farm Bureau Federation has accomplished in the past 12 years and what they have meant to folks on the farm:

1. Secured the passage of the Agricultural Adjustment Act (A. A. A.) of 1933, providing for acreage adjustment of basic crops and commodity loans and a big factor in raising the farm income $1,000,000,000 a year for the next 4 years.

2. In 1933 sponsored the Emergency Farm Mortgage Act which virtually stopped farm foreclosures and reduced the rate of interest so that borrowers from the Federal land banks had a saving of $400,000,000.

3. Sponsored the Bankhead-Jones Act of 1935 authorizing Federal appropriations for State experiment station and extension service and for the establishment of Federal research laboratories.

4. In 1936 sponsored the Soil Conservation Act creating a long-time soil conservation program. That has already resulted in increasing the average per acre yield of cotton from 156 to 272 pounds.

5. In 1937 secured passage of the Marketing Agreement Act to promote orderly marketing of nonbasic agricultural commodities.

6. 1938 improved the Agricultural Adjustment Act giving a better program than provided by the A. A. A.

7. 1939 secured passage of a bill that required truthful labeling of seed.

8. In 1941 pushed through Congress the Bankhead bill that raised the commodity loan rate from 52 to 85 percent of parity. This bill raised farm income of that year at least $1,000,000,000 and the price of cotton $25 per bale.

9. In 1941 obtained enactment of the Steagall bill which provides that support prices on farm commodities shall be continued at least 2 years after the war ends.

10. In 1944 amended control bill directing the President to use every power of Government to insure that farmers receive parity.

Though the Farm Bureau Federation has accomplished much the big tasks are still ahead. Compared with organized labor and organized industry, organized agriculture is still very weak, weak in numbers and weaker in finance. Yet, there never was a time greater strength was needed.

It is important that, in post-war planning and in the peace conferences, agriculture should not only have delegates sitting at the conference tables but those delegates should be backed by sufficient strength to command equality of attention with other groups. Every trade agreement that is proposed with other countries should be made only after those in authority to speak for agriculture have been heard.

COTTON AT THE CROSSROADS AN EXAMPLE OF THINGS IMPORTANT

King Cotton, which has been the largest source of income for the Nation of any exported crop and the main income for the South, is at the crossroads. Many predict that it is doomed, that its doom will mean wreck and ruin for the South. Some contend that cotton growers should be subsidized, as industry has been subsidized. Others contend that by equipping farms with modern machinery cotton can be produced cheap enough to hold its own. Others answer there is no way that farmers can produce cheap enough to meet new competition without a loss and that they are not financially able to take the loss. All agree that unless cotton can be put on the market for approximately one-half of the present price it is doomed to obsoletism. Foreign produced cotton has already taken 60 percent of the foreign market, and rayon and other substitutes produced now at 11 cents per pound are even a greater threat to the home market. Farmers have been criticized for wanting a floor under cotton that holds it above the world market. But let those critics be reminded that farmers do not want a market if it has to be supplied at a loss to hold it. Let those critics also remember that it is high tariff, unfavorable freight rates, and other special legislation favoring industry that has made those costs high and not profit to the cotton grower.

It is plain that what to do to save a national asset is a national problem. The whole attitude of Congress and the administration is yet to be decided. On those decisions hangs the future of the cotton South.

The American Farm Bureau Federation is working day and night on these problems. They are hoping and praying for a solution that will lead to a better and stronger America; an America that offers a still better place in which to live; an America in which every citizen and every group of citizens takes first pride in seeing that every other citizen and every other group of citizens has equal opportunity and is equally happy and equally free from fear of want. But the American Farm Bureau needs more strength. It needs more ammunition; in short, it needs more manpower; it needs members who will give it a backing; it needs numbers who will give it authority; its problems are many and vital.

So, Mr. Farmer, when you consider joining the Farm Bureau Federation, do not look upon it as just another organization, but think of it as an organization that believes in a better and stronger America, and that to make it better and stronger there must be a better agriculture enjoying equality with other groups.

Mr. Businessman, this is no less your problem. Get in the boat with those who are trying to guide the ship of state to safer and happier shores. Help row with your membership. It will mean a better distribution of wealth and happiness—greater prosperity in your business. Those of you who prize and love America and are friends of agriculture join the Farm Bureau Federation. It is the logical and best equipped organization or force to speak for agriculture. Agriculture needs a stronger champion.

Coke and Coal Top Priorities in War-Winning Materials

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a brief statement from Walter P. Schenck, secretary of the Uniontown, Fayette County (Pa.), Chamber of Commerce, relative to the coal and coke production of Fayette County. You will observe that more than 23,000 men in this county, during the year 1944,

brought to the surface more than 20,000,000 tons of the finest bituminous coal—much of it coking coal—and at the same time we produced in Fayette County about three-fourths of all the bee-hive coke produced in the entire coke area.

When we consider that it is absolutely essential to have coke to make steel, and that we must have coal to make the wheels of industry go, in this big global war effort, we will have to place the men who dig this coal and make this coke among the top notch group of our civilian war heroes.

Yes, Mr. Speaker, my county has more than 14,000 girls, men, and boys in uniform in this war effort. More than one-third of them are sons and daughters of these civilian heroes who daily go down into the mines and furnish this all important material—coal and coke—to make essential equipment to put in the hands of our armed forces. Again I want to say that the wages of these miners and coke makers should be raised so that their pay envelope would be commensurate with the war workers in the steel mills and other war-producing establishments. Mr. Schenck's statement follows:

UNIONTOWN, PA., *February 9, 1945.*

Hon. J. BUELL SNYDER,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I am in receipt of your letter of February 8, requesting information relative to coal and coke production in Fayette County in 1944.

Coal production for Fayette County in 1944 was slightly in excess of 20,000,000 tons. * * *

Relative to bee-hive coke production, we produced in Fayette County * * * about three-fourths of all bee-hive coke from this area last year.

* * * * *

Following is a list of coal mines in operation in Fayette County and the Monongahela River area in Greene and Washington Counties.

Name of coal mine	Operator and address	Approximate number employed
Alicia	Pittsburgh Steel Co., Alicia.	300

W. P. SCHENCK,
Secretary,
Uniontown Chamber of Commerce.

Memorial 50-Cent Piece in Honor of the Late Will Rogers

EXTENSION OF REMARKS
OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. RIZLEY. Mr. Speaker, pursuant to authority granted by unanimous consent, I incorporate as a part of my remarks a resolution recently unanimously passed by the Oklahoma House of Rep-

resentatives memorializing Congress to issue a memorial 50-cent piece in honor of the late Will Rogers.

Each succeeding year, since the untimely passing of this great Oklahoman, we are more and more reminded of the great loss sustained not only by our own country but all the other countries of the world. Never at any time in the history of this country have we so sorely needed the benefit of his humor, philosophy, and understanding. Certainly no one contributed more, during the years of his activity, toward establishing friendship and good will between this country and the other countries of the world.

The resolution follows:

Enrolled House Resolution 17

Resolution memorializing Congress to issue a memorial 50-cent piece in honor of Will Rogers, great Oklahoma humorist, philosopher, and world citizen

Whereas Oklahoma is the birthplace and final resting place of the beloved philosopher, humorist, and cowboy statesman, Will Rogers, who walked with kings and did not lose the common touch; and

Whereas we desire to keep alive his memory as the outstanding example of Oklahoma and world citizenship, and to perpetuate those virtues of humility and good will which he expressed in his life; and

Whereas a proposal has been advanced in the National Congress that a memorial 50-cent piece be coined in honor of Will Rogers, and this project has been endorsed by Members of the National Congress, the Will Rogers Memorial Commission, and others interested in preserving the name of Will Rogers: Now, therefore, be it

Resolved by the House of Representatives of the Twentieth Legislature of the State of Oklahoma, That we memorialize Congress to speedily pass legislation authorizing the coinage of a 50-cent Will Rogers memorial piece, and that we urge the Oklahoma Members in the National Congress to use their best efforts to push this legislation to a successful conclusion; be it further

Resolved, That a copy of this resolution be printed in the Journal and that the clerk of the house be directed to send by registered mail a copy of this resolution to the honorable members of the Oklahoma delegation in Washington, D. C.

Adopted by the House of Representatives the 7th day of February 1945.

JOHNSON D. HILL,
Speaker of the House of Representatives.

Unity Is Greatest Need

EXTENSION OF REMARKS
OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, I have read with great interest an address made by the president of the United States Chamber of Commerce, Mr. Eric A. Johnston, in which he states clearly and decisively that hate and intolerance are the worst enemies today to American progress and the peace of the world.

I share with this distinguished gentleman this philosophy and I am concerned as I look back over the past 12 years as to what has brought about this particular disturbing situation. Surely much of it can be charged to the policies of the New Deal administration.

There are many who may disagree on the objectives of the national administration. There are many things with which I have found myself in agreement. There has been great debate upon the policy of economics employed, but the one outstanding among all the others that has been bad, it seems to me, is the sinister effort to produce a class consciousness, and that effort has been expanded for political ends.

Yes; we have heard about economic royalists and tories and similar things. We have seen the maneuvering of the machinery of this mighty force directed in the interests of minorities, solidifying, if you please, their interests first within themselves and then welding them into a common unit, results of which produced the desired number of votes on election day. And so it can be rightfully said, I believe, that no greater force in the land has contributed to this class distress than the political efforts of the New Deal.

Much as I may disagree with many things they have done, all passed into insignificance in my personal judgment as compared with the insidious attempt to drive a wedge between the different peoples. In full realization of the fact that the vast number of voters are in the low-income brackets, great political effort has been expanded to allege that these people are underprivileged, and all too often they are underprivileged—we do not deny that—and I have no occasion to refuse to assist them to advance themselves, but it can be done without producing a class consciousness from which springs immediately the feeling of hate and distrust toward others.

It should be the policy of our Nation to legislate against those who appropriate conditions for their special interests. But we should never at any time remove from the man the opportunity to climb higher and higher on the wall of personal achievement if he is willing to pay the price for that climb. Some men in this world are so constituted that they will attain wealth even though located under conditions most unfavorable. There are millions of others, given every conceivable advantage, who spend more than they earn. This is a part of human nature, and laws passed by this Congress or laws promoted by this Government will never change human nature.

Pressure groups have taken their cue from this administration, and in their desire to add numbers to their membership dwell at great length in their tirades against those who may have accomplished something in life. And so like the chickens that come home to roost, in this day when our representatives meet in far away places to lay the foundations for a lasting peace with the other nations of the world, we find ourselves confronted at home with this distressing aspect of class consciousness. All of this had its beginning and received its stimulus from this administration as it moved forward to reelect itself again and again and again.

Mr. Speaker, under unanimous consent, I include herewith the remarks so ably expressed by Mr. Eric A. Johnston:

UNITY IS GREATEST NEED

(By Eric A. Johnston, president, Chamber of Commerce of the United States)

Of all the social problems that face our country in this era of crisis, that of national unity seems to me the most challenging. Most other problems will not be solved if the American people are divided into mutually hostile and suspicious groups, sections, and classes. More than that: Even if solutions were possible under such conditions, they would hardly be worth achieving. They would be empty victories, utterly meaningless, if the character of our American civilization were changed in the process.

And the core of that civilization, it seems to me, is in the sacred dignity of the human being, regardless of race or class or place of birth. Individual freedom and liberty within a framework of law are essential to the America we know and love. Without these elements it would no longer be our America, except in the geographical sense. In the deeper moral sense it would be an alien country, where those of us who cherish ideals of freedom would be exiles in our own homes.

MUST FACE REALITY

We are all of us, in our several ways, seeking to preserve America. Millions of our sons are doing it on battlefields with bombs and bayonets. Those of us who build and manufacture do it with machines and goods. But what all of us have in mind is not simply the physical preservation of our country. It is the preservation of those human values which are implicit in the word "America"—the freedom, the opportunities, the equalities, the democratic ideals celebrated in our national songs and poetry and books and holiday speeches.

I have been privileged to travel widely in our country, and I do not hesitate to offer any personal testimony that race and group tensions are increasing to an alarming degree. Men and women who should know better—who do know better—allow themselves to mouth the catch phrases of anti-Semitism and antiforeignism, of antibusiness, or antilabor, antifarm. Most of them are not themselves aware that they have been infected by the virus of intolerance which already has the whole world writhing in the fever of war.

When there's a riot in Detroit or Harlem, when racial antagonisms break into the open in Boston or Brooklyn, it's more comfortable to shrug them off as local incidents. But the truth must be faced. These episodes of violence are symptoms of pressures and emotions and maladjustments which are Nationwide.

The first thing we must do is to confront the reality. Obviously the most violent and deep-seated of our antipathies are racial and religious. Widespread though these expressions of group hatred are, it is a hopeful fact that they still afflict only a small minority of the American population. That minority can be curbed and reeducated if conscious and organized efforts are undertaken.

DESTRUCTIVE POLICY

At the very worst, that minority can be frightened into desisting. Not by legal or physical threats—you can't legislate love of one' neighbor. Americans can be made sharply aware that intolerance endangers not merely the small groups against whom it is directed but the country as a whole. The obstreperous hate-mongers and their stupid or frivolous fellow-travelers can be made to understand that it simply isn't smart to rock the American boat in which they, too, are passengers.

America has prospered because it has opened avenues of economic expression to all men who had the urge and the capacity to advance themselves. Wherever we erect barriers on the grounds of race or religion, or of occupational or professional status, we hamper the fullest expansion of our economic society. Intolerance is poor economy. Prejudice doesn't pay. Discrimination is destructive.

There are some in our country—industrialists, white-collar workers, laboring people—who hold to the myth that economic progress can be attained on the principle of an unbalanced see-saw. They think that if some groups can be forever held down, the others will forever enjoy economic privileges and prosperity at the end which is up.

Fortunately, it does not work that way. Any advantage thus gained must be paid for out of the fruits of the productive plant. The withholding of jobs and business opportunities from some people does not make more jobs and opportunities for others.

Perpetuating poverty for some merely guarantees stagnation for all. True economic progress demands that all artificial barriers erected by ignorance and intolerance be removed. To put it in the simplest terms, we are all in business together. Intolerance is a species of boycott and any business of job boycott is a cancer in the economic body of the Nation.

Let's not apologize for the amazing variety of our human material here in America. Let us rather glory in it as the source of our robust spirit and opulent achievement. Let's not deny that there are differences in race and that our country has all the 57 varieties of God's humanity. Let us merely make clear that these differences cannot be measured on any scale of good, better, and best. They are all equally valid and all must continue to contribute to the magnificent mosaic of American life.

ALL HAVE CONTRIBUTED

Subtract from the grand total of America the contributions of our racial and religious and economic minorities, and what remains? Subtract foreign-born Andrew Carnegie from our metallurgical industry or David Sarnoff from American radio; or George Gershwin and the Negro composers from our native music; or Norwegian-born Knute Rockne from our football or Danish-born William S. Knudsen from the automotive industry; or Russian-born Major de Seversky from American aviation or Belgian-born Lee H. Baekeland from American chemical achievements; or slave-born Dr. George Washington Carver from biological developments. The temptation is to list hundreds and thousands who have thrown their particular genius into the American melting pot.

Too many Americans, indeed, too many of the immigrants themselves, whatever their race or land of bith, behave as if America only gave things to newcomers. We need to be reminded that America received more than it gave. After all, our country let the strangers in because it needed their music power, their purchasing power, their fecundity, and their brains.

On the whole, America, through the generations, has shown itself capable of preventing natural prejudices from spilling over into unnatural intolerance. On the whole, the trend has been toward greater equality. Even the worst manifestations of prejudice have been gradually tempered.

The danger today comes because the normal prejudices are being stimulated by deliberate propaganda. Watered by hate they flourish in more and more places as outright intolerance and discrimination.

Yank, the Army Weekly

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mrs. LUCE. Mr. Speaker, I believe that many civilians will be interested in the following fine description of a magazine that is edited by soldiers for millions of their soldier sons. It appeared in Dutton News on January 25:

YANK, THE ARMY WEEKLY

(By Sgt. Al Hine)

Yank in its almost 3 years of existence has built up an enviable reputation for the accuracy and quality of its reporting. It has also built up a somewhat confused picture in the minds of the millions of civilians who know it by reputation. They want to know it better because their sons, brothers, husbands, and sweethearts in the service tell them about it, but few have had a chance to examine the magazine itself.

INTRODUCING YANK TO CIVILIANS

Yank, by War Department order, remains the property of the enlisted man, the only official publication for the whole Army. * * * The appeal of Yank, the Army Weekly, from the day in May 1942, when its first skeleton staff assembled in a bare room on Forty-second Street to the present, has been, in one sense at least, esoteric. Yank was and is written exclusively for soldiers exclusively by soldiers. It has been, until now, a closed book for the civilian reader—unless the civilian reader can pick up a copy from a friend in the service or read, at a later date, some of the Yank material which has been reprinted in magazines and newspapers of general circulation.

Civilians who haven't ever seen a copy of Yank are prone to wildly false impressions of what the book is. Some think of it as a glorified version of a high-school students' paper.

Yank is salty and gutty and sometimes profane. It isn't any of these all the time because the average soldier isn't any of these all the time. Yank's contents are balanced, not according to a golden means of what would be good for the soldier, but according to what the soldier, who writes Yank as well as reads it, likes. Yank is what the soldier is.

That is the story of what goes into Yank, the stories and the cartoons, the articles and the poems and the photographs. Now a word about the people who put it there.

The most important phrase in the Yank credo is by the men, for the men in the service, Yank's writing, drawing, photographing and production personnel is 100 percent enlisted men. No officers are assigned to Yank in an editorial capacity. There are Yank officers, both in the New York headquarters and in the various overseas branches, but they deal with administrative problems and act as liaison between the enlisted editorial staff and their War Department superiors. Yank men write their stories from the enlisted man's point of view and pass them through the same channels of security censorship that applies to all other correspondents.

WHO ARE THE WRITERS, ARTISTS, CAMERAMEN?

These enlisted writers, artists, and cameramen are an Army cross-section. Running down the editorial masthead you can check off almost every branch of the service. There are ex-infantrymen and air force soldiers, engineers and ex-medical men. There are signalmen and artillerymen and Sergeant Hargrove, the most famous of Army cooks. Yank has a sailor on its staff, for ships' stores are as regular an outlet for the magazine as the Army's PXs. Yank goes to all the armed services, not merely to the Army.

Sgt. John A. Bushemi came to Yank from the Field Artillery at Fort Bragg, N. C.; before the Army he had been a photographer on the Gary (Ind.) Post-Tribune. In the early, harried days of Yank organization, he worked in the New York office, shooting the picture stories of training programs and camp news which necessarily made up a good part of early issues of Yank.

John, or "One-Shot" as he was nicknamed, didn't stick long around New York. By the end of 1942, he was in the Pacific. He went along on the early island hopping that chewed away the perimeter of Jap domination. He sent back to Yank some of the finest combat photographs of the Pacific war.

John went along on the landings at Eniwetok in the Marshalls. He had already covered combat operations in New Georgia, Makin, Tarawa, and Kwajalein. Moving up on the beach with the invading Yanks, Bushemi was fatally wounded by fire from a Jap knee mortar. His last worry, before he died, was about transmissions of his photographs to Yank.

Sgt. Pete Paris had been with the Engineers at Fort Belvoir. He came to Yank as a photographer and artist. Pete joined the military migration to north Africa. He covered the invasion with his camera and moved on up into Sicily with the advancing British and American troops. Home for a brief spell after Sicily, he went next to England where he waited, with thousands of other Yanks, for the invasion of the continent.

D-day was Pete's biggest assignment and on D-day he was killed. He was wounded severely on the Normandy beachhead. The ship carrying him back to a hospital in England was strafed and sunk. Later, when it washed up on shore, another Yank artist-photographer, Cpl. Joe Cunningham, saw it. "It was blasted apart," he said. "Three big holes blown through it."

YANK STAFFERS IN ACTION ON EVERY FRONT

Yank staffers have won seven Purple Hearts in four different theaters of the war. They have three Bronze Stars, three Legions of Merit, and two Air Medals.

In England Reporters Sgt. Walter Peters and Pvt. Ben Frazier went to aerial gunnery school to qualify as combat personnel on the bombers softening up Hitler's war machine in 1943 and early 1944. Each of them made five or more missions. Walt Peters went along on the famous raid on the ball-bearing works at Schweinfurt, the raid from which 60 flying fortresses never came back.

There have been few big stories in this war that have not seen a Yank correspondent in the middle of the action. Sgt. Burgess Scott, writer, and Sgt. George Aarons, photographer, were with Montgomery's Eighth Army when it chased Rommel out of Africa. Sgt. Ed Cunningham was with Wingate's Raiders and Col. Phil Cochran when they launched the air-borne invasion of Burma.

Sgt. Walter Bernstein hiked over the hills of Yugoslavia with a band of Partisans to be the first English-speaking correspondent to interview Marshal Tito. Sgt. Mack Morriss was in on the early bloody days of Guadalcanal. Now he's in Germany with the First Army. Sgt. George Meyers, of the Alaska beat, was with the United States forces in the Aleutians.

Sgt. Bill Reed hitched a ride on one of the first B–29 raids in the Pacific. Sgt. Dave Richardson, long before that, had been with Lieutenant Commander Bulkley's famed PT-

boat squadron. Sgt. Merle Miller covered Pacific warfare with Bushemi; now he edits the Paris edition of Yank.

Sgt. Barrett McGurn and other Yank men were in on MacArthur's return to the Philippines. Corp. George Barrett, bumming a ride on a reconnaissance flight out of Italy, saw his plane's motor's shot up and made a forced landing in the Mediterranean.

Add to these all the Yank men in less active theaters, reporting the Army job of supply troops in Australia, of weather station G. I.'s in the north Atlantic, of soldier longshoremen in the Persian Gulf, of transport fliers in India and WAC's in Ceylon. Add the tremendous amount of unsolicited material from correspondents in the field who turn to Yank when they find the germ of a story in their outfit. Add up all of these and you find the down-to-earth Army reasons why Yank is the enlisted man's reflection as well as his weekly magazine.

YANK, PIONEER IN GLOBAL PUBLISHING

There is a "how" to be added, too, to the "what" and "who" of Yank. The how has to do with Yank's production, with its 15 different editions printed weekly in 11 plants scattered all over the world. For Yank has been a pioneer in global publishing.

Yank had to go global when the war scattered Army readers to the four corners of the world. The first foreign printing of Yank was set up in London in 1942. Now Yank is printed in India, Egypt, France, Hawaii, Iran, Italy, Australia, Panama, and Puerto Rico. The Honolulu office prints three different Pacific editions, including a pony-size job for air mail. New York prints a domestic edition, an Alaska edition, and an over-all overseas edition for those overseas installations not serviced by a printing center of their own.

Yank's publishing problems have been as varied as it foreign offices. The Middle East edition, now printed offset in Cairo, was originally a letterpress job, run on a machine in Palestine that had previously been used for printing grapefruit wrappers. The Persian Gulf edition is printed by Iranian pressmen on French paper with German presses; extra plates are made by an Armenian photoengraver who dealt with Yank personnel through a Turkish-Russian interpreter.

The master edition of Yank, naturally, is made up in New York from the contributions of correspondents in the various theaters of war. This master edition is then matted for letterpress; extra positives and negatives are made for offset and rotogravure. The mats, positives and negatives, are shipped by air to the overseas printing plants. There, with changes to run material of tropical interest to the particular command, they are put together to form the Pan-American Yank (Panama) or Yank Far East (Australia) or Yank European Edition (Italy), or whatever.

Thus Yank, substantially the same magazine wherever it goes, reaches sailors on the run to Murmansk and marines on Saipan, medical corpsmen in Assam and combat infantrymen on the soil of Hitler's Reich. And to all of them, wherever it goes, it tells the same story, the true story of themselves and their part in the war.

Work or Fight

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. WEISS. Mr. Speaker, the recent debates in Congress on the May work or fight bill left the American people confused and bewildered over the necessity of such drastic compulsory legislation. The genial and able Patrick T. Fagan, area director for the War Manpower Commission, Pittsburgh, Pa., wrote me on the subject and submitted pertinent free verse by S. Quagmier McGill. I am happy to include in my remarks the poem by Mr. McGill I received in a letter from Mr. Fagan.

WORK OR FIGHT

(Condensed)

The work was nice in our organization
'Til, in an effort to aid the Nation,
Some crackpot with hallucination,
Conceived of manpower utilization, compliance, and stabilization.

The plan was fine and without hesitation,
War Manpower Commission commenced to ration.
Employers were accused of malutilization
And darned near succumbed to nervous prostration.
And in the form of communication,
Periodically register indignation.

Then comes Government reorganization
And each plant is requested for compilation
Of records that led to complete frustration
And in an attempt at retaliation,
Industries howled, "It's discrimination,
We've done our best at integration
And leaned over backward with cooperation.
The workers are victims of bad transportation
And we seek solace in expectation.

So we suggest an experimentation of comprehensive adaptation
Of a program which, by demonstration,
Is bound to help the situation;
We're on the verge of realization
They'll have to pick an occupation
And choose with all acceleration
Or else it's military indoctrination."
"Termination."

—By S. Quagmier McGill.

What Do the Veterans Want?

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. PHILLIPS. Mr. Speaker, Congress talks a great deal about what should be done for the veterans when they come home from this World War. I sometimes think that what we should do is to ask the veterans themselves what sort of help they want or what they think Congress should do. This thought was emphasized a few days ago in a letter I received from a lieutenant in the Seabees from my own home town. Boiling down what he says, it is that "most of the veterans are interested in a chance to get ahead in their own businesses."

He sent with his letter a clipping from the Seabee Coverall, which is printed at the United States Naval Base at Port Hueneme, Calif. The item is clipped from a column called Port Hole Peerings, and makes an interesting suggestion regarding post-war rehabilitation, all over the world, and the possibilities of absorbing men who have had tremendously fine experience for such rehabilitation jobs. This proposal would give them a chance to do a better job than could be done otherwise.

PORTHOLE PEERINGS

(By Burns)

How about it? Why not give the G. I.'s (a broad term used here to include officers and men) first call in applying for post-war civilian reconstruction jobs overseas? Here's why: Hundreds of thousands of man-hours (to use current nomenclature) are being spent these days in planning post-war jobs for the millions of G. I.'s now in the armed forces. And this is a good deal. But I wonder—as plans shape up for the Allied control of Germany, and eventually Japan—if the planners have thought of devising some system whereby the education, administrative experience, and all-around ability of many G. I.'s could be intelligently used in the post-war civil, economic, and political control of Germany and Japan.

Specifically, the Allied post-war civilian reconstruction set-up overseas, is bound to include many well-paying jobs, and I seriously doubt if there would be any serious objections to making these overseas jobs first available to the G. I.'s. The G. I.'s were thought competent enough to invade the countries, and this writer has not a single doubt as to their ability in helping to run them. But let someone think that this is a proposal for the G. I.'s to take over the functions of the State Department, let me hastily add that this is not what I have in mind. Rather, it's my idea to give the G. I.'s first crack at accepting such post-war overseas civilian jobs as will be necessary to convert the Germans and Japs from their "master race" complex. And such jobs will most certainly include a place for school teachers, newspaper editors, censors, and the like. And the armed forces today have men with these qualifications. However, all the post-war overseas civilian jobs for the victorious Allies will not fall into the so-called white-collar class.

Construction jobs, probably, will be the largest single undertaking of the Allies, immediately after Germany and Japan are defeated. And it's certain that the Allies are not going to hand over millions of dollars' worth of construction material to our former enemies, and, in effect say: "Go to it and rebuild your country." Surely, the Allies will hold a careful watch over the Germans and Japs as to what they rebuild, for a blank check on millions of dollars' worth of construction materials with nobody around to watch how these materials were being used could well result in some kind of a Siegfried line being built behind our backs. Germany did it before, but surely, we won't let her do it again. So the question arises as to how the Allied supervision will be carried out.

Will the armies of occupation carry on all the supervisory functions? Presumably not, for only last week the newspapers revealed that the former O. P. A. head, genial, able, cigar-smoking Leon Henderson, a civilian, was sent to London (and I quote the reliable Associated Press) "to handle economic affairs in the American-controlled portion of defeated Germany." Doesn't this sound as if civilians (and most G. I.'s have a burning desire to join 'em) were to play a part in the post-war reconstruction of Germany? It does from where I sit, and chances are that a similar set-up will be devised for Japan—in due time.

Now, remember this: Not all of us are going to consider the war won just as soon as the guns stop firing. There's more to this war than combat fighting. Call it winning the peace, if you choose. But whatever combination of words pleases you, the fact remains that not all of us will be willing to retire to the thousands of "Podunks"

from which we came and "forget it all." Sure, sure, right now we think we will, and we'd be crazy if we didn't think so. However, once we're united with our families, thousands of us will realize that the job which no longer requires bloodshed is, nevertheless, not done.

And to finish it, thousands of us will experience a continued determination to play an active role overseas, this time in the front lines of post-war reconstruction, though not in fox holes. For again the sane elements of civilization (to wit, the Allies) are again going to stage an effort—but this time a successful all-out effort we hope—to make this next post-war world really safe for democracy. And many a G. I. will wish to continue playing an active role, though no longer with shot and shell.

Speaking personally, it would give me a tremendous amount of satisfaction to hold a post-war reconstruction job overseas, and in holding the job to know that my ability and past experiences were being intelligently used in this war's ultimate goal of seeing the job through—of actually being on hand and actually taking part in helping to create, at long last, a safe and sane world.

So I ask, Why not give the G. I.'s—and the term is meant to include all officers and men in the armed forces—first call in applying for civilian post-war reconstruction jobs overseas?

Congress Can if It Will

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Telegram, Superior, Wis., for February 1, 1945:

CONGRESS CAN IF IT WILL

Members of Congress are indulging in considerable conversation concerning proposals to reorganize that body's method of doing business.

This is all to the good, provided that too much time is not spent talking about it. For many years the need has been apparent to citizens having dealings with Congress or knowledge of the way its machinery functions. The Constitution contemplated that the ultimate source of power, next to the people themselves, should be their duly elected representatives. The executive department has definite prerogatives and the judicial has negative powers as relating to both the others. But the greatest single source of power, the purse strings, the founders placed in congressional control.

Yet, with all its potential power Congress too often finds itself the victim of circumstances that it should control but does so only inadequately. To those familiar with the development of machinery of State government, especially as observed in Wisconsin, the curing of the situation at Washington does not seem so difficult to accomplish. In this State, through leadership both in the executive and the legislative branches during the past 50 years there has been a marked increase in the scope of governmental activity and in the machinery to handle it. At no time through this long process has there been evidenced on the part of the people of the State any great fear that the Executive would overshadow the legislators to the extent that the people's hold on Government be weakened.

One outstanding reason for this is the fact that in enacting the legislation to cope with modern conditions the Wisconsin Legislature has had the benefit of expert counsel whose objective was to serve the people's instead of special interests. Wisconsin was the first State to develop a legislative reference bureau and clothe it with ample authority and funds to produce full information relating to subjects under consideration. Thus have grown such able departments as the public service commission, the industrial commission, the State tax commission, and various other boards that are now an integral part of the State government.

The personnel of such boards is named by the Governor, but in actual practice the executive's function stops there. He can remove for cause and he can recommend reduced or enlarged appropriations, but the general Wisconsin experience has been that these agencies function independently and stay within the limits contemplated by the legislature.

Two vital things are lacking at Washington, the need for which has prevented Congress from working out any such efficient sysetm for the National Government. First, Congress has no adequate fact-finding organization on which it can depend for unbiased analysis of the problems presented; second, it has no machinery for following through on departments to hold them to the task prescribed and prevent them from branching out into other fields. A lone Congressman or even a congressional committee has small chance to follow the ramifications and evaluate the consequences. A smaller unit such as a State, does not meet this latter difficulty in such degree. Being closer to the scene of operations legislators have a better chance to know how far public servants may be transgressing.

There are efforts being made to streamline its methods of operation, but unless Congress makes up its mind to first inform itself as to the needs involved and second to check up on the agencies that it sets in motion the lawmakers have small chance of holding up that end against executive departments and bureaus of their own making. Congressman VOORHIS of California is pressing a bill to accomplish this. The general idea should be written into law with the least possible delay. Congress has too long permitted bureaus and interested department heads to be the main source of information as to the merits of their own operation.

Activities of Secret Service and Other Enforcement Agencies of the Treasury Department

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I include as part of my remarks some interesting releases from the enforcement agencies of the Treasury Department. They follow:

Frank J. Wilson, Chief of the United States Secret Service, said today that carelessness on the part of persons receiving Government checks and merchants and others who cash them is contributing to an increase in juvenile delinquency.

Chief Wilson said that nearly half of some 1,800 persons arrested by his agents during 1944 for stealing and forging Government checks were 18 years old or younger. Many of these youngsters, he believed, might have been saved from making a start toward a life of crime had the opportunity for apparent easy money been removed. He called upon persons who receive such checks to guard them as they would money, and on persons who cash them to use extraordinary care in obtaining proper identification of persons who present checks for payment.

An additional social aspect of the problem is presented by the fact that many such checks stolen are allowance and allotment checks urgently needed by dependents of our servicemen. Their families or dependents often suffer hardships because issuance of new checks is delayed by the necessary investigations.

Chief Wilson said the courts are paying increasing attention to the juvenile problem arising from this racket. Several jurists have called merchants who cashed checks for juveniles under obviously doubtful circumstances into court and warned them of possible charges of contributing to delinquency.

At Omaha, Nebr., Judge Herbert Rhoades, of the Douglas County Juvenile Court, placed parents of 9-year-old and 11-year-old brothers on probation for a year after the children were arrested on check stealing charges.

The tragic aftermath of crime was demonstrated dramatically in one case. A San Antonio, Tex., man identified as the forger of six Treasury checks, stabbed himself to death before his wife and baby as city detectives closed in on him after a 10-mile automobile chase.

The Secret Service is intensifying its educational campaign designed to remove opportunities for stealing and forging checks.

Narcotic addicts, pinched by steadily diminishing supplies in the underworld trade, are resorting to frantic efforts to obtain drugs through fraud and theft, H. J. Anslinger, Commissioner of Narcotics, reported today in reviewing the work of his agents during 1944. He cited as examples:

Three Dallas, Tex., men were given prison sentences in connection with theft and sale of morphine syrettes from first aid kits installed in Army planes and parachutes, thefts that might cost the lives of United States fliers.

A Sioux Falls, S. Dak., couple to satisfy their addiction, invented a cancer stricken father and false documents to obtain quantities of morphine from a sympathetic country doctor.

A woman addict in Kentucky hired ailing old men whom she paraded from physician to physician as her father to obtain prescription drugs.

Two Medford, Oreg., physicians were given long prison terms for supplying addicts; a prominent St. Petersburg, Fla., doctor drew a record $10,000 fine and a suspended prison term; and a Chicago physician is awaiting trial on similar charges.

E. J. Shamhart, Deputy Commissioner of Customs, reported continued numerous seizures from vessels arriving in United States ports especially those from India and Iran, mostly in small caches in every conceivable hiding place aboard ship. However, several sizeable lots of opium seized appeared intended for the illicit United States traffic.

Combined narcotics seizures by customs at the ports and borders and by Narcotics agents in the interior traffic totaled 7,160 ounces, compared with 8,549 ounces in 1943. Total seizures of marihuana were 12,117 ounces, against 11,961 ounces in 1943. Total arrests for violations of the drug laws were 2,410 in 1944 and 2,672 in 1943.

Seizures and arrests continue below levels of pre-war years.

The days when mountaineer folk considered "revenooers" fair targets for a rifle ball have passed largely, but enforcing Uncle Sam's tax laws relating to liquor still has its hazards.

Dwight E. Avis, Assistant Deputy Commissioner, in charge of the enforcement section of the Alcohol Tax Unit, culled from his agents' reports on 1944 activities a case in point.

Two Treasury investigators, J. B. Reed and W. W. Frost, were wounded by buckshot near Biloxi, Miss., when their car was ambushed after they had destroyed two moonshine stills. Three prisoners in the rear of their car were unhurt. Lovender Ladner and Ramsey Cameron were given 20-year prison terms on charges of assault with a deadly weapon in connection with the shooting.

There are new tricks to this old trade also, Mr. Avis revealed. One gang of illicit liquor distributors in North Carolina employed attractive 16-year-old girls to accompany their drivers as "blinds."

The American soldier's penchant for souvenirs is proving something of a headache to United States Customs officers, who, although sympathetic, have to follow the laws and regulations.

E. J. Shamhart, Deputy Commissioner of Customs, in charge of enforcement, reported numerous seizures during 1944 of automatic weapons, explosives, explosive devices, and ammunition obtained in battle areas and being brought back by returning servicemen.

Importation of military souvenirs is permitted where the members of the armed forces have certificates of permission signed by their commanding officers. Unauthorized articles are confiscated and turned over to military authorities. Customs officers point out that many such items are dangerous and that there is danger of weapons and explosives falling ultimately into irresponsible or criminal hands unless they are rendered inoperative.

Attempts of servicemen to inform their relatives of their whereabouts and experiences in communications outside the mails, and consequently not cleared by other censorship, also add to the Customs job. Diaries and other such communications when seized are preserved carefully and may be released to the addressees after the war.

Mr. Shamhart reported that the scarcity of liquor produced an increase of small-scale smuggling operations during the year, with 6,650 such seizures, an increase of 1,100 over 1943. There were no signs of a revival of liquor smuggling on the scale of prohibition days rum running, however, with such activities being confined to individual cases on the Mexican border and from Cuba. Other types of seizures declined, but several cases involving war-scarce commodities were noted. Mexican silver cigarette lighters worth $8,000 were seized, along with some jewelry in one case. Two persons were arrested in a case involving smuggling of watches, silks, and woolens worth $24,000 from Canada.

A case of attempted smuggling in reverse involved $11,000 worth of piece goods headed out of the country in violation of orders of the Foreign Economic Administration and intended for Cuban consignees. Remnants, which could be exported legally under license, were packed around the outside of bales containing actual bolts of materials. The goods were seized.

W. H. Woolf, head of the Intelligence Unit of the Bureau of Internal Revenue, has a long-standing conviction that persons who cheat Uncle Sam on their taxes are pretty likely to "take" their fellow citizens as well.

For example:

An Alliance, Ohio, scrap-steel supervisor for a big steel company charged 25 cents to $4 a ton for bestowing to dealers wishing to sell scrap to his firm his personal stamp of approval. His employer was in ignorance of his methods. The Intelligence Unit found the man had reported only $4,200 income while garnering $25,000, and he went to prison for tax evasion.

An Oskaloosa, Iowa, gasoline dealer made false claims for tax exemption on sales allegedly made to the county government. He claimed that 50,000 gallons were sold to the tax-free agency, whereas investigation showed that actually only a small part went to the county, the rest being disposed of to other customers, quite profitably, of course.

In another case, Mr. Woolf reported, a gambler made $125,000 betting on races and failed to share with the Government. He's doing 5 years.

Wallace and Williams

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Washington Evening Star of February 12, 1945:

WALLACE AND WILLIAMS—COMMON MAN

(By Ernest Lindley in the Washington Post)

A contest of sorts seems to be developing between a majority of the Republicans and the right-wing Democrats in Congress to see which group can put itself more emphatically on the record as opposed to any man who has lifted his voice in behalf of the common people or the underdog. Henry Wallace has become the symbol of the aspirations of the common man—more so probably than any other man in American public life except Roosevelt. Aubrey Williams, less well known than Wallace but very far from unknown, is identified more particularly with the underdog.

Williams was Hopkins' right-hand man as Federal relief and W. P. A. Administrator. He organized the National Youth Administration in 1935 and was its Administrator until it was liquidated. Through N. Y. A., hundreds of thousands of young men and women earned enough money to enable them to stay in high school and college. Hundreds of thousands of others got part-time work experience which helped them to qualify for jobs. As the national defense program and the war came on, Williams was quick to correlate this work training of young people to the needs of war industries.

Williams put his heart into the N. Y. A. program, perhaps all the more because he had had to quit school in the fourth or fifth grade, to start earning his living. Later he went back to school and worked his way through college. In the First World War he served with the Y. M. C. A., the French Foreign Legion, and the United States Army. Three of his four sons are in the armed forces now.

What has Williams' early life got to do with his qualifications to be Rural Electrification Administrator? Not much, perhaps, except to indicate that he has energy and a strong will—in short, that he is a good example of individual initiative. Not all our self-made men are to be found in private business. Many of the ablest go into the professions and the public services, often because they have a sense of social obligation. Williams comes out of the South, from early American stock—judging by his long lank frame, predominantly Scotch-Irish. He has come a long way under his own steam. He is the kind of man who would rather be an effective public official than president of the largest corporation or a millionaire. He is simply an old-fashioned American with a Presbyterian conscience, who believes that equal opportunity is a fundamental American aspiration, and that the high-water mark of American economic and social progress was not reached in the twenties.

As to his specific qualifications to be R. E. A. Administrator, these observations may be pertinent: He is an experienced public administrator who has dealt with large affairs. He is enterprising. One of the gravest charges leveled against him as N. Y. A. Administrator was that he corralled machine tools which could have been put to better use elsewhere. The charge probably was correct, but it was a tribute to Williams' foresight and initiative. He has shown ability to find and direct competent men. One of the important national farm organizations, the Farmers Union, thought him qualified to be one of its chief organizers.

Williams' opposition does not appear to be as large or as firm as Wallace's. But the political significance of the fights against them both lies in the fact that they are champions and symbols of the aspirations of the common man and the underdog. Their opponents may be smart politicians; they have succeeded in getting themselves elected. But they have not won a national election since 1928, and they are advertising a general viewpoint on which Roosevelt repeatedly has been able to capitalize. That is the viewpoint which the progressive Democrats have labeled "Hooverism."

Presented as a public service by:

INTERNATIONAL LATEX CORPORATION,
Playtex Park, Dover, Del.

Lincoln

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following editorial from the February 12, 1945, issue of the Lawrence (Mass.) Evening Tribune:

LINCOLN

There were not many men 84 years ago, especially in the distraught city of Washington, who believed that the Union of States could be saved. Bull Run, which statesmen and society people went out to see in their carriages, was but the beginning of a succession of disasters, and for a time it seemed as if the Union could not produce soldiers who would stand and fight and generals competent to lead. Everywhere there were treachery, disloyalty, fear, acquisitiveness, and inefficiency.

Meanwhile, the thunder of the guns drew closer to the capital and the city was overrun with fugitive slaves, soldiers who had fled from battle, and mercenaries of one sort or another who were determined to capitalize the Nation's crisis.

Lincoln witnessed the disheartening spectacle. He saw the defeat of his armies, the failure of his chosen generals, the perfidy of many in high places, the rising tide of fear that surged through the city. For long months it appeared as if the forces of the Union could not match in fighting qualities those who followed the banner of Lee and

that a great nation must disintegrate. He had reason, not once but a thousand times, to fear that all was lost, that the overwhelming storm could not be weathered. But he never lost either his faith or his courage. He knew that a cause which was infinitely just would triumph, that the American people had within them those qualities which are vital to victory.

There is never a time when the life of Lincoln is not a source of inspiration to the American people. In this troubled year of 1945, the sublime faith of Lincoln in the enduring character of this Nation is a heartening example and a font of spiritual sustenance.

The American people need this faith today and will need it still more in the days that lie ahead. At a time when defeat was everywhere and passion ran high, Lincoln found it in his heart to speak without malice and to urge charity for all "and firmness in the right as God gives us to see the right." Let each American do his best to find in his own heart something of his courage, his tolerance, and his faith.

Where New Jobs Are Waiting

EXTENSION OF REMARKS

OF

HON. ROGER C. SLAUGHTER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. SLAUGHTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of February 11, 1945:

WHERE NEW JOBS ARE WAITING

The American people have become acutely conscious of the need of planning for full employment after the war Henry Wallace is only one of many who are stressing this necessity. And whether the number of jobs is to be 57,000,000, as Mr. Wallace asserts, or several million less than this figure, as estimated by others, the task of maintaining full employment is one to challenge all our resources.

While the great bulk of these jobs must be geared to the home market, many industries are set up on the basis of supplying the peacetime requirements of other countries. We are prepared to produce automobiles, typewriters, agricultural machinery, machine tools, and mass production goods in general on a scale far in excess of domestic needs. Evidently the expansion of our export industries might be counted on to furnish an important quota of jobs toward full employment.

In his Chicago speech last October the President said he was convinced that with congressional approval our foreign trade could be trebled after the war, "providing millions of more jobs." Dean Acheson, an assistant secretary of state, told the National Association of Manufacturers that the United States must find markets abroad "in the neighborhood of $10,000,000,000," and thus provide 3,000,000 jobs in industry and 1,000,000 in agriculture.

We shall not realize the importance of these figures unless we bear in mind that the 1940 census, showing an aggregate employment of 45,000,000 persons, reported that only ten and one-half million of these were engaged in manufacturing. The rest were in construction, mining, farming, trade, and various services. The 3,000,000 jobs proposed in export industries would thus constitute nearly 30 percent of all employed in normal peacetime manufacturing.

What are the chances of expanding our export industries and thus contributing millions of new jobs toward the full employment program? The Department of Commerce, in a survey of foreign trade after the war, points out that the chief barrier to the expansion of American imports has been, not lack of demand on the part of foreigners, but the inability of foreign purchasers to get the dollars they needed to pay for our goods. They may have enough of their own currency for the purchases they would like to make, but unless they can exchange their currency into dollars the American dealers aren't interested. And the supply of dollars available depends in the long run on sales of foreign goods to the United States.

In other words, foreign trade is essentially a swapping of goods. Foreigners pay for the American goods they buy with the goods they sell in America. (To be accurate we must include here the American money spent abroad by travelers, or sent back to the old country by immigrants, or spent on foreign freight and insurance.)

Evidently we can't build up our export industries unless we are willing to accept imports in payment. We can't sell more abroad unless we are willing to buy more abroad.

We all recognize this broad fact theoretically. But to apply the principle practically—that is another matter. After the last war we found ourselves abruptly transformed from a debtor to a creditor nation. This meant that whereas we had been accustomed to pay the interest on our debts with exports of farm products and manufactured goods, now we no longer could send out exports in payment of interest. The only way foreigners could continue to buy our products was by inducing us to accept goods in exchange.

But we didn't want to do this, or at least our protected industries didn't want us to. They sent up screams that resulted in our raising tariffs that already were high, and a few years later in raising them again. Our export trade was in danger of being shot to pieces because of the inability of foreigners to pay for the American goods they wanted. The only reason this didn't happen was that we began to make foreign loans on a huge scale. We thought we could eat our cake and have it too. What we were doing was lending the foreigners the money to buy American goods and postponing the day of reckoning. That day finally came in the crash of the depression.

In view of the stress that is now being put on export industries to help create postwar jobs, the question is whether we have learned the lesson of the improvident 1920's. Are we ready to build our exports in the only sound way by swapping exports for imports? Or will we shut our eyes and plunge ahead as we did after the last war?

Two writers in Harper's magazine put the case bluntly in an article, That Export Boom May Cost Us Another War. They point out that though people recognize in principle that tariffs should be lowered in order to promote both national and international prosperity, apparently no group has ever been willing to give up any advantage that it thought a high tariff brought it.

The experience under the Hull trade agreements was discouraging. The greatest care was taken to make reductions in duties so slight as to admit only an additional trickle of foreign goods. But the admittance of such goods to the extent of only 2 percent of the American production was enough to evoke violent protests from the interests affected. The salmon packers of the Pacific coast were going to be ruined by imports of a few thousand cans against an American production of 300,000,000, just as the livestock men of the West grew pale when an unusual rush of Canadian cattle one day in the spring of 1936 broke the Minneapolis market for the day.

The writers in Harper's conclude that if America makes a ruthless drive to capture foreign markets without a sound give-and-take program on foreign trade, this Nation will force other countries into a series of protective measures in the course of which world trade may be strangled, peoples impoverished, and the way left open for new dictatorships and new wars.

It cannot be denied that such a danger exists. It need not eventuate if the American people act on the information now available and insist on a reasonable foreign trade policy. Such a policy would be of vast advantage not only to the United States, but to the world. The Nation cannot allow an enlightened policy to be wrecked by pressure groups, eager for short-run advantage.

Price Control and the War Effort in Australia

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. OUTLAND. Mr. Speaker, our experience in this country with price control has demonstrated the effectiveness of a national price-control program in time of war. While some mistakes have been made the over-all picture has contrasted wonderfully with the picture of the last war.

I believe that it would be of interest to the American people to know something about the price-control efforts of our allies in this war. Consequently, I am including here as part of my extension of remarks an address broadcast over the Columbia Broadcasting System on January 20 by the Honorable D. B. Copland, Commonwealth Prices Commissioner of Australia, entitled "Price Control and the War Effort in Australia":

I am very glad, during a brief official visit to the United States, to have the opportunity of speaking to you about price control in its relation to the war effort in Australia. This is the right way to approach the problem of price control. It should not be considered merely as a repressive agency designed to hold prices at a particular level during the war, though that is the major job price control has to tackle. But in the broader sense price control is one of a group of measures which all democratic governments have to take to mobilize their resources for war and to maintain stability in the economy under the disturbed conditions of war.

Australia commenced price control in the first week of the European war in September 1939 and it has been my principal responsibility to the Commonwealth Government to control prices ever since. The first step taken by the Government was to insue a "stay" order pegging the prices of the principal commodities at the levels ruling on August 31, 1939. This gave us time to work out a system of control which would permit price adjustments to unavoidable increases in costs. In the Australian economy costs rose immediately on the outbreak of war because Australia imports essential goods and the landed costs of these imports went up on account of increases in freight rates and war-risk insurance and rises in prices overseas. Australian exports also rose and these goods enter into consumption or into the

production of other goods. These increases in the prices of imports and exports had to be absorbed into the whole price structure and some increases in prices were therefore unavoidable. Australia has an interesting system of wage control under which a large proportion of wage rates are automatically adjusted each quarter to the cost of living. Thus, the rise in prices brought about by higher prices of imports and exports also brought about a rise in wages. This in turn caused other costs to go up and other prices. It looked like a vicious spiral of rising prices, rising wages, rising costs and still further rises in prices.

This is rather too simple an explanation of the method of control and might give the impression that there was no real firm control at all. It would, however, be a great mistake to jump to such a conclusion. Traders and producers were not allowed to add the whole of their increased costs of production if they were already making high profits. They were not permitted to make a greater profit margin on sales of any commodity than their pre-war margin unless they got permission. In some cases where profits were low, or where losses were actually being made, traders were allowed to adjust their profit margins by raising their prices. Against that, however, was the principle adopted that the Prices Commissioner could also reduce profit margins where they were high. As turn-over was increasing, profits tended also to rise rapidly and traders were expected to absorb some of the increases in costs. This is what people call the squeezing of profit margins, and what others call profit control instead of price control, but what's in a name? The fact was that from the very beginning of the war profit control was an integral part of price control, so that prices did not rise by the full amount of the increases in costs. In a few instances, prices were even reduced below the pre-war level, and in many cases, as for example, in steel and iron, large increases in costs were absorbed before any rise in price was permitted. Australian iron and steel is now the cheapest in the world, and the main company producing iron and steel in Australia has readily accepted a lower profit margin for the duration of the war. The squeezing of margins was not confined to manufacturers, but was extended to both wholesale and retail distribution.

From the very outset price control was designed to prevent profiteering. In wartime supplies are disorganized and demand leaps up rapidly. Thus there is created a profiteer's paradise, and he would have most certainly entered into that paradise had it not been for price control. The rule was laid down from the outset that mere shortage of supply in the face of increased demand did not entitle a trader to raise his price.

This system of price control worked fairly satisfactorily for the first 2¼ years of the war. At the outbreak of the Pacific war in December 1941, the Australian price level had risen by only 12½ percent despite the big increases in imported goods and in exports and the general upward movement of wages and incomes. The pressure on the price level was greatly increased by the impact of the Pacific war on Australia. We had then to divert men and resources from civilian production to war production and the shortages of goods became more acute. So did the pressure of demand, and it was a stiff battle to hold prices at reasonable levels. The landed costs of imported goods went up again because we were partially isolated from the rest of the world and had to pay very heavy insurance rates on cargoes. After a year and a quarter of the Japanese war, the price level had risen by another 10 percent, making 22½ percent in the first 3½ years of war.

The increase would have been greater had it not been for other measures of control designed to strengthen the economic front. We have to remember that in this war the home front is more important than in any war in history. That is because more than ever before this is a war of equipment and ships and planes, as well as of the armed forces. The drain on normal supplies of goods and transport is much greater than in any other war, and Australia has had to impose rigid controls on her economy in order to build up the home front for the increasing burdens it has had to bear.

These controls are as follows:

(a) Control of supplies of essential materials so that they will be reserved for war needs.

(b) Control of transport so that priority will be given to materials and men required for war. We even have a rationing of railway travel in Australia.

(c) Control of consumption through general rationing so that the productive effort of the community will not be absorbed in meeting nonessential civilian demand. In addition to petrol, tea, butter, sugar, and meat, there is a severe rationing of all clothing, household linen, boots, and shoes. Without this rationing it would be impossible to supply our own forces and the forces of our allies in the Pacific and the people of Britain with essential food and clothing.

(d) Control of manpower so that men and women are undertaking what is regarded as essential work if they are not in the armed forces.

(e) Control of incomes, including wages and salaries, and incomes derived from rent and interest. There is thus a maximum level of incomes so that costs will not be continuously rising because of increased incomes resulting from shortages of labor.

In this background of general control, price control was further intensified and a price stabilization policy was put into operation in April 1943. This policy has been successful in holding the general level of prices, including the prices of all goods and services at, or about, the level prevailing on April 12, 1943. No goods or services are exempt from the price ceiling. Thus it covers not merely the prices of potatoes and butter, or essential clothing, but also the prices of amusements of all kinds, haircuts, charges in beauty parlors, medical and dental fees. The view Australia has taken is that there can be no compromise with the evils of inflation and profiteering. The controls of supply, consumption, labor, and transport, all contribute not only to the mobilization of resources for war, but also to the success of price stability. Price control in turn plays a very important part in enabling these other controls to operate equitably and smoothly. They all hang together like the blocks in an arch and they can bear the burden while they are in position. Price control enables resources to be diverted at equitable levels of rewards and it prevents the less noble-minded sections of the community from being able to use resources to obtain special rewards higher than those available to people working for the war, whether they are soldiers, sailors, airmen, munition workers, transport workers, and so on.

Thus we see that price control has a great constructive part to play in the war effort. It is a central feature of the attack on the home front. Not only does it help in mobilizing resources for the war, but it imparts confidence to the people that inflation will not swallow up all their energies, their incomes and their savings. It gives stability to wage earners, investors, and employers alike, in a world which otherwise would be most unstable. It sweeps away opportunities for profiteering, which is most damaging to any war effort. Thus it builds up morale, but its advantages will not be confined to the war.

The greater the economic stability attained during the war and the lower level which costs and prices can be stabilized, the easier will it be to make adjustments to peace conditions, and to move in an orderly way through the difficulties of the transition period from war to peace. This is important. We all owe it to the hundreds of thousands of men and women who are fighting on the real front that we shall hold the economic front in reasonable shape for them when they return. We cannot do this unless we maintain stability of prices. If we fail we will damage ourselves in the long run, but much more reprehensible will be the damage we do to the brave men and women who are giving the most valuable years of their lives to enable us all to live in a free society. Each section can see the case for special concessions, but if all the concessions are granted, we are back where we were before in the same relative position, except that prices and incomes are higher and we have suffered a blow to our pride that we were not able to hold the position. For this reason a price controller's job is a most unenviable one. His watchword should be: "No compromise," and people in a democracy normally dislike a man who is uncompromising. But in price control we have to be uncompromising, because we are dealing with an enemy. At all events, that is what we have tried to do in Australia and our measure of success is partly due to an uncompromising attitude against allowing any price increases under a price stabilization plan. So, if I can presume to say one word of advice after my 5 years' experience in the small community of Australia, it is this, support your price controller and sustain him. You will get greater rewards in the long run than any inconvenience you may suffer from his decisions.

Stability is so important that it must be held even against increases in costs such as the higher prices of imports or the necessity for improving the position of some producers to bring them up to common levels of incomes in the community.

To meet these costs it is better for the Government to pay subsidies rather than to allow prices to rise still further. The Australian Government in common with the other democracies that are operating a price-stabilization plan is paying subsidies. These subsidies are not looked upon as aids to distressed producers, but as constructive payments designed to maintain economic stability. They amount in Australia to approximately £17,000,000 per annum, or about 1½ percent of the total national income.

Views of Civil Aeronautics Board as to the Proposed Uniform State Air Commerce Bill

---

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. LEA. Mr. Speaker, pursuant to request granted by the House, I place in the RECORD a statement by the members of the Civil Aeronautics Board in reference to the proposed uniform State air commerce act.

There is a proper field for the States by legislation and administration to cooperate with the Federal Government in the regulation of air navigation. The prospect, however, of 48 States attempting by legislation and regulations to cover the board field of aviation must be looked upon with apprehension by all

true friends of air commerce. A multiplicity of regulations, conflicting laws, and inconsistent regulations will almost inevitably follow a widespread scale of State legislation.

However, well intended may be the aggressive effort to secure State legislation of air navigation in the alleged interest of our commerce, it carries the probabilities of many varied and great handicaps to the progress of aviation. All such efforts should be measured by the probable results that would follow as the result of such proposed legislation.

The views of the Civil Aeronautics Board are expressed in the following letter:

JANUARY 19, 1945.

Mr. FREDERICK G. HAMLEY,
National Association of Railroad and Utilities Commissioners,
Washington, D. C.

DEAR MR. HAMLEY: Following the meeting with some of the Association's committee on legislation on December 6, 1944, the members of the Civil Aeronautics Board have given careful consideration to the committee's proposed uniform State air commerce bill. In response to the committee's request, the Board submits its views with respect to that proposed legislation.

We believe you will agree that the question of state economic regulation should be considered from the standpoint of the interest of all the people in the realization of the full potentialities of air transportation to serve the people and in the development of a national air transportation system adequate to the needs of the entire country.

We are of the opinion that no urgent necessity exists for the proposed economic regulation of air commerce by the States. Air transportation has been, and is, essentially interstate in character, and it is our belief that it will continue to be predominantly interstate for some years. Thus, a comparison of the relative volume of passenger movements by types of carriers shows that in 1933 45 percent of the railway passengers and 54 percent of the highway passengers moved in intrastate commerce (Federal Coordinator of Transportation, passenger traffic report), whereas in September 1940 (the last month for which the Civil Aeronautics Board has a country-wide traffic survey) less than 16 percent of the air carriers' passengers moved in intrastate commerce, and they accounted for less than 8 percent of the total passenger-miles. In the past intrastate services have developed in close relation to the long-distance or interstate services. The Board looks forward to a considerable growth of local air services, but even these services will be largely interstate in character, operating across State lines and carrying chiefly interstate traffic. Of the approximately 600 applications for domestic service on file on January 5, 1945, only 47 applications were for service within a single State. Air transportation is still in its development stage, and no public interest will suffer from postponing the inauguration of State economic regulation. On the contrary the development of air transportation could be seriously prejudiced by the regulatory program you propose. We recommend, therefore, that no action be taken during the 1945 sessions of the State legislatures.

If the States, nevertheless, undertake active economic regulation of air transportation, the Board agrees with your committee that uniformity in legislation and regulation is desirable. However, the Board must point out that seldom have uniform State statutes been uniformly interpreted and administered, and it entertains grave misgivings lest the development of air commerce be prejudiced by a multiplicity of regulation and by a lack of uniformity in regulation.

The members of the Association's committee on legislation rested the case for immediate State economic regulation largely on what they assume to be an essential similarity between air transportation and other forms of transport. In response to your queries, we outlined what appeared to us to be significant differences between air and surface transportation, differences which support the conclusion that a different public policy from that designed for the regulation of surface carriers must continue to be applied to air commerce. We would again direct your attention to these salient and distinguishing characteristics: (1) air transportation is predominantly long-distance, and hence, interstate, transportation; (2) the air carriers do a relatively small volume of business (the industry's aggregate operating revenue being approximately equivalent to that of one medium-size railroad for the prewar years) and operate with relatively narrow profit margins, and hence are unable to bear the burdens of multiple regulation; and (3) the air transportation industry is still in its developmental stage when every opportunity to effect low costs must be safeguarded if the industry is to achieve the volume operations which the public interest requires. No evidence has been advanced that intrastate air transportation has suffered from the absence of State economic regulation or that the level of charges for intrastate transportation has been such as to require State regulation. Indeed, passenger fares have moved in harmony with reductions in operating costs. Furthermore, the studies which we have made into intrastate operations on the west coast (where conditions would be expected to be more favorable to intrastate operations) indicate that the local services have been financially dependent upon the long-distance, interstate operations. Thus, there exists no basis for any misgivings that the interests of the intrastate traveler have been neglected or made subservient to those of the interstate traveler or shipper. Nor is there any basis for a fear that the development of local services has been, or will be, retarded by the absence of State regulation.

If your association should, nonetheless, sponsor a program of State economic regulation of air commerce, we believe that every effort should be made to avoid conflicts between State and Federal regulations, and particularly that duplicate regulation of the same air line by both Federal and State authorities should be avoided. To insure this result each air line should be responsible to only one regulatory agency rather than to many regulatory bodies. Therefore, the proposed uniform bill should, in our opinion, be modified to redefine the jurisdiction of the State authority, limiting State economic control to those air carriers which are not subject to Federal regulation. It is our considered judgment that the air transportation industry cannot properly develop and give maximum service to the public under a system of multiple regulation. The industry's large potential contribution to the growth of the country's commerce and the welfare of every community, as well as its vital relation to national security and defense, warns against any governmental action, State or Federal, that might handicap or forestall its imminent expansion.

We should seriously consider the precise nature of the public's interest in air transportation. In the absence of artificially imposed obstacles, it is certain that every important community in the country will be linked by reasonably direct services to every other important community. Air transportation can make all regions of the Nation as accessible as the different parts of the State now are in terms of surface transportation. The vast majority of the people who will use air transportation for travel or for fast shipments will be primarily interested in long-distance carriage. If multiple economic regulation keeps cost at high levels or hampers the growth of volume operations, the air carriers will be unable to make those rate reductions which are prerequisite to the maximum development of economical air transportation. The net result of State economic regulation may thus be gravely detrimental to the interests of the people of the State, diminishing the amount of service offered to its communities and increasing the costs to the taxpayers.

Furthermore, the Board sees no justification for some of the duplicating regulations which are contemplated by the proposed uniform State air commerce bill. We refer specifically to requiring interstate carriers already certificated by the Civil Aeronautics Board to obtain certificates of convenience and necessity from the States. Similarly, the requirement that interstate air carriers keep accounts according to any system differing from that prescribed by the Civil Aeronautics Board would impose a heavy burden on interstate commerce; and even if that system is followed, the requirement that the interstate air carriers report specifically on their intrastate operations, segregating their accounts accordingly, would involve difficulties and expenses quite disproportionate to any resulting benefits.

This response to the request of your committee for a frank statement of our judgment as to the wisdom of the uniform State air commerce bill in its present form and at the present time rests upon our estimate of the consequences for air transportation which would follow the attempt of the 48 States to regulate the interstate air carriers that constitute our national air network.

Sincerely yours,

L. WELCH POGUE,
Chairman.

Medical Care in Maryland

REMARKS
OF

HON. DUDLEY G. ROE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. ROE of Maryland. I want to call your attention very briefly to a very important legislative enactment just adopted by the Maryland Legislature.

I am proud of Maryland's traditions and I think justly so, and so I am happy to see that my State, in cooperation with the doctors and nurses, our splendid and efficient State department of health, and our progressive Governor has worked out a program to give adequate medical care for those who cannot afford to pay for it themselves, and have provided in the present State budget an appropriation of $200,000 for this worthy worth-while achievement. I trust other States will follow Maryland's lead.

I will be pleased to get a copy of the Maryland act for any of my colleagues who might be interested in same. The editorial follows:

AN IMPORTANT STEP FORWARD IN MEDICAL CARE

Passage by the legislature of the State medical aid bill brings nearer the elimination of a serious weakness in the existing medical system. This is the inadequacy of medical care for those who cannot afford to pay for it themselves.

The bill makes provision for payment by the State of doctors and nurses engaged in

this service and also for improving the equipment and facilities of county health bureaus. Administration is placed in the hands of a newly created bureau of medical services in the State department of health, and this bureau is also to operate the two chronic disease hospitals, for which provision has been made, and the third which is contemplated. Expenses are covered by an annual appropriation of approximately $200,000 which is included in the budget.

The bill was framed with the advice and cooperation of the medical profession, and the virtue of the proposal lies in the fact that it endeavors to improve the existing system, which has accomplished so much, rather than to destroy the whole structure and attempt to erect something completely new and untried. The favorable action of the legislature keeps Maryland in the forefront in the important matter of improving and extending medical care to all who need it.

There Ought To Be a Law

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport Journal of February 16, 1945:

THERE OUGHT TO BE A LAW

It was reported last week from Michigan that disorders in a camp for conscientious objectors at Germfask are being investigated by the Government, with a view to finding some way of enforcing discipline among the 74 men confined at Citizens Public Service Camp No. 135, located there. The charges against persons interned at this particular place include refusal to work, frequent absences without leave, bringing liquor into the camp in violation of rules, breaking into food lockers, and destroying large quantities of Government property—and, on one occasion threatening camp officials with bodily harm.

The troubles at No. 135, we are informed, have been of long standing. State courts have insisted they are without jurisdiction, and the Federal tribunal in that district has taken the position that, except in cases of desertion, the violations were too trivial to take up the court's time. There have been proceedings against 10 deserters during the last 5 months, it was claimed by the prosecuting attorney.

In our view there has been entirely too much coddling of these so-called conscientious objectors from the very beginning, this claim being used as a cloak to hide, too often, a nonconscientious coward's fear of enemy bullets. The line drawn between the classes of American youths—those anxious to serve and those unwilling to answer their country's call—is entirely too wide. Camps for conscientious objectors are entirely too numerous, for everything else being in order, the eligible male citizen should either be ordered to fight or go to prison. (There are, of course, some exceptions.)

What is needed, however, is a law giving the commandant of a citizens public service camp full authority to punish minor infractions of discipline following proper trial by military court. It is high time to put an end to such nonsense as has been reported from Germfask, No. 135.

Chicago's War Labor Plan

EXTENSION OF REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, regarding the legislation recently passed by the House of Representatives, known as the work-or-fight bill, I include an article from the Washington Daily News of February 13, 1945, which outlines a plan that is used in Chicago to solve the war-labor situation.

I have known Dean Spencer for quite a while and know him to be a very capable and apt man, who meets these problems with a breadth of vision, as the article herein describes.

He has been fortified with men in the War Manpower Commission such as Charles Casey and Leonard Brown, who are a credit to that agency, and this article proves what can be done by cooperation of employer and employee, without drastic legislation.

The article follows:

CHICAGO'S WAR LABOR PLAN

(By Peter Edson)

Chicago area's War Manpower Commission office thinks it has a plan for solving the labor-shortage problem in critical war industries.

This Chicago plan has been in operation for over a month and William H. Spencer, dean of the Chicago University School of Business, now regional W. M. C. director, cites figures to show it works. The Chicago plan is attracting attention at W. M. C. headquarters in Washington as something other areas can copy.

To begin with, Chicago is one of the tightest labor areas in the country. It was slow starting on war work but has picked up steadily. The Chicago area consisting of Cook and DuPage Counties—not to be confused with the Chicago Region of Indiana, Illinois, and Wisconsin—has a labor force estimated at 1,833,000, of whom over a million are in war production. Every procurement agency has contracts in Chicago—Army, Navy, aircraft, Maritime Commission, and 50 percent of the Quartermaster Corps processed foods are from Chicago packing plants.

Many of these Chicago area contracts are without ceiling, meaning that the Government will take all of the items that can be produced, without limit. Chicago can therefore use all the labor it can get for war industries. The question has been where to get it.

Toward the end of last year, Chicago area manpower officials through the 18 area offices of the United States Employment Service, were crying for 60,000 more workers in essential industries. That figure has been successively cut down to 40,000, to 20,000, and to 10,000 today through a very simple and apparently workable plan which has been found acceptable to employers, labor union officials, and the working people themselves.

Point of attack on this problem was the 650,000 people employed in the trade and service industries.

First step was to put all women workers under priority referral, meaning that women could no longer switch from one job to another unless they had U. S. E. S. release.

Next step was an order to cut 10 percent from the labor force of all nonessential industries employing more than 10 people, the 10-percent cut to be paid off in male workers. Thus if an employer had 200 workers, half of them women, he would have to release 20 men.

These employers could not be given credit for the men they released, however, unless they were men who could be placed by U. S. E. S., unless they were accepted by the essential industry employer to whom they were referred and unless they had a written guarantee they'd get their old job back from their original employer and that all their seniority and other union rights would be protected during their temporary employment in essential war industries. These three conditions, particularly the last, sold the idea to the labor organizations and, furthermore, they prevented the nonessential industry employers from dumping their least efficient workers.

Deadline for release of the first 5 percent was set at February 15, the second 5 percent to be released by March 15 for the tristate region, though this was moved up to March 1 for the two-county Chicago area.

The results, as announced by Dean Spencer, show how Chicago has been able to shift its work force to meet war needs. What this all means is that Chicago has found tens of thousands of workers it didn't know it had and that it will get many more millions of dollars worth of war contracts as a result.

Address of Hon. Ivy W. Duggan, Governor of the Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ivy W. Duggan, Governor of the Farm Credit Administration, before the annual meeting of the American Farm Bureau Federation, December 12, 1944:

Farmers are in the best financial position for the moment that they have ever known. They have experienced 5 years of record production. There has been no other time in the history of agriculture in this country when we have had 5 consecutive years of as high production, either in the aggregate or per farm worker. During the same period there has been an almost unlimited market for the vast majority of commodities which farmers have produced. In spite of greatly expanded production, they have been unable to fill the demand at all times for many commodities, such as wheat, tobacco, livestock, livestock products, etc. There are only a few commodities, such as cotton, wool, and eggs, of which at times we have had a surplus supply on hand. Farmers truly have done a magnificent job in the face of shortages of labor, materials, equipment, fertilizer, and other supplies in producing for the war effort not only the commodities most needed but when and where they were needed. Too little and too late has not been said of farmers in any instance in this war.

In fact, since 1940, farmers have experienced a situation that does not usually come once in a lifetime. In addition to having a favorable growing season, record production, and almost unlimited markets, they have received good prices for what they produced. While prices of agricultural commodities on the whole have not been as high in this war as they were in the last war, income has been higher because of the record volume of production.

Farmers have had demonstrated again that it is price times volume that determines their income. The gross income from agriculture for each year since 1941 has set a new all-time record. Each year since 1941, the net return to agriculture has also set a new record. The average annual farm income per worker has nearly doubled since 1941 and is now $1,456. Of course, the annual income per worker is nothing like as high in agriculture as it is in industry where it now amounts to $2,360. But still, I state again that as a result of this combination of factors, farmers are for the moment in the best financial position in the history of American agriculture.

There has been a marked change in the financial structure of agriculture since 1940. The high gross income and the high net return to labor and investment in agriculture have had a big effect on agriculture's balance sheet. We find the total equities in agriculture have increased almost $30,000,000,000 between January 1, 1940, and January 1, 1944. This increased equity is accounted for by increased prices in the case of real estate, by increases in both volume and price in the case of crops and livestock, and by increased savings from net income in the case of currency and deposits and United States Government bonds; and finally by a reduction in the farm debt since 1940.

Possibly the most significant item in farm assets is the large amount of cash, bank deposits, and United States Government bonds which farmers now hold. On January 1, 1944, this amounted to about $12,000,000,000, or an increase of more than $7,500,000,000 since January 1, 1940. This increase in cash assets and bonds alone amounts to more than the total outstanding farm mortgage debt. If distributed in proportion to debtor this could wipe out the total mortgage indebtedness of farmers together with all of their short-term indebtedness on January 1 of this year and still leave several billion dollars of cash on hand.

Farm real estate values account for the greatest part of the rise in farm assets from $54,000,000,000 in 1940 to $83,000,000,000 in 1944. There has been little change in the amount of farm real estate, so all of this increase of $12,000,000,000 in the value of farm real estate is due to price changes. Then the rise in prices of livestock, machinery, and crops on hand amounts to over $7,000,000,000. So it is estimated that the rise in prices accounts for $19,700,000,000 of the $21,100,000,000 increase in the value of tangible farm assets. How secure is this increase of $19,000,000,000 in value of assets which is based on price increases? How much of this is paper profit and how much of it is real? How much of it will last? Let's look for a minute.

It is true that Congress has guaranteed to beginning January after the end of the war, support prices of many agricultural commodities at 90 percent of parity for 2 years But that doesn't mean today's prices because prices of agricultural commodities on the whole are 114 percent of parity. Ninety percent of parity would mean a decline of one-fifth in prices received. Then with cost of production still on the upward trend, the net profit could be reduced without a 24 parity point decline. With a 24-point decline to 90 percent of parity the net profit could be greatly reduced or wiped out. Furthermore, Congress has not made a public commitment on the volume of agricultural commodities on which it would support the price, and farmers must never forget that it's not volume alone that determines income but that it is volume times price that determines the gross income. And to determine the net income, the cost must be subtracted from the gross income.

Real estate prices, which accounted for a $12,000,000,000 increase in farm assets the first of this year as compared with the first of 1940, have been going up since the war started at just about the same rate, if not a little faster, than during World War No. 1. For 2 years now this rate has been remarkably steady at 1 percent a month. Land prices for the whole country have gone up about 44 percent above the 1935–39 average. While the rate has been greater in some parts of the country than in others, there is no part of the country in which there hasn't been a material increase in the price of land. How much of this is paper profit? Frankly, if land prices continue to go up and there is continued speculation on the part of farmers and others in farm real estate, all of the increased assets may turn out to be merely paper profit. Let's see what happened in the last war.

Cash income and gross income were up then just they have been in this war, although not quite so high, and farm real estate values rose from $39,500,000,000 in 1944 to $50,000,000,000 in 1918. They didn't stop there, however, but went on up to $66,000,000,000 in 1920. In the 10 years from 1910 to 1920, the total value of farm real estate increased $32,000,000,000, or almost doubled. If we should continue to follow the same pattern, we could expect real estate values to reach a peak about 2 years after this war. You are all familiar with what happened after 1920. In 13 years' time the total real estate value shrunk to $30,500,000,000. Farmers had lost on real estate alone $36,000,000,000 of paper assets, and remember that the increase in the assets from 1940 to 1944 of $30,000,000,000 is $6,000,000,000 less than farmers lost on real-estate assets alone in the 13-year period following 1920. Whether the present increased assets turn out to be paper profits is going to be determined to a very high degree by farmers and others who bid for farm real estate. In addition to the actual loss in valuable assets, we should not forget the 2,000,000 farm foreclosures between wars when farmers who were foreclosed lost all their savings and equities.

The following factors are operating to further increase real estate values:

First, there are more people, both farmers and nonfarmers, wanting to buy farms. Tenants and sharecroppers are trying to become owners, active farmers are adding to the size of their places, war workers are buying expecting to become either part-time or full-time farmers, and servicemen, often with the help of their folks, are purchasing land to operate when they are discharged.

Many city people are looking for a place to invest surplus cash earnings as a hedge against further inflation. I would warn city investors, though, to remember that they didn't have any hedge in farm real estate in the 13 years following 1920. For them it was sort of like hedging on a horse race by betting on two other horses.

To supply this demand, the farms for sale are decreasing. Credit institutions, estates, and other unwilling holders of farms have sold nearly all their land. The higher rental incomes also have made retiring farmers and widows want to hold on to land they would otherwise wish to sell.

Not only are more people wanting to buy the fewer farms offered, but they can easily finance the purchase. Those $12,000,000,000 of quick assets give many farmers the money to pay cash or large down payments on land they want, and city buyers have even more cash they can use. The balance is easily borrowed.

Life insurance companies, banks, and other investment institutions which largely pulled out of the mortgage lending field in the depression are reentering it on a large scale. Many banks now find themselves with a very large proportion of their funds invested in Government securities and are seeking more diversified outlets for their funds.

Private capital is also aiding in the financing of sales. For example, individuals this year are making nearly 40 percent of all mortgage loans to farmers. Such loans are almost never based upon land appraisals by experienced appraisers or on the normal value of a property. They are not made under a long-time amortization repayment plan. Usually loans made by individuals are the first to get in trouble.

Added to these economic factors tending to further increase real-estate values are the psychological forces. In almost any area you go into today, you can hear farmers relating how someone in a community paid for a farm with one or two crops and how someone sold a farm for twice what he was offered for it or paid for it only a few years ago. Some farmers and real estate operators are beginning to feel the urge to do a little speculating, such as buying a farm for resale at a profit. Of course, no one knows how far this will go if not curbed. The full effects on real-estate values of the high production in 1944 and the large net income to agriculture have not yet been fully felt.

Over on the other side we have certain factors which are operating and which we hope will continue to operate to hold down further inflation of real-estate values.

Many farmers will remember what happened during and following the last war and will not repeat the mistake they made then.

The investment in Government bonds is at least delaying the full effect of the increased income on land prices.

One other factor is the uncertainty of post-war markets for agricultural commodities, especially some of the important ones such as wheat, wool, and cotton, causing many farmers to hesitate before obligating themselves for farms at increased prices. The advancing cost of production and difficulty in securing adequate and efficient farm labor has tended to put a brake on land purchases.

I think that the policy of the Farm Credit Administration is possibly one of the strongest influences in checking uncontrolled inflation of land. As you know, it has for a long number of years followed the policy and practice of lending on the normal value based upon the long-time earning power of the farm.

It took considerable courage on the part of the Farm Credit Administration and the cooperating borrowers, who took a portion of the risk, to lend on normal values during the depression of the thirties when most of the other lending agencies were withdrawing from the field or had withdrawn. Normal value during the depression is the same as normal value during inflation, but normal value during the depression was relatively high and in some cases higher than market value. By staying with the farmer and normal value during the depression, the Farm Credit Administration refinanced hundreds of thousands of farms which were on the brink of foreclosure and assisted the farmers to remain farm owners, hold their properties, thus affording them an opportunity to work out of the situation in which they found themselves, and to remain farm and home owners. Sticking to normal value during these present times when in so many instances the normal value is far below the present market price perhaps takes more courage than during the depression. However, when prices are at the bottom, they cannot go any lower, and history has proved that loans made at the bottom are much safer, both for the borrower and the lender.

The production credit associations, the intermediate credit banks, and the banks for cooperatives, as well as the emergency crop and feed loans, and the regional agricultural credit corporations were all of measurable benefit to the farmers of this country when

it was equally as hard to get production and marketing credit as it was to get mortgage credit.

I wish I had time today to review the history of each of these lending institutions and the part they have played in helping the farmer to achieve the very favorable balance sheet he has today, for each has a record in which it can take great pride.

However, getting back to the question of land prices, farmers themselves will determine just how much pressure their present cash bank deposits and Government bonds, in the amount of some $12,000,000,000, will exert on further inflation of land values. If they will use these liquid assets to further reduce their debts or invest them in more Government bonds to hold until after the war when materials and supplies are available, then they can use their cash assets to improve their farm buildings, build new buildings, make necessary repairs to equipment and fences, buy new machinery and equipment, improve their livestock, terrace and improve their land, and as operating capital. If so used, these funds will have very little effect in further increasing land values. After the war, farmers very likely will need a rather large reserve of ready cash and operating capital to convert from a wartime to a peacetime basis. I would like to point out right here that agriculture has a more difficult conversion problem than industry. Agriculture does not have any backlog of unfilled demand to be met when the war is over.

In the conversion period from a wartime to a peacetime basis and in the post-war period, farmers may have a greater need for sound agricultural credit agencies than they have ever had before. They will desire credit designed to meet their specialized needs. In some areas we may need a different type of credit with an intermediate period of maturity from the kind they have been accustomed to in the past; one designed to assist farmers in converting to a different type of agriculture due to the shifting of markets and production over a period of years. I would urge the American Farm Bureau and the other farm organizations to study carefully private, cooperative, and direct lending institutions, to thoroughly familiarize themselves with the history of these institutions, with their strength and weaknesses, and determine how well-fitted each is to meet the probable needs of the future.

If history repeats itself and we have declining prices following this war as we have had following all previous wars, we may have a rather heavy strain on the agricultural credit institutions of the country. I would seriously question the advisability of dispensing with any sound institution or program which has rendered a real service in the past, without carefully evaluating the future needs for such institutions, program, or service.

Other subjects to which we should give consideration are:

1. A Government licensed and supervised appraisal system where, for a reasonable fee, either a borrower or a lender could obtain a normal value appraisal based on the long-time earning power of a farm.

2. The taxing of profits made from land speculation. This could be a variable tax on farm resales, the amount of the tax depending upon the number of years between the time of purchase and time of resale.

3. A study of the Government lending agencies to determine the degree of corporation, coordination, and consolidation that should be brought about to see how much the cost of providing credit can be reduced and the efficiency of services increased, to determine the degree of competition, duplication, and overlapping existing between and within Government lending agencies; to see that there is available to all farmers types of credit to meet their individual needs.

4. State and national farm organizations also should look into the cost of transferring titles and recording deeds and chattel mortgages. In many cases, these costs and fees are out of line with the service rendered but probably can be corrected only through State legislation. The Farm Credit Administration would be glad to cooperate with the farm organizations in a study of this type.

The farm organizations and all the farm groups should give careful consideration to programs for veterans. Credit to veterans for purchase of farms and for operating capital must be such that there is a reasonable assurance of success. In our haste to be of assistance to veterans, I am sometimes afraid of what we might do to them instead of for them. Improper credit or untimely credit to veterans, and to others, for that matter, would probably cost the Government more in the long run and at the same time do the veteran immeasurable damage.

Our agricultural income will be greatly influenced by the amount of employment and our national income. However, even with full employment we may not have a prosperous agriculture. Also, full employment in industry is going to depend upon the purchasing power of agriculture. Thus, we should not ignore the importance of industry to agriculture and conversely, industry should not ignore the importance of agriculture.

Post-war problems will be difficult but not impossible to solve. I have the utmost confidence in the ability and will of the American people, and especially of the American farmer because I know him best, to meet and deal with whatever problems develop. The farm organizations have an opportunity and a responsibility in assisting in a solution of the post-war problems of agriculture. Farm organizations, individually, and as a group, must oppose with all of their power and their might unsound policies, plans, and programs. Yet, they cannot be content and must not be content with a policy of opposition. Farm organizations must take a stand and blaze the way for courses of action which are sound. They must lead the way in the forward march of agriculture. The best defense against the problems of the future is a strong courageous offense.

Consolidated comparative balance sheet of farms of the United States, 1940–44 [1]

[In millions of dollars]

Item	Jan. 1, 1940	Jan. 1, 1941	Jan. 1, 1942	Jan. 1, 1943	Jan. 1, 1944	Net change, 1940–44	
						Percent

Retirement Pensions of Railroad Employees

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks, I include the following letter from the John Fritz Chapter, No. 6, East St. Louis, Ill., of the International Association of Railroad Employees:

JANUARY 5, 1945.

DEAR CONGRESSMAN: At a meeting of our organization held this day, we the officers were directed to write you a New Year's greeting, and solicit your support of our pension plan. Considering all the sadness and sorrow throughout the world, it is indeed difficult for us to say "Happy New Year." Everywhere there are vacancies left by our beloved members who have passed into the great beyond. During 1944 the grim reaper took 29 members of our group, their presence is sadly missed in our meetings.

The John Fritz Chapter filed a petition with Congress about a year ago asking for a pension increase, but nothing came of it. We now respectfully request the new Congress to consider our case. Our pension plan is predicated on length of service and earnings. The pension now scales between $6 per month minimum and $120 per month maximum. The increases we ask are as follows: Those who now receive $100 to $120, a 5-percent increase; for those who now receive between $75 and $100, an increase of 10 percent is requested. For those receiving $50 to $75 monthly we ask an increase of 15 percent; those who receive between $25 and $50 request an increase of 20 percent; and for those receiving between $6 and $25 we ask an increase of 25 percent. We feel that these allowances can be made without increases being necessary in the present tax rate for pensions on railroads and employees thereof. The rate now in force is 3¼ percent from employees and a like amount from the railroad companies.

In its annual report for the year ending June 30, 1943, it is stated that more money is being paid into than is being expended by the Railroad Retirement Board. Many millions are invested in Treasury 3-percent notes. We feel that the income of the retirement program is meant for retired employees and should not be frozen in investments beyond a reasonable surplus fund. Railroad workers are buying War bonds separately from their payments toward retirement.

In our local chapter we have a membership of approximately 400 people, all over 65 years of age. Some of our people are 70, some 75, and a few over 80. It should not be difficult to understand the hardship now being undergone by these people because of the tremendous increase in living costs. In most of these homes there are one or more dependents. In a majority of these homes there are loved ones in the armed forces, doing their bit in the war effort.

We are hoping that you and others will bring these matters before the attention of the House.

Sincerely yours,

C. A. DUNCAN.
H. A. SNEDEKER.
H. W. BRUNKHORST.
V. C. POWELL.
ERNEST COOMBS.
FRANK C. SMITH.

Ship Construction

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter on the subject of ship construction from Admiral Land and a summary from the Maritime Commission, showing tonnage deliveries under the Maritime Commission's program through January 31, 1945:

UNITED STATES MARITIME COMMISSION,
Washington, February 13, 1945.

The Honorable S. O. BLAND,
Chairman, Committee on the Merchant Marine and Fisheries,
House of Representatives.

DEAR JUDGE BLAND: Believing it may be of interest to you, I am enclosing a tabulation showing monthly deliveries under the Maritime Commission's program through January 31, 1945.

Last month United States merchant shipyards completed 120 ships, totaling 1,429,296 tons, dead weight. During January for the first time, the number of Victory cargo ships placed in service exceeded the deliveries of Liberty ships, 33 of the former being completed as compared with 32 of the latter, not counting Victories converted to combat-loaded transports. Liberty ships now comprise a relatively small proportion of the merchant shipyards' output, and at the end of January only 116 more such vessels (including colliers and aircraft transports based upon the Liberty design) remain to be delivered. Naturally, deliveries of long-range type cargo ships, military conversions, and tankers continue at a high level.

With kindest regards, I am,

Sincerely yours,

E. S. LAND, *Chairman.*

Dead-weight tonnage of ships delivered under the Maritime Commission shipbuilding program

Month	1939	1940	1941	1942	1943	1944	1945

District Schools Physical Training—Since Pearl Harbor 27,000 Students Have Profited by It

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. STEFAN. Mr. Speaker, the membership of this House knows of my interest in and activity with legislation dealing with the physical-fitness and health activities in the schools of the District of Columbia. The time has now arrived when I can report to you that the appropriations which you approved for this program have been justified and that the program is being successfully conducted by the able officials and their staffs in the public schools of the district. The Congress has wisely continued these appropriations and has also approved funds for an accelerated program. You may be interested to know that more than 27,000 students of the District schools have benefited by the program since Pearl Harbor. Many heroes of this war are numbered among those who have participated. So successful has been this program that many schools in other communities have adopted it in whole or in part. Educators in many States who look to Washington for leadership are making inquiries into this excellent type of youth training.

The gratitude of those who believe in this program goes to this Congress for the approval of the funds for its continuance; to the Superintendent of the District Schools and his able staff; to the business and professional people of the District for their sympathetic assistance, and to Mr. Ben McKelway, associate editor of the Washington Star, who was one of the foremost in the District in the promotion of this and other programs which have as their objective the building of better citizens through health and physical activities among the boys and girls of the District of Columbia.

Because of the great interest in this program in all parts of the country, I requested a full report on the program and its relationship to service in the armed services. Mr. Robert L. Haycock, Superintendent of the District Schools, who has taken a lead in these activities, has prepared such a report. This report is so informative and so encouraging that I include it with my remarks for the information of the Congress and the country:

STATEMENT PREPARED BY ROBERT L. HAYCOCK, SUPERINTENDENT OF SCHOOLS

Nation-wide interest is centered at this time in proposed legislation providing for a year of military training. Many leaders in public life have expressed the opinion that compulsory military training after the war can be made most effective through proper coordination of high-school training with that offered in the military camps. Since Pearl Harbor the American people have been passing through a cauldron of experience due to unpreparedness for the great conflict. A never again declaration is heard throughout the land, and our leading military men affirm that compulsory universal military training is essential to maintain a lasting peace and to preserve order among recalcitrant nations. In all our planning the part that our high schools have already played in preparing inductees for military service must not be overlooked. Also, we must give due credit to the vocational high schools for their part in training men to adapt themselves readily to motorized warfare and to specialized tasks in war industries and production centers.

Preparation, therefore, is a matter of national importance especially in its relation to post-war security. Compulsory military training as proposed will affect especially our young men just above high school age. The war has shown us that adequate training for the kind of warfare now taking place on the battle front requires months of well-planned preparation.

SPECIALIZED HIGH SCHOOL TRAINING

The kind of warfare in which we are engaged makes such rigorous demands upon the physical stamina, fighting spirit, and independent thinking of our men that it became necessary at our induction centers to enlist only those men who would be able to measure up to the service requirements of the armed forces. Physical fitness had to be a first consideration as well as other potential abilities and characteristics.

Most of the young men reporting at the induction centers are products of our public schools. Many have completed their high-school training and some have entered colleges. It is evident that the kind of training given in our high schools before the young men come to the induction centers is a matter of great importance in its relation to military training.

Unfortunately many of our drafted men did not have the advantage of high-school training. The census of 1942 revealed that only 41 percent of these men had received training in the high schools of this country. To improve the situation many States are now stepping up compulsory school attendance requirements.

Present-day warfare is very complex in its demands upon our fighting men serving in the air, under the sea, with the signal corps, manning our ships, and operating the tanks. Training our men in the fundamentals that will make them more efficient in all arms of the service requires that our regular high schools and our vocational high schools be provided with laboratories, shops, and equipment so that appropriate courses may be introduced and competent teachers employed.

ADAPTATION IN THE HIGH SCHOOLS IN THE DISTRICT OF COLUMBIA

The high schools of the District of Columbia have been cooperating with the selective-service procedures by preparing for each graduate before he reaches the induction center a personality card which sets forth in considerable detail his high-school record including scholarship, special skills and achievements, personal characteristics and interests, and a general background of his ability and educational attainments. Thus high-school training and background becomes an important factor as the counselors at the induction centers channel these young men into their niche in the armed forces. How important it is, therefore, that the high schools adapt their training and preparation so that the inductee may serve his country efficiently.

In many communities high schools have been adjusting their courses to the war needs insofar as school funds will permit. A striking example of rapid adjustment is found here in the District of Columbia where marked improvements have been made in the high schools to prepare students for greater efficiency in the war effort after graduation. Wartime adjustments have been made in physical training, in science courses, in aviation, in radio, and in automotive mechanics. Undoubtedly physical fitness is the first fundamental in the life of the soldier.

CONGRESS SUPPORTS THE WASHINGTON PHYSICAL EDUCATION EXPANSION

During the war period marked improvement and expansion of the physical education program of the senior high schools of the District of Columbia was accomplished by increasing the number of hours of instruction from 3 hours to 5 hours per week.

This expansion was made possible by increased appropriations allowed by the House Committee on Appropriations for the District of Columbia under the sponsorship of Representative KARL STEFAN, member of that committee from Nebraska. Provision was made for the employment of additional qualified instructors. The main purpose of this accelerated program of instruction was not only to improve the general health and vigor of high-school pupils, but to prepare inductees for the rigorous physical demands of military life.

Every boy and girl now benefits by physical training every day. Since Pearl Harbor 27,192 students have profited by this accelerated program. This figure represents 12,454 boys and 14,738 girls. The following table indicates the participation by our high schools:

	Boys	Girls	Total
White schools:			
Anacostia	700	830	1,530
Central	991	998	1,989
Coolidge	1,031	1,045	2,076
Eastern	1,517	1,893	3,410
McKinley	1,792	1,530	3,322
Roosevelt	892	1,086	1,978
Western	929	986	1,906
Wilson	1,447	1,497	2,944
Total	9,299	9,865	19,155
Colored schools:			
Armstrong	1,907	1,192	3,099
Cardozo	643	2,244	2,887
Dunbar	614	1,437	2,051
Total	3,164	4,873	8,037
Grand total	12,454	14,738	27,192

PURPOSES UNDERLYING PHYSICAL FITNESS TRAINING

Most of the senior pupils now enrolled in the high schools will be inducted into service in the armed forces or will be employed in wartime industry in the immediate future. The general purpose of the physical training program is to make secondary school students physically fit to undertake the heavy manual tasks that will face them in the camp or the wartime community. Other purposes may be stated as follows:

1. To develop an appreciation of the value of physical fitness for effective service of one's country for efficiency in industry, and for general success in life.

2. To put into practice training procedures recommended by Army and Navy officers to develop physical characteristics needed by soldiers, sailors, and airmen.

3. To provide a daily period of systematic training in a program of muscle buildings and strenuous physical activities.

4. To develop strength, stamina, endurance, agility, and bodily coordination.

5. To train in teamwork through field athletics and group activities in the gymnasium, thus developing leadership as well as cooperation.

6. To develop courage, self-confidence, and physical prowess through combat activities involving bodily defensive and offensive techniques.

7. To instruct the prospective inductee in health habits and standards of healthy living as related to nutrition, personal hygiene, and sanitary living conditions.

The inductee who is physically fit for the rigorous life of the soldier, the sailor, or the airman must have speed, agility, and flexibility in movement; must be hardened to endure protracted periods involving strain and exertion; must climb down ropes, scale walls, and carry heavy loads; must take hard falls and punishment without apparent injury; must engage in combative activities and take blows without flinching; must be able to swim through rough water when clothed and bearing a burden; must acquire the power to march or run long distances; must learn to buffet, to wrestle, to tumble, and perform acrobatic feats.

SOME RESULTS OF THE NEW PHYSICAL-FITNESS PROGRAM

The new program in the Washington high schools has been eminently successful despite some problems caused by the manpower shortage. With a view to evaluating the extent of gains in physical fitness especially of high-school boys a system of tests was developed by a committee of instructors in the white high schools.

The over-all aim in these tests was to make possible at all times a knowledge of the physical progress or retrogression of each student as a result of his participation in the physical education program of our senior high schools.

In order to attain that aim it was proposed that certain objectives in the testing program be set up. This included a comprehensive battery of tests to be given three times in each school year so as to keep students on the alert to improve themselves physically, the explaining of the purpose and mechanics of each activity in such a manner as to create in each student the desire to accomplish physical growth and development; the maintaining of an accurate record of the scores of each student from the time he enters our high schools until he graduates, giving a clear picture of his progress; and finally the ultimate establishment of norms or standards of performance in each event for the high-school students.

Four activities were proposed by a committee of male teachers of health and physical education, as follows: (1) push-ups, (2) set-ups, (3) jump and reach, (4) the 440-yard dash. All of these events are simple of execution, practical of application, and require a wide range of movement. In addition they show very clearly whether the student shows improvement in performance.

Attached with this statement is a complete report indicating the marked improvement shown by the large number of boys who took part in the four types of tests—push-ups, sit-ups, jump and reach, and the 440-yard dash. It was particularly noticeable that there was a definite improvement in the performance of the younger and less-developed boys.

The committee will continue its study of the progress of the boys during the current school year and it will hope to develop acceptable norms after enough tests have been given to enable the committee to establish satisfactory standards of performance for different levels.

INSTRUCTION IN SWIMMING IN THE WASHINGTON HIGH SCHOOLS

Ability to swim well is considered essential in the training preparation of the inductee. In the high schools of this city it is the aim to train every boy and girl to swim. Last spring and summer as soon as the weather permitted much progress was made with this program. In the Central, Coolidge, Dunbar, McKinley, and Anacostia High Schools practically every boy and girl enrolled acquired the art of swimming. In the other high schools a similar program is in progress.

HIGH SCHOOL CADET TRAINING

Especially valuable as preparation for military service is the training given in the high-school cadet organization of the Washington public schools. For more than 60 years the cadet training has been an outstanding feature of the high schools. Cadet training began in the white schools in 1882; in the schools for colored students in 1888. The Cadet Corps, composed of a brigade of five regiments and three battalions of white cadets and a regiment of colored cadets has become an outstanding student organization in the community. These military groups have been for many years a notable feature in the school life of the Capital of the Nation. Many young men with aspirations for military careers have received valuable training before entering West Point or Annapolis.

CADET TRAINING SINCE PEARL HARBOR

After Japan's treachery had drawn us into a global war requiring our Navy and Army to cross the Pacific as well as the Atlantic, all high-school preinduction training took on greater significance. The anticipation of actual induction gave the cadets a more real and serious attitude toward the physical training essential for meeting the rigorous demands of military service. Cadet training was entered upon with greater purpose and enthusiasm.

In all of the high schools for white and colored, there are 44 companies in which a total of 2,525 privates and officers are enrolled. Membership in the cadets is voluntary. Trained by men of Army experience, the program of drill and tactics gives to the boys the training best adapted to Army procedure and practice. Supplemented by the stepped-up physical training given in the gymnasium and on the play field, the cadet goes into the camp better prepared to meet the demands of soldier life. Undoubtedly he becomes a soldier better equipped, better able to master all the arts of war, ready to be adjusted into the many differing units of the armed forces.

VALUE OF HIGH SCHOOL CADET TRAINING

The high-school cadet benefits from far more than just the drill which occurs twice every week. Cadet life is a challenge to a boy's manly school spirit, because it offers membership in the largest competitive organization of the high schools of the city. Cadet activities offer far-reaching physical and social advantages to every enlisted student.

These are some of the outstanding benefits to the cadet:

He becomes identified with the oldest and most popular high-school-student organization which for more than 60 years has been the pride of the Washington schools.

He enters into comradeship with upstanding, self-respecting fellow cadets with whom lasting friendships develop.

He contributes to the welfare of his school through loyalty to his cadet group and its efforts for achievement and success.

He participates in many celebrations and events of a military nature that bring pleasure and satisfaction.

He receives training and experience that develops physical stamina, fortitude, and manly attitudes.

He understands more fully the true meaning of service and sacrifice for one's country through a worthy unselfish citizenship.

He learns the value of cooperation, teamwork, self-control, and personal responsibility within the group.

He acquires the habit of adjusting himself to law and order, and gains a wholesome understanding of proper relations with his superior officers and associates.

He appreciates the true values that make men manly, genuine, honorable, and free from that which cheapens one's life.

He becomes informed concerning the necessity and the purpose of our National Military Establishment, and through company battalion, and regimental drill comes to understand something of its organization and operation.

He learns how to assume the responsibilities of leadership if he becomes an officer, and thus has experiences of great value to him in life situations involving human relations and executive ability.

EVALUATION OF CADET TRAINING BY AN EXPERIENCED ARMY OFFICER

Impressed with the favorable results of the cadet training of high-school youth, Lt. Col. H. O. Atwood, professor of military science and tactics, in charge of the cadets in the colored high schools of this city, has listed the following as the benefits derived from such training:

1. A cadet is taught the duty and obligations of a citizen to his country, his community, his associates, and himself.

2. He is taught the meaning of and the value of loyalty to one's country, one's associates, and one's high principles.

3. He is taught what discipline is; its value to him in whatever walk of life he may be; its part in causing one to have self-respect and self-confidence; that self-discipline is necessary to success.

4. The value of and necessity for punctuality.

5. He is taught the value of and necessity for physical fitness and is given a course in physical training and personal hygiene which fits him physically for his work now and in after life.

6. He is taught map reading; care and mechanics of the rifle and how to shoot; the value of teamwork; the value of careful grooming; the value of and use of a fine, forceful personality; is given exercises in command and other things which develop leadership; is shown the value of self-respect and self-confidence, initiative, and ambition.

Dr. Sao-Ke Alfred Sze, formerly Ambassador to the United States from China, was educated in America and attended the Central High School of this city. As a cadet, he attained the rank of lieutenant. Referring to his cadet experience, Dr. Sze says: "I have always regarded the cadet training which I received at the Washington high school as valuable to me as a matter of physical development and as a matter of discipline."

HIGH-SCHOOL CADETS COMMISSIONED SINCE PEARL HARBOR

Officers must be trained as well as privates. Both must be well prepared to be integrated into the numerous branches of the service and to function efficiently wherever assigned.

Principals of the Washington high schools were requested to follow up the records of graduates since Pearl Harbor to determine, if possible, whether or not cadet training brought rapid advancement in the ranks. This study shows that 92 of our high-school graduates have already advanced to the rank of commissioned officers. They have been commissioned as follows: 1 lieutenant colonel, 1 captain, 72 lieutenants, 18 ensigns. Young men who have had the experience of leadership in our high-school cadet organization should be prepared to demonstrate after the basic training of the camp has been completed a readiness to enter upon officer training.

GIRL CADETS A GROWING ORGANIZATION

Since Pearl Harbor the girl cadet companies in the Washington high schools have had a notable development. This is another phase of the Nation-wide participation of women in war activities. The organization of WAC's and WAVES has been a great incentive to high school girls to do their part toward victory.

Since 1941 the girl cadet groups in schools for white students have increased in enrollment from 294 to 414. Companies are now organized in all eleven of our high schools. Undoubtedly the training received by girl cadets contributes beneficially to physical fitness, to willingness to serve wholeheartedly in the war effort, and to general school spirit and morale. At this time when delinquency has loomed ominously in the social life of our young people we cannot overestimate the wholesome effect of cadet experience for both boys and girls.

In the high schools for Negro students the girl cadet activity aroused enthusiasm from the beginning and the interest has been sustained. In 1942 the enrollment was 650. This year 682 have enlisted despite the increasing opportunities for after-school employment.

MORE PHYSICAL TRAINING URGED FOR HIGH SCHOOL GIRLS

In a bulletin recently issued by the Committee on Physical Fitness, Federal Security Agency, a study of replies from more than 900 school systems showed that only about 46 percent of the girls in the last 2 years of the high schools were receiving regular physical training. The study showed that more illness is found among girls than boys. Officers of the WAC's and WAVES state that women admitted to the service have poor posture, are low in endurance and are lacking in strength. Out of 1,680 examined in 1 recruiting area of the WAC's, 500 were rejected for physical defects.

A survey by the American Youth Council of girls between the ages of 16 and 24 years found that 62 percent of the single girls had no physical recreation.

STEPPED-UP PHYSICAL TRAINING FOR HIGH SCHOOL GIRLS

With increased funds made available by the House Committee on Appropriations for the District of Columbia physical training for girls has been increased from 3 days to 5 days per week. Additional teachers have been employed and the training in gymnasiums, on the play fields, and in the cadet drill has been greatly improved. In the high schools for white students 9,865 girls have benefited by this stepped-up program of physical training. The improved program has given training to 4,873 girls in the high schools for colored students.

Among graduates from the schools for Negroes who have entered the WAC's or WAVES six girls have been commissioned as first lieutenants.

Among the white graduates in the WAC's or WAVES one is a lieutenant colonel, eight are first lieutenants, 4 are second lieutenants, and 7 are ensigns.

HIGH SCHOOL CADET BANDS

An interesting feature of the Washington High School Cadet organization is the large number of bands. Instrumental instruction given to cadets having musical ability is an important phase of cadet training. There are eight bands in the high schools for white students, one at each school, and one inter-high band in the colored high schools. Two hundred seventy-three cadets play in the nine bands. When the entire brigade is on parade the numerous bands add enthusiasm and spirit to the marching units. At each school also there is a well-trained orchestra. Thus, music has a large place in our high-school training. Many boys and girls specialize in instrumental music with a view to preparing for a career in music. School credit is given for proficiency in music along with other regular credits for academic courses. Many inductees who have had training in these bands have been assigned to the Army, Navy, and Marine music schools.

DISTINGUISHED MILITARY MEN TRAINED IN THE WASHINGTON HIGH SCHOOLS

During its long history the high-school cadet organization of this city has had a wholesome influence upon the early training of many men who have attained high rank in the affairs of our Nation. Large numbers of graduates entered West Point and Annapolis and later won distinction in our military forces.

The following is a partial list of high-ranking graduates. The great war has brought such rapid changes that it has been difficult to keep pace with the attainments of all of our high-school alumni:

Lt. Gen. Brehon Somervell, Chief of Supply, United States Army.
Lt. Gen. Thomas Holcomb.
Maj. Gen. William Rupertus, United States Marine Corps.
Maj. Gen. Robert C. Macon, United States Army.
Maj. Gen. Richard Elwood Quesada, United States Army.
Maj. Gen. Donald Stroh.
Maj. Gen. Levin Campbell.
Brig. Gen. William E. R. Covell, United States Army.
Brig. Gen. B. O. Davis.
Brig. Gen. Anthony McAuliffe.
Brig. Gen. W. Richard Dear, United States Army.
Brig. Gen. Roy Heflebower.
Brig. Gen. David S. Brewster, United States Army.
Brig. Gen. Robert Nicholas Young, United States Army.
Dr. Sao-ke Alfred Sze, former Ambassador from China, as a high-schol student was commissioned lieutenant in his company at the Central High School.
Admiral George Fort.
Vice Admiral Russell Willson, United States Navy, former superintendent, United States Naval Academy.
Vice Admiral Joseph K. Taussig, United States Navy.
Rear Admiral Charles A. Young, United States Navy.
Rear Admiral Oscar Badger, United States Navy.
Rear Admiral Lawrence DuBose, United States Navy.
Rear Admiral Dallas Sutton, United States Navy.

Many high-ranking military men have received cadet training in the Washington high schools for colored pupils. The following have rendered distinguished service in the military forces: Brig. Gen. B. O. Davis, Col. West A. Hamilton, Col. Campbell C. Johnson, and Col. Howard D. Queen. In addition to the above, there are 12 lieutenant colonels, 26 majors, 60 captains, 245 lieutenants and 4 ensigns who were cadets in the colored high schools.

Former cadets in the white high schools who have advanced to high rank as officers in the Army, the Navy, and the marines are listed as follows:

U. S. Army:	
Colonels	22
Lieutenant colonels	19
Majors	29
Captains	59
First lieutenants	204
U. S. Navy:	
Captain	1
Commanders	24
Lieutenant commanders	21
Lieutenants (junior grade)	17
Ensigns	19
U. S. Marine Corps:	
Major	1
Captain	1
First lieutenants	3

ANNUAL CADET DRILLS

Notable events each year in the high schools of this city are the two competitive drills and reviews of the cadets, one for the white cadets and one for the colored cadets. Griffith Stadium is crowded with enthusiastic parents and friends on these occasions when the companies meet in competition. Battalions also meet each year in competition. On the basis of outstanding performance the most meritorious band is also chosen.

CONCLUSION

It is evident that the high school period is an area in the educational progress of our American youth when enriched training is of vital importance to our boys and girls as they face the responsibilities of a worthy citizenship in the life of the Nation. Out of the exploratory experiences that come to the student as he pursues his high-school courses, he finds satisfaction in personal achievements in certain fields of learning and culture and in abilities and skill that prepare him for a livelihood in his community.

He is ready to choose his career whether it be a profession, a vocation, or a scientific or commercial pursuit. At the same time he will have received basic training that makes him physically fit and intelligently prepared to be more readily trained should his country call him for a period of military training.

FEBRUARY 8, 1945.

Memorial Services for Mr. Justice Sutherland

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial address of William Cattron Rigby:

Mr. Chairman, it was while he was on this Court that I came to know Mr. Justice Sutherland. He was a kindly judge; always keenly interested; able to cut to the heart of a matter with a quiet question or two.

He had come to his place here with an established reputation as a constitutional lawyer. In the Senate, and as president of the American Bar Association, and in lectures, magazine articles, and public addresses, he had expressed his views of the Constitution and our Government.

He loved the Constitution, and revered it. He had said of it, in his first lecture at Columbia University, in December 1918:

"It is the most democratic thing we possess, for it is the one thing above all other things that makes articulate and clear the claim that all political power comes from the people, * * * those whose will it speaks today, and whose will it must continue to speak until they in the exercise of their sovereign authority see fit to put something else in its place." [1]

He did not take a narrow view. In this same lecture he said (ibid., p. 16):

"But though the Constitution stabilizes the principles of government it does not fix or define these principles minutely or in detail. * * * The authority of the several departments of government is, therefore, of great flexibility. The Constitution was intended to be perpetual and hence to cover the changing needs of the people and the country, the extent of which changes were within the contemplation but not within the knowledge of the framers. Within the broad limits of the enumerated subjects it was intended that power should keep pace with need and that the Constitution should be the source of this power as a spring is the source of an ever-flowing stream and not as a cistern is the source of a precisely measured and rigidly limited supply."

In another lecture in that series at Columbia University, the next month after the armistice in the former World War (ibid, p. 27):

"By reason of our participation in the war we have formed alliances and assumed responsibilities which we cannot wholly lay aside now that the war is ended. * * *

"In this new and extended relationship, we shall probably be obliged to extend the scope and application of the familiar meanings of the Constitution, and it may be to find—though not to make—new meanings." [2]

He called himself conservative, but not reactionary. In his great Senate speech July 11, 1911, opposing the initiative, referendum, and recall in the then proposed Arizona Constitution, he had said: [3]

"Somebody has defined a stand-patter as a man who has stopped and cannot start, and a progressive as one who has started and cannot stop. If these definitions are * * * accurate, sensible people will avoid both schools. * * *

"I am no stand-patter. I am not in favor of standing still. No one who takes the slightest thought desires that we shall do that. Of course, we must advance, but we must at our peril distinguish between real progress and what amounts to a mere manifestation of the speed mania. * * *

"The forward march of democracy will be of little avail if in the end it rescues us from the absolutism of the King only to hand us over to the absolutism of the majority. * * *

"I am not one of those who have become impatient at the restraints and checks and safeguards of the representative form of government and the written Constitution * * * (ibid., p. 2802).

In the main and in the long run, changes which come by the gradual and orderly processes of evolution are better and far more enduring than those brought about by the spasmodic methods of revolution. Experience is a safer guide than prediction. A tree is known by its fruits rather than by its blossoms, for sometimes the fairest blossoms, like the fairest promises, produce no fruit at all" (ibid., p. 2803). [4]

And eight years later, in his Columbia University lectures, speaking of the importance of the Preamble's statement of the ends for which the Constitution is "ordained and established":

"The substantive powers conferred * * * are the means to these ends, but it is the ends which are essential; the means are only important insofar as they contribute to the ends. Hence the wisdom of the rule * * * that the Constitution must be construed with reference to these ends and so as to subserve them." (Constitutional Power and World Affairs, supra, p. 42.)

And in his Columbia University lecture on The External Powers—Extent and Limitations, he had said (ibid., pp. 48–49):

"It is time we realized not in phrases merely, but in fact, that the Constitution is not a petrification nor the charter of a petrification. This is a progressive Nation in a progressive world. As the Nation goes forward the Government which has been organized to put the will of the Nation into operation must go forward with it and in aid of it; * * *. This does not mean that the powers of the Government are not fixed, but it does mean that they are not fixed within any narrow or rigid bounds. * * * The Constitution does not change * * * but the things which fall within the scope of the Constitution constantly change. * * * The Constitution was not made alone for those who framed it and adopted it. It was made for us who followed them, and for those who will follow us in the centuries to come. * * * Without this capacity for indefinite extension" (ibid., p. 50) "the written Constitution long since would have become a tradition, and the Union itself, perhaps, have fallen apart from its own weakness."

Of the war powers (ibid., pp. 94–97) he had said:

"The sword and the purse are the two indispensable requisites of war. In time of war when the life of the Nation is at stake the power of the general Government to sharpen and strengthen the one, and fill the other, and utilize them both, by any means and in any way the authorized agencies of that Government may determine, cannot admit of question; and in my judgment the power exists without any restrictions whatsoever, save those which are imposed by such express prohibitions of the Constitution and such fundamental restraints upon governmental action as are obviously and clearly intended to apply at all times and under all conditions.

"The Constitution looks to an enduring Republic, and a perpetual union made more perfect. This, the framers intended, and for this many thousands of brave men have perished. * * * This does not result in the suspension of the Constitution, * * * but it may result in a suspension of the constitutional rights of the individual, because they conflict with the paramount powers of war. * * * In time of peace, an attempt to interfere with the least of these would be, and ought to be, resisted to the utmost. In time of war, when the Nation is in deadly peril, every freeman who prizes the boon of enduring liberty will lay them all freely and ungrudgingly upon the sacrificial alter of his country."

He had emphasized the independent powers of the individual States in their own sphere, as against those of the Federal Government; that the Constitution creates "an indestructible union of indestructible States"; and likewise—notably in his 1921 address before the New York State Bar Association—the basic and vital character of the distribution of the governmental powers among the three great departments.

He had supported the woman-suffrage movement, and the nineteenth amendment, in the Senate and afterwards.

He had shown deep respect for this Court. He had on one occasion in the Senate [5] quoted Lord Bryce's saying that [6] "The Supreme Court is the living voice of the Constitution;" and that of Chief Justice Marshall [7] that:

"The judicial department comes home in its effects, to every man's fireside; it passes on his property, his reputation, his life, his all. Is it not to the last degree important that [the judge] shall be rendered perfectly and completely independent, with nothing to influence or control him but God and his conscience?"

He had defended in the Senate the independent power of this Court even to reconsider and to overrule its own former decisions. In the debates on the income tax, championing this Court's decision in the Pollock case he said on May 17, 1909 (44 CONGRESSIONAL RECORD, 2096):

"Stare decisis is an adviser, not a dictator. Stare decisis operates by way of persuasion, not of compulsion. I submit that there is as much virtue in setting aside the wrong precedent as there is in following a right precedent.

"The Supreme Court of the United States is the greatest Court the world has ever seen. In the year 1895 when the Pollock case was decided its members were as magnificently equipped in learning and ability as any who have sat in that august tribunal before or since. * * * If the effect of their decisions is to set aside the prior decisions of the Court for a hundred years, we may be sure those judges did not do that for light or trivial reasons."

With such matured fundamental beliefs Mr. Justice Sutherland came to his place in this Court in the autumn of 1922. He applied them here. His opinions sometimes reflect the identical phraseology he had used some years before. For a variety of problems experience had further especially prepared him. The Federal Criminal Code and the Judicial Code, as well as the workmens' compensation law, were largely his own handiwork; and, to a degree, the woman suffrage amendment. For problems of the outlying territorial governments, and of mining and irrigation, water rights, the desert land law, Government land patents, and the like, his memory harked back to his early days in Utah, under its territorial form of government, when its problems and those of the miner and of irrigated lands and of Government land patents were all about him. He took his share of the work of this Court in these fields, as in others.

But it fell to him, too, to write the Court's opinions in some cases of grave constitutional importance, and in some to be constrained to dissent.

I shall not attempt a catalog; a collection of his opinions runs to five volumes, but a few may indicate the trend of his thought.

---

[1] "Constitutional Power and World Affairs," pp. 10–12.

[2] Nearly 9 years earlier he had said in the Senate on March 2, 1910, in support of the bill for postal savings depositories (45 CONGRESSIONAL RECORD 2616):

"While it is true that the Constitution continues to speak through its original words and meaning, their scope and application continuously broaden so as to include new conditions, instrumentalities, and activities."

[3] 47 CONGRESSIONAL RECORD 2793 et seq., at p. 2795.

[4] And earlier in the same speech (ibid., p. 2794):

"A written constitution means nothing unless it means stability and permanence. It is the fundamental law, the foundation upon which rests the whole superstructure of the state; and like the foundation of a great building the continual tearing out of a stone here and the insertion of another there will threaten the integrity of the whole structure."

[5] Speech of July 11, 1911, supra, 47 CONGRESSIONAL RECORD, 2802.

[6] American Commonwealth, vol. I, p. 273.

[7] Debates, Virginia State Convention of 1829–30, pp. 616, 619; quoted again by Mr. Justice Sutherland, 22 years later, in writing the opinion of this Court, in *O'Donoghue* v. *United States* (289 U. S. 516, 532).

In *Cudahy Co.* v. *Parramore*, December 10, 1923, upholding the Supreme Court of Utah, in its liberal construction of the Workmen's Compensation Act of that State, as covering an employee injured while on his way to work, Mr. Justice Sutherland said (263 U. S. 418, 423–424):

"The modern development and growth of industry, with the consequent changes in the relation of employer and employee, have been so profound in character and degree as to take away, in large measure, the applicability of the doctrines upon which rest the common-law liability of the master for personal injuries to the servant, leaving of necessity a field of debatable ground where a good deal must be conceded in favor of forms of legislation calculated to establish new bases of liability, more in harmony with the changed conditions. Workmen's compensation legislation rests upon the idea of status, not upon that of implied contract; * * * upon the existence of the relationship * * * the fact that the accident happened upon a public road or at a public crossing * * * is not conclusive against the existence of such causal relationship, if the danger be one to which the employee, by reason of and in connection with his employment, is subjected peculiarly or to an abnormal degree." (Followed afterward in his opinion in *Bountiful Brick Co.* v. *Giles* (276 U. S. 156, 158–159); February 20, 1928.)

In the field of territorial law he upheld the Governor General as against the Legislature in the Philippine Board of Control cases involving the voting control of the Philippine National Bank and other Philippine Government-owned corporations, considering its exercise to be an executive function rather than a legislative one, saying (*Springer* v. *Philippine Islands* (277 U. S. 189, 201), that separation of the Government powers into the three great departments is implicit in the Organic Act and, in almost the same identical words which he had used 7 years previously in his 1921 address before the New York State Bar Association:

"And this separation and the consequent exclusive character of the powers conferred upon each of the three departments is basic and vital—not merely a matter of governmental mechanism."

He cited this again 5 years later, in *O'Donoghue* v. *United States* (289 U. S. 516, 530), and in *Williams* v. *United States* (289 U. S. 553, 580), in holding that the Supreme Court of the District of Columbia, and the Court of Appeals for the District (as they then were, now the United States District Court and the United States Circuit Court of Appeals for the District of Columbia) are constitutional courts of the United States under article III of the Constitution, the compensation of whose judges may not be diminished during their continuance in office, but that the Court of Claims is simply a legislative court analogous to Territorial courts established by the Congress.

And in *Humphrey's Executor* v. *United States* (295 U. S. 602) he held the President without power peremptorily to remove a member of the Federal Trade Commission appointed for a fixed term of office under the act of Congress creating the Commission to discharge quasi legislative and quasi judicial duties, instead of purely executive duties, thus limiting to this extent the earlier decision in *Myers* v. *United States*, 272 U. S. 52, which had held the President vested with unrestricted power to remove purely executive officers.

In *Posadas Collector* v. *The National City Bank of New York* (296 U. S. 497) he held that the national banking laws extend to the Philippine Islands, and in *Bengzon* v. *The Secretary of Justice of the Philippine Islands* (299 U. S. 410) held that the Governor General was without power under the organic act to veto a particular section of a bill as it was passed by the legislature.

In *People of Puerto Rico* v. *Shell Company* (302 U. S. 253), he upheld the power of the insular legislature to enact its own local antitrust act for the island, despite the existence of the Federal antitrust acts, the Sherman Act and the Clayton Act, holding that although Puerto Rico is to be considered as a Territory of the United States to which the Federal antitrust acts extend, nevertheless, the local legislature may legislate on the same subject, and that its legislation is valid insofar as it does not conflict with any act of Congress, saying (302 U. S. 253, 258–259), quoting from *Kopel* v. *Bingham* (211 U. S. 468, 474, 475, 476), that:

"'It may be justly asserted that Puerto Rico is a completely organized Territory, although not a Territory incorporated into the United States * * *.'

"With equal force, it may be said here that there is no reason why Puerto Rico should not be held to be a Territory within the meaning of section 3 of the Sherman Act.

"The grant of legislative power [to the insular legislature] in respect of local matters, contained in * * * the organic act of 1917 is as broad and comprehensive as language can make it. * * * It requires no argument to demonstrate that a conspiracy in restraint of trade within the borders of Puerto Rico is clearly a local matter, * * *. The power being given without express limitation, a conclusion that the present exercise of the power is precluded by the existence of section 3 of the Sherman Act must rest upon the assumption that a congressional statute penalizing specific local behavior and a statute of Puerto Rico to the same effect cannot coexist. With due regard to the status of the Territory, the character of its established government, the positive terms of the congressional grant of power, and the lack of conflict between the two acts, that assumption must be rejected.

His first opinion, the Ozawa case, held that a Japanese was not a "white person" within the naturalization laws;[8] followed later by his like ruling in the Thind case, as to a high cast Hindu.[9]

In desert-land law and water-rights decisions he held[10] that:

"By the Desert Land Act of 1877 (ch. 107, 19 Stat. 377), if not before, Congress had severed the land and waters constituting the public domain and established the rule that for the future the lands should be patented separately. Acquisition of the Government title to a parcel of land was not to carry with it a water right; but all nonnavigable waters were reserved for the use of the public under the laws of the various arid-land States," thus settling a long-standing controversy in the Western States.

In interstate commerce cases he upheld State taxes in some cases, but not in others. For example he held that the Kentucky wholesale gasoline sales tax could not be levied on fuel for interstate ferries on the Ohio River between Kentucky and Illinois,[11] but in *Atlantic Lumber Company* v. *Commissioner* (298 U. S. 553, 554, 557), he upheld the Massachusetts excise tax for the privilege of doing business in Massachusetts, on a Delaware corporation, having its principal office and actual headquarters in Massachusetts, with properties and subsidiaries and bank accounts scattered through several States and Canada, against the contention that it was unconstitutional as imposing a burden on interstate commerce; since the burden, if any "is not immediate and direct but remote and incidental, a distinction which * * * marks the line between a tax", in such cases, "which is valid and one which is not"; although in *Ozark Pipe Line* v. *Monier*, 266 U. S. 555, 560, 562 et seq., he had stricken down as a direct burden on interstate commerce a Missouri franchise tax on a Maryland corporation operating through Missouri a portion of its pipe line from Oklahoma to Illinois.

In the fields of the war powers, and of the external powers of the Federal Government, he had occasion, in several cases, to tread the same ground he had trodden in his speeches and lectures.

In the Omnia Co. case,[12] where the Government, during the last war, had requisitioned the Allegheny Steel Company's entire production of steel plate for a year, and had thereby made it impossible for that company to comply with its earlier contract to deliver a quantity to the Omnia Co., he upheld the Court of Claims in denying relief to the Omnia Co., although admittedly its contract (p. 508) was property within the meaning of the fifth amendment * * * "and if taken for public use the Government would be liable"; because there was no direct "taking" of the contract, but only consequential damage to the Omnia Co. as the result of lawful governmental action in requisitioning the product of the Allegheny Co., saying (p. 513):

"The Government took over during the war, railroads, steel mills, ship yards, telephone and telegraph lines, the capacity output of factories and other producing activities. If appellant's contention is sound, the Government thereby took and became liable to pay for an appalling number of existing contracts for future service or delivery, the performance of which its action made impossible. This is inadmissible. Frustration and appropriation are essentially different things."

In another opinion the same day, April 9, 1923,[13] he had occasion to consider in interpreting a statute the effect of the circumstance that the country had been at war when it was enacted. In deciding that the Deficiency Appropriation Act of June 15, 1917, in its clause (40 Stat. 182) empowering the President "to modify, suspend, cancel or requisition any existing or future contracts for the building, protection, or purchase of ships or material," authorized cancelation of the Government's own contracts, he said (261 U. S. at p. 521):

"When the act was passed we were in the midst of a great war which called for the utilization of all our resources. The necessities were great, beyond the power of statement. The Government was confronted with the vital necessity not only of producing ships and supplies in unprecedented quantities, but of producing them with the utmost haste. Hence it was necessary that everything which stood in the way of or hindred such production be put aside. But this was a necessity which Congress of course realized must sooner or later come to an end, suddenly and completely. With the termination of the war the continued production of war supplies would become not only unnecessary but wasteful. Not to provide, therefore, for the cessation of this production when the need for it had passed would have been a distinct neglect of the public interest."

Thirteen years later, in 1936, in the Curtiss-Wright Corporation case,[14] in upholding the joint resolution of Congress of May 28, 1934

[8] *Ozawa* v. *United States* (260 U. S. 178).

[9] *United States* v. *Thind* (261 U. S. 204).

[10] *Idaho Irrigation Co.* v. *Gooding* (265 U. S. 518, 520, 525); *California-Oregon Power Co.* v. *Beaver Portland Cement Co.* (295 U. S. 142, 150, 153–165); *Ickes, Secretary* v. *Fox*, 300 U. S. 82, 87, 95–97.

[11] *Helson & Randolph* v. *Kentucky* (279 U. S. 245, 247, 248–252).

[12] *Omnia Commercial Co., Inc.* v. *United States* (261 U. S. 502, 507, 508 et seq.).

[13] *Russell Motor Car Co.* v. *United States* (261 U. S. 514, 521).

[14] *United States* v. *Curtiss-Wright Corporation* (299 U. S. 304, 311, 315 et seq.).

(ch. 365, 48 Stat. 11), authorizing the President if he should find that the prohibition of the sale of arms and munitions to the countries then engaged in armed conflict in the Chaco might contribute to the reestablishment of peace, to issue a proclamation making such sales unlawful, Mr. Justice Sutherland called attention to the difference existing between the powers of the Federal Government in relation to external affairs, on the one hand, and in relation to internal affairs, on the other; and that in relation to external affairs the President as the Executive head of the Federal Government is the sole organ through which the Nation speaks to other nations.

He applied the same reasoning again the following year in *United States* v. *Belmont* (300 U. S. 324, 325 et seq.), upholding, after the recognition by the United States of the Soviet Union, a claim of the United States, under an assignment to it by the Soviet Government, to a sum of money deposited in New York, the Soviet Government's title to which, however, had come through an earlier act of confiscation by that Government, back in 1918. He says (pp. 330, 332):

"That the negotiations [with the Soviet Government] * * * were within the competence of the President may not be doubted. Governmental power over internal affairs is distributed between the National Government and the several States. Governmental power over external affairs is not distributed, but is vested exclusively in the National Government. And in respect to what was done here, the Executive had authority to speak as the sole organ of that Government. * * *

"What another country has done in the way of taking over property of its nationals, and especially of its corporations, is not a matter for judicial consideration here."

In a series of forward looking decisions he upheld State statutes and ordinances based upon the changing conditions of modern life; such as the zoning ordinances of the Village of Euclid, a suburb of Cleveland; [15] and of Los Angeles; [16] the statute of New York [17] regulating the use of city streets and highways by private motor carriers of passengers and freight; the New York statute [18] prohibiting women from working in restaurants after 10 o'clock at night in cities of the first and second classes; and that [19] regulating the sale of kosher meat; and the Fair Trade Act of Illinois.[20]

The general trend of his reasoning in cases of that type is reflected by what he said in upholding the Euclid ordinance (*Euclid* v. *Ambler Co.*, 272 U. S. 386-387):

"Building zone laws are of modern origin. They began in this country about 25 years ago. Until recent years urban life was comparatively simple; but with the great increase and concentration of population problems have developed, and constantly are developing, which require, and will continue to require, additional restrictions in respect to the use and occupation of private lands in urban communities. Regulations, the wisdom, necessity and validity of which, as applied to existing conditions, are so apparent that they are now uniformly sustained, a century ago, or even half a century ago, probably would have been rejected as arbitrary and oppressive. * * * And in this there is no inconsistency for while the meaning of constitutional guaranties never varies, the scope of their application must expand or contract to meet the new and different conditions which are constantly coming within the field of their operation. In a changing world, it is impossible that it should be otherwise. But although a degree of elasticity is thus imparted, not to the meaning but to the application of constitutional principles, statutes and ordinances which, after giving due weight to the new conditions are found clearly not to conform to the Constitution, of course, must fall."

In *Brush* v. *The Commissioner of Internal Revenue* (300 U. S. 352, 361, 374) reasoning as in the *Ambler* v. *Euclid* zoning case, and the New York motor car license and womens' working hours cases, *Packard* v. *Banton*, and *Radice* v. *New York*, supra, as to the effect of changing conditions, he held that (p. 370):

"We conclude that the acquisition and distribution of a supply of water for the needs of a modern city involve the exercise of essential governmental functions."

And accordingly that the chief engineer of the New York City water supply bureau was engaged in the exercise of a governmental function of the city; and thereupon concluded, as a matter of course, that such official's salary was exempt from Federal income taxation, in accordance with the long established rule of this court as it had stood ever since *McCulloch* v. *Maryland* (4 Wheat. 316) and *Dobbins* v. *Commissioners of Erie County* (16 Pet. 435, 448-449) followed in *Collector* v. *Day* (11 Wall. 113), and then recently recognized in *New York ex rel Rogers* v. *Graves* (299 U. S. 401, 408).[21]

But in any case where he considered that fundamental constitutional rights were being invaded, he was adamant. He set his face against any chipping away of the foundations of ordered liberty. Thus, in the first Scottsboro cases, *Powell* v. *Alabama* (287 U. S. 45), he held that the right of a defendant in a criminal case to have counsel for his defense is fundamental, and includes reasonable opportunity for consultation with his counsel in preparation for trial; and, accordingly, the convictions in those cases were reversed.

In *Byars* v. *United States* (273 U. S. 28, 32-34), he emphasized the right to protection against unlawful search and seizure, in reversing the judgment below because counterfeit internal revenue stamps seized in an unlawful search had been used in evidence for the prosecution, holding that the rights guaranteed by the fourth amendment are "not to be impaired by judicial sanction of equivocal methods."

And in *Grosjean* v. *American Press Co.* (297 U. S. 233), he struck down a Louisiana statute levying a discriminatory tax on advertising in newspapers and periodicals with a circulation of more than 20,000 copies, or in moving pictures, as in violation both of the first amendment guaranteeing the freedom of the press, and also of the equal protection clause of the fourteenth amendment.

And so also, as violating the Bills of Rights, a New York statute attempting to fix the profit to be made on the resale of theater tickets; [22] one of New Jersey limiting the fees of employment agencies; [23] of Oklahoma requiring contractors with the State to pay wages not less than the "current rate per diem in the locality"; [24] of California, regulating the fees of private motor carriers; [25] one of Tennessee, regulating the price of gasoline; [26] one of Oklahoma, requiring a license for manufacturing and selling ice; [27] and, in a greatly debated case, Vermont's "Income and Franchise Tax Act of 1931," insofar as it levied heavier taxes on income from money invested outside of the State.[28]

In *Carter* v. *Carter Coal Company* (298 U. S. 238, 278 et seq.), his opinion for the court struck down the Federal Bituminous Coal Conservation Act of 1935, considering the 15 percent tax levied by it as "clearly not a tax, but a penalty," and following former decisions that the Constitution "made no grant of authority to Congress to legislate substantively for the general welfare" (p. 292), "and no such authority exists, save as the general welfare may be promoted by the exercise of the powers which are granted."

In his later years on the Court he found himself constrained to dissent in a number of Bill of Rights cases. Notably, in the Blaisdell case [29] in which the majority opinion upheld the Minnesota Mortgage Moratorium Act enacted in the depth of the financial depression, he found himself constrained to say, in his dissenting opinion (pp. 448-449):

"Few questions of greater moment than that just decided have been submitted for judicial inquiry during this generation. He simply closes his eyes to the necessary implications of the decision who fails to see in it the potentiality of future gradual but ever-advancing encroachments upon the sanctity of private and public contracts. The effect of the Minnesota legislation, though serious enough in itself, is of trivial significance compared with the far more serious and dangerous inroads upon the limitations of the Constitution which are almost certain to ensue as a consequence naturally following any step beyond the boundaries fixed by that instrument And those of us who are thus apprehensive of the effect of this decision would, in a matter so important, be neglectful

---

[15] *Euclid* v. *Ambler Co.* (272 U. S. 365, 379, 386-387), Nov. 22, 1926.

[16] *Zahn* v. *Board of Public Works* (274 U. S. 325, 326, 327-328).

[17] *Packard* v. *Banton* (264 U. S. 140, 141, 144).

[18] *Radice* v. *New York* (264 U. S. 292, 293 et seq.).

[19] *Hygrade Products Co.* v. *Sherman* (266 U. S. 497, 499).

[20] *Old Dearborn Co.* v. *Seagram Co.* (299 U. S. 183, 185).

[21] Despite the rising dissent which swept that whole rule into the discard the next year after Mr. Justice Sutherland had left this Court, in the decisions in *Helvering* v. *Gerhardt* (304 U. S. 405, 408, 411-424), and *Graves* v. *New York ex rel O'Keefe* (306 U. S. 466, 475-487). But sweeping away that old rule of the immunity of State officials from Federal taxation, and vice versa, did not affect that part of the decision in the Brush case, holding that the operation of a water system by a modern city is the exercise of an essential governmental function.

[22] *Tyson* v. *Banton* (273 U. S. 418, 426 et seq.).

[23] *Ribnik* v. *McBride* (297 U. S. 350, 355, 357); overruled April 28, 1941, 3 years after Mr. Justice Sutherland had left the bench, in *Olsen* v. *Nebraska* (313 U. S. 236, 244), where the Court said:

"The drift away from *Ribnik* v. *McBride, supra*, has been so great that it can no longer be deemed a controlling authority. It was decided in 1928. In the following year this Court held that Tennessee had no power to fix prices at which gasoline might be sold in the State. *Williams* v. *Standard Oil Co.* (278 U. S. 235). Save for that decision and *Morehead* v. *Tipaldo* (298 U. S. 587), holding unconstitutional a New York statute authorizing the fixing of women's wages, the subsequent cases in this Court have given increasingly wider scope to the price-fixing powers of the States and of Congress."

[24] *Connally* v. *General Construction Co.* (269 U. S. 385, 388, 393-395; primarily for uncertainty).

[25] *Frost Trucking Co.* v. *The Railroad Commission* (271 U. S. 583, 589, 592).

[26] *Williams* v. *Standard Oil Co.* (278 U. S. 235, 238 et seq.).

[27] *New State Ice Co.* v. *Liebmann* (285 U. S. 262, 271-280).

[28] *Colgate* v. *Harvey* (296 U. S. 404, 416, 424, 431, 433-436); Justices Stone, Brandeis, and Cardozo dissenting (pp. 436-450). This case of *Colgate* v. *Harvey* was, on January 29, 1940, expressly overruled in *Madden* v. *Kentucky* (309 U. S. 83, 93), with Justices Roberts and McReynolds dissenting.

[29] *Home Building & Loan Association* v. *Blaisdell* (290 U. S. 398, 448-483).

of our duty should we fail to spread upon the permanent records of the court the reasons which move us to the opposite view." [30]

And in concluding his powerful dissent from the majority opinion subjecting the Associated Press to regulation by the National Labor Relations Board, he said: [31]

"Do the people of this land—in the providence of God, favored, as they sometimes boast, above all others in the plenitude of their liberties—desire to preserve those so carefully protected by the first amendment; liberty of religious worship, freedom of speech and of the press, and the right as freemen peaceably to assemble and petition their Government for a redress of grievances? If so, let them withstand all beginnings of encroachment. For the saddest epitaph which can be carved in memory of a vanished liberty is that it was lost because its possessors failed to stretch forth a saving hand while yet there was time."

Early in his service here the act of Congress empowering a board to fix minimum wages for women (or children) employed in the District of Columbia came before the Court in *Adkins* v. *The Children's Hospital* (261 U. S. 525), decided April 9, 1923. To him the discrimination between men and women involved in that statute prescribing minimum wages for women, without imposing any corresponding limitation on those for men, was a violation of the fundamental liberty of an adult woman to contract as she chose, and was a reversal of the modern trend toward equality of women with men before the law. Pointing out that this was not a statute relating to the hours of labor for women, or to their working conditions, in relation to which the physical differences between the two sexes may justify different provisions for them,[32] he says (pp. 553–554):

"In view of the great—not to say revolutionary—changes which have taken place * * * in the contractual, political, and civil status of women culminating in the nineteenth amendment, it is not unreasonable to say that these differences have now come almost, if not quite, to the vanishing point. In this aspect of the matter, while the physical differences must be recognized in appropriate cases, and legislation fixing hours or conditions of work may properly take them into account, we cannot accept the doctrine that women of mature age, *sui juris*, require or may be subjected to restrictions upon their liberty of contract which could not lawfully be imposed in the case of men under similar circumstances. To do so would be to ignore all the implications to be drawn from the present-day trend of legislation, as well as that of common thought and usage, by which woman is accorded emancipation from the old doctrine that she must be given special protection or be subjected to special restraint in her contractual and civil relationships."

Emphasizing the distinction between such a statute and one merely regulating hours of labor or working conditions, he adds (p. 554): "This court has been careful in every case where the question has been raised, to place its decisions" (sustaining a statute) "upon this limited authority of the legislature to regulate hours of labor, and to disclaim any purpose to uphold the legislation as fixing wages, thus recognizing an essential difference between the two." [33]

His opinion in the Adkins case was plainly influenced by his belief that the "modern trend" of legislation and thought is toward the perfect equality of women with men before the law, and that the District of Columbia statute and other State statutes of that type were really reactionary in refusing recognition of women's equal rights and equal liberty of contract with men. However, during the following decade, and particularly after the financial depression, State statutes began to multiply along lines similar to that of the District of Columbia stricken down in the Adkins case; but Mr. Justice Sutherland's own earnest belief remained unchanged with respect to them; and this Court adhered to that decision as late as the Tipaldo case (*Morehead* v. *New York ex rel Tipaldo* (293 U. S. 587, 603, 614; June 1, 1936), despite rising dissent.

But on March 29, 1937, the Adkins case was overruled in *West Coast Hotel Co.* v. *Parrish* (300 U. S. 379, 386), upholding a statute of the State of Washington, where this Court repudiated the idea of there being any substantial difference between a "minimum wage" and a "maximum of hours" statute in limiting liberty of contract. The opinion of the Chief Justice adverted among other things to the history during the intervening decade since the Adkins decision, and said (pp. 399–400):

"The adoption of similar requirements by many States evidences a deep-seated conviction both as to the presence of the evil and as to the means adapted to check it."

And added:

"There is an additional and compelling consideration which recent economic experience has brought into strong light. The exploitation of a class of workers who are in an unequal position with respect to bargaining power and are thus relatively defenseless against the denial of a living wage is not only detrimental to their health and well-being but casts a direct burden for their support upon the community. What these workers lose in wages the taxpayers are called upon to pay. The bare cost of living must be met. We may take judicial notice of the unparalleled demands for relief which arose during the recent period of depression and still continue to an alarming extent despite the degree of economic recovery which has been achieved. * * * The community is not bound to provide what is in effect a subsidy for unconscionable employers."

Mr. Justice Sutherland, however, remained unconvinced. To him the majority opinion was a change made by the Court in the meaning of the Constitution. He felt constrained to dissent, and in his dissenting opinion [34] he stated in forceful words what he conceived to be the duty of a Justice of this Court in such a case. He said (ibid., pp. 401–402):

"Undoubtedly it is the duty of a member of the court, in the process of reaching a right conclusion, to give due weight to the opposing views of his associates, but in the end the question which we must answer is not whether such views seem sound to those who entertain them, but whether they convince him that the statute is constitutional or engender in his mind a rational doubt upon that issue. The oath which he takes as a judge is not a composite oath, but an individual one. And in passing upon the validity of a statute, he discharges a duty imposed upon him, which cannot be consummated justly by an automatic acceptance of the views of others which have neither convinced nor created a reasonable doubt in his mind. If upon a question so important he thus surrender his deliberate judgment, he stands forsworn. He cannot subordinate his convictions to that extent and keep faith with his oath or retain his judicial and moral independence.

"This court acts as a unit. It cannot act in any other way; and the majority (whether a bare majority or a majority of all but one of its members), therefore, establishes the controlling rule as the decision of the court, binding, so long as it remains unchanged, equally upon those who disagree and upon those who subscribe to it. Otherwise, orderly administration of justice would cease. But it is the right of those in the minority to disagree, and sometimes, in matters of grave importance, their imperative duty to voice their disagreement at such length as the occasion demands—always, of course, in terms which, however forceful, do not offend the proprieties or impugn the good faith of those who think otherwise." [35]

Early the following year, on January 3, 1938, only a few days before his retirement from this bench, Mr. Justice Sutherland handed down the opinion of this Court in *Alabama Power Co.* v. *Ickes, Federal Emergency Administrator of Public Works* (302 U. S. 464, 475), holding that a competing power company had no standing in equity to maintain a bill to enjoin performance of "loan-and-grant agreements" between the Administrator and various municipalities contemplating the construction of municipal electricity-distribution systems, which might result in destructive competition with the existing power company. The bill was based on the alleged ground that the agreements were unlawful, but his opinion for this Court held that, since (pp. 478–479) "the interest of a taxpayer in the moneys of the Federal Treasury furnishes no basis for an appeal to the preventive powers of a court of equity"; [36] and since the complaint did not allege conspiracy or fraud or malice or coercion, that it showed no invasion of any "enforceable legal right of petitioner" (pp. 479 et seq.).

In considering constitutional questions of grave importance concerning which there was widespread division of thought throughout the country, that came before the Court during the period of Mr. Justice Sutherland's service on the bench, it was inevitable that men of strong convictions and different points of view should develop conflicting opinions, and should hold them firmly. Upon these matters it is too early to appraise his work or his opinions. It is enough to say, as his colleagues did in their letter to him, January 6, 1938, upon his retirement from the bench:

"Not only have you brought to our deliberations learning and dialectical skill, a wide

---

[30] Justices Van Devanter, McReynolds, and Butler concurring with him (290 U. S. 483).

[31] *Associated Press* v. *Labor Board* (301 U. S. 103, 141).

[32] He distinguished for example the case of *Muller* v. *Oregon* (208 U. S. 412), dealing with the number of hours in which any woman may be employed in certain industries and similar cases; *Riley* v. *Massachusetts* (232 U. S. 671); *Miller* v. *Wilson* (236 U. S. 373); and *Bosley* v. *McLaughin* (236 U. S. 385); cases where the reasoning was along the same lines as Justice Sutherland's own reasoning in the above mentioned case of *Radice* v. *New York* (264 U. S. 292, 293 et seq.), decided the next year.

[33] Chief Justice Taft and Justices Sanford and Holmes dissented; Justice Brandeis took no part in this case (ibid., pp. 562–571).

[34] Justices Van Devanter, McReynolds, and Butler joined him in thinking that "the judgment of the court below should be reversed."

[35] He said further, stating his own position on the case:

"It is urged that the question involved should now receive fresh consideration, among other reasons, because of 'the economic conditions which have supervened;' but the meaning of the Constitution does not change with the ebb and flow of economic events. We frequently are told in more general words that the Constitution must be construed in the light of the present. If by that it is meant that the Constitution is made up of living words that apply to every new condition which they include, the statement is quite true. But to say, if that be intended, that the words of the Constitution mean today what they did not mean when written—that is, that they do not apply to a situation now to which they would have applied then—is to rob that instrument of the essential element which continues it in force as the people have made it until they, and not their official agents, have made it otherwise." (Ibid., pp. 402–403).

[36] Citing his own former opinion in *Massachusetts* v. *Mellon* (262 U. S. 447, 486 et seq.),

knowledge of affairs enriched by varied and eminent public service, and a habit of thoroughness and precision, but you have matched tenacity of purpose with an unvarying kindliness and have mellowed our deliberations with unfailing humor" (303 U. S. vi).

He was a great judge and a great American.

The Boy Scouts of America

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley before the Advertising Club of New York at the luncheon meeting commemorating the thirty-fifth anniversary of the Boy Scouts of America:

Mr. Chairman and guests, Dr. Fretwell's introduction makes me feel very humble, for it seems to me that all of us here, who have the privilege of taking part in the anniversary observance of this great organization, are honored by the opportunity.

A short time ago, Dr. Fretwell showed me a copy of a message which had just been received from Gen. Mark W. Clark, commanding general of the Fifteenth Army Group in the European area. I would like to read you his message just as it was handed to me:

"In sending the Boy Scouts of America my hearty congratulations on the thirty-fifth anniversary of their movement, I feel a personal pride in the record of achievement and inspiration manifested by that organization.

"My son, Bill, now in his final year at West Point, was himself an Eagle Scout. Scores of enlisted men and officers under my command are former members and, being true Scouts, have never lessened the ideals of world brotherhood. They join me in congratulating all Scouts for the great service they are rendering on the home front. We, in turn, are looking to them for inspiration and leadership in our post-war life when brothers together becomes more than a theme for the Boy Scouts—when it becomes the keynote for every race and creed of this battle-torn world.

"With best wishes, I am,

"Sincerely,

"MARK W. CLARK,
"Lieutenant General,
"United States Army,
"Commanding."

Now when a man like General Clark takes time out of his many duties to send a message from his headquarters to the Boy Scouts of America, I think we on the home front should realize that the growing boys are most certainly our responsibility, but as the citizens of tomorrow, are the bright promise of the Nation. I think that we should feel that we are privileged to have a share in the work that is being done to strengthen them for the great task that lies ahead.

I believe this is typical of the feeling throughout the country today. We are all of us very much more aware of our responsibility to youth than we were a generation ago. When I was a boy, growing up in a small town, there were no such organizations as the Boy Scouts. We had no neighborhood clubs for boys. We went fishing, swimming, skating, coasting down hill, played baseball and now and then got together for a little social diversion. Nobody directed us; nobody assumed any responsibility for us; we just went along on our own power. But we were lucky at that. In the cities, the boys fared much worse. There were no playgrounds for children. There were very few parks. When cities did have parks they were usually removed from centers of population. The only places for recreation were the city streets, and the only recreation direction was the corner cop. Only of course neither he nor the kids thought of it exactly that way.

Today the picture has changed. We realize that youth ought to have a number one priority on our devoted attention. Our young men are needed to fly our planes, to drive our tanks, to absorb the shock of battle. We need our young men desperately today, and we realize that when we ask them to take the brunt of battle, we have no moral right to accept their sacrifices unless we do everything under heaven not only to help them to get readjusted when they come back, but to educate, to train and provide the right sort of experiences for their younger brothers.

Now the Boy Scout Movement invests in the future and it is one of the great tokens of the fact that America is awake to her obligations to youth. Under God and the fitness of things, I believe that we ought to strengthen the oncoming generations to youth to repay the sacrifices which their older brothers are now making for them and for us, and we ought to highly resolve that our young people will be properly equipped to take the leadership that they will have to assume in years to come.

Well, what have our boys and girls a right to expect of us? Are we, you and I, really fulfilling our obligation to them? We pick up our newspaper and we read that juvenile delinquency is up 40 percent, 50 percent, and in some places I have seen it estimated as high as 60 percent. Why? Everyone has an answer. The war, the war conditions, overcrowding, this thing, that thing, the other thing. There is nothing the matter with our boys and girls today except the same thing that has always been the matter. The problem is not juvenile delinquency, but adult indifference. Boys want adventure. Of course, they do. They always have. The thing to do is to give them the right sort of adventure. The time to stop juvenile delinquency is before the boy becomes delinquent.

There are four things to my way of thinking that play a very important part in the life of a boy, that have everything to do with fixing the way his future life will be. First is the home. In 9 times out of 10 if a boy gets into trouble, you will be able to trace the cause of it to bad conditions at home, bad example, indifference, neglect.

The second great influence on a boy is the church. It is impossible to overestimate that influence. Religion should be a real and compelling thing in the life of a boy. The time was when the atheist was just one in a mob who cried out, "There is no God." But today in Nazi Germany atheism is organized and for the first time in the history of the world a new generation was educated on an anti-Christian and anti-God basis. We have seen the results in the lives of the young people in Nazi Germany, who were taught that the state is above God.

How much better off the whole world would be if all observed the twelfth Scout law. Let me read it to you. "A Scout is reverent. He is reverent toward God. He is faithful in his religious duties, and respects the conviction of others in matters of custom and religion." If that had been the law for boyhood all over the world there would have been no racial persecution in Germany, and the world would not now be embroiled in the bloodiest war in history.

The third important influence on youth is the school. There is no need to elaborate on that. We all know how necessary a good education and vocational training are for the future of a boy. What the home and the church do for the heart and soul, the school does for the mind.

But in our complex modern life when the home, and the church, and the school have done their part, there still is need for something more in the lifetime of a boy. He is a social being. He naturally looks for companionship, and he looks for adventure, something to do in his spare time. That is where the Boy Scouts of America comes into his life, and does a job which, in my judgment, no other organization can do more effectively. What are some of the things that this Scout program gives the boy to round out his equipment for life?

In the first place, the Scout program gives him wholesome recreation. Boys become Scouts for the fun that they get out of it. You and I may know that a lot of other things are important, but to the boy today, just as to us, when we were boys, the great thing is adventure and fun. Now, there are all sorts of commercial amusements available on ever street corner—many more than when you and I were in our 'teens. There is the motion picture—a great institution and a powerful educational source for good, in its better phases, but there are also unfortunately, cheap motion pictures that pander to the boy's love of excitement, without doing anything constructive for him. There are the poolroom and the dance hall, harmless enough in themselves perhaps, but not constructive influences in the life of a growing boy. In contrast to these and other commercial amusements, the Scout movement gives the boy the whole world of the out-of-doors—camping, a chance to sleep out in the open and to fill his lungs full of fresh air; a chance to cook his dinner over a fire; a chance to go swimming, to learn how to handle a boat, and maybe to save a person's life.

That brings up the second thing that I think is valuable in the Scout program. It gives the boy things to do that appeal to him as worth while—that appeal to the man already beginning to take shape in him. He learns to take care of himself and he learns to help other people.

Not so long ago there was an item in one of our New York papers. The headline read, "Boy Scout Rescues Pair Felled by Gas." The article told about how his knowledge of artificial respiration enabled a 14-year-old boy to save the life of an elderly couple who had been overcome by fumes from a gas heater. When this boy came home from school in the afternoon he smelled gas as he entered the hallway of the apartment building where he lived. He traced the odor to an apartment on the fourth floor, and got no response. But he did not give up for this boy was a Scout. He knocked for one of the other tenants, climbed through the window of this apartment on to the fire escape and looking through the window next door saw the couple lying on the floor. With help from the neighbor he broke the window. He took the pulse of the unconscious man and woman and started to work on the man because his pulse was weaker. At the same time he directed the neighbor how to revive the woman and yelled down the fire escape to someone else to send for help. By the time the police and ambulance got there both those old people had been saved, because a 14-year-old boy knew what to do and how to do it.

Now this is a common enough story. I dare say something like it appears many times in our newspapers here in this city and elsewhere all over the country. But think of the satisfaction that that Boy Scout and all the other Boy Scouts in his Scout Troop, and in other Scout Troops, get out of the knowledge that they have learned something worthwhile that enables them actually to save a person's life.

Right now in the city of New York, and in every other community, large and small, all

over the country, young boys are having a chance to help our country win the war in ways that would never under the sun have been possible if it were not for the Boy Scouts of America. This is not only a very well worthwhile service for our country, but is an Waste paper drives, bond selling, planting crops, helping the Red Cross; you see these important thing in the lives of these boys. Boy Scouts all over doing a man-sized job at a time when we have a serious manpower shortage.

Then another important thing that the boy gets in his scout troop is companionship. The right sort of companionship, the right sort of impressions, are of critical importance to a boy. I ask you here to look back upon your own youth and consider honestly how much of what you are now has been affected by the friends and companions you had when you were in your 'teens. How important it is for every boy to have a wholesome recreation, and worthwhile things to do, with the right sort of companionship. And I think you will agree that boys are tremendously susceptible not only to the influence of companions of their own age, but also to the influence of adults. Boyhood is perhaps the most important period in a man's life, then his ideals are acquired, his character formed. He needs to have the right kind of man to supply his ideals and to become his hero. Every boy is a hero worshipper, and he tries, albeit unconsciously, to make himself like his hero. If the men with whom he associates are cheap, and crooks, are gunmen or gangsters, that is the sort of hero the boy wants to resemble. It is up to us to see that he has the right sort of companionship and the right sort of leader to follow.

At this period boys are having a hard time. Their older brothers are away, their fathers in most cases are keeping longer business hours than ever before, and crowding in a lot of wartime activities also. Many of the wholesome things that the family used to do together are not possible now, because of war work or restricted travel conditions or gasoline shortage or other reasons. Boys have time on their hands. Tens of thousands of boys are nightly on our streets looking for amusement, seeking adventure, yearning for companionship. This situation is a challenge to us on the home front. Is it not up to us to provide places where these boys can meet and play, be entertained and instructed and at the same time be under the influence of men of the right kind?

This is a practical thing to do. It can be done. It has been done, thank God, all over America. But why are we not, in every community, undertaking it in a big way? All of you men here today are interested in boys and want to work for them. That is why you are taking part in this occasion, but are you interested enough and do you care enough? If each one of you would lead a one-man crusade to provide more opportunities for boys to get the benefits of this Scout program, your city could be an immeasurably better place when your sons come back home than it was when they left.

This job is up to us. It depends upon us whether these boys will have the opportunity to learn how to be good and worthwhile citizens, or whether they will be woefully neglected during these important formative years. We cannot turn our backs and ignore existing conditions. It is up to us to accept the challenge and lend ourselves for the task. It is a man's job and it needs men of mettle who will put something of themselves into the undertaking.

For 35 years the Boy Scouts of America has been helping to train and direct American boys. This year the Scouts are taking a wider view. Their theme for the year is, "Scouts of the World—Brothers Together." Scout organizations exist in practically every country in the civilized world. In 1939 there were 3,000,000 Boy Scouts. Travelers told us that everywhere they went they would find these smiling boys in their distinctive uniforms, eager to do a good turn and devoting themselves to the ideals of democracy and friendliness and respect for the rights of the other fellow, which the Scout code teaches. No, not in Germany. Hitler would have none of Scouting; neither would Mussolini. And as fast as the Nazis invaded a helpless country, one of the first things they did was to abolish the Scout movement.

Nonetheless, boys in these countries did not give up their Scouting, and now as fast as the countries are liberated, the Boy Scouts are coming into the open again. These Boy Scouts all over the world have a lot of things in common and they deliberately cultivate friendliness and good will with each other by correspondence, by world camps, by exchange of books, and by swapping things with each other as boys have done since the world began. I think we have a tremendously important force in building world friendship and international good will here. Certainly, if we are to have a world peace it will have to be preserved by these boys of Scout age throughout the world. To me it is very encouraging that so many millions of them are Boy Scouts and are dedicated to democratic principles, to high ideals, and to the Scout promise.

It is my profound conviction that the boy who subscribes to your Scout promise, who has a chance to learn the things that Scouting teaches him, and to associate with the right kind of man as leader, will go a long way to make an honest, upstanding, straight-forward citizen of this country, and that in the tomorrows which are coming he will be found in the very front line of the citizens who will maintain the cherished and sacred traditions which the democratic nations of the world are defending today.

Handbook for Servicemen and Servicewomen of World War No. 2 and Their Dependents, Including Rights and Benefits of Veterans of World War No. 1 and Other Wars and Their Dependents

---

REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. PATMAN. Mr. Speaker, since 1934 I have prepared each year a booklet on veterans' rights and benefits. The last one that was printed as a House Document was in February 1944, House Document No. 394, Seventy-eighth Congress, second session. It contained 314 questions and answers and often referred to as the "veterans bible."

With the assistance of others, who will be given proper credit when the booklet is printed, I have prepared another handbook which brings this particular one up to date and includes all recent legislation, especially the so-called G. I. bill of rights. It will contain 391 questions and answers.

The table of contents will include:

Part I: Benefits and Privileges Available During Period of Service in Armed Forces.

Part II: Benefits Administered by the Veterans Administration for Veterans of World War No. 1, World War No. 2, and of the Intervening Period, and Their Dependents.

Part III: Benefits and Privileges Available Through Other Government Agencies for Veterans and Their Dependents.

The booklet will be fully indexed and practically every question that has arisen so far is answered in this booklet.

For instance, the following subjects are especially included:

Mail and railway fares.

Pay and allowances.

A table showing the rates of pay and allowances for officers of the armed forces which indicates how the rank of one in the Army compares with the rank of one in the Navy, both officers and enlisted men.

Servicemen's dependents' Allowance Act of 1942.

Allotments of pay.

Monetary allowances in lieu of quarters for dependents.

Missing men and women and their dependents.

The Women's Army Corps.

Women's Reserve of the Navy.

Women's Reserve of the Marine Corps.

Women's Reserve of the United States Coast Guard.

Soldiers' and Sailors' Civil Relief Act of 1940.

Mustering-Out Payment Act of 1944.

Six months' death gratuity.

Headstones and national cemeteries.

Organization of the Veterans Administration.

United States Government life—converted—insurance, World War No. 1.

National service life insurance, World War No. 2.

Protection of life insurance issued by private companies.

Pensions payable where there was service in the armed forces in World War No. 1, World War No. 2, or in the intervening period.

Servicemen's Readjustment Act of 1944—so-called G. I. bill of rights.

Educational training under Servicemen's Readjustment Act of 1944.

Vocational training to provide for the rehabilitation of disabled veterans and their employment—act of March 24, 1943.

Guaranty of loans.

Readjustment allowances.

Hospital care, domiciliary care, and medical treatment of veterans.

Burial of veterans.

Appeals.

Employment and veterans' benefits in Federal employment.

Income tax.

Homestead and other land laws.

Naturalization of persons who have served in the armed forces.

DISTRIBUTION TO MEMBERS

The Committee on Printing will give me a hearing soon on the question of printing a supply of these booklets for distribution to the Members of the House and Senate as heretofore, and for the purpose of making them available for sale at the Government Printing Office.

VETERANS' BENEFITS

The Veterans Administration has just issued Pamphlet No. 44 of December 15, 1944 which contains information concerning monetary and other benefits available to persons who have served in the armed forces of the United States, and to the dependents of such persons. This pamphlet gives a history of the Veterans Administration and the location of the various offices and hospitals of the Veterans Administration and contains information in the form, in most instances, of exact reproductions of laws concerning veterans and their dependents.

This booklet brings up to date a booklet that I prepared with the help of the Veterans Administration in 1941, which was House Document No. 300, Seventy-seventh Congress, first session.

Prior to that time another booklet was prepared by me on veterans' benefits, House Document No. 666, in 1940, and House Document No. 701 in 1938 was of the same kind.

The first booklet of this kind was prepared by me May 15, 1934, which was brought up to date in 1936.

BOOKLETS SERVE DIFFERENT PURPOSES

Although the booklet prepared by the Veterans Administration is a very valuable booklet and I commend the Veterans Administration for doing an excellent job on the revision, yet it does not serve the purpose that the handbook containing questions and answers serves. Any booklet prepared by the Veterans Administration or any other official governmental agency must necessarily be very strict as to the exact wording of a law, and therefore, many questions arise which are difficult to answer by reading the actual text of the law.

The question and answer form presents questions that are daily asked and the answers are in plain language that anyone can understand.

VETERANS ADMINISTRATION BOOKLET RECOMMENDED

Since the booklet on Veterans' Benefits, Pamphlet No. 44 of December 15, 1944, by the Veterans Administration is available at the Government Printing Office now at 15 cents per copy, I do not now propose to ask for another resolution, as I have in the past, to provide for its printing and distribution to the Members. However, I recommend this booklet to anyone interested in veterans' affairs. It contains 98 pages with 8 pages of index. It is a very comprehensive booklet and should be in the hands of every person who is dealing with the veterans or their dependents.

PRINTING OF QUESTIONS AND ANSWER HANDBOOK WILL BE REQUESTED

It is my hope that the Committee on Printing will ask for the passage of a resolution that will permit the printing and distribution of the question and answer handbook which has just recently been finished, and that the House will pass the same and that the printing and distribution can be made by March 15, 1945.

Mandalay '45

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, I was thrilled a few nights ago when Mr. Dorr Stuart sang a song entitled "Mandalay '45." It was a fighting song and typifies the spirit of the British and American soldiers fighting in that far-off land. As he sang that song, we who heard him were impressed with the words describing the ultimate fate which is in store for Tojo and Hirohito.

Mr. Speaker, under leave to extend my remarks, I am submitting herewith the words of that song:

MANDALAY '45

(By Dorr Stuart)

By the old Moulmein Pagoda, lookin' eastward to the sea,
Is that Burma girl still settin', as of old she used to be?
Is the wind in peaceful palm trees? Do the temple bells still say—
"Come back, you British soldier," as they did just yesterday,
"Come you back to Mandalay"?
No, there's guns by those pagodas, and there's death upon those seas
And those Burma girls aren't settin', they've been beaten to their knees.
If there's wind among the palm trees, it's the wind from bombing planes;
And the temple bells aren't ringin', Burma's silent in her chains.
Can you 'ear the paddles chunkin'? No, the bombs make too much roar,
And the shells and bullets splatter round the Great Gawd Budd's front door.
But the Japs have had their 'nnin', and the time has come to say
That there'll soon be hell a-blazin', out of China 'crost the bay.
Like our boys did at Midway.
And those fires will keep on spreadin' growin' hotter as they go,
'Till they reach one grand explosion in the heart of Tokyo.
Listen, Tojo, Hirohito, and your little gods of clay,
While the bombs rain down like thunder "out of China 'crost the bay."

Extending the Three-Mile Limit

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include an article by Mr. Edward W. Allen, of Seattle, which was recently printed in the Commercial Fishermen's Weekly. This article deals with the 3-mile rule, an antiquated piece of international law, which was originated nearly 400 years ago and is based upon the distance that cannon in those days could fire out to sea.

Today with rocket bombs hurtling hundreds of miles through the air, it is time that we took a lock at the 3-mile rule. This article indicates some of the certain needs for its revision:

THREE-MILE RULE IS DECLARED OBSOLETE, ANTIQUATED—POLICY HAS NEVER BEEN STRICTLY ADHERED TO. AS A MENACE TO FISHERIES DEVELOPMENT, THE RULE PRESENTS A PRACTICAL PROBLEM WHICH CALLS FOR PROMPT ACTION. FISHERY DISPUTE WITH JAPANESE COULD HAVE LED TO BLOODSHED

(By Edward W. Allen)

Senator WALLGREN'S bill raises a question not only important to Alaska but to everyone interested in this Nation's food supply and in its international relations.

Before the war the world's annual catch of fish was said to be 30,000,000,000 pounds, of which the United States took almost 4½ billion pounds. Such a food resource certainly is worth perpetuating.

Formerly ocean fisheries were thought to be inexhaustible. Modern high power, long range, efficiently equipped fishing boats have proved this is not true. More effective regulation is therefore necessary, and the greatest obstacle to such regulation is the so-called 3-mile rule, that a nation can protect its coastal fisheries to a distance of only 3 miles offshore.

RULE SUITED SEA POWERS

However, it was only at the beginning of the last century, at the time when England's Navy became powerful and England wished to hold all other nations down to the smallest sea rights, that the principle gained real recognition. Our own New England fishermen who wished to frequent other people's coasts were largely responsible for this country's taking the same position. Although later on, when Germany and Japan also became strong at sea they, too, adopted the idea, it cannot properly be said that it ever became a rule of international law for the very good reason that probably a majority of nations, such as Russia, Mexico, Norway, Sweden, Portugal, as well as others, have consistently opposed it.

The rule is really only one of policy. Furthermore, it has never been strictly adhered to even by its advocates. It is inconsistent with some of our own recent positions, such as those indicated by the antismuggling laws and the Declaration of Panama. We already have a diplomatic precedent as to Bristol Bay, to which I will later refer. Whatever value the rule may have had in the past, it is now a menace to the protection and development of the great coastal fisheries.

JAPAN SENT FISH BOATS

There is perhaps no more valuable single local fishery than that of Bristol Bay, Alaska, where in a normal year, with only a 30-day fishing season, up to a million and a half cases of red salmon are canned. A case consists of 48 one-pound cans. These salmon spawn in fresh-water streams, usually go to sea their second year, and 3 years later seek the very stream where they were born, there to spawn and die. In making this return they pass through the Aleutian Islands and swing northeasterly for more than 3 miles off shore.

Commencing about 1930, Japan sent fish boats into Bristol Bay. Gradually she increased her operations until in 1936 and 1937 it was demonstrated that Japanese vessels operating more than 20 miles off shore could, if their attempts persisted, practically destroy this fishery.

Fishery unions, salmon canners, members of the Pacific coast public, rose up and demanded that these Japanese marauders be put out. Their effrontery was not only shown by claiming the right to do as they pleased even though it would destroy a valuable American food resource, but one Japanese article went so far as to call Bering Sea just an extension of the Bay of Tokyo.

Our State Department averted a dispute which might well have resulted in bloodshed by getting the Japanese to agree to withdraw their salmon fishing vessels until the problem could be worked out more conclusively, but a permanent solution is essential either through diplomatic channels, which is the most desirable procedure, or through legislative action if the other should fail.

COULD WIPE OUT FISHERY

I should like to give one other illustration. Halibut are found only on ocean banks having the right range and relation of depth and water temperature. Now it happens that almost 90 percent of the Pacific coast halibut fishery is more than 3 miles off shore. Canada and the United States have spent hundreds of thousands of dollars bringing back this fishery to its present high state of production. Are they, when this war is over, to permit foreigners who have not contributed 1 cent to this result and whose fishermen have not suffered any of the restrictions which have been imposed to our own fishermen, to come over to our side of the ocean, reap the harvest, and deliberately wipe out all the constructive work this Commission has done?

The Senate of the United States in 1937 ratified a salmon treaty with Canada. The Commission created by that treaty is confident that if its recommendations are followed, an enormous industry can be rehabilitated. This fishery has fallen to about 15 percent of its former maximum. It can be brought back. But what will it profit these two countries which are thus cooperating in such a constructive manner and affording such a world-inspiring example of practical friendship, if they let outsiders frustrate all their efforts?

OPENLY CONDEMNED

The 3-mile rule as applied to fisheries, if it ever had any reason, has lost it. It is openly condemned by many nations. It is not a binding principle of international law. It is obsolete and unsound. It should be repudiated along with other antiquated conceptions.

Not only have the fishery interests of the Pacific coast pleaded for immediate action in this regard, but the two international commissions to which I have referred have submitted resolutions on the subject to both governments. Labor unions, commercial organizations and operators have all supported this position. Even the lawyers of the United States have taken up the same.

This is not a matter of theory. It is an extremely practical problem which calls for prompt action. We hope that it will be solved through diplomatic channels, but that you gentlemen will not hesitate to resort to legislation if other methods fail to obtain the result which is so important, in fact, essential.

Thoughts for Peace Planners

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1945

Mr. GRANT of Indiana. Mr. Speaker, Dr. Ferdinand A. Hermens of the Department of Political Science, University of Notre Dame, has written a powerful and challenging appeal to all who work toward a just and lasting peace.

Dr. Hermens' letter appears in the current issue of Our Sunday Visitor and is as follows:

THOUGHTS FOR PEACE PLANNERS—OF INTEREST TO MEMBERS OF COMMITTEES ON FOREIGN AFFAIRS

(By Prof. F. A. Hermens, University of Notre Dame)

No peace could be better than one based upon the teachings of the founders of the American Republic, and upon the lessons of our own national development. No peace could be worse than one inspired by the kind of writing based upon a mixture of passion, half-truths, and plain fiction, which apparently is an inevitable byproduct of wartime psychology.

The founding fathers had a high opinion of the dignity of the people's representatives and expected them to exercise real leadership. Madison, in No. 10 of the Federalist papers, said that their task was "to refine and enlarge the public views." Hamilton, in No. 71 of the Federalist papers, reminded us that there is a difference between "the deliberate sense of the community" and "an unqualified complaisance to every sudden breeze of passion, or to every transient impulse which the people may receive from the acts of men who flatter their prejudices to betray their interests." He called upon our leaders to crystallize the former, and to shun the latter.

The polls taken on the subject of peace by the National Public Opinion Research Center at Denver are a powerful reminder that the thinking of the average American is even now a great deal sounder than the literary products of certain intellectuals. Furthermore, the public reaction to "the Pattern for peace" issued by the religious bodies of this country, to the recent statement of the Catholic bishops on peace and power politics, and to Pope Pius' latest Christmas address, shows that our people respond gladly to far-sighted leadership whenever it is offered. Therefore, we do not have to delay in mobilizing the "deliberate sense of the community"; it is possible to bring it into action here and now.

Leadership in the interests of a just and durable peace presupposes, in the first place, the renunciation of power politics. Most of us are aware of the reality of, and the need for, power. But we reject what has long been a practice in other lands and what now in this country threatens to develop into an influential theory. The late Prof. Nicholas John Spykman, the founder of this school of thought, at one time said:

"The statesman who conducts foreign policy can concern himself with values of justice, fairness, and tolerance only to the extent that they contribute to or do not interfere with the power objective. They can be used instrumentally as moral justification of the power quest, but they must be discarded the moment their application brings weakness. The search for power is not made for the achievement of moral values; moral values are used to facilitate the attainment of power."

Such realism is not only immoral but it is deeply unreal. A nondemocratic power may, for a long time at least, follow the policy recommended; a democratic country cannot. Our consciences are as much a reality as are our guns, and in a democracy the consciences will, in the end, control the guns. Wartime passion may drown out the voice of the conscience; if this happens, post-war disillusionment will produce a guilt complex bound to paralyze the use of force when force is necessary to protect the right.

Let us then, first of all, lay down the basis of a foriegn policy which we can respect. At times we may fail to attain the ideals embodied in such a policy, but that is no reason not to have the ideals. If circumstances drive us off our road, the star of our principles should guide us back to it. And when accepting a policy of the lesser evil, we should bear in mind that as Christians we are not permitted to do evil. We may tolerate what is wrong because in trying to remedy it immediately we might be led into even greater evils. But we should make it clear that we fight for as much good as we can attain, and when we do not reach the goal we should resist the temptation to call right and just what in fact is but submission to superior force. Any lesser evil to which we submit should not make us slacken in driving for the good which alone can be our real goal.

THE CASE OF POLAND AN EXAMPLE

We should bear such lessons in mind in the present struggle over Poland. Perhaps there is a limit to what we can do to defend her true integrity and independence. But we should not call right what in fact is nothing but a decision based upon sheer military might. Besides, there is no need to have such things as the present dishonorable press campaign, which portrays the Lublin committee as a true emanation of democracy.

Justice acknowledges no limits. It has to be observed toward the vanquished as well as toward our allies. In the case of Germany our responsibility is all the greater because our own military power will have much to do with the ultimate defeat of that country and the decision of its fate afterward. To be sure, in the countries overrun by Hitler's armies the demand for sheer vengence is great. But it is by no means universal. Some of the leaders of the underground movements in the countries have, in fact, come out for farsightedness and moderation, and so have influential papers in much-bombed Britain. It would have been natural for us to throw our weight on their side, if, instead, we do the opposite, there is real danger that we might find curselves lined up with the forces of vengeance and destruction.

In dealing with Germany, we might well heed the counsels of the founders of our Republic. The problem of militarism was most lucidly dealt with in Nos. 6 and 8 of the Federalist papers. The authors, Jay and Hamilton, were concerned with the possibility that instead of the union proposed, the 13 States might resume their independence, or that regional federations might be effected. They objected that this would create a feeling of insecurity all over the continent. One State, or one regional federation, would be in danger of being attacked by another. A standing army would be required to guard against this danger. In being so vital to the security of their section, the Army leaders would make themselves superior to the civilian powers and establish militarism; wars would follow upon some pretext or other. The proposed Union, however, would dispense with he need for an overlarge and overbearing army, and preserve peace alongside democracy.

PRESCRIPTION FOR THE GERMAN PROBLEM

What Hamilton said contains the diagnosis of, and the prescription for, what we call the German problem: In the Thirty Years' War which reduced Germany's population from 16,000,000 to less than 8,000,000, Germany was the anvil of the power politics of Europe. At the end of that war, Brandenburg—Prussia's standing army came into being, through which Germany in the end was to become the hammer, although the intervening period of Napoleonic tyranny should not be forgotten.

Under such conditions, the solution is obvious. Let the states of Europe federate as did those of the North American continent. It will not be easy to do so, but then, neither

was a permanent union finally established in this country without difficulties. Federation of Europe means cooperation, and out of cooperation alone can there arise reconciliation—without which there will never be a peace worthy of the name.

To be sure, in their opposition to a federated Europe, Lord Vansittart and Stalin, believing in different varieties of power politics, have joined hands. Agencies working for a real peace, such as the Catholic Association for International Peace, have endorsed such a solution. As long as we are willing to apply the lessons of our own national development, we should do whatever is in our power to promote this goal. Above all, we should shun any of those political monstrosities propagated by our own hatemongers and calculated to make perpetual the abyss now separating victors and vanquished.

Let us remind those in the liberated countries who oppose cooperation with the "upright souls" (to use a term of Pope Pius) in the Axis Nations of what the younger Pitt said when his great opponent, Fox, taunted him with his failure to bear in mind his father's belief that France was the natural foe of England. Pitt wisely answered that "to suppose any nation can be unalterably the enemy of another is weak and childish."

American political development contains other elemental lessons which we should ponder. The founding fathers' analysis of the reasons of, and the remedy for, tyranny is as sound and as modern as their analysis of militarism. It is impossible to bring these points out in detail in this letter. Yet, the fog of propaganda which hangs over our discussion of the peace should not be allowed to obscure the true meaning of American political philosophy and American political experience. The Senate and House Foreign Affairs Committees might well hold hearings in order to sift the true from the false in the current controversy about the reorganization of the world. In that way alone can we satisfy ourselves that we shall base our contribution to the peace, and our foreign policy after the peace, upon the Christian and democratic traditions of this country, rather than upon the quicksand of that "sudden breeze of passion" against which Hamilton and Madison warned us so eloquently.

Confidence, the Basis for Full Employment—Full Employment Bill Introduced

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. PATMAN. Mr. Speaker, there are two subjects upon which the people of this Nation are united and speak in a single voice. First, and most important for the immediate present, we are united in our programs leading to a solid and long peace. Second, and of equal national importance, we are united in our desire to devise ways and means to bring to an end for all time the recurring cycles of depression and major unemployment which this Nation has been forced to endure during various stages of its past history.

Depressions are bred by fear and thrive in a climate of lost confidence. Depressions and unemployment go hand in hand. To banish unemployment would be to banish depression.

The real question before us in this connection is not "Can we have full employment?" but "How do we go about maintaining full employment?"

When we face squarely this question and attempt to devise its answer, we quickly recognize that jobs are made because investments are made and because credit is not contracted and our citizens have funds they can and will spend.

Investments are made under three conditions:

(a) When idle capital exists;

(b) Markets appear assured; and

(c) When confidence exists.

Credit remains uncontracted—

(a) When debtors' employment or sources of revenue seem assured;

(b) When signs of continuing reinvestment are visible; and

(c) When employment opportunities for the able and willing exist.

Our citizens have funds they can and will spend—

(a) When employment opportunities are plentiful;

(b) When present employment remains insured; and

(c) When general confidence exists.

Idle capital now exists in greater quantities than ever before in this Nation's history. Recent reports of the Securities and Exchange Commission give overwhelming testimony on this point. Markets, however, are not assured when we can see into the post-war period only so far as we can visualize the resumption of certain types of civilian buying of now scarce items when those items are once again in plentiful supply.

Markets will not appear assured unless and until the customers know that their own personal jobs are assured and that employment opportunities will always exist for the able and willing.

The catalyst is confidence. Without it the gears will not mesh and the economic future is uncertain and full of gamble.

Confidence, however, is not bred by idle words, fancy phrases, or even by a campaign of national advertising to that end. It stems from actions taken, not from actions promised at some future date. Only through affirmative action is confidence inspired and guaranteed.

To begin at the beginning, we must devise ways and means to assure the Nation, its industries, and its industries' customers that a full and steady flow of investment capital will be poured back into our industries each year in a sufficient amount to insure maximum employment and thus assure a maximum customer market. To have confidence, we need a guaranty that this will be done. From whom will we get this guaranty?

If we assign this task to private industry, and to private industry alone, we take a grave step. Offhand, to assign private industry the entire responsibility might seem a logical step. Reflection, however, will show that this is not possible nor is it practical under our political and economic system.

By definition, private enterprise in our country means competitive enterprise. This means that the more competitors there are, the healthier is our economic system. For private industry to do the full job of guaranteeing a sufficient and continuing flow of investment capital at all times in amounts enough to assure maximum employment would mean that businessmen would have to foregather and agree in advance on what they would spend for investment and construction each year. In order for such a program to be effective, and workable, it would be necessary for a relatively small number of men and groups to meet and agree in order to exercise such control over the economy as to make their decisions effective.

The power which this small group would wield would mean the power of economic life and death. Whoever made these decisions would control the country. The people of this country will never stand for the vesting of such power in a few persons or groups which are not directly accountable to the people. The fundamental power of our people must never be transferred from public hands to private. Any other road would lead to fascism.

If it is not possible to vest this power in the hands of large business and industrial interests, there remains but one place to vest it. That is in the Government.

It is for this reason that I have today introduced in the House H. R. 2202, described as the Full Employment Act of 1945.

The purpose of that bill, as I see it, is to induce and help maintain an economic climate of confidence in the United States. It proposes the following:

First. It would offer every possible inducement to private enterprise to operate at a high level of activity.

Second. It directs the President to propose annually a wide variety of measures to assist private business in offering jobs to all.

Third. It provides for estimating the number of jobs this activity will produce.

Fourth. Lastly, it directs the executive branch of the Government to embark upon a works program that will supply whatever jobs remain to be supplied in order to assure employment opportunities for all the able and willing.

This is a vastly different thing from just a public works bill. The essential difference in one respect is that this works program will be carried out by private industry under contract with the Government. More important, however, is the guaranty itself that the required investment to maintain this full employment will always be forthcoming.

Imagine the difference in risk-taking and the attitude of private business in this respect if it knew in advance that this primary cause of depressions and panics had been removed. Imagine the degree of confidence that a businessman could feel in making his own plans if he knew in advance that a high level of general business activity would not of necessity be followed by a downswing such as has often happened in the past.

Take a case in point where the future looks dark. I refer to the case of the cotton farmer, who typifies the post-war period's most serious agricultural crisis.

This cotton farmer, faced with foreign competition of cotton raised by laborers

working for a pittance, and faced with competition at home from the larger agricultural units which are bound to equip themselves with these latest mechanical picking and other devices, knows that he and his helpers are likely to need other fields of employment for themselves after the war. They cannot remain exclusively raisers of cotton and hope to make a decent living. They know that other jobs must be made available to them or at least the opportunities for other kinds of employment must be open to them. My bill offers this particular group that kind of hope. It offers many other marginal groups the same type of guaranty.

As chairman of the House Small Business Committee, I can visualize where legislation of this type would be a tremendous boon to small business. Its effect upon agriculture is obvious because when agriculture's customers are employed, farm products command good prices and sell in large quantities.

Full employment, high wages, a prosperous agriculture, all help small business, and large business gets its quota of the benefit also.

I am not one who thinks utopia comes with a stroke of the pen or the passage of a law. This bill would not solve the problem. It would, however, provide the mechanism within Government for a long step forward toward solving the problem and there is nothing in the bill, in my opinion, to which business, large or small, can object. I have protected business from divulging trade secrets and have a clause at the end of the bill which forbids the disclosure of information the publication of which would be harmful to the firm or person submitting it.

We have made a splendid approach toward the solution of the problems of the peace table and have done this because we showed political unity and a singleness of purpose. In approaching this problem of full employment only one spirit can bring us through to an early and successful conclusion—the spirit of good-humored and tolerant cooperation, with industry, large and small, agriculture, labor, and Government pulling together.

Rights of Witnesses

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

RIGHTS OF WITNESSES

Congressional investigating committees obviously need greater flexibility in their procedures than courts of justice. But they need also a resolute respect for the rights and reputations of the citizens hailed before them. To this end, Representative FRANK HOOK, of Michigan, has urged enactment of what he terms a bill of rights for men being investigated by congressional committees. He would assure such persons legal counsel at private hearings, access to stenographic records of any testimony cited by a committee, a full opportunity to reply to accusations and to file a formal statement at the conclusion of testimony. These are such elementary principles of fair play that it is shocking to realize how flagrantly they have been disregarded in the past.

The whole system of congressional investigation, a vital adjunct of the legislative process, has been brought into disrepute by the excesses of committees such as those headed by Representative Cox and former Representative Dies. Some of them have become organized atrocities. Congress as a whole, for the sake of its own prestige, ought to put a checkrein of the sort proposed by Mr. HOOK on the activities of Members whom it vests with investigatory powers. Committee members ought to keep careful check upon any chairman disposed to make individual pronouncements for the committee as a whole. Of course, the most effective control Congress can exercise over investigating groups is care, in the first instance, in establishing them. In this regard, it is worth recalling that Mr. HOOK is also the author of a resolution calling for repeal of the amendment creating a permanent Committee on Un-American Activities. Adoption of this would be the best evidence Congress could give that it wants the rights of witnesses respected.

Labor's Amazing Production Record—Now Let's Repeal the Smith-Connally Law

EXTENSIONS OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. LUDLOW. Mr. Speaker, I do not believe that in all America there is any person among our 130,000,000 people who is more capable of giving an accurate opinion on labor's part in winning the war than J. A. Krug.

Mr. Krug is Chairman of the War Production Board, and in that capacity has over-all responsibility for the production of the implements required to win this global war.

Writing to Mr. Krug, I said:

I will be much obliged if you will give me your opinion on labor's contribution toward winning the war in respect to the production of the implements of war.

Chairman Krug's answer has just been received. It should be read by everybody in the country.

During the 3 years ending last December, monthly production increased 11 times in size.

"Quite remarkable" are the words used by Chairman Krug in describing labor's strike record since Pearl Harbor. Pointing out that the enormous increase in industrial activity normally would have been accompanied by an increase in the number of strikes, the War Production Board Chairman says:

Instead of increasing, however, the number of man-days lost due to strikes has declined over the period 1942, 1943, and 1944. A preliminary estimate through November 1944, shows that 0.1 percent of available working days were lost because of strikes. Furthermore such strikes as have occurred have been of shorter duration and have involved fewer workers.

The Chairman reports that enormous increases have occurred in labor productivity and that the output per worker as of April 1944 was 30 to 35 percent over December 1942.

In view of the plain, unmistakable facts set forth in Mr. Krug's letter in regard to labor's magnificent contribution toward winning the war I have referred the letter to the House Committee on Military Affairs, which has before it H. R. 459, the bill I introduced on the opening day of this Congress for the repeal of the Smith-Connally law.

That law is a cruel, stinging indictment of labor based on utterly false premises.

Chairman Krug's letter gives us the facts about what labor has really done and it is a record of almost unbelievable accomplishment.

I appeal to Congress to right the wrong it did to labor when it passed this iniquitous law.

The full text of Chairman Krug's letter is as follows:

WAR PRODUCTION BOARD,
Washington, D. C., February 3, 1945.

Hon. LOUIS LUDLOW,
House of Representatives,
Washington, D. C.

DEAR MR. LUDLOW: In reply to your letter requesting my opinion on labor's contribution toward winning the war with reference to producing the materials and equipment of war, I am very happy to forward to you the following comments:

Labor's contribution to the war effort may be measured by the degree to which labor has mobilized for war work, the extent to which labor's voluntary effort has kept strikes, labor turn-over, and absenteeism to a minimum, and the way in which labor has rallied to help solve production problems, manpower shortages, and other situations affecting critical war production, through local labor-management committees, and similar groups.

Growth in production: Labor's mobilization for war together with the development of technological and managerial improvements and increased labor productivity have brought about an enormous growth in munitions production which just about quadrupled over the period January 1942 to December 1943. Employment in munitions increased roughly 70 percent over the same period. Monthly production during the 3 years ending December 1944 has grown from one-half billion dollars to five and one-half billion, or 11 times its former size.

Mobilization: The manpower of the country has been mobilized through measures which were basically voluntary in character. Between 1940 and 1944, 15,500,000 people were brought into employment and the armed forces who had not been employed in 1940. During the same period millions of workers moved from less essential employment to war work, as was evidenced by decreases in employment in trades and services and an accompanying rise in employment in all types of war work. Between July 1941 and July 1943, employment in retail trade was reduced approximately from 6,700,000 to 5,900,000. Self-employed and domestics were reduced from 7,500,000 to 5,700,000. On the other hand, over the same period, employment in the munitions industries rose from 5,900,000 to 9,600,000, and employment in Federal war agencies rose sharply likewise.

Expansion of the total labor force, including the Armed Forces, in the 12 months ending in September 1944, was half a million more than the normally expected increase of about 600,000 annually. As of December 1944, the total labor force was 6,700,000 greater than the labor force would normally be expected to be.

Large numbers of workers have migrated from their homes to centers of war production. Areas in which war production has been concentrated have experienced tremendous population increases. San Diego, Calif., for instance, has experienced a population increase of 111 percent between 1940 and 1944, while its population increase for the entire decade 1930 to 1940 was 38 percent. San Francisco has experienced a 40-percent increase over the past 4 years, as compared with 8 percent in the previous decade. This concentration of war workers in war production centers has led to the development of serious community problems such as shortages of housing and transportation, difficult shopping, etc., which have made living and working conditions much harder for the workers and are in part responsible for turn-over, absenteeism, etc.

An idea of the size of the occupational adjustments which have been made may be gathered from the fact that millions of new entrants to the labor market and former workers in less essential industries were being put to work on war jobs who had not had the previous industrial training needed. Workers who had had previous industrial training in peacetime factories likewise needed training for their new jobs. According to the Bureau of Training of the War Manpower Commission more than 10,000,000 persons have been trained in the various types of public vocational training courses between 1940 and 1944.

Labor productivity: Enormous increases have occurred in labor productivity. A rough analysis of munitions output and employment based on W. P. B. and B. L. S. data indicates that output per worker has risen steadily. Output per worker as of April 1944, on this basis, is from 30 to 35 percent over December 1942.

No-strike pledge: After Pearl Harbor labor took its no-strike pledge. Labor's strike record since Pearl Harbor, when properly evaluated, is quite remarkable. Since that date, the enormous increases in industrial activity and in employment which have occurred would mean, under normal conditions, a corresponding increase in the number of strikes and in the number of man-days lost due to strikes. Historically, except under unusual circumstances, strike activity has increased with growth in industrial activity.

Instead of increasing, however, the number of man-days lost due to strikes has declined over the period 1942, 1943, and 1944. A preliminary estimate through November 1944 shows that 0.1 percent of available working days were lost because of strikes. The loss of 2 days' time in a plant has a minimum effect on production, since so short a period would not deplete the stock piles the plant has on hand with which to carry on production other than that immediately affected by the strike. Furthermore, such strikes as have occurred have been of shorter duration and have involved fewer workers.

It must be recognized that accumulated fatigue and strain springing from wartime living conditions are bound to have their effects in strikes, absenteeism, and labor turn-over.

Labor-management cooperation: Over 5,000 labor-management committees have been established throughout the United States, their purpose to provide a mechanism whereby representatives of labor and of management can sit down together to work out production problems. Under the suggestion-box system set up by these committees to receive workers' suggestions on how to expedite or improve production, nearly 10,000 awards have been made, and about 100,000 suggesters have submitted usable ideas. Several hundred million man-hours have been saved through these suggestions. Not only have labor-management groups made recommendations on the best utilization of machinery, the adaptation of old machinery to new uses, and the breaking of production bottlenecks, but they have been instrumental in promoting increased care of tools and machines to prevent break-downs, in eliminating the waste of materials, and in minimizing rejects. Labor-management committees have established subcommittees with a wide range of functions from controlling absenteeism and turn-over, improving measures and devices around the plant to protect health and safety, to morale work among the plant's employees.

Local community groups in which local labor groups, or collective bargaining representatives of the particular plant concerned, as well as the labor representative of the regional war production board, have worked together in many cases to help overcome problems holding up production of critical items. These problems are worked out on a plant-to-plant basis, in terms of the individual problem concerned. One or two instances will illustrate this approach.

One of the War Production Board regional labor representatives handled a foundry problem in up-State New York in which the local U. S. E. S. office was unable to make referrals because of a low starting wage and high-cost transportation facilities. Investigation showed that under a recent War Labor Board award the company was in a position to employ new personnel at a higher rate but feared that doing this would create unrest by setting up intraplant inequalities. However, the W. P. B. labor representative was able to show the company how they could make adjustments under general order 31 which would offset the inequality factor. So far as transportation was concerned, the company was willing to engage a carrier and absorb the costs but was not permitted to do so since the War Labor Board interpreted this as a salary increase. Furthermore, no Utica transportation company would contract to transport people to and from the plant because of disagreement over transportation rates. This problem was overcome by securing a decision from the W. L. B. permitting the company to pay all transportation above rates normally charged on the route, and by engaging a taxicab company to supply the necessary service. As a result, in a short period of time, the company had secured the additional people needed.

Group action on a community basis was employed in Philadelphia also, where the W. P. B. labor representatives for that region called together a group of union officials to explore the possibilities of lending men to critical establishments. Under this program firms whose needs were less essential would agree to lend especially skilled workers to "must" plants for a specified period of time—30, 60, 90 days. At the same time these firms would guarantee to give these workers full reemployment rights and their previous status.

This same flying squadron device was used by several Minnesota shipyards in lending pipefitters to the Gopher Ordnance Works, in that area. Use of such a device requires cooperation from everyone concerned. Management has to guarantee reemployment to the workers being lent. Unions must agree to the crossing of union jurisdictional lines when necessary. Government procurement services must cooperate along with other Government agencies and community services.

Another type of cooperative action was used in the rubber industry when heavy-duty tire production fell behind schedule. In this instance management was placing the blame for the situation on the organized rubber workers, particularly in the Akron area. Unfavorable newspaper stories brought the crisis to a head. In July and August, General Knudsen, and Mr. Keenan and Mr. Golden, Labor Vice Chairmen in the Board, held conferences with the local rubber union officials in Akron and other parts of Ohio, in Michigan and also New England. These conferences brought forth the fact that in large part the answer to the recruitment problem in the rubber industry lay in improving relations between labor and management.

The Office of Labor Production was uniquely suited to deal with this problem since its representatives were drawn from labor and had the confidence of the local unions involved. Furthermore, as an agency of the War Production Board it was able to assist in procuring materials and machinery where that proved necessary. Therefore, teams of representatives were assigned to the trouble spots to work jointly with the local unions, management, and Government agencies on a recruiting program. Subsequent area conferences made it very plain that causes and solutions varied from area to area and from plant to plant within the industry. The success of this method of dealing with production lags by plant-by-plant discussions led by Government officials thoroughly familiar with labor problems indicates the readiness of labor to cooperate in any steps that can be shown to be necessary and reasonable in order to increase military production.

I hope you will find this information useful.

Sincerely,

J. A. KRUG, *Chairman.*

Drive Opened Before State Legislatures To Obtain Endorsement of Vicious Proposal To Limit Federal Taxes on the Rich

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. PATMAN. Mr. Speaker, the closely knit faction in our Nation which is sponsoring the proposed amendment to reduce the taxes on millionaires' incomes, gifts, and inheritances is at the present time making a desperate bid for endorsement by additional State legislatures.

As pointed out in some of the recent literature put out by the Committee for Constitutional Government, a number of State legislatures now in session will adjourn for 2 years, and therefore the plea from the committee is for immediate and renewed activity to induce these legislatures to endorse their clever scheme before they adjourn.

Only too well do they realize that many of these legislatures, if not sold on the idea during the present session, will certainly never be open for consideration of such a plot again after the legislators have had an opportunity to give thorough study and thought to the implications which would result from the adoption of such an amendment. These implications have only begun to be brought

to the attention of the legislators and to the public with any degree of effectiveness. I believe I can say that I was one of the first to bring this nefarious conspiracy out in the open. I must admit that I am amazed and completely baffled at the success with which the Committee for Constitutional Government, under the direction of Pettengill, Rumley, Gannett, and McClure, operated before the treacherous scheme was brought to light.

In this connection, I find one of the committee's spokesmen, with typical audacity, making such a statement as the following: "At this stage, all that is asked is that Congress submit the proposal to the people so that they may decide whether to accept or reject it. So far, Congress has failed to submit it to the fair judgment of the entire Nation. The immediate issue, therefore, is whether Congress shall continue to suppress the proposal or shall submit it to the Nation for discussion and action on its merits."

In the name of common decency, has the underhanded, unpublicized campaign waged by the Committee for Constitutional Government been any indication that they would have been willing to "submit it to the fair judgment of the entire Nation"? This is what I have tried to do and what I am now doing—let us bring this diabolical scheme out in the open and let us have less of bewilderment and surprise by our public, and even our legislators, when it is discovered that endorsing resolutions have been passed by our legislatures. Let us bring it out in the cold light of public scrutiny and we will soon see what reception it is given by the "fair judgment of the entire Nation."

According to another propaganda pamphlet put out by the committee, the following 17 States are listed as having passed an endorsing resolution in both houses: Alabama, Arkansas, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Massachusetts, Michigan, Mississippi, New Hampshire, New Jersey, Pennsylvania, Rhode Island, Wisconsin, and Wyoming. What the committee is not publicizing, however, is the fact that the Governor of Pennsylvania vetoed the endorsing resolution and the fact that the State of Arkansas passed a resolution reversing its endorsement—bringing the score down to 15 States instead of 17. Neither are they publicizing the fact that some of the other States listed above have before their legislatures at the present time rescinding resolutions such as passed by Arkansas.

The pamphlet lists 29 States as being in session this year and making the comment "If one of the 29 States listed, having biennial sessions, fails to pass the resolution this year, action in that State will be delayed for 2 years." We can, therefore, expect a concerted drive by the Committee for Constitutional Government for passage of an endorsing resolution in the 29 States. For the information of the Members, and for the information of those who are anxious to see that the propaganda of the Committee for Constitutional Government is not the only material used in discussion and consideration of the proposed millionaires' amendment, I list these States below:

Arizona, California, Colorado, Connecticut, Florida—April—Georgia, Idaho, Kansas, Maryland, Minnesota, Missouri, Montana, Nebraska, Nevada, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington, and West Virginia.

It is also noted that six States have passed the endorsing resolution in but one house. They are: California House, Louisiana Senate, Nevada Senate, New York Senate, Ohio Senate, Virginia House.

Unfortunately for the Gannett-Pettingill-Rumely-McClure syndicate, they will no longer be able to spread their gospel and continue their activities with the complete lack of general public knowledge with which their activities have been heretofore blessed. A fine example of this is the effort now being made to obtain the endorsement of the New York Legislature, and the article which immediately appeared in PM on Sunday, February 11, exposing this new drive. The article follows:

GANNETT OUTFIT GETS BEHIND DRIVE FOR INCOME-TAX GRAB—COMMITTEE REVIVES CAMPAIGN TO LIMIT LEVIES

(By Karl Pretshold)

ALBANY, FEBRUARY 10.—The campaign has been revived to have the New York Legislature join the movement for an amendment to the Federal Constitution limiting Federal taxes on incomes, gifts, and inheritances to a maximum of 25 percent, during peacetime. The campaign is part of a national effort by Frank Gannett, millionaire reactionary Republican publisher, and his Committee for Constitutional Government.

Seventeen State legislatures already have passed resolutions asking Congress to call a constitutional convention to repeal the sixteenth amendment which gives the Federal Government power to levy taxes on incomes, gifts, and inheritances. The resolutions all call for a twenty-second amendment fixing a 25-percent income-tax ceiling.

If adopted, says the United States Treasury Department, the tax-grab amendment would almost certainly shift the burden of the Nation's war debt to the small taxpayers and bring about a Federal sales tax.

The Constitution requires action by two-thirds of the States to obtain a constitutional convention. Thus resolutions by 15 more States are required to get Federal action on the tax-grab amendment. If a constitutional convention is obtained and initiates an amendment, that amendment must be ratified by three-fourths of the States.

SINISTER LOBBYING

Lobbying efforts of the Gannett committee on behalf of the amendment were called sinister, sordid, by Representative WRIGHT PATMAN (Democrat), Texas, during the debate in Congress last year.

Assemblyman Justin Morgan (Republican), Erie, has again introduced the Gannett resolution here. He introduced it last year, but it was defeated in the assembly. In 1943 a similar resolution carried in the State senate and died in the assembly rules committee. To be effective, the Morgan resolution would have to carry in the assembly and at the present session of the senate.

Irwin Steingut (Democrat), Brooklyn, assembly minority leader, said he opposed passage of the resolution.

"I am for lower taxes," he said, "when and if they can be lowered. We must recognize facts and this proposal would put hardship on the small taxpayer and relieve the big fellows."

Irving M. Ives (Republican), Chenango, assembly majority leader, voted against the tax-grab resolution last year. He will oppose its adoption this year if it comes to a vote.

Labor is wholeheartedly against it. Legislative representatives of various unions say they would urge defeat of the Gannet resolution.

MAJOR VICTORY

The amendment giving Congress the right to levy income taxes was adopted in 1913 after decades of agitation. Its adoption was considered one of the major victories of progressive forces.

"The spirit of our Constitution was breached when the sixteenth amendment was passed," the committee declares in a recent letter seeking contributions toward a $15,000 fund to finance its tax-grab campaign. Defenders of the present income-tax system are denounced as collective-minded radicals out to misuse Federal taxing powers, and thus undermining private enterprise.

"Powerful forces," runs the alarmist warning, "some of them favoring State socialism, are mobilizing" in defense of the sixteenth amendment. Therefore, says the Gannet committee, an immediate special fund of $15,000 is needed for quick action on behalf of the tax grab.

DIFFERENCE

The difference between those who back the idea that taxes should be levied on those with the ability to pay and the committee, it is said in a recent leaflet, is "in the final analysis a difference as to the philosophy of government—national socialism as opposed to a representative form of government based on free enterprise."

The State legislatures adopting the Gannet-sponsored resolution are Alabama, Arkansas, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Massachusetts, Michigan, Mississippi, New Hampshire, New Jersey, Pennsylvania, Rhode Island, Wisconsin, and Wyoming.

They Are Making News

EXTENSION OF REMARKS

OF

HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following editorial from the Bridgeport Post of February 12, 1945:

THEY ARE MAKING NEWS

Representative CLARE LUCE in her broadcast Saturday night again repeated her criticism that our fighting men on the Italian front have been relatively neglected by press, radio, magazines and all other sources of public information, and that they are conscious of this and correspondingly resentful.

Their bitterness is intensified because so many of them have been so long under fire, without adequate leaves or replacements, under the most miserable conditions of physical discomfort.

Mrs. LUCE discussed this situation with the manager of one wire-service bureau, and found her criticism taken lightly. "We have plenty of correspondents covering the Fifth Army front," said this man, "but there isn't

enough action there. After all, news is action."

But is that a good definition? Mrs. LUCE evidently thought not, for she dissected it in her broadcast. Some 19 centuries ago, she pointed out, there was a sequence of events, beginning at Bethlehem and ending at Calvary, which attracted but little attention at the time.

The great, the mighty, and the powerful in the Rome of that day thought these events too insignificant to mention, but in truth they had more bearing upon the fate of Rome than the rise and fall of all the emperors put together.

And in our own time, Mrs. LUCE remarked, the rise to power of an obscure German beerhall orator failed to be news to most of us until he had become such an obvious menace that we have since had to call the four corners of the earth to arms to stop him. A sad error of judgment on our part in not recognizing news when we saw it.

The definition, "News in action," will do for tabloid journalism but not for any service of information that intends seriously to inform and enlighten the people. The late Carr Van Anda, managing editor of the New York Times during the period when that newspaper rose from relative obscurity to recognized leadership as a journal of information, illustrated the point repeatedly.

There is no subject duller than archeology, for instance, but a touch of insight and imagination on Van Anda's part made the opening of Tut-Ankh-Amen's tomb a page 1 news story for weeks on end, in every daily newspaper in the world.

It was an interesting story and important too—for it is important for us humans to know how our remote predecessors thought, felt, and acted, unless we wish to repeat their errors and share their fate.

Just now it is infinitely more important for us to know how hundreds of thousands of our fighting men in Italy and elsewhere are suffering and sacrificing and perhaps dying, and what their survivors will be thinking when they return to take control of this Nation, as they most certainly will.

It would be much smarter for news service managers, newspaper editors, broadcasters, and war correspondents to act on Mrs. LUCE's tip than to try to brush it aside. For she has been to these fronts, she has seen and talked with these men, she knows what they are thinking—and she knows news.

Who's Going to Be Free?

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. PLOESER. Mr. Speaker, the Gardner Advertising Co., of St. Louis, Mo., frequently publishes a letter entitled "It Seems to Us."

Their most recent one, on the subject of What Is Free Enterprise? is worthy of the attention of every American, and I extend it, as follows:

ST. LOUIS, MO., *February 1945.*

DEAR SIR: Who's going to be free?

Right now, in this nightmare of war, no one is free. We're all in the same boat. We all work for the Government. We all work or fight for America.

That's good for all of us. It's good for our souls. It's good for America—until this war ends. Then * * * what price freedom?

If we are to be free, we must recapture free enterprise. It's our only hope if we are to provide enough jobs, produce enough goods, earn enough profit to pay off this war, pay our way in peace—and put an end to American crises.

Well, what is free enterprise? Freedom from what? How much freedom? Who gets it? Can you answer these questions? Can we? Let's try.

Free enterprise is a way of life. It's strictly American. It's a voluntary system, a merit system, an honor system. It's the most individualistic, most reliable, most productive system on earth. It's the only system conceived in the spirit of its people, raised to world dominance by the genius and elbow grease of its people, paying top rewards to a majority of its people. It works.

Free enterprise is a hypersensitive economic triangle. It's a three-man team. Worker, employer, investor, perform interrelated, interdependent, indispensable roles. Each must have his job, his dignity, his just rewards. Each is inescapably dependent upon the other two. Working in harmony, all three prosper. Playing one against the others leads to ruin—for all three. Until these facts are faced by worker, employer, and investor there can be no free enterprise in America. Only the shell remains.

Free enterprise flourishes when government functions as servant—and not as master—of all three members of the team. Freedom from excessive power—in all its sinister forms—is the No. 1 requirement if we are to recapture our three-man job-making, prosperity-making, peace-making team, free enterprise.

How much freedom? Every ounce that can be heaped upon the scales of justice—and still keep them in balance. Freedom rooted in the fact that those scales are held aloft by the strongest arm in all the land. Freedom to plan and build to one's own standards. Freedom to succeed or fail—with all America as the jury. Freedom to expand in all directions—short of exploitation. Freedom to prosper with honor.

Who gets it? First, the worker. In free enterprise, he gets more, rises higher, faster, than he can under any other system on earth. He's free to think more, produce more, earn more than his fellow workers. He's free to compete for authority, prestige, social and financial independence. He's free to win and hold all four—as countless others have before him. Yes, he's free to climb. And his ladder is as strong as his own abilities and desires.

The employer finds his freedom in incentives to prosper. Incentives to build better products, render better services, win and hold more customers. Incentives to produce and distribute more efficiently and thus outstrip his competitors. Incentives to expand and employ more workers. Incentives to climb—and lift his workers with him.

Of all the freedoms, the investor's is the most restricted, most hazardous, most misunderstood. His money is the lifeline of industry and trade, the energy which puts life into job-making machinery. Without his money, industry bogs down, workers find no work, depression reigns. And yet, his is the freedom to risk his all and take his share of profit or lose his shirt—and no tears shed.

And be it noted that investors include millions of workers with a few dollars invested—as well as the few with many.

Free enterprise is not a lopsided system in which one member of the three-man team gets all the glory—or the gravy. It's not an economic grab bag. It's not a system which condones sharp practice in any form—any more than it condones arson, murder, rape. It's not a cloak for crooks. It is not for one group and against another. Free enterprise is a system in which all groups prosper when they pull together.

Why must we recapture it? There's one alternative to prosperity and peace via the three-man team of free enterprise. It's collectivism or some alluring facsimile thereof. Collectivism is modern slavery—net. We are not fighting this war to set up a collectivist America—or to make the world a set-up for its creators!

Very truly yours,

GARDNER ADVERTISING CO.

Provisional Polish Government in Lublin

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. O'KONSKI. Mr. Speaker, no doubt the Members of this House will be interested to know just who the people are who have been chosen by Russia to head the so-called new Polish Government in Lublin. The names and records of these so-called leaders of the Polish Nation read like a Communist's who's who. These so-called leaders are about as representative of the Polish Nation as the draft dodger of World War No. 1, Earl Browder and his gang are representative of the American people. Earl Browder represents just about as much a percentage Americans as the representatives of the Lublin government represent the Poles. In order that the Members of the House might know just who the so-called Polish leaders are I ask unanimous consent to insert their names and records at this point in the RECORD:

MEMBERS OF THE PROVISIONAL GOVERNMENT IN LUBLIN, AS BROADCAST FROM LUBLIN ON DECEMBER 31, 1944.

Acting President: Boleslaw Bierut.

Prime Minister and Minister of Foreign Affairs: Edward Osóbka-Morawski.

First Deputy Prime Minister: Wladyslao Gomolka.

Second Deputy Prime Minister: Stanislaw Janusz.

Minister of National Defense: Gen. Michal Rola Zymierski.

First Deputy Minister of National Defense: Gen. Alexander Zawadzki.

Second Deputy Minister of National Defense: General Konczyc.

Public Administration: Józef Maslanka.

Public Security: Stanislaw Radkiewicz.

Finance: Konstanty Dabrowski.

Public Education: Stanislaw Skrzeszewski.

Social Welfare and Health: Wiktor Trojanowski.

Agriculture and Agrarian Reform: Eduard Bertold.

Communications: Jan Rabanowski.

Industry: Henryk Mino.

Supplies and Commerce: Piotrowski.

Posts, Telegraph, and Telephone: Tadeusz Kaplinski.

Justice: Edmund Zalewski.

Culture and Arts: Wincenty Rzymowski.

Information and Propaganda: Stefan Matuszewski.

WHO'S WHO IN THE PROVISIONAL GOVERNMENT IN LUBLIN

M. Boleslaw Bierut, born in 1891 at Laczna, near Lublin. His real name is Krasnodebski, and the name "Bierut" is a nom de plume composed of the two first syllables of the other two names, which were used by him during his political activities: Bienkowski and Rutkowski. During the First World War he

served in the Russian Army and had already begun Communist activity. In 1921 he was admitted to the Comintern and granted Soviet citizenship.

In December 1923 he was sent for the first time to Poland and soon established himself as one of the leaders of the Polish Communist Party. In 1925 he planned the escape of the famous Comintern member Leszczynski, and himself escaped to Moscow. Later he was entrusted with the Polish section of the Comintern Office for Central and Eastern Europe, which had its headquarters in Vienna. In 1930 the office was transferred to Prague, where he continued to head the Polish section. He cooperated closely with a certain Jurewicz, cashier to the Comintern for that part of Europe.

In 1932 he was again sent to Poland as leader of the underground Communist organization. This time he was caught and sentenced to 7 years of hard labor. But before many months passed he was exchanged as a Soviet citizen for a Polish citizen in Russia. In 1933 he was sent to a special school organized by the Comintern in Leningrad and the next 2 years were spent in Moscow on special political studies. In 1936, under the name of Rutkowski, he was in charge of the Polish Section of the Foreign Office of the O. G. P. U.

He entered eastern Poland in 1939, on the heels of the Soviet troops, and organized a widespread political sweep of all Polish, Ukrainian, and Jewish elements opposing communism. Mass deportations to Russia, arrests, and executions were carefully prepared by him. After the German armies occupied eastern Poland, Bierut escaped to Moscow, but in the winter of 1941–42 he was dropped by parachute from a Soviet plane onto Polish territory. His task was to organize Communist activities in Poland, acting against the underground movement and the underground state directed from London and to set up a new Polish administration in opposition to the existing one.

He organized the Polish Communist Party under the innocent name of the Polish Workers' Party. (One of the leading and most highly respected political parties in Poland, both of prewar and present times, is that of the Socialists. In Polish it goes by the name of P. P. S. What the political agents from Moscow did—acting, as always, on instructions—was to dissolve the Communist Party in Poland and announce the formation of a Polish Workers' Party, the P. P. R. The intention here is perfectly clear. It was expected that through confusion of P. P. S. and P. P. R. working people and peasants, who are utterly opposed to communism and the protection of the U. S. S. R., would be inveigled into the Bolshevik-sponsored party. For the P. P. R. is nothing but the Communist Party under another name.) His next step was to form a council which was supposed to represent the Polish people and a committee, later known as the committee of national liberation. Neither the council nor the committee, however, represented anyone but a few Communists. In March 1944 Bierut, with four others, including Osóbka-Morawski, reached Moscow and there the whole group appeared publicly as leaders of the Polish National Council.

M. Edward Osóbka-Morawski is about 40 years old and a member of the Polish Socialist Party. Before the war was instructor in cooperative movement in Wielun, later worked with the Warsaw Building Cooperative. During the war went over to the Workers' Party of Polish Socialists. After the failure of his efforts to bring this party under the control of the Polish Workers' Party (P. P. R.), a haven for the Polish Communists, he became a member of that latter party in December 1943 and published a fake copy of Robotnik to create impression that the Workers' Party of Polish Socialists merged with the Communist Party. He was sent to Moscow as chairman of the national council elected by the P. P. R.

M. Gomolka, Prime Minister, now a member of the P. P. R., was secretary-general of the Polish Communist Party. He is a new addition to the Lublin group. His career goes back to 1920 when, as an 18-year-old youth, he organized a Communist cell in the Thirty-sixth Infantry Regiment of the Polish Army and promoted desertion to the Red Army. He was arrested and put in prison. He was later trained in Russia for the work of communizing Poland and in practical revolutionary knowledge.

M. Janusz (Agrarian Party) belonged before the war to the Central Board of the Polish Peasant Party and was not known to be an extremist.

Gen. Michal Rola Zymierski. Real name Lyzwinski. In 1927 as chief of the Armament Department of the Ministry of War he was accused of bribery, arrested and sentenced to 5 years of prison and demotion. After serving his jail sentence he went to Paris and traded in arms for Republican Spain. It was then that he contacted Communist elements. Under the name of General Rola he was appointed to the Berling Army. His claim to have no party affiliation is not true, as he too belongs to the P. P. R. under membership card No. 21.

M. Alexander Zawadzki, a Pole by origin but a Red Army officer since 1920 and later for several years Colonel of N. K. W. D. on the Manchuria frontier. Later imprisoned, he was released during the war, promoted to the rank of general and made assistant to Gen. Berling, and the real head of the Army.

Gen. Konczyc, Soviet officer, member of P. P. R., frankly communist.

M. Jozef Maslanka, Minister of Public Administration, former member of the Polish Diet from the conservative and ultra-Catholic district of Grodno-Bialystok, during his term in the Diet a typical back bencher with no initiative or followers.

M. Stanislaw Radkiewicz, member P. P. R., active member of the Union of Polish Patriots in Moscow.

M. Konstanty Dombrowski, member P. P. R.

M. Stanislaw Skrzeszewski, member P. P. R., Communist of many years standing, member of the Union of Polish Patriots, formerly teacher of mathematics in Cracow.

M. Wincenty Rzymowski, Minister of Culture and Art, has often changed his political credo. Became member of the Union of Polish Patriots in Moscow in 1944 when the Red Army occupied Polish eastern borderlands. He was expelled from the Polish Academy of Literature in 1938 for plagiarizing from Bertrand Russell's works. A fervent defender of the 1935 constitution and of the Brzesc process.

M. Stefan Matuszewski, a Communist agent even before the Bolshevik Revolution of 1917, became later a valuable agent for the Comintern. He was detached to the Polish Socialist Party and has always disclaimed his Communist affiliation. At the Congress of the Polish military men within the Russian Army, called to Petrograd in the spring of 1917, he opposed violently the motion of organizing separate Polish units of the Poles serving with the Russian Army, which units were to fight side by side with the Russian Army. As a result of this stand he had to leave the congress with the group he was heading. At that time he was a lieutenant in the Russian Army. At the close of the same year, soon after the outbreak of the Bolshevik Revolution, he was one of the group of Polish Communists who tried to set up a Polish red brigade, a unit which was later used against Poland in the war of 1920–21. In the fall of 1944 he was elected treasurer of the reorganized Socialist Party by the fake Congress of that party called to and held in Lublin under the Red Army supervision. His loyalty to Moscow in his role of the head of the Lublin propaganda center cannot be questioned.

Pontifical Mass for the Victims of Warsaw

EXTENSION OF REMARKS

OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. POWERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered by the Right Reverend Monsignor James H. Griffiths, S. T. D., chancelor of the military ordinariate, St. Hedwig's Church, Trenton, N. J., January 28, 1945:

"My glory shall always be renewed, and my bow in my hand shall always be renewed. * * * When I sat as a king, with his army standing about him, yet I was a comforter of them that mourned." (Job XXIX.)

On this day the Church of God in its liturgical office makes commemoration of the octave of the feast of St. Agnes, a Roman virgin and martyr who died in the fourth century. Until recent years when the Sacred Congregation of Rites adjusted the calendar, this day was dedicated to a renewal of the memory of St. Agnes. However, when the late Sovereign Pontiff, Pius XI, desired to dedicate the 31st of January to that glorious apostle of modern youth, St. John Bosco, the feast of St. Peter Nolasco was transferred to January 28. And yet the Roman Church could not bear the thought of totally eliminating all reference to Agnes, the glorious exemplar of Christian youth, Christian purity, and Christian fortitude.

Hence, it is today that we make commemoration of this unusual child, Agnes, whose feast the church celebrated a week ago on the 21st of January. It is as though Christianity could not forget this singular type of the Church of Christ standing in her innocence and simplicity before the formidable array of the totalitarian empire of the Romans. Agnes, a girl of 13 or 14 years, was able to vanquish the power and astuteness of a political organization which had conquered the whole known world because she had faith in Christ her Savior, because she was convinced that all the power politics, all the refined tortures, all the assaults on her Christian virtue could not avail against the power of God.

She had been subjected to flattery, to the offer of riches and prestige. She had been threatened with the punishments prescribed by Roman law for those who would not betray her Creator—and still she remained adamant. When the executioner raised his sword and finally and haltingly swung it down upon her lily-white throat, the world of power politics, the totalitarian government, concluded that they had definitely disposed of a delinquent child who had not the practical common sense to sprinkle a few grains of incense on the burning coals in the brazier which stood before the images of the deities which symbolized a totalitarian state that believed not in the divinities except as they typified its tyranny over the souls of men.

The Christians spirited away the broken, bleeding body of this child saint and laid it in the soft, moist earth beneath the cobbles of the Via Nomentana outside the imperial city of Rome. There she lay as an inspiration to other men, weak and feeble as the world reckons strength. But she remained in her humble "columbarium" as a source of power for others who would meet the armed might of tyranny, urging them on to fight the good fight in spite of persecution and

confiscation, in spite of all the brutal tortures which hatred and cruelty could devise. Those bones were not the relics of a great general, or of an astute statesman. They were the bones of a young girl who had vanquished an empire and the builders of empire knew it.

It is the old, old story of Christianity. It is the old, old story of the weak who confound the strong; of the simple who confound the wise. With this inspiring figure of Agnes before our eyes, it seems to me providential that this day should have been chosen on which to intercede for Poland and to pay prayerful tribute to her martyrs who have poured forth their blood for their country and for their faith. Agnes becomes the counterpart of Poland, weak as the world reckons, but strong before God; standing bravely before the wisdom of the world, resisting its blandishments, its flatteries, and its debasing compromises because she has principles and ideals which surpass the cheap expediency of diplomacy.

Poland could match the glorious legions of martyrs of Rome itself. She can produce national heroines such as St. Hedwig—the Jadwiga who bravely saw her husband fall in battle for Poland; who beheld unflinchingly the slaughter of her son, as he resisted the barbarous invasion of his country by the pagan Mongol Tartars from the east.

It would be a simple matter to embroider over with sparkling gems the golden tissue of the glories, the victories, the joys of Poland. We might readily compose a Paradiso of Casimir and Stanislaus and Andrew Bobola, of Sobieski and Kosciusko and Pulaski; of Maria Theresa Ledockowska, Prince Augustus Czartoryski, and Mother Frances Siedleska. But, no, this morning we are assembled for a more painful purpose but for a purpose which is no less glorious. This morning we have come to mourn with Poland and to plead for Poland.

We have come this morning to offer sacrifice not for one man, for a prince—but for a whole city—for the city of Warsaw, the capital of one of the most distressful people modern civilization has ever known. We have come to pray for Warsaw by the Vistula, which has died a dozen deaths from the conquest of Napoleon to its double martyrdom under Hitler; for Warsaw, whose very ashes have become by a divine paradox the burning source of life and the unquenchable spark of liberty. We have not come to mourn the death of one man. No, for before us there lie symbolically the broken, blasted bodies of 300,000 men and women, who spattered with their blood and brains the streets and cellars of their beloved Warszawa in the most recent, most ill-fated, and most betrayed struggle of the Polish people—a struggle undertaken not merely to defeat the enslaving enemy but to achieve and establish their God-given right to national independence and national sovereignty.

The whole world stood aghast on September 27, 1939, when Warsaw first surrendered to the Nazis. It seemed incredible that a well-organized military establishment should have crumbled in 27 days. That was before western Europe had experienced the lightning thrusts of blitzkreig. They later learned its diabolical tactics at Sedan and at Abbeville and at Dunkerque. Then they began to appreciate the courageous resistance of the Poles, who had been the first to confront this new type of mechanistic, terroristic warfare.

Yet Warsaw was not to be crucified once, but twice. Although she had been beaten to the earth in 1939, the flame of liberty burned in her breast and again in August 1944 the Polish underground rose from the cellars and back alleys of the city—at the signal from its supposed Allies—to throw off the yoke of slavery, hoping that the leadership of Gen. Tadeusz Bor-Komorowski would be supplemented by its friends with whom he was fighting to destroy nazi-ism. The story is well known to you all: An insufficient supply of food and arms flown clear across the continent of Europe and dropped from the skies; a host of excuses and oversimplifications by an army which until then had been allegedly rolling forward across the plains, invincible and indestructible and victorious.

It all came to a finish on October third of last year. After superhuman efforts, without appreciable help from outside, starving and naked, and pest-ridden, the Poles of Warsaw gave up to the Germans. And in the very hour when the arms of the United Nations were marching to victory across France, in the Baltic States, in the far-flung theater of the Pacific, the bleeding patriots of Warsaw were capitulating to the Germans while the invincible armies of Russia stood in the very suburbs of the city, across the River Vistula in the outlying districts of Praga. Only yesterday morning in the newspapers all this sordid story of betrayal was confirmed by Lt. Jan Novak in his statement in London.

Now that this undying exploit of the dying Poles has passed into history, statesmen and generals held the Sixty-three Days of Glory. Why 63 days of glory? Why not 1,825 days of glory? Why not 5 years and more of glory, since September 1, 1939, when the panzer divisions first rolled into Poland? Though they were beaten on the Western Front and betrayed on the Eastern Front, the indomitable Slavic spirit of the Poles has never acknowledged defeat. It has trusted in the promises made to it in the dark days when it was engulfed in the Nazi miasma.

It was this trust in the given word of the United Nations which drove them on across the face of the earth to keep their plighted word with the rest of the world in the crusade to crush nazi-ism.

While civilians were deported to frozen Siberia and languished in the blistering heat of Persia and picked their way across the submarine-infested seas to a savage refuge in the highlands of Africa, their fighting men carried on. No race or people has been more loyal, more sacrificing to the cause of the United Nations than the Poles. When the fiendish reality of the blitz broke over Britain, it was the Polish aviators who organized themselves into fearless squadrons which defended the United Kingdom at a time when western civilization trembled in the balance. It is a matter of record that one out of every eight German planes destroyed in the Battle of London was shot down by the Polish Legion, of which more than one-half gave their lives to defend the British Isles. Those exiled Poles, yearning for liberty, have fought in Norway, in north Africa, in Italy, in Holland, and in Normandy. It is now admitted that were it not for the Poles and the French the Battle of Cassino would not have been won and the road to Rome and northern Italy opened.

Poland and the Poles have unquestionably vindicated themselves as invaluable, loyal Allies and they have vindicated their rights to their lawful aspirations for nationhood. It is for this reason that all men who believe in God, who love Poland, who have even a rudimentary regard for natural justice are today appalled as they witness the travesty on international justice which is being enacted as Poland is pounded between the diplomatic anvil and the imperialistic hammer, in the name of realism. It is all so redolent of the period of the partitions when Maria Theresa wept for Poland but with each tear drop took another mile.

Poland has time and again been called the bastian of western civilization. Today she is something infinitely more—she is the litmus test of our war aims. If she must of necessity turn red regardless of the wishes of her people; if she must sacrifice her national sovereignty, her national aspirations, her national honor and independence to gratify and satisfy and appease the imperialistic greed; the nationalistic security policy of a bordering nation, then has our preaching been in vain, and all the blood and sweat and tears shed not only at Warsaw, but at Dunkerque, at El-Alamein, at Guadalcanal will have been expended in vain—and Poland and western civilization will stand exactly where they were on September 1, 1939. If this should ever happen, the Atlantic Charter must go down in history as a pact made not merely geographically but ideologically as well—at sea!

In the middle of the last century when the springs of thought and the springs of hope had dried up in a Poland suffering another Crucifixion, her poet Zygmunt Krasinski smuggled into the country his inspiring poem "Dawn—Przedswit" which reenkindled the dying embers of the national will to live. He consoled the mourning Poles as he wrote:

"And I heard
A voice that called in the eternal sky:
As to the world I gave a Son,
So to it, Poland, thee I give.
But in Thee my purpose for Him lives.
Be thou then the truth, as He is, everywhere.
Thee I make my daughter!
When thou didst descend into the grave
Thou wert, like Him, a part of humankind.
But now, this day of victory,
Thy name is: All Humanity!"

In this day, when the eagles of victory have settled on the standards of the United Nations, the cause of Poland is the cause of all humanity. If the white eagle of Poland is now torn asunder, all humanity is torn apart. And if the United Nations now betray Poland, they betray not truth, the unbetrayable, nor even all humanity, but themselves, and with their diplomatic kiss' traitor craft, they purchase for themselves not peace but a grave, a plot of days, wherein to consummate their Judasry with Judas' compensation of despair.

Selling of Surplus War Plants

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the Western States Council, at Salt Lake City, Utah, on February 13, 1945, concerning the policy of selling surplus war plants. I ask that it be printed in the RECORD rather than to weary the Senate with a repetition of the speech. It addresses itself to the great problem before the Congress of the disposition of the $200,000,000 steel plant near Salt Lake City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen of the Western States Council, this gathering is a gratifying revelation of the proper functioning of a great republic such as that in which we live. You are meeting to consider how the now iron and steel producing facilities at Geneva and Fontana can best be fitted into the permanent economy of the West. Exactly as your grandfathers planned the opening of the West, you meet here today to plan its further growth.

As we all know, the great plant here at Geneva was built with governmental money

and title to the plant still rests with the Government. It has been managed during the war by a subsidiary of United States Steel without profit. The facilities at Fontana were built with money borrowed from the Government by Henry Kaiser. The Government still holds a mortgage on these facilities. The problem is to establish as soon as possible the fairest conditions under which these plants can be run and owned by private industry after the war.

One is in doubt whether to congratulate you upon the importance of these plants to the future growth of the West or to commiserate with you because of the inevitable problems which will arise when these war-born plants are put into peacetime production. Perhaps I should do both—with emphasis upon the fact that the headaches of the reconversion era will be a small price to pay for the revolutionary effects of a growing iron and steel industry in this part of America. This industry in this area can be a real asset to the entire Nation if we are successful in building an expanding economy in the post-war period.

The just and wise disposal of the plants at Geneva and Fontana will present complex problems but I think we should begin by seeing those problems against their true background. Tough as will be the business of selling one of these plants and facing up to the fair financial adjustments which may be necessary on the other, their disposal is but a very small part of the total surplus-plant disposal problem.

The sale of all surplus property, to go further, is only one segment of the entire reconversion problem here at home. It, in turn, must be handled with an intelligent regard for other factors such as our future tax policies, a stable price level after the shooting stops, and employment opportunities for millions of displaced war workers and millions of returning service men—to name but a few of the policy decisions still ahead of us.

Furthermore, in a world now as compact as New England was in colonial days, no wholly domestic solutions, even if they are integrated into a sensible national program, can work unless we also solve our basic international problems. I am thinking of such matters as the building of an international organization to assure a durable peace, of the world-wide problems of shipping, of air transportation, of the flow of petroleum between the continents, of the marketing of worldwide agricultural surpluses, and of the building of an integrated system of international communications for this country as we go into the post-war years.

All these things are part and parcel of a single picture. Any major change in any particular part of that picture may make it necessary for us to make other changes in our approaches to other parts of the total problem. I know the job ahead is not an easy one. I do, however, want to say in all temperance that this administration is no more ready to meet these problems of the peace than it was ready to meet the problems of total war at the time of Pearl Harbor. The day may yet come when we shall have to pay dearly for our economic unpreparedness. It will come if we do not move swiftly to make up for lost time.

A meeting such as this, however, can make a constructive contribution to reconversion policy on a national scale. Of necessity, this meeting must be a beginning. Some of the information we need is now available. Other relevant facts will not be known for some time to come.

There is the question of your ultimate markets for end products both on the West Coast and abroad. This is the $64 marketing question for every potential fabricator of steel products in these Western States. Once you feel that your estimates of post-war markets and post-war costs of production are reasonably accurate, you will have to face the problems of peace-time expansion. Tens of millions of dollars worth of additional capital investment in fixed assets will have to be made before you can switch over to the production of peace-time products. That will present the further problem of the best ways to secure your needed financing. It will be a tremendous undertaking under the best of conditions.

Meanwhile, you will be continuing your engineering surveys on your costs of production. These are likely to be more like a motion picture than a single print, however, since you are still in the shake-down period of production so far as your ultimate costs are concerned. New technological advances may have to be made before you can fully utilize the raw materials available to you in the most efficient ways possible.

Your freight rate structure post-war will be vitally important. I am thinking not only of the freight rates from your present plants to your probable markets, but of the rates on your raw materials from their points of origin to all of your west-coast plants as well. And I am also thinking of the freight rates both by rail and by water from the pre-war steel centers of the country to the west coast.

The pricing policies followed by the older steel centers of the country on their west coast sales post-war will be a determining factor in the growth of your steel industry out here. The problem, as you know, is not one which you will be able to settle wholly upon a regional basis. Basing points are essential but Pittsburgh plus must not mean west coast minus. There are headaches ahead to be sure, but the kind of internal pioneering in which you are now engaged is also tremendously stimulating. You are carrying forward the old pioneering tradition of this part of the country—1945 will have as interesting a place in the history books of a century from now as 1845 has today.

Now, as to the part of Government in this complex situation. No serious and responsible voice is heard these days which advocates Government ownership and operation of such establishments as these steel plants. Everyone seems agreed that our surplus plants must be sold to private industry as rapidly after the war as possible. This does not mean, however, that the Government problem is as simple as it would be if all the Government had to do was to sell its surplus plants to the highest bidder. Unfortunately, it is much more complicated than that.

If, for example, the Government sets its sights too high as to price, in order to protect the taxpayers, there may not be any buyers of our war-built plants. Idle plants will mean idle men. If, on the other hand, the Government sets its sights too low as to price, in order to get out in an ill-advised hurry, a grave injustice might be done to both business and labor in the pre-war steel centers of the country. Too low a price would subsidize the new purchaser unfairly with respect to his older competitors.

Justice must also be done in this case as between the Geneva plant which the Government owns outright and the Fontana plant upon which the Government holds a mortgage. The necessity for consideration of both plants as the two sides of a single coin is obvious.

The price at which the Government sells any surplus plant will have an unavoidable and a profound effect upon competitive conditions within any industry. There is no dodging the unpleasant fact that government will have to weigh all the relevant factors before coming to its final decisions. Any other approach would be irresponsible and certain to bring about grave repercussions. Government cannot possibly escape its role as umpire among sincerely conflicting interests in the difficult transition period.

It should reach its decisions as speedily as possible, however, both with respect to price and with regard to the conditions of sale. It must consider minority interests as well as the public interest before its ultimate decisions are made. The whole point I am making is this, that any decision by government with regard to the price of our war-financed plants will have a profound effect upon competitive conditions. The decision, unfortunately, cannot be reached upon so simple a basis as that of a price tag alone.

Under existing legislation, the Congress has reserved the responsibility of passing upon major sales of surplus plants concluded tentatively by the executive branch of the Government. The Attorney General has the additional responsibility of examining any antitrust angles involved in such sales.

This complex set-up must not result in frustration of business initiative through governmental indecision.

The Defense Plant Corporation should take the initiative in providing a mechanism through which all the various interests can be considered with dispatch. Government must not give business a run-around by batting it from one agency to another unless it is desired and designed to paralyze recovery. What we need is a single table around which we may achieve a meeting of minds. The chairman at the head of that table probably should be an outstanding man from the Defense Plant Corporation. The Attorney General should have his representative at the same table. Otherwise, the Department of Justice will be in a position to upset arrangements which have taken many weeks or months to work out without having made itself heard throughout the early discussions.

A steel man from the War Production Board obviously should be sitting around the same table. There must also be consideration of the views of segments of the industry and of communities and labor interests that will be vitally concerned. Personally, I feel very strongly that appropriate representatives from the Congress also should be present to avoid so far as possible endless review. This approach may provide us with an informal forum where every affected business interest and every affected labor group and every affected Government group will have its chance to be heard.

This is an obvious democratic approach but it cannot work effectively without vigorous leadership from the executive branch of our Government. That is where the initiative must come from under our form of government. We have not had that leadership in the past. We cannot do without it in the future.

Some such procedure should be followed not only with regard to these western steel plants but with regard to each of the major surplus plant disposal problems as well. The time to have begun was many days before yesterday. Every day we put it off only increases the probability of unemployment when the war is over. There is no excuse for further delay, nor for continuing to bite at these problems piecemeal.

The Defense Committee of the Senate will turn the same searchlight upon industrial reconversion for peace that proved so useful in stimulating our industrial mobilization for war.

The swift and equitable solution of these matters requires much more than teamwork within Government so that you businessmen can have a central spot for the discussion of your proposed programs. It also requires teamwork between Government and industry. As sincere differences of opinion arise within Government or industry or labor, we must all avoid the easy demagoguery of letting epithets fall too loosely from our tongues. Nothing will be solved by calling each other naughty names.

Rather, we must begin as you are beginning by getting all the facts out into the light. Those facts must then be judged with

as little bias as possible by each of the affected groups. Our final decisions must be composite decisions based upon our analysis of all the facts. That will require a good deal of give and take on all sides. The need for this unity and understanding cannot be over-emphasized. We shall not remain a first-rate power in world affairs if we are torn and weakened by disunity here at home.

These new iron and steel facilities in the West are an asset not only of this region but of the whole Nation. They must be used with imagination post-war as a vital part of an expanding economy for the whole country. Properly used, they can bring about an enormous growth of other industries out here which depend upon reasonably priced steel products for their own success.

When a region like this becomes more highly industrialized, the benefits of that growth are felt throughout the entire Nation. Trade will increase within this region to be sure, but it will also increase as between this region and other sections of the country.

In coming to grips with this problem of surplus plant disposal, we must beware of those who tell us that there are very simple answers to very complicated problems. There are none. We must also beware of the perfectionists who will oppose compromise solutions because their own particular brands of Utopia are not being established overnight. There are no such panaceas.

Rather, we have a razor-edge path to walk. The road will be more than half traveled, however, if we recognize that fact from the beginning. Our ultimate goal is easy to define although it will be difficult to reach. That goal is the full use of our human and material resources. More and more people right around the world must each year have a little more chance to earn the decent kind of living made possible by science. This is the road to peace.

The greatest single challenge to the private enterprise system is this broadening of markets, world-wide. Too many people are still dependent upon human muscle power rather than upon mechanical horsepower for their standards of living. Industrial engineering, coupled with economic statesmanship, can turn the energy of men from the mad rivalries of war to the glad rivalries of peace.

Let America show the world the joy of making more use of our resources as an example for the good of all mankind. Let us help men to live fuller lives instead of preparing the ground in bitter disillusionment for more and more tragic graves.

Actually, this broadening of markets is more than our greatest challenge; it is also our greatest hope. The way to realize this hope is to keep our eyes ever riveted on our ultimate goal. Only then will our day-to-day decisions enable us to move toward it as rapidly as possible. There is no other way along which we can travel and be sure that we shall finally arrive.

The Republican Party Looks Forward

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Republican Party Looks Forward," delivered by the Senator from Indiana [Mr. WILLIS], at Niles, Ohio, on McKinley Day, February 9, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, I am deeply grateful for this opportunity to meet with you tonight to celebrate, a few days late, but not too late, the one hundred and second anniversary of the birth of William McKinley. I hope that you will feel, as I speak, that we are thinking together, and that I am speaking with you, rather than to you. It is my hope that I may say something that will be of benefit to you, to our Republican Party, and to this great America which we all love so dearly.

We of Indiana, your neighboring State, are proud of William McKinley, the twenty-fifth President of the United States, just as we are proud of that long list of distinguished citizens who have sprung from your soil and have won national fame for the great State of Ohio, and for the great Middle West as well. Two of my distinguished colleagues, Senator TAFT and Senator BURTON, are carrying on today this tradition in a magnificent manner. No State is more ably served in the Senate than is Ohio.

Citizens of both Indiana and Ohio have a high regard for your great former Governor, our Republican Vice Presidential candidate in the recent election. He waged a valiant campaign, and although he did not win enough votes, he won a place in the hearts of millions of people in this Nation—and time will not soon erase the high mark of political statesmanship set by that sterling American Hon. John W. Bricker.

We of Indiana and you of Ohio have many other common ties that bind us. Some of these ties were knitted in our common history when we were part of the great Northwest Territory, struggling together to develop this vast empire. I can never forget one stirring example of our mutual will to fight aggression. Back in 1813, when the British were advancing on Detroit and threatening at the back door the very existence of this new Nation, the Secretary of War wrote a letter to William Henry Harrison, Governor of the Northwest Territory with headquarters at Vincennes, Ind., calling on him to assemble the fighting men in Indiana, Ohio, and Kentucky and to march to Detroit to repel the invaders. The response was immediate, and in the historic battle of Thames, the British were decisively defeated. That was the last time until these present bitter years that any foe ever dared to raise a foreign flag on American soil or fire a shot at American homes. The aggressors who struck at Pearl Harbor and Manila, and at Guam and Kiska, might well have read the history of the Northwest Territory and have learned that the descendants of the men who whipped aggressors in 1813, would prove as worthy in battle today.

And, of course, there is a community of interest in both our economy and our outlook on national and international affairs today. There are some who would say that I should be ashamed to be from Indiana and you should be ashamed to be from Ohio, for there is definitely an effete clique in this country who believe that every idea emanating from the Middle West necessarily is a reactionary or hide-bound idea.

Horace Greeley said, "Go west, young man," and grow up with the country, and in those days he meant to go to what we now know as the Middle West.

Now, many could say: "Go east and go down with the cities." I say that in jest, but actually it seems that the majority of the people of the great East, animated by fear, by emotionalism, or by selfish gains, are determined to accept lock, stock, and barrel the economic and social fallacies of the Old World, from which their ancestors once escaped and fought a great war so that they might be free from the shackles that bound down the peoples of Europe.

We in the Middle West no doubt have made mistakes and errors of judgment in the past, and, being human, may make other errors. But there is one thing you can say for us here in Ohio and over in Indiana and out in Illinois and across to Nebraska: We are Americans. We believe in America. We love America. We think of America and we think for America. And we think American.

And, thank God, we shall always hold it our duty—yes, our duty, and not a sin—to think of America first in solving our problems at home and abroad.

I cherish this opportunity to speak here tonight for another reason. I have always—and I say it humbly—felt a kinship to the man whose memory we honor. Like William McKinley, I was one of nine children. So I know how much he had to struggle in his early life. And I know how he achieved the ability to live in harmony and cooperation with those closely associated with him in life.

My father and William McKinley fought in some of the same campaigns of the Civil War. My first vote was cast for the election of William McKinley for President. And I feel our political beliefs and actions have been watered by the same middle western wellsprings of wholesome Americanism. The man in whose honor we meet is my idea of the type of American we must develop in our national political life if we are to meet successfully the challenges that face us today.

The story of William McKinley shows us how much life in America has changed and is changing. It is recorded of him that he "studied beyond his strength" and had to return home to rest. I just wonder how many school students today are studying beyond their strength and need to go home to prevent a nervous breakdown? But there still remains today only one way to success, and that is through the homely virtues of initiative, thrift, and character under a free government.

When the Civil War broke out in 1861 William McKinley enlisted as a private. He did not have the advantage of being a President's son, so, having no training, he could not enlist as a captain. So far as the record shows, he was not even known to President Lincoln at that time, and even if he had been it would have availed him nothing, for Lincoln never mixed the Army up with his personal political favorites. McKinley proved to be a good soldier in his own name. He was promoted to second lieutenant in 1862, to captain in 1864, and in 1865 was breveted major of volunteers for gallant and meritorious services.

The comparison is only a contrast to all who are familiar with the lives of the two men.

After the war, McKinley bent all his energy to the study of law and he was admitted to the bar at Warren, Ohio, in March 1867, beginning practice in Canton, Ohio, where he made his permanent home. He immediately associated himself with the Republican Party, taking part in his first political campaign on behalf of Ulysses S. Grant for President. In 1876 he was elected to the House of Representatives of the National Congress, and there he remained for 14 years, broken by only one defeat in 1882. In December 1880 he was appointed a member of the Ways and Means Committee succeeding James A. Garfield, who had been elected President the preceding month, and to whose friendship, as to that of Rutherford B. Hayes, McKinley owed much in his early years in Congress.

It was on April 16, 1890, that he introduced the tariff measure known commonly as the McKinley bill, which became law. The bill became as famous as its author in the campaign of 1896 when one of the slogans was,

"Bill McKinley and the McKinley bill." Under provisions of this bill reciprocal trade agreements were provided and reciprocal treaties later were made with Germany, Italy, France, and Belgium.

When McKinley campaigned for the presidency in 1896, he and his associates were called the advance agents of prosperity. They promised to the laboring man of America the "full dinner pail," which slogan has since become part of our political lore. It is interesting to note that the Democrats, who in those days sneered at the full dinner pail of McKinley, have adopted it and gone far beyond it today in their promises of jobs for everybody. There is a vast difference between McKinley's full dinner pail and Wallace's employment for all. He made his promise good without introducing a new ism in America and without destroying the solvency of the Treasury of the United States. The full dinner pail that McKinley's policy brought was filled by the honest and worthy toil of American laboring men and women through jobs in private industry made possible because those jobs were protected from the competition of cheap foreign labor. The Republicans in those days, as they would today, if given the opportunity, under a sound fiscal policy, made possible the expansion of private industry so that employment and pay rolls could rise.

The great industrial empire of the Calumet region of Indiana, and no doubt the industrial development of this northeastern Ohio area, had their inception in the policies advocated and established by William McKinley, and out of these policies developed the two most prosperous decades in American life—years of unprecedented comfort and peace at home.

The New Dealers today promise full employment for everybody at higher wages sustained by Government jobs. The dinner pail they offer is made with glittering promises and Government jobs if necessary. Their so-called gains are based on an ever mounting debt and ever spiraling prices. The New Dealers fail to tell you that they are only thinning the soup, that they will not give us more goods and services but will hamper opportunities and will do nothing more than divide up a diminishing production if their policies are followed.

They tried it for 8 years and still had 10,000,000 of unemployed in this land of promise. They promise you a fully rationed dinner pail. They promise jobs, but are not certain these jobs will be in private industry, where men can advance according to their abilities. They promise us the right to employment, but they fail to promise the right to work where we please, when we please, and at what we please.

William White, son of the great liberal of Emporia, who recently returned from Russia, got a look at the freedom of state controls in a land of full employment in peace or war. He points out that Russian workers are no more or less free than the inmates of the prison at Chillicothe. The prisoners, you know, have very little to worry about. True, they can't talk against the warden and his assistants. True, they have very few civil rights. But they are well fed and well clothed for the climate they are in. Russia, he maintains, is one vast prison, where a man cannot move unless he reports to a commissar—another word meaning bureaucrat—or cannot change jobs unless he gets state permission. The prisoners, at home and abroad, should serve as a sample of what the New Dealers have in mind for us. Sure, they will let us all have a minimum of good things, sometime in the future, if we will but give up all our freedoms to them now.

Of course these great forward-lookers who style themselves liberals, deny that they have any desire to sovietize America. As near as one can ascertain, all they propose is that free American citizens give over unto Government power to plan business, to control materials, to designate markets, to allocate labor, to regulate working conditions—all to be brought about by the huge spending power of the Government. Is that liberalism? Is that freedom? The plain truth is that they are liberals only in spending other people's money.

The people who preach these beautiful aims should be challenged at every opportunity to tell how they are going to accomplish these things within the framework of our Constitution and in view of the inherent wickedness of man. We know our rights under our Constitution as it is written today. We might have more freedom under other bills of right that have been discussed by flighty high officials, but before we take off into the stratosphere with no haven in sight, the politicians who promise us these things must show, beyond the shadow of a doubt, that we will not lose our present rights while trying to attain more liberties and more of life's goods. The promiser must prove to us that he will bring real freedom and not tyranny disguised under a new name.

On the day before he was fatally wounded by an assassin's bullet, shortly after he had been reelected President for the second time, William McKinley spoke at the Pan American Exposition in Buffalo, N. Y. He declared that henceforth the progress of nations must be through harmony and cooperation, and he maintained that the time had come for wide-reaching modifications in the tariff policy of the United States through commercial reciprocal agreements with other nations.

Like a great many other words and phrases, the term "reciprocal trade agreements" has been picked up by shrewd manipulators, used, or rather misused, repeatedly, and then made a cloak for practices that have not the slightest resemblance to the original.

The trade agreements which McKinley favored called for mutual agreements based on satisfactory exchanges of surplus manufactured goods or raw materials. They were businesslike agreements in which both parties to the contract benefited. The so-called reciprocal trade agreements of former Secretary Cordell Hull have been and are now nothing in the world but multilateral low tariff devices by means of which this administration has frittered away American wealth in a vain and foolhardy attempt to lift the other nations up to our economic level. We have not succeeded in lifting the other nations. We have succeeded in depleting our own resources to an alarming degree. They did not increase foreign trade; they did not prevent war. They did destroy thousands of jobs for American workingmen.

President McKinley supported the "good neighbor" policies which were inaugurated by his friend and coworker, Secretary of State James G. Blaine. Blaine believed in a real "good neighbor" policy, and put into effect practical measures designed to strengthen our ties with our neighbors to the south. He certainly never hinted he would agree with the present so-called good neighbor program in Latin America by means of which we have spent billions of dollars in the past several years and are spending hundreds of millions more in the vain effort to purchase good will. The American taxpayer still has a right to protest such waste of public funds, but protests seem to be in vain in this day when bills are still pushed through Congress with the battering ram of administration influence.

President McKinley sincerely believed that the peace and progress of Nations must come through harmony and cooperation in worthwhile objectives. That, too, was a major theme of his last public address at Buffalo. During his administration the United States entered into membership in the permanent court of arbitration known as The Hague Tribunal. The tyranny of Spain was driven from the Western Hemisphere. United States soldiers joined with the troops of other nations and invaded China to defend American lives and property during the Boxer uprising. Stable government was maintained in the Philippines and a colonial policy was established through which those down-trodden and exploited peoples advanced to a state which in twoscore years has brought them ready for independence. This policy established a new pattern for colonial administration under which lasting good will must be achieved.

True international cooperation has never been opposed by the Republican Party. Republicans for the most part have opposed, now oppose, and forever will oppose American participation in any agreements or cooperation with other nations on terms dictated by other nations without full consent and approval of the United States Congress.

William McKinley was thinking when he urged increased international cooperation—as you and I are thinking—of cooperation by mutual agreements, embracing liberty and justice for peoples of all nations, great and small, not on arbitrary decisions by any two or three powerful nations.

Finally, my fellow citizens, we cannot understand completely the greatness of William McKinley unless we pay reverent tribute to his true personal character. He had a deep and abiding faith in the guidance and wisdom of divine providence in the affairs of men and nations. He believed in the homely personal virtues—temperance, honesty, simple justice, the sanctity of the home and family—the virtues that made this Nation great and will make us great again. He took into the White House a high and noble attitude that increased the respect of the Nation for that house and that high office. He was never spiteful and vindictive with either political friend or foe. He did not know how to harbor a grudge. His administration was noted for the harmony among those charged with responsibility; harmony between the executive and legislative branches of the Government. When he died, the people had high faith in the spoken and written word of the White House, faith born of confidence in the personal and official integrity of the President.

Now, my fellow citizens, I have not come here tonight wholly for the fellowship that one gets in meeting with Republicans, alluring as that was. I have come primarily because I believe that the life of William McKinley is significant for us today. Therefore, my purpose in coming will not be fulfilled until I have expressed some clear, tangible and definite conclusions.

1. The Republican Party was born in the Middle West. Here it was nurtured and here it grew to its greatest strength. From out of these States came Lincoln, Grant, Hayes, Garfield, Harrison, McKinley, Taft, and Harding. Only one successful Republican candidate for the Presidency, Herbert Hoover, was originally elected from outside these States. The three other Republican Presidents from other States first came to the office as Vice Presidents to Midwestern Presidents (incidentally Ohio Presidents). In the recent election the Republican party polled new high records of votes for the past 16 years in the Middle West. We can well look here for successful leadership.

2. The American people need the pure Americanism of the Middle West. We must give to them the right to choose whether we shall continue under the philosophy which made America great, or shall accept the ideologies of theorists too often borrowed from foreign lands. The Republican Party cannot succeed by compromising with the philosophy of the New Dealers. We have been rebuked twice for doing that. We won our greatest majorities in the recent election in the States in which a clear-cut campaign was waged against the New Deal. We are not reactionary. It is the New Deal that would take us back to state control—back

to the tyrannies of the Old World that our fathers fought to be free from, back to the poverty of other nations that have failed to catch the spirit of America. You will understand, I hope, that I speak of real progress when I urge and pray that we in America go forward. We must set up the outlines for sound financing of the tremendous financial burden our people face. We must establish an economically sound and progressive program of continuing security for the aged, the infirm, and industrous. We must offer a program which defends the right of free enterprise and the unshackling of the business and industrial structure of the Nation; a program which will enable the individual to attain for himself a competence and to keep it. Upon these and many other principles which we already know we shall go forward. If we are to recover the virtues that made our great men and our great Nation, we must not look back.

3. We must begin this campaign at once, and every hour in the day, every day in the week and every week for the next 4 years we must labor unceasingly to arouse the American people to the danger that confronts them. Through glittering promises and vague generalities the people have been misled. We are in definite danger of losing our civil freedom, as so many unwittingly have lost their economic freedom, by depending upon the state and the state alone. A fourth term has put a tremendous strain upon our representative republican government and we must unceasingly warn the people of the danger confronting them, if huge selfish groups, big bureaucratic bunds, and mercenary machine bosses continue to storm the ramparts of free government. The people have been soothed with seductive promises that there is an easy way to liberty and security. Someone has said that "it is much easier to bamboozle people than it is to unbamboozle them." The older ones here tonight will recall the confusion that was in the minds of the people in the early days of the first McKinley campaign. There was Coin's financial school—a very appealing thesis that the way to prosperity was through an inflated currency, and every forum had its exponents of fantastic philosophies. However, the people were unbamboozled by the strenuous, persistent, and patriotic effort of loyal Americans in 1896, and they can be unbamboozled again if we make the issue plain and take our stand squarely upon it. Shall we go forward upon the American way, or shall we turn from this way to the path that leads to socialism, communism, and chaos?

LINCOLN AND COMMON PEOPLE

4. We must have faith in the American people. McKinley's greatness like that of Lincoln grew out of his confidence in the integrity and judgment of the common people. I believe that they will again respond when the truth is made known to them. Sons of Washington, of Jefferson, of Lincoln, of McKinley, and of Wilson will not for always permit their Constitution to be sabotaged by Executive decree, nor for long permit an administration to continue in power by the vote of selfish groups. I refuse to believe that America is going down that glittering road that promises so much, but ends in the same totalitarianism that came to the men who wanted full employment through economic control in Russia, Germany, and Italy. How terribly they were misled and what a price they paid. Americans are not like that!

And finally, when I think of the brave men who are fighting for us tonight, on the battle fronts from the forests of Germany to the streets of Manila, I know that America is not doomed—is not finished and will never be finished. They went out, mere boys, to do a job for us. And what a man's job it is they are doing! Only a little while ago they were riding bicycles down the streets or taking their best girls out for sodas, or playing on the high-school football team. Tonight they may be driving a Flying Fortress, costing a quarter of a million dollars, high in the stratosphere, carrying a message of doom to those who would enslave the souls of freemen. Tonight they are on the battle fronts of the world, serving notice that America is unbeaten and unbeatable. Let us rally to their cry for tomorrow: Keep America free!

Development of North Pacific Area

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. MAGNUSON. Mr. President, some time ago the then Vice President of the United States, Henry A. Wallace, was asked by the President to proceed to China and the Orient and parts of Soviet Asia for the purpose of making a general political and economic survey of the international situation in both areas and such facts as may pertain to the possibility of our international collaboration in the post-war world with these two great Asiatic powers.

Upon his return to this country, he made a report to the Nation in the form of a radio speech from Seattle on July 9, 1944.

The contents of that speech and the views expressed therein are of such importance to us of the Pacific coast that they should not go unheralded, and I therefore ask unanimous consent that the speech may be printed in the RECORD.

Mr. Wallace's broad and intelligent interpretation of our Pacific problems after that trip is of such nature as to justify any representative from the Pacific area to place the utmost confidence in his views and suggestions for the post-war economic cooperation and development of the area. Development of the Pacific rim requires vision and political courage.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since I left the skies above America 7 weeks ago I have visited two great countries—Soviet Asia and China. I have not stood upon the threshold of these countries like a stranger. I have been honored with the confidence of those who are working to shape their countries' destinies. I have been privileged to look behind the scenes.

Today I want to tell you something of my experiences of the past weeks.

In the first place, I am today more than ever an American. The more I examine other countries, the more convinced I am that the American way of life is the best way for us. In the second place, we can and should fit our own way of life to cooperation with other nations and other peoples whose way of life is different from ours but who need our cooperation quite as much as we need theirs, and are not only willing but eager to cooperate with us.

In the third place, I am convinced that a main area of new development after this war—new enterprise, new investment, new trade, new accomplishments—will be in the new world of the North Pacific and Eastern Asia.

This will give to our Pacific coast an importance greater than it has ever had before, and I am glad, returning from Soviet Asia and China, that Seattle is my port of entry. No city is more American in spirit and action than Seattle. But no city has shown itself more alive to the importance of our relations with other areas of the North Pacific. This spirit is well exemplified, not only in your active peace-time trade with Asia, but also in the University of Washington, where for several years you have worked on integrating the study of the languages, cultures, history, politics, and economics of the Pacific.

We shall need all our resources of knowledge and all our American readiness to think out new ways of tackling new problems when we have won the war in the Pacific.

The day will come when the Pacific will be cleared of Japs, and our boys, coming home from Tokyo, will land at Seattle, Portland, San Francisco and Los Angeles. Then we shall think more and more of our West as a link with the East of Asia. Those who say that East is East and West is West and that the two shall never meet are wrong. The East of Asia, both Chinese and Russian, is on the move in a way which is easy for any American to understand who sees these great areas at first-hand for himself. The rapid agricultural and industrial development of this great area means so much to the peace and prosperity of the post-war world that I am glad on my return to America to give my impressions of the manifest destiny of the West of America and the East of Asia.

Here in Northwest United States we were long held back by unfair freight rates and by failure to develop the power inherent in the great rivers. But more and more we are perceiving the importance of strengthening our West and especially our Northwest. Thanks to men like Norris, McNary, Bone and Roosevelt, the Northwest during the past 10 years has rapidly expanded. This expansion must continue to the limit of its agricultural, industrial and commercial potentialities. This includes Alaska, which has not yet begun to measure up to its possibilities. Our growth must be not merely in terms of ourselves, but also in terms of Asia. Vigorous two-way trade with Soviet Asia and China will greatly increase the population and prosperity of our Northwest.

All of this I knew in a theoretical way before going to Asia. After having seen as much of the industry and agriculture of east Asia as any American has seen in such a short time, I am more than ever convinced that we are entering upon what might be called the era of the Pacific. One characteristic of the Pacific era will be the building of great airports in parts of the world now very thinly inhabited. The extent to which the Russians have already developed runways and servicing for airplanes in east Asia amazed me. We landed at perhaps a dozen airports in Soviet Asia, the names of which not one in a thousand Americans ever heard. It is quite possible that for 15 or 20 years after this war the air route to Asia via Fairbanks, Alaska, will not be a money-making one. But it is also certain that our national future requires that we, in cooperation with Russia and the Chinese, maintain such a route.

Soviet Asia, during the past 15 years, has more than doubled in population. It is quite possible that the next 50 years will see a further increase of more than 30,000,000 people. I am convinced from what I saw of the Amur River region that in the southern part of that area there will be a great increase in population. Russia, as a result of her experience with this war, will certainly shift much of her industry east of the Urals. Most of the people who moved to Siberia with their factories will stay there.

Everywhere, from Magoden on the Pacific Ocean to Tashkent in central Asia, I found the Russian people producing to the limit

in the factory and on the farm. About two-thirds of the work on farms and one-third of the work in the factories is being done by women. In the factories everywhere I found American machinery, some purchased before the war but most of it obtained under lend-lease.

The way in which American industry through lend-lease has helped Russia to expand production in Soviet Asia has given me an increased admiration for both the United States and Russia.

I found American flour in the Soviet far east, American aluminum in Soviet airplane factories, American steel in truck and railway repair shops, American machine tools in shipbuilding yards, American compressors and electrical equipment on Soviet naval vessels, American electric shovels in open-cut coal mines, American core drills in copper mines of central Asia, and American trucks and planes performing strategic transportation functions in supplying remote bases. I found the people both in positions of management and at the work benches appreciative of the aid rendered by the United States and other Allies. While it is misleading to make any comparison between the huge Soviet industrial effort and the amount of lend-lease aid we have been able to give the U. S. S. R., I am convinced from what I saw in Siberia and central Asia that lend-lease has helped the Russians in many difficult and even critical situations on the industrial front, as well as on the military front.

On the rich irrigated land of Central Asia a strong cotton industry is being rapidly developed. At Tashkent, a city of a million people, I found experimental work in cotton which for its originality and practical effectiveness compares most favorably with the best in the United States. Modern industry was also flourishing at this ancient seat of Eastern culture.

From Tashkent, my farthest point west, we turned east to Alma Ata, my last stop before entering China. There I found not only excellent scientific work with apples, but also the beginnings of a moving picture industry which may make Alma Ata the Hollywood of Central Asia. Located at the foot of the Tien Shan—Heavenly Mountains—the city is blessed with a superb climate, almost as good as that of southern California.

China is totally different from Soviet Asia. While she is eager and anxious to enter the machine age, she has not yet been able to turn out, in either modern war materials or heavy goods, more than a small fraction of her needs. This situation should not long continue. China, with her 450,000,000 people and her great resources, should sooner or later produce a large portion of her requirements in the way of heavy and light industrial goods and also consumer goods. But to modernize her industry and train her people, China needs help. We have thousands of technical and businessmen in the United States who are able to furnish that help. But the businessmen in particular want to be sure of one thing. They want to be certain, before they lay the foundations and make the necessary outlay, that there is no foreseeable likelihood of conflict within China or between China and the U. S. S. R.

I am glad to say that I found among those with whom I talked an outspoken desire for good understanding; and personally I am convinced that China and the U. S. S. R. will take the necessary steps to insure continuing peace and to promote cultural and commercial exchanges among the nations of the Pacific to the benefit of all.

Asia is the center of the greatest land and population masses of the world. It is our business to be friends with both Russia and China and exchange with both Russia and China the goods and information which will raise the standard of living of all our peoples. I found the leaders in both Soviet Asia and China anxious for the most friendly relationship with the United States and expressing the utmost confidence in the leadership of President Roosevelt. Living standards can be raised. Causes of war can be removed. Failure to concern ourselves with problems of this sort after World War No. 1 is costing us today hundreds of billions of dollars and a terrible toll of human life.

To avoid a recurrence of the scourge of war, it is essential insofar as the Pacific Basin is concerned, that relations among the four principal powers in the Pacific—China, the Soviet Union, the British Commonwealth, and the United States—be cordial and collaborative.

Post-war stability in China is dependent upon economic reconstruction—agricultural as well as industrial—and reconstruction in China is dependent upon trade. It became clear to me during my visit to China that reconstruction is going to depend in large measure on imports from abroad. It will require technical and material assistance from us given on a businesslike basis.

We hear much about industrial reconstruction in China. I found the Chinese anxious for industrialization. China should be industrialized. But any industrialization of China must be based upon agricultural reconstruction—agrarian reform—because China is predominantly a nation of farmers. They are good farmers, as I observed during my stay there, but they need a break—a new deal.

China should make the necessary reform, but we can help by furnishing technicians and scientific information and, on the trade level, by selling the Chinese agricultural implements, fertilizers, and insecticides. Ultimately, of course, China should make these products for herself.

China should be self-sufficient in foods, but I can foresee that for many years the Chinese will continue to import food products from our West—wheat, flour, and fruits, for instance. In fact, it is not unreasonable to anticipate that, with an increase in the standard of living of China's consumers, a healthy exchange of food products peculiar to China and our West will develop and endure.

Northwest lumber should play an important part in the China of the future, as it has in the China of the past.

The industrialization of China will require machines and the materials of which machines are made. During recent years our West has been developing facilities for the production of steel and machinery. These will be in demand in China to produce the consumer goods which will be needed by the masses of east Asia.

Machines for land, sea, and air transportation will also be needed. Our West is in a particularly strategic position to produce for the east of Asia airships and sea ships, and the timber, steel, and aluminum of which they are made.

Trade is not a one-way affair; it is a swap, sometimes direct and sometimes complicated. It seems evident that credits will have to be employed to finance economic development in east Asia. But those credits must be repaid, and the most satisfactory way to repay is with goods. So, speaking particularly of China, we should plan to buy as well as to sell. Such typical commodities as wood oil, silks, tea, hides, and metals, which formed the bulk of China's exports to us before the war should form the basis of an expanding Chinese export to the United States after the war.

There is a great future for trade between east Asia and ourselves. To bring this to pass will take only a sympathetic understanding of each other's conditions and a far-sighted determination to make trade what it should be—a mutually beneficial transaction.

Day after tomorrow I hope to report to President Roosevelt certain definite facts which I am not at liberty to discuss here. But I can say that everywhere I went in eastern Asia I found rapid changes. Even in Mongolia, one of the most remote regions of the world, I found that the changes of the past 20 years had been very great. The United States, together with Russia and Great Britain, has a profound interest in the rapid, peaceful change of eastern Asia to the more fruitful use of her vast natural and human resources.

Here is a great new frontier to which Seattle can furnish much in the way of leadership. Our scientists must cooperate with Russian and Canadian scientists in learning how to lick the problem of the permanently frozen ground of Alaska, Canada, and the north of Siberia. We must exchange agricultural and weather information. I have found a splendid disposition on the part of Russian scientists to cooperate in agricultural matters and a frank readiness on the part of Chinese administrators to consider America's position as well as China's in discussing future economic cooperation. This gives me great hope for the long future.

The American businessman of tomorrow should have a broad world outlook. I have faith that American economic leadership will confer on the Pacific region a great material benefit and on the world a great blessing. The new frontier extends from Minneapolis via the coast States and Alaska through Siberia and China all the way to central Asia. Here are vast resources of minerals and manpower to be developed by democratic, peaceful methods—the methods not of exploitation, but on the contrary the more profitable method of creating higher living standards for hundreds of millions of people.

It was a wonderful trip. I am grateful to the President for giving me an opportunity to talk with people in every walk of life in Asia who are aiding us in winning this war. With victory we can continue to work together in peace. We want a higher standard of living in America. We want full production, jobs for our boys who come home, and peacetime jobs for those who are now employed. Trade with Russia and China will help keep the factories of America busy in the days that lie ahead. We are on our way.

Hebrew Freedom

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Peter H. Bergson, chairman of the Hebrew Committee of National Liberation, at Carnegie Hall, New York, on Monday evening, December 4, 1944.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The liberation of certain parts of Europe has resulted in a virtual abandonment of the clamor in this country for the rescue of the Hebrew people of Europe. The fact that parts of Europe are no longer under German occupation has overshadowed, in the minds of too many people, the fact that there are probably one million and a half Hebrews still in constant danger of horrible and useless German death.

I believe that it is our duty, and it is furthermore, feasible and possible at this stage of the war, to take necessary official steps which are sure to result in the slowing down of Germany's campaign of extermination and might very well result in a complete halt of that campaign.

After all, the Germans are not going to murder Hebrews in Europe right up to the very minute of the armistice. They are going to stop some time before that, and I believe that the time when they will stop, the military situation being what it is today, is entirely in the hands of the United Nations. I believe that steps could have been taken to bring this about yesterday. Steps can still be taken to bring it about in a couple of weeks. And once it is done the extermination of the Hebrews will cease.

It is not a question of speculation, it is a question of facts and logic. The Germans are still at war with the United Nations, but they have clearly declared they are not fighting now to crush and conquer the United Nations, they are fighting to be able to bargain for a settlement. Because of that, they have refrained, for quite some time now, from doing anything against the will of the United Nations which is not prescribed by the most conservative and accepted dictates of warfare.

The representatives of the International Red Cross in Washington told me that Germany's treatment of prisoners of war has improved to a degree where they are now given even very scarce and expensive medical supplies. What is necessary, therefore, is that the Germans are really convinced that the United Nations care about, and seriously oppose, their campaign of extermination.

In order to achieve that, some concrete things must be done. First of all, the Germans know well that while a United Nations War Commission is working in London, establishing procedure and gathering evidence for the punishment of war criminals, this commission officially refuses to regard the murder of Hebrews as a war crime. It is claimed that this is so because Germany is a sovereign State, as are its satellites, and sovereign states have the right to execute any of their nationals. Therefore, the murder of German or Hungarian Jews is not contrary to international law. It is a shocking situation. Most people are not aware of it and do not know it; nevertheless, it is there. But the Germans are aware of it; they know it very well. How can you expect them to stop their murderous activities against the Hebrews when they know this to be the official and practical situation and not the one so often expressed in meaningless speeches and statements?

Secondly, the Germans know too that the United Nations have issued repeated warnings that the use of poison gas against any member of the United Nations would result in retaliation by all. It has now been officially and repeatedly established that the Germans have used and are using poison gas in their campaign of extermination against the Hebrew people. Leading powers of the United Nations have officially confirmed such reports, and the fact that a warning and a threat have not been simultaneously issued to Germany that the Hebrews are one of the United Nations, again to the criminal German mind serves as an encouragement to continue with the murder.

The Hebrew Committee of National Liberation has repeatedly urged in official communications to the leading powers of the United Nations that an appropriate warning be given to Germany in connection with the use of poison gas. Such a warning is sure to bear results because the Germans cannot afford to ignore it. They have yielded in cases where the United Nations' position was not nearly so strong. General Bor, commander of the Polish underground, captured in Warsaw, and the underground forces in Czechoslovakia, are being treated by Germany as war prisoners, although they are by no means part of a regular army, nor do they wear uniforms. They are being treated as such because the United Nations demanded such treatment for them. Should the United Nations demand, in the same terms, that Hebrews in German-occupied territory be treated as prisoners of war, for that is what they are, the murders will cease.

What is specifically necessary is that the United Nations issue a joint declaration proclaiming that crimes committed against Hebrews in Europe, irrespective of the territory on which the crime was committed or the citizenship or lack of citizenship of the victim, be considered a war crime and punished as such, and that the governments of the United Nations instruct their representatives on the War Crimes Commission to see to it that this declaration is immediately put into effect.

The very core of the situation which bridges the question of the rescue of those still in German territory, and the salvation of those in liberated territories of Europe, is the realization that it is foul and evil to consider the loss of some 50 percent of an entire population as an episode, as a temporary occurrence which ought to be soon forgotten, and which does not dictate, does not compel, a fundamental change in the entire structure which brought it about.

And here I speak, first of all, to the so-called leaders of American Jews. For it is they who are making every effort to hold on to the present, to stick to the status quo at any price. The fact that the various and numerous Jewish factions and committees are continuing today, after all that has happened, to advocate, virtually in the same phraseology, the same proposals which they made 5 and 10 and 20 and 50 years ago, is the most shocking evidence of the depths and the dangers to which inertia and confusion lead.

Except for the proposals of the Hebrew Committee of National Liberation, there has been no new approach, no new formula, no new solution. There is only a feverish effort to preserve the status quo. Everything that the Jews did after the last war is being quoted again and held up as an example of what should be done after this war. Overlooked or forgotten is the horrible fact that under this system, and under these policies, and under these leaders, we have lost more lives than did the British Empire—to be more exact, about 40 times as many.

Should these Jewish leaders win, and should the murder of 3,000,000 Hebrews pass as an episode which did not merit the punishment of the perpetrators or bring forth a change in the life of the survivors, a pattern would be set for the solution of the problem of the Jewish people the world over. The moral would have been provided for all who care to watch and copy, for a perfect, speedy, and cheap way permanently to solve the problem.

That is why something new must come out, something positive, to the consternation of the perpetrators of the crime. This something is the emergence of a sovereign Hebrew nation. And there is no time to postpone this development until after the war. It may be too late. That is why we insist that the Hebrew nation is today, and of right ought to be, a member of the United Nations. That is why we insist today that all Hebrews in Europe be considered prisoners of war, and all crimes committed against them be considered war crimes.

That is why we demand that we, the nation against whom more war crimes have been committed than against all the other United Nations combined, should be given a seat on the War Crimes Commission to order and supervise the punishment of Germany for its crimes against Hebrews. That is why we demand that the Hebrew nation receive all the benefits and all the assistance of U. N. R. R. A. due it as a nation ravaged by war, and that is why we demand that our delegates sit as members of U. N. R. R. A. and as members of the International Committee on Refugees and participate in all United Nations councils and conferences in which the interests of our nationals are involved.

These are the demands of a people who have learned a lesson, who refuse to die, and who refuse to remain in a position which has led to death in the past and is sure to lead to it in the future. These are the demands for which the Hebrew committee stands and fights. These are the demands for which we are being persecuted, not by external enemies but by the dead hand of yesterday, which is the symbol of the misguided leadership of the Jews in this country.

What do they propose? Status quo ante? Pious hopes and wishful thinking. They are meeting now in Pittsburgh to select a delegation of American Jews to the peace conference. What peace conference? The one that took place yesterday or is taking place every day all over the world? What Jews? The American doughboy from Brooklyn fighting today for the liberation of Europe? Isn't he going to be represented by his American Government? And if they mean not to represent American Jews, who are Americans and do not need two representations, whom do they want to represent?

If they mean to represent us, the mutilated, wounded Hebrews of Europe, we appeal to them in the name of friendship and common sense to stop and think. Who are they, Americans with the security of the American Constitution, to attempt the impossible—to be the political spokesmen of a foreign nation—the Hebrew nation? For an American will never and can never be accepted by American statesmen as the political representative of a foreign entity. Rather, should not we Hebrews with no other state, no other government, no other representatives, survivors of Warsaw and Lublin, Bucharest and Budapest, united as one nation with the Hebrews of Palestine, come before the conscience of the United Nations, as indeed we are doing now, and say:

"Here we are, the Hebrews who refused to die. Here we are molded through the fires of German hell; here we are, people whose souls have never been enslaved and whose bodies too are now free. Are you going to treat us as equal human beings, accept us into your councils, recognize our statesmen? Or are you going to persist in treating us as second-rate human beings, unable to speak for themselves and unworthy of the right of self-determination? Are you going to do that and speak at the same time of the "four freedoms?" Are you going to be guilty of that and shatter the hopes of your children for a free and decent world, even as you and your fathers had it shattered once before? Here we are, 3,000,000 strong. Here we are in Palestine and on the roads leading to it, and we refuse to go back to ghetto Europe."

We, therefore, appeal tonight particularly to the leaders of the Jewish community in this country, to the men who had the tragic misfortune of being in leadership when the disaster overcame us, but whose consequences they cannot overlook. We say to them:

"You are Americans. You have a country and a flag and a government, and all the things we lack. You therefore should not, for your good and for ours, keep confusing yourselves with us and placing yourselves in our position, as our leaders, which you are not and which you cannot be. But you and we share not only a common faith and civilization, we share ancestry and heritage. And this should make you our true friends. But you must let us speak for ourselves and act for ourselves, and be called in our own name, and you befriend us, and help us, and champion us. But do not become our protectors and spokesmen, for then you humiliate and insult us, even as does the enemy; for then you proclaim us 'schutzjuden', even

as did the enemy. For you, too, view us as a passive object to be murdered at will by Hitler, to be ignored and sometimes pitied by Churchill and to be sincerely pitied and spoken for by Stephen Wise. In this lies the tragedy. This is the clue to the entire solution. The Hebrew is not an object. He is a human being whose only chance for survival lies in his ability to speak and act for himself. We are not protected Jews, nor are we stateless Jews, nor are we refugee Jews, nor German Jews, for we hate Germany. We merit being referred to by our own name—our own nationality—as all humans are referred to.

We are Hebrews, members of a Hebrew nation, whose territory is Palestine. And we, the Hebrew nation, must sit in the councils of nations. We must have recognition, or we can receive no consideration. And you, Stephen Wise, the American, and you, Chaim Weizmann, the Englishman, should be first to give us this recognition, to demand it for us. Unless we attain it our dead have died in vain, our survivors have survived in vain, only to face continued privation and torture, and to remain the chosen people—chosen for discrimination and abuse.

It is for this that we of the Hebrew Committee of National Liberation, with humility and reference, have undertaken the initiative and responsibility of proclaiming to the whole world that we are still here, that Germany's solution did not work, that to the contrary it has speeded the renascence of our nation.

We consider ourselves one of the United Nations. From our headquarters in Washington waves the Hebrew flag, as the flags of all other nations wave over roofs of their representatives in this leading world capital. To the various governments go constantly our communications concerning all problems involving Hebrew nationals. We Hebrews have thus taken the initiative without which no nation has ever been liberated. The rest is now up to the others. It lies now with the governments of the United Nations which, through fulfillment of our just demands, can bring to an end this, the greatest scandal of history.

I am happy to say that in the time that has elapsed since first we raised the Hebrew flag in Washington, experience and considerable progress have proven not only the justice but the eminent practicability of our solution.

We rely upon the understanding and support of the magnificent American people. The time is now at hand for the full and dignified restoration of the ancient Hebrew nation as a full-fledged member amongst the republics of the world.

With your help it shall be done.

Pending Water-Disposal Treaty With Mexico

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Inter-American Unity," written by Sumner Welles and dealing with the pending Mexican treaty.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTER-AMERICAN UNITY

(By Sumner Wells)

PENDING MEXICAN TREATY

The dramatic progress in our march toward victory in Europe and in the Far East, the meeting of the heads of the three major powers, and the series of political crises in Europe have all engrossed public thought in this country to the exclusion of problems which have to do with the course of events in the New World.

It is singularly unfortunate that that should be the fact at this moment. The existence of a solid inter-American front was never more important to the United States than it is at this time, and inter-American unity has not for many years been more gravely threatened. The number of vital questions in the field of inter-American relations which are coming up for immediate decision is very large. Few Americans seem to appreciate realistically how greatly United States interests are going to be affected in the future by the way in which these questions are now determined.

Outstanding among such questions is the pending treaty between the United States and Mexico, providing for the distribution between the two countries of the waters of the Rio Grande and Colorado Rivers, now under consideration by the Foreign Relations Committee of our Senate.

If the present treaty as negotiated is ratified by both Governments future relations between Mexicans and Americans will be free from one of the greatest causes for friction and bad feeling which can exist between peoples whose very existence depends upon irrigation and where the water supply is severely limited. For in this case unless the distribution of water for irrigation purposes is based upon equity, and regulated by an intergovernmental authority rather than by local authorities, international controversies will become inevitable. Under existing conditions the grounds for such controversies between Mexico and the United States will constantly increase because of the growing demands for additional water for irrigation on both sides of the international boundary as a consequence of the rapid development of those agricultural regions.

The treaty was negotiated while there was still time to find an agreement based on fair treatment to all existing interests for the purpose of preventing an insuperable obstacle to good relations between Mexico and the United States in the years to come.

The provisions of the treaty which provide for the distribution of the waters of the Rio Grande between the citizens of Texas and those of Mexico are welcomed by both sides.

It is only with regard to the articles in the treaty which cover the distribution of the Colorado River waters that trouble has developed. The opposition comes solely from the State of California.

For the first time in history, so far as I can learn, a State has appropriated funds to block the ratification of a treaty negotiated by the Federal Government. The California legislature has appropriated $75,000 for this purpose.

California alleges that no chance was given interested persons in that State to make known their views before the treaty was negotiated.

That charge is patently absurd.

The Committee of Fourteen—composed of two representatives of each one of the seven States forming the Colorado River Compact—was consulted by the Department of State before any decision was even reached by the Department that a treaty could be negotiated. The committee at that time agreed to cooperate fully with the State Department in formulating acceptable bases for the treaty to be negotiated with Mexico. Representatives of California were present at every one of a series of meetings which took place over a period of more than 2 years at which these bases were discussed. Finally, a formula for the water treaty was approved by Arizona, New Mexico, Colorado, Wyoming, and Utah. Nevada abstained from approval or disapproval. Only California opposed the formula. But her representatives had taken every opportunity throughout that long discussion of making the views of the California interests fully known.

The California representatives are charging that an excessive amount of water will be guaranteed to Mexico by the treaty.

It should be emphasized that under the terms of the seven-State Colorado River Compact, California receives annually 4,400,000 acre-feet of water from the Colorado River. The water required by the Imperial irrigation district in California is included within this amount. But California interests have already entered into contracts for almost a million acre-feet beyond the total allotted to California by the compact.

The 1,500,000 acre-feet of water allocated to Mexico by the treaty are less than Mexico's use of water in 1943 and in 1944 by some 300,000 acre-feet.

If the treaty is not ratified, Mexico can, of course, continue to increase her use of water, particularly in the rich Mexicali Valley, which is a continuation, on the Mexican side, of the Imperial Valley. At the present time there is an annual excess of some 8,000,000 acre-feet of water flowing into Mexico from the Colorado River. Mexico has every right to put this water to beneficial use. Under international law, the beneficial uses of water which a downstream country has built up cannot be cut down by new uses created at a later date by the upstream country. Should California interests later attempt to divert the amount of water required by such beneficial use within Mexico, and should Mexico then demand arbitration of this question, the United States is pledged by the Pan American Arbitration Treaty of 1929 to accede to such a demand. In that event, the weight of established law would be wholly on the side of Mexico.

It can readily be foreseen what bitterness of feeling will be aroused in both Mexico and the United States if the treaty is rejected and a condition of affairs is allowed to develop where Mexico legitimately puts to beneficial use the present overflow, while California interests continue to enter into contracts for additional water.

The pending treaty is an example of constructive and preventive statesmanship on the part of both governments involved.

Its ratification will not only remove a constantly increasing threat to friendly relations between Mexico and the United States but it will provide assurance as to the permanence of their water rights to the hundreds of thousands of farmers on both sides of the boundary. It will also have a profoundly helpful effect in strengthening confidence throughout the other Americas—at a moment when it is much needed—in the consistency of the policy of the Government of the United States to deal fairly and justly with all of its American neighbors.

Lincoln Day Dinner Address by Joseph H. Kaszubowski, President of the Coordinating Committee of the American-Polish Associations

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD an extremely thought-provoking address delivered by Joseph H. Kaszubowski, president of the Coordinating Committee of the American-Polish Associations in the East, at the Lincoln Day dinner, Hotel Statler, Washington, D. C., on February 12, 1945. On that occasion I was privileged to be a guest with the Senator from Minnesota [Mr. SHIPSTEAD] and the Senator from Rhode Island [Mr. GREEN].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We meet tonight to celebrate the birthdays of two immortal heroes in the age-old fight for freedom—Abraham Lincoln and Thaddeus Kosciusko. We meet at a time when the fate of Poland and America, the future of freedom everywhere, is still in the balance. A great conference is taking place where diplomatic decisions are being made, as fateful as any of the great batlefields of this war. At that conference our political leaders must stand as firmly and steadfastly as our soldiers. This is a time when we must renew our faith in the ideals which united Lincoln and Kosciusko and which still unite the two countries, Poland and America, which they loved.

Unlike Lincoln, Kosciusko had to fight slavery not merely within his own country. His country itself was enslaved. So he fought in Poland when he could, and when he could not, he fought abroad. When other freedom-loving countries would not or could not help to free Poland, Poles like Kosciusko fought to help them.

In doing this Kosciusko and Pulaski were the forerunners of the Polish Army of today which fought first in Poland, then in France, and later still in the Battle of Britain. It has kept fighting ever since, inside Poland and out, on most of the bloodiest battlefields of this war. Many of those who escaped abroad had to travel halfway around the world before they could begin to fight their way back to Poland. But in this great odyssey their single aim remains, like that of Ulysses, to return to their homeland. And yet today, despite all the heroism they showed and the blood they shed from Tobruk, to Cassino, to Breda, the day of their return seems as far away as ever. When we remember the services of Kosciusko in bygone days, let us remember also the services of those Poles today who followed his example.

The aim of Kosciusko like others who followed in his footsteps was to return to Poland, but only to a Poland that was truly free. In the meantime they served humanity and especially America. Poland's martyrdom gave them an understanding and a love for the universal principle of liberty not only in Poland but elsewhere.

Because of this Kosciusko realized long ahead of his time that the institution of slavery was a deadly enemy of America's freedom. Like Lincoln, he knew that the slavery of some threatened the liberty of all. That is the lesson we must remember today.

Lincoln said that a nation cannot exist half slave and half free. We who live in an age of rocket bombs and rocket planes know that what Lincoln said of America is now true of the world. We have learned that peace is indivisible, that justice is indivisible, and Kosciusko, with his prophetic soul, knew these truths 150 years ago which we are painfully learning today.

Thomas Jefferson called Kosciusko the "purest son of liberty." When he left America for the last time to fight, and eventually to die, for Poland, Kosciusko left all his property to free slaves in America. His letter to Jefferson read:

"I, Thaddeus Kosciusko, being just on my departure from America, do hereby declare and direct that, should I make no other testamentary disposition of my property in the United States, I hereby authorize my friend, Thomas Jefferson, to employ the whole thereof in purchasing Negroes from among his own or any others, and giving them liberty in my name; in giving them an education in trade or otherwise; in having them instructed for their new condition in the duties of morality, which may make them good neighbors, good fathers and mothers, husbands and wives, in their duty as citizens; teaching them to be defenders of their liberty and country, of the good order of society, and in whatsoever may make them happy and useful.

"FIFTH DAY OF MAY 1798.

"T. KOSCIUSKO."

The millions of Poles who followed Kosciusko to America have been inspired by his example.

There was never any conflict between our love for the land of our forefathers and our love for America, the land of our own opportunity and of our children's future. American Poles paid their debt to America not only by their sweat but by their blood, in the front ranks in two world wars. The fact that in both wars Polish freedom was linked with the triumph of America's cause gave us a double motive to fight for America's victory, not only in war but in peace.

Today American Poles with millions of other Americans are deeply concerned. Our victories mount, but there is increasing fear that the true victory for which America fights is being lost. America has no selfish ambitions. Like Poland, we were forced into this war by aggression. Our war aim has been not only to repulse this particular attack of Germany and Japan but to end the danger of aggression for all time. We know the world has grown too small for America to isolate herself from future wars. An international organization must be set up, but it can only be established on the basis of justice, for America cannot promise to defend frontiers which sow the seeds of future wars. That is why the Atlantic Charter was more than expression of noble ideals, more than a promise by Britain and America to the enslaved peoples. It is the only kind of peace which offers safety to ourselves.

That is why not only our honor but our security is involved in the fulfillment of the Atlantic Charter. The President has said that the aims of the Charter are as valid today as on the day it was written, and America, herself, is living up to its principles. For where we are the liberating power, as in the Philippines, all goes well. There our triumph means what America and the world believed it would mean everywhere. Although the Philippines were not fully independent before the war, America is now not only liberating them from the Japanese; we are giving them a greater independence than they had ever known.

But when we turn to Poland, the situation is tragically different. Poland was independent before the war. Poland was the first to refuse to compromise with Hitler. Poland suffered under the Nazi yoke longer and more terribly than any other nation. And yet the "liberation of Poland" now brings not only the loss of nearly half the country which it set out to defend, but the loss of its true independence under the guise of a foreign puppet government.

When this proposal was first presented to Premier Mikolajczyk, he would have said, if he were an American—"This is where we came in." Because this is precisely the same proposition which was presented in 1938 and 1939 to Poland by Hitler. The only difference is that Hitler's offer was more generous to Poland. According to testimony of French diplomatic observers contained in the official French Yellow Book, Hitler made three proposals to the Polish Government, looking toward combined action against Russia both in 1938 and 1939. The basis of the German proposal was that former German regions be returned to the Reich and that Poland be compensated by additional territory from the Soviet Union—a proposal exactly like Stalin's, but in reverse. As the French Yellow Book shows, Poland refused these offers. If Poland had accepted, the whole course of the war would have been different. Russia would have been attacked 2 years earlier and she would have succumbed.

Exactly the same parallel applies to Britain. Here is what a British Labor Member of Parliament, Richard Stokes, said on January 31:

"I remember that in June 1939 we sent a mission to Russia to arrive at a treaty with Russia against Germany. My belief is this * * * that, in effect, the Russians said to us 'let us have Poland to the Curzon line, and the Baltic provinces, and we will have an alliance with you.' We said 'no,' and I personally think we were quite right. There was no alliance and what happens next? Off go the Germans to Moscow and Von Ribbentrop is asked the same question. He says 'yes, not only may you have the Baltic provinces but as much as you want of Poland on the east.' * * * Now, where do we find ourselves? We find ourselves fighting to give Russia precisely those territories which, had we allowed her to have them in 1939, would have prevented the outbreak of war at all. Is there an answer to that?"

This tragic irony is underlined in a statement this week in the newspaper of the Polish Army, published in London, which corresponds to the Stars and Stripes in the American Army. This is the paper which speaks for 150,000 Poles now fighting in the front rank of the Allied armies. Many of them started to fight in Poland. They escaped to fight in Britain, Africa, and the Continent of Europe. And today they speak of what this Russian liberation means to Poland. They speak with restraint, but their words should go to the heart of every American:

"We are enjoying, of course, the defeat of the Germans and the German flight from Poland. But we don't feel the same joy which overwhelmed crowds of people in Belgium, France, and Holland, after the liberation of their countries by the British and Americans. They have regained their freedom—we have not. We don't mean that the Red Army is not acting according to the laws of war. We realize that no one else but the Red Army has chased the Germans from Poland. But we mean by that the fact that a complete foreign body has been established in our country and given power to execute its will.

"What is the gain for us if Governor Frank is replaced by another gentleman who is a strange figure in Polish political life, who lived and worked in a foreign country and for a foreign country who treated Poland as his enemy No. 1? What is in it for us if the German authorities are replaced by a new form of government which does not allow us to express our opinions, which does not recognize a freedom of speech and does not protect the population from freedom from fear by giving orders to liquidate anyone who opposes the new regime by words or deeds?"

So speaks the Polish Army abroad, and the most remarkable thing about these words is their moderation. What more they might have said is conveyed by an editorial from the British magazine Time and Tide, which reported on January 27:

"There is one cause for the acute anxiety of the Poles, which must be a matter of immediate and general concern—the fate of the Polish home army after its 5 years of resolute fighting against German occupation. These men, who are recognized by the British and American Governments as an allied belligerent force with full combatant status, are being terrorized and hounded as traitors throughout liberated Poland. The commission set up last August in Lublin to investigate anti-Soviet activities in Poland has accepted the mere fact of membership in the home army (or service in the Polish under-

ground state) as proof of anti-Soviet activities.

"Reports of home army units being arrested and disarmed and their members shot or deported have grown too numerous and too detailed to be discounted. One of the most callous cases was the incarceration of 200 officers and noncommissioned officers (subsequently deported to Russia) and over 2,000 men of the Polish home army in the infamous former German concentration camp at Majdanek. Even in September, in an area under the administration of the Lublin Committee, there were five concentration camps for Poles. Since the committee took upon itself the status of a provisional government, statements from Lublin have made it painfully clear that a policy of extermination of the home army is to be relentlessly pursued."

Nor is this all. On December 5 the United Press reported from Moscow: "Exchange of population between the Soviet Union and Poland is proceeding satisfactorily and according to plan."

This is no temporary war measure, for the effect of these deportations may never be undone. They must be stopped now or never. The exiled Poles must be returned now or they never will return. With heavy hearts we recall that of the million and a half Poles deported by Russia during the Hitler-Stalin pact, only one-tenth were ever recovered, even when Russia had friendly relations with the Polish Government. Hundreds of thousands of them died of hardship.

What this amounts to is this: In Kosciusko's day Poles were openly exiled to Siberia. Today it is called "exchange of population."

Is it possible that America has not enough influence with her allies to end such open violations of the Atlant Charter as this? That is the question which the world is waiting to hear answered by the conference of the Allied leaders.

So far our Government has not even made an open protest. Worse still, Ralph Parker reported in the New York Times 3 weeks ago that the Lublin soldiers who carry out these very acts are armed with American lend-lease equipment.

We have financed and supplied our Russian allies on the most lavish scale in history, while at the same time they have pursued policies which we were pledged in honor to oppose. We have heard much about the necessity for compromise to preserve Allied unity, but so far the compromise has all been on our side. Allied unity is our goal. But there can be no unity without equality of reciprocity.

We are told that it spreads disunity if we criticize our allies when they violate the Charter. But we reply that it is not the criticism but the violations of the Charter which destroy unity. Unity cannot be preserved by pretense or by censorship. It can only be based on common principles, and those principles have already been expressed and pledged in the Atlantic Charter.

The Atlantic Charter is more than a statement of vague and remote objectives. It is a statement of rules or principles, an expression of moral law like the Ten Commandments. We cannot tacitly approve a gross violation of these rules and still claim to be faithful to the objectives of the Charter

The Charter promises all people "the right to a government of their own choosing," and if any people on earth has earned that right, it is the Polish people. The Charter further promises that all peoples should be immune from territorial changes "that do not accord with the freely expressed opinions of the people concerned," and if any people on earth should be so immune, it is the Polish people.

In his time Kosciusko also was advised to compromise by the realists, the people who believe that peace can only be preserved by power politics. The Congress of Vienna set up the political power and spheres of influence of his day. They called it the Holy Alliance. Kosciusko was invited to Vienna, offered the post of viceroy of Poland by Czar Paul of Russia. The Czar promised to make liberal reforms if Kosciusko would consent to surrender his demand for full Polish freedom. But Kosciusko refused to be the Bierut of his day. The Polish people who survived a living death for 150 years will never compromise. The Polish people will return the same answer today.

In his last message to Congress the President promised to use every ounce of America's power to fulfill the principles of the Atlantic Charter, which embody America's war aims. The American people hope with all their hearts that the President will be successful. But he will not succeed if any of the fundamental issues of principle are abandoned. There must be no more glossing over, no more secret diplomacy, no more pretense of allied unity where it does not exist. We must know where we stand. Either the promises to Poland are to be kept or Poland is to be sacrified on the altar of power politics.

The Polish Government has called for a joint Allied occupation and supervision of liberated Poland until free elections can be held, but it must not be the kind of joint action we have seen in Bulgaria and Rumania. It must be real Allied supervision throughout the whole of Poland. There must be as many British and Americans in Poland as there are Russians, or joint action would be a mockery. Moreover, any election would be a mockery unless the millions of Poles deported both to Germany and Russia are returned before such an election is held.

As for the proposal to compensate Poland by moving the whole nation hundreds of miles to the west, we may say that Poland is not a nation of nomads but a people rooted in the soil they love, the soil they have defended with their blood.

When General Pershing landed in France during the last war to save her from the invader, he uttered these immortal words: "Lafayette we are here." Thus we repaid our debt to France. But the debt to Poland and Kosciusko is still unpaid. We pay him eloquent tributes, it is true, but he would rather have us do something for his country. As our Under Secretary of State, Joseph Grew, has said:

"His deeds of valor in fighting for a cause which he was great enough to take as his own are written deep in the annals of history; but the true character of the man who a century and a half ago fought for the ideals which have inspired and will ever inspire the progress of Poland and the United States, is enshrined in the hearts of all of us. And it is from our hearts that the call goes forth in salutation from our people to the people of Poland—Kosciusko lives."

Yes, Kosciusko's spirit does live. It was present in the first battle of Warsaw, in the immortal struggle in the Jewish ghetto, and in the legendary exploits of General Bor's home army, when they fought for 2 months against the might of the Nazi Army, abandoned and alone. Kosciusko's spirit lives and it says to us Americans: "Where are you? We are waiting."

Why Does Hitler Hang On?

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Why Does Hitler Hang On?" by H. V. Kaltenborn, published in the February 1945, issue of The Rotarian.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY DOES HITLER HANG ON?—THE BLITZKRIEG IS NOW IN REVERSE AND ALLIED ARMIES ARE CONVERGING ON THE REICH, BUT NAZIS BATTLE ON—WHY?—WHEN WILL THE CRACK-UP COME?—A DISTINGUISHED AMERICAN RADIO COMMENTATOR OFFERS HIS ANSWERS TO THOSE QUESTIONS

(By H. V. Kaltenborn)

Why does Hitler continue the struggle in the face of certain defeat? What persuades the Nazi hierarchy and the highly competent leaders of the German army to sacrifice what little remains of German manpower and German resources to a lost cause? If they are, as we say, already planning the next war, why do they persist in wasting effort on a war that is already lost?

The answer is simple. German leaders are not at all sure that the war is irrevocably lost. They count on dissension among the Allies. They exaggerate the power of their new weapons. Moreover, they hope that if they can even prolong the war well into 1945, they will get better terms than unconditional surrender.

During the closing weeks of 1944, I visited the most important military fronts in Italy, France, Germany, Belgium, and Holland. I talked with many Government officials, diplomats, and military leaders in Rome, Paris, Brussels, and London. I interviewed German prisoners and civilians. Above all, I talked with the men who are fighting the war in the front lines. My dominant impression is that Germany is still stronger than seems possible when the war is viewed from the American side of the Atlantic.

The Nazi war machine may collapse. The failure of the German offensive in December produced strains which may shorten the war. But this major effort also taught us that we underestimated what remains of German air power, tank power, and supply power. We continue to destroy Germany's war industry, but she always seems to have enough left to put up a good fight on three fronts.

Are Hitler's hopes altogether vain? What about his new V-bombs and his jet-propelled airplanes? Can they help him get better terms than unconditional surrender? Is there any chance that he can capitalize on the developing differences between the United States, on the one hand, and Britain and Russia, on the other? An examination of these questions should tell us why Hitler fights on.

The V-bombs are a terrible war weapon. With unlimited opportunity to make them and launch them, Hitler could both terrorize and weaken his enemies. I had a chance to study the effectiveness of the V-2, for which there is yet no answer. It gives no warning of its approach and destroys an enormous area. The V-1 or buzz bomb is equally deadly, but it cannot travel so far because it flies more slowly at a lower altitude, it can be intercepted. The proportion that reaches intended targets is steadily declining. German jet fighters are faster than any Allied planes, but they need more time to reach maximum speed.

During the first weeks the jet fighters were used, they accomplished little. The German pilots were still experimenting and had not worked out the best way to utilize the extraordinary speed of which these planes are capable. They were also unable to remain in the air for any length of time. But Allied aviators are convinced that the jet plane will play a highly important role in aviation. They hope, before long, to surprise the enemy with a better jet plane than the Germans have produced.

No new weapon, no matter how effective, is likely to win a war. It can prolong a war or make war more destructive, but neither the V-bombs nor the jet planes have given Hitler the illusion that he is going to win. They have boosted home morale by giving Dr. Goebbels a good talking point. Thus they have made it easier to persuade the German people to go on fighting.

Hitler's hope that Russia, Britain, and the United States might begin to pursue their separate interests if the war continued into 1945 has been justified by events. Despite continued calls from Britain and the United States for a post-election meeting of Roosevelt, Stalin, and Churchill, no such meeting had been announced at the turn of the year. Much has been lost by this postponement.

At Dumbarton Oaks, Russia reserved the right to veto joint action against an aggressor. Yet how can there be collective security unless each nation agrees in advance to abide by the collective decision of all other nations? The whole principle of international cooperation depends upon the willingness of every nation to surrender the right to wage aggressive war. In the prewar period the Soviet Union made substantial contributions to the League of Nations and its principles. But since Russian military power has swept the Germans out of Russia, the Balkans, and the Baltic States, the Soviet Union has pursued an independent policy with regard to all her neighbor countries. This policy is one of power politics without the slightest regard for the rights of weaker peoples.

In an effort to protect her own position as a world power, Great Britain has revived imperial ambitions. Winston Churchill still thinks of the Mediterranean route to the Far East as the life line of British Empire. His sense of history and his conservative background combine to remind him that the British have always opposed Russia's entry into the Mediterranean. In Afghanistan, in Persia, in Turkey, and in the Balkans, Russian and British interests have long fought one another. They are at war today even though the first interest of both countries is the defeat of Germany. The Churchill government seems to want monarchy for Spain, Italy, Greece, and Yugoslavia, probably because the monarchy is a convenient rallying point for the conservative forces of law and order. It is a symbol which has powerful appeal to a distracted people seeking an escape from communism.

Generally speaking, I found United States diplomatic and military leaders abroad on the side of the British. They have worked closely with British leaders in crisis situations. They share their dislike of a Communist solution. Most of them doubt that Greece or Italy will be ready for democratic government at the end of the war. The choice, they feel, lies between a Communistic Europe dominated by Russia and a much more conservative Europe in which Great Britain, France, the Vatican, the United States, and other powers will continue to exercise a moderating influence. They would welcome Russian cooperation. They fear Russian domination. All these things Hitler knows. They help to explain his belief that, given time, they might affect the conduct of the war. They make the men around Hitler feel that on the diplomatic and political war fronts time is now on their side.

"Unconditional surrender" is, in the opinion of most military leaders, the Allies' greatest propaganda mistake of the war. Whatever it did to fortify Allied home morale, it did much more to stiffen German morale. It also pointed up the separate policies of the Big Three, since the Russians never approved the Casablanca dictum and have never used it. Their propaganda has always distinguished between Nazis and other Germans and has never threatened to destroy Germany. The Russians talk soft, but there is every prospect that they will act hard. Americans talk hard, but there is every prospect that they will act soft.

In essence, there is no such thing as unconditional surrender. No leader and no group of leaders will be in a position at the end of this war to guarantee the unconditional surrender of 70,000,000 Germans. That surrender cannot be guaranteed by Allied military government. Unless and until voluntary cooperation is secured from a German Government which has the obedience of the German people, the Allies must enforce the terms of surrender on 70,000,000 Germans by the use of military power.

What we really mean by "unconditional surrender" refers only to the Nazi hierarchy and to the military power they have created. We are quite willing to work with the German people insofar as they are willing to work with us. I saw that for myself in Aachen, the first big German city which the Allies took over. Military administrators did little more than supervise. Germans operated the stores, the banks, the municipal services, even the police department. They did it willingly and efficiently. They will run the rest of Germany for the Allies in the same way.

In order to offset the foolish talk of unconditional surrender, a German newspaper in German, published under General Eisenhower's supervision, tells Germans what the Allies expect to do for them. This newspaper features the promise to treat Germans fairly, to pay them going wages, to see that they are fed, to re-create their labor unions. It counters these promises with what continues to happen to them under the Nazi regime. The purpose of this newspaper is not to coddle the Germans, but to save lives by shortening the war.

Hitler hangs on, but not for long. I returned from Europe convinced that there is little chance to end the war before another summer is under way. This year will certainly see the end of war in Europe. But it will not see true peace begin. Unless we realize that military victory is a beginning and not an end, we shall repeat our failures of the twenties. We can frown on both fascism and communism; by the judicious use of food and fuel, of gold and goods, we can help defeat the extremist and advance the cause of the middle way. But it will take infinite patience and tolerance. Those who shout from a safe distance against admitted evils will be less helpful than those who applaud each hesitant step in the right direction. Perfectionists can be the curse of post-war Europe.

Germany continues to fight now because she sees growing differences among the Allies. Unless these differences are healed, even a defeated Germany can regain the balance of power.

Mexican Water-Disposal Treaty Dispute

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Treaty Dispute," published in the Washington Post of February 13, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TREATY DISPUTE

Governor Warren's objection, in California's name, to senatorial ratification of the waterway treaty with Mexico already has had some unpleasant repercussions. A movement has been started in Mexico to deny California the migrant Mexican workers who help to harvest California's crops. A cloud has been cast over the American Foreign Ministers' Conference which opens in Mexico City on February 21. This treaty, in Latin-American estimation, is the key to the realities of our professions as a good neighbor.

Of course, California's opposition to the treaty, which is now under consideration by the Senate Foreign Relations Committee, is not a new thing. This opposition should likewise be understandable in a country like Mexico, which is equally thirsty for water. At the same time California's attitude is alone among all the seven Colorado Basin States. Solitary among them California voted against the formula upon which the treaty is based, even though California produces not a single drop of the Colorado. In the circumstances California's opposition could not hold up the diplomatic negotiations with Mexico. For international reasons a treaty was overdue, since the issue has plagued Mexican-American relations for years. For national reasons, also, the Mexican right needed definition. Further development of Colorado River water, with the determination of the Mexican claim, can proceed without let or hindrance from Mexico.

The Californians do not challenge either the need of defining Mexico's claim or the desirability of a treaty. It is this treaty, as Governor Warren said, that the Californians oppose. Under it the Mexicans are pledged to have delivered to their country 1,500,000 acre-feet of water from the Colorado River, the delta of which is situated in Mexican territory. The Californians say that this is double the sum of water that Mexico is entitled to. The figure is the amount that Mexico got by normal flow prior to the building of Boulder Dam, which, by regulating the Colorado, benefited Mexico as well as the United States, in that Mexico was saved from floods and got its water desilted. Since the construction of the dams Mexican usage of Colorado water has increased. In 1943 Mexico was using well over a million acre-feet of Colorado water. In this, as in most other aspects of the dispute, engineering testimony differs: antitreaty experts say 1.1 million acre-feet, protreaty experts, 1.8. But a compromise figure would show that Mexica is now using about the same quantity of Colorado water as is guaranteed—subject, however, to a sliding scale in case of drought—in the disputed treaty. Moreover, half or more of the promised 1.5 would be return flow. This is water that has already been put to use within California and has seeped back into the river or the canals on the way to Mexico. It is estimated, therefore, that the allocation to Mexico would be 3 or 4 percent of the primary flow of the Colorado River.

It would seem to be this figure that any arbitration tribunal would have to take into account in case of a rejection of a treaty. For international law, which in this matter is based on treaty precedents, requires the protection of existing uses. That in the event of nonratification Mexico would submit the case to arbitration is undeniable, since there is not the slightest prospect of getting a better treaty out of Mexico. Mexico happens to be every whit as thirsty for water as California. The Imperial Valley, the flowering of which is California's main concern in this treaty dispute, becomes the Mexicali Valley on the other side of the frontier, and Mexico intends to exploit it. Nor could this country back out of arbitration. We would be committed to acceptance of arbitration by our signature of the Pan-American Arbitration Treaty of 1929.

In the meantime Mexican usage of Colorado water in anticipation of arbitration

would continue to increase. There is reason to believe that last year the figure was a little less, but very little less, than it was in 1943, say, around the 1.5 million acre-feet guaranteed under this treaty. Much more is available for Mexican use. For, as the downstream country, the waste flowing into the Gulf of California passes through Mexican territory, and this is between 8 and 9 million acre-feet. It is thus difficult to see how the United States could get a better deal at arbitration than is written into the new treaty. On the contrary, the prospect is that the deal would be worse. For the Colorado division in this treaty is tied up with a division of the Rio Grande waters which decidedly inures to United States advantage.

We find nothing in the record to sustain the charge that the treaty sells California down the river. Nor can we find that California's legitimate hopes for the future are in danger. With these, of course, the entire Nation is in sympathy. Californian development is American development, and the post-war years will pose a problem in furnishing employment for all our population which calls for the maximum use of all our resources. However, California already gets one-third of the waters of the Colorado and is not now using more than a half of that third. That is an indication that this treaty will not stifle the development of Southern California in the conceivable future. Indeed, it has been shown that California itself doesn't consider itself in danger. The evidence has been furnished to the State Department and presented in evidence before the Senate committee. Actually California offered itself to supply Mexican needs out of its own facilities, but, of course, at a price. The offer was made by the Imperial irrigation district of California.

It is in the material no less than in the moral interests of the country that the treaty be ratified with minimum delay. The State Department appears to have gone the limit in consulting all the interests concerned in the hope that at this delicate stage of our continental relations there would be the minimum of argument.

A White Cross and a Dog Tag

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 15, 1945

Mr. MURDOCK. Mr. President, the Brigham Young University, at Provo, Utah, is one of the outstanding universities of the West. The university newspaper is known as the Y News. In its issue of January 11, 1945, I find a letter, under the heading "A White Cross and a Dog Tag," written by Sgt. Claron L. Oakley, who is now somewhere on the western front in France, and who is a former student of this great university. I ask unanimous consent that the letter from Sergeant Oakley be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A WHITE CROSS AND A DOG TAG

On the windswept shores of Normandy, stretched far over the green flat lands, lies a field of white crosses and single dog tags that are the mute evidence of the enormous price paid to free France. In the center of the field flies Old Glory, fluttering gently in the wind, representing the ideal for which these boys died. These staring white, inanimate crosses represent the bill paid to lift the black cloak of oppression from a nearly smothered France; but, in the deepening shadows, the crosses take on the form of the men over whom they stand, and you realize that these soldiers, now lying in soil far from the land they died for, lived, breathed, and laughed like you. They, too, loved the feel of warm sun on their flesh; the thrill that comes in smelling the fresh clean, air of spring; the exuberance that lingers in the crisp, cool breezes of autumn; the happiness that comes with getting something new, the sorrow that comes in parting with something old. They're all standing before you, and in the soft symphony of the night winds, their voices reverberate in one loud question: "Why?"

Why must there be wars? Why was I chosen to be a martyr for freedom? Why must I bear the cross for a world too blind, too selfish, too lazy to keep from seeking to destroy itself every quarter century?

Why? Why!

But only dead silence is his answer—for I can't give them the answer. The evening shadows lengthen, and the moon throws a lonely beam across the row on row of white crosses that have now become a group of martyred soldiers.

Can I tell them why? Why their blood soaks the sand of foreign beaches? Why their lives were snapped short by a terrible pattern called war? I could say we were forced into the fight by a stab in the back from a grasping, treacherous Japan; that we had to resort to war to keep from ignoring the constant prodding of a power-starved Germany. I could answer these quizzical dead in that way—but I must also tell them that the winds of France play over their graves today because big-hearted America, territory-hungry Britain, and security-bent France were not willing to pay the price to keep the peace for which they so fiercely fought in 1918. Too anxious to settle back to the normalcy she had known in pre-war years, the United States reverted to civilian luxuries once more and left a peace-loving Woodrow Wilson to fight on alone for his dreams and visions of living on an earth free from war, with peace for all time. In the meantime, a bitter Germany was locked behind the walls of defeat to lick the wounds that not even then would heal. In those years that she was ignored, blockaded, and shunned, Germany built its foundation for the Third Reich that turned the whole of Europe into a flaming mass and threatened to turn the whole face of the globe into a titantic battlefield—just 21 years after they had been pounded into submission.

Will 1965 see the same thing happen again?

These men long for and demand the reasons why they lie dead on the same soil their fathers bled and died on just 26 years ago. If we can't tell them why, we must at least promise them that it will never, ever, happen again. We can either resign ourselves to the fact that wars are a necessary evil that must forever be.

There is a stir of dissatisfaction among the crosses.

Or we may search our hearts, our minds, and our conscience for the elusive solution to the formula for a permanent world peace. Scientific patterns for peace may come from the mouths and pens of Sumner Welles, Cordell Hull, or Walter Lippmann, but the real solution lies with us in realizing our responsibilities as individual citizens—indispensable pillars supporting the structure of peace—not for a decade, generation, or a century, but for all time. If we become so eager to settle back to pre-war normalcy after this armistice is signed, the marine at Tarawa, the Russian at Stalingrad, the Chinese and British at Hong Kong, will all have sacrified in vain.

As the last telephone book has been ripped to shreds and dropped on the cheering streets; as the last V-sign has been given and the last victory whistle blown, the job of having a lasting peace will have just begun. The peace terms lie in the hands of a handful of men, but the keeping of that peace lies in the initiative and ambitions of the freedom-loving millions. Without their help, the peace to come will only be a pause between a more bloody, more gigantic struggle than the one in which we are now engaged.

A ray of moonlight stabs the darkness. A bird, startled into flight, screeches its defiance at a fleet of bombers passing overhead. Then there is silence. The row on row of men blur in the moonglow and become once more a field of crosses. Their bodies lie silent in the foreign soil of France, but their valiant spirits—far away in a world that must be far better than the one we know—watch and wait for the day of lasting peace they tried so hard to bring on earth. They wait for that day, and Paul Smith, Dale Lewis, Norman Harris, Que Jones, and the many other Y boys who have died, been wounded, or are missing in action in this great conflict wait with them.

You and those of us who remain must justify their lonely vigil.

Sgt. CLARON L. OAKLEY.

SOMEWHERE IN FRANCE.

Address of Hon. Clarence J. Brown of Ohio

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. CLARENCE J. BROWN of Ohio, at Chattanooga, Tenn., on February 12, 1945:

Mr. Toastmaster, ladies and gentlemen, I consider it a great privilege to break bread with my fellow Republicans in the historic city of Chattanooga, on the one hundred and thirty-sixth anniversary of the birth of Abraham Lincoln, the founder of our party.

It is a real pleasure to come to Tennessee—the Volunteer State, which has given so many strong sons and daughters to the Nation. It is good to get away from the hectic turmoil, the uncertainties and the inconsistencies, the political and international intrigue, which have become almost the normal life in Washington, and to come to this beautiful community where one can breathe the free and pure air of true Americanism as it flows down from your ageless hills and mountains. It is in places such as this that the heart of America beats the strongest. In your veins flows the blood of those who fought and died to create this Nation. Your forefathers carved this magnificent State from the wilderness. Men of courage and vision, they fought tyrants for their freedom and Nature for their living.

Tennesee has long held a prominent place in the affairs of our party and Nation. You have given to the Congress of the United States two of your outstanding Republican sons, both of whom I am proud to call my warm personal friends. I speak of JOHN JENNINGS, Jr., who represents your Second Congressional District in the House of Representatives, and B. CARROLL REECE, of the First Tennessee District.

Judge JENNINGS is one of the most powerful and influential Members of the Congress. An able, astute, and sound lawyer, he occupies a place of leadership on the important Judiciary Committee which passes upon most of the grave legal problems which come before our national legislature. His counsel and advice are sought and followed by his colleagues. JOHN JENNINGS always has his feet on the ground, his mind on the alert, and his heart in the right place.

Within a few days after I first entered the House I was fortunate enough to be assigned to the great Committee on Interstate and Foreign Commerce, where CARROLL REECE had already given several years of able service. I soon came to admire his keen analytical mind and to trust and follow his sound judgment. We worked in even closer relationship as members of several important subcommittees, and I say to you that because of the tireless energy and the unusual ability of Representative REECE of Tennessee the people of America are today enjoying the benefits of much progressive legislation.

In recent years CARROLL REECE and I have served together on the Republican National Committee, and on the national executive committee of our party. Through him, as well as from other sources, I have learned of the splendid work you have done in this State. I hope I shall not be accused of taking advantage of this occasion if I digress for a moment to express to the sound American citizens of this community my personal gratitude, and the appreciation of the Republican National Committee, for the exceptionally generous financial support you gave to our cause during the recent campaign. The sinews of war which you provided helped greatly. We made the good fight in 1944. We lost—yes—but we went down fighting for the principles in which we believed.

These are dark and discouraging days to many of us who have always believed, and still believe, in constitutional government and the American way of life. So I feel it only fitting and proper that those of us who still cling to the beliefs of Lincoln should gather here, and in numerous other cities of the land, on this, his natal day, to draw from his life and deeds renewed courage and added strength to carry on the good work he began.

In the city of Washington, in a direct westward line from the Capitol and the Washington Monument, near the east bank of the Potomac, stands the national memorial to Abraham Lincoln. I can best describe it in the words of an unknown poet:

"Yesterday I saw Lincoln
I stood reverently before him
Within the lighted walls in Washington.
There he sat, like one who would speak to the Nation.
With deep, all-seeing eyes, soft and friendly,
Full of the warmth of human kindness.
His spirit of tolerance, of liberation,
Of love of the Republic,
Filled that shrine
And reached out, calling all of us
To unity, to sacrifice, and brotherhood.
Surely his life defines the American way—
The ways of freedom, liberty of conscience,
Press, and speech."

I usually pass the Lincoln Memorial each day on my way to and from the Capitol. In recent years as the pressure of the times brought longer hours of work and more troublesome problems, more and more often I have found myself stopping for a moment in front of that beautiful memorial to gaze at the huge stone figure of Lincoln sitting there in the shrine a grateful Republic has erected to his memory. Usually it is at night that I stop—at night when the flood lights play upon his figure and cause it to stand out of the darkness in all the glorious detail which a world-renowned sculptor has given it. He sits looking to the eastward toward the Capitol. In his face is all the pathos and the understanding, the pain and the suffering; the plainness and the humility; the character and grandeur of soul, which have made it both an inspiration and an enigma to all who look upon it. Often I go there disheartened and low in spirits. I leave with a renewed faith in the Nation which produced and gave to the world Abraham Lincoln.

Lincoln proved himself to be a true man of destiny, given to the Republic in one of its darkest hours when its very survival was in grave question. Today, our Nation faces another such crisis. We need a Lincoln now as badly as we needed a Lincoln in the sixties, for the future of our glorious Republic is at stake. It must soon be decided whether it can and will survive in the form in which it was created, and under which it became great.

During the past 12 years many changes have taken place in our governmental structure. Strange doctrines and preachments have been heard from high places. We have seen the depression, which came as the inevitable aftermath of the First World War, lengthened by governmental bungling until it lasted for more than 9 years—until it became almost a normal condition to have ten or twelve million Americans unable to obtain employment—a depression which was not cured, but only suspended, by the coming of war and the calling of 12,000,000 young Americans to arms. Class has been set against class. Industry and free enterprise became the whipping boys of the New Deal administration. Everything possible was done to discourage private initiative, thrift, and progress. Yet when war came, and our sons marched forth to fight and die on half a hundred far-flung battle fronts throughout the world, it was these same whipping boys—American industry and our American free-enterprise system—supported by the strong sinews of free American labor—that out-produced all the world and furnished the implements of war so necessary to assure the great victories which have been won.

A few short years ago there were many who were critical of modern youth. There was much talk about the jitterbug age, and that young America had become soft and decadent. Time has proven how wrong that appraisal was, for within the veins of the young manhood and womanhood of America still courses the blood of those who founded and made great this Nation of ours. On land and sea and in the air, American youth have met in deadly combat the best our enemies could pit against them, and have proven themselves the better. Just as our youth have demonstrated their worth in the terrible crucible of war, so, too, has industry, private enterprise, and free labor here in America proven beyond question their worth, their abilities, their strength, their capacities, their loyalty, and their patriotism. American free enterprise and free labor have alone outproduced the state-controlled industries and the slave labor of all the dictator nations of the world combined, four times over.

We are winning on the battle fronts in both Europe and the Pacific. There is every indication victory may soon come to our arms across the Atlantic and, while final triumph may be longer delayed in the Pacific, it is nevertheless just as certain.

No longer are we in danger, here in America, from our enemies from without. No foreign foe now threatens us with destruction through military might. Yet history teaches us that more nations have been destroyed from within than from without. More nations have fallen as a result of internal weaknesses than have ever been despoiled and crushed by invading armies.

Today we have within our borders those who do not believe in our American way of life. They do not believe in representative government or free enterprise, or the Constitution as we have known it. They want to change this Nation into some sort of a socialized state, for they believe in the philosophy the state should be supreme, and the individual should bow to the will and the desire of the state. The men and women who believe in such a philosophy are neither Republicans nor Democrats. They believe in and owe allegiance to no party. For the time being, at least, they have affixed themselves to the Democratic Party and gnaw from within the Roosevelt administration. Many call themselves New Dealers.

Of course, Mr. Roosevelt and other of the top spokesmen of his administration, have long told us the New Deal is a liberal movement. I can agree with such a theory in only one particular. I admit the New Deal is, and always has been, liberal with other people's money. They have been so liberal that today we have a national debt of nearly $250,000,000,000, and a Federal tax rate that starts at 23 percent of any income above $500 and goes so high as to actually total more than 100 percent, this year, on incomes of $500,000 or more.

Yes, the New Deal is so liberal that everything we eat and wear is taxed to the limit, with the Government taking more than one-fourth of our entire national income as taxes. So liberal that at every family table of three there is a fourth unseen guest present—the tax collector—eating more than one-fourth that family's substance.

Yes, the Roosevelt administration has been a liberal one—so liberal that we have given to others of our finances and our natural resources so lavishly as to almost bankrupt ourselves. Since entering the war we have consistently spent more money than all the rest of the nations of the world combined—friend and foe alike. We have been so liberal with our natural resources as to practically exhaust many of them, and to make it impossible for us to ever wage another war such as this, without being dependent upon foreign sources of supply for necessary raw materials. With less than 25 percent of the oil reserves of the world, we have been furnishing 80 percent of the gasoline and oil used in the war. The oil reserves of the United States and the British Empire are approximately the same; yet we have furnished 80 percent of the war's oil and gasoline needs, while the British Empire has furnished only 8 percent.

Today, on the Western Front in Europe, we are supplying slightly more than 70 percent of the military manpower engaged in that gigantic struggle. In the Pacific we are furnishing practically every fighting man in combat against the Japanese, outside of China. We have conquered island after island in the struggle, all of strategic importance to our national defense, only to raise the flag of some foreign power once the fighting was ended.

We have done all of these things without promise or obligation on behalf of the recipients of our largess. We have promised, so I understand, to do much more for the rest of the world in the post-war years ahead, although neither the Congress nor the American people have been informed as to any of the provisions of these promises.

Woodrow Wilson's policy of "open covenants, openly arrived at," has had no place in Mr. Roosevelt's scheme of things. The Atlantic Charter was announced and given to the world as an authentic document approved and signed by the President of the United States and the Prime Minister of Great Britain, and held forth as an inspiration and a promise of better things to the war-torn and prostrate people and nations of the world. Yet, when many of the pledges contained in that pronouncement were disregarded and forgotten, it was blandly announced by the President, at a press conference in the White House, that the Atlantic Charter actually never existed as a document, and, of course, was never signed.

A great conference—the first between the leaders of the Three Great Powers—the United States, Great Britain, and Russia—was held at Teheran a little more than a year ago. It was surrounded by secrecy, but soon after the return of the President the American people were assured no secret agreements or commitments had been made. Then, a year later, or just a few months ago, when certain actions were taken by one of our allies in the Balkans and in Poland, and by another of our allies in Greece, it was openly announced on the floor of the British Parliament such actions had been taken in conformance with agreements made at Teheran, and with the full knowledge and consent of the President of the United States.

We are now hearing rumors from abroad that certain agreements are either in process of formation, or have already been made, whereby the United States will furnish huge sums of money, mounting into many billions, and great quantities of machinery, materials, and supplies of every type and description, for the rebuilding of Europe and the reestablishment of European industries and world trade, not only for the liberated countries, but for our present allies and enemies as well.

If the Roosevelt administration has any fixed foreign policy today, neither the Congress nor the people know about it. Is there any person in this room who can tell us what American foreign policy is tonight? Or where we stand, as a nation, on any foreign question other than military ones? Has the Democratic Party enunciated any foreign-policy program half as broad or half as detailed as the one laid down by the Republican Party at the famous Mackinac Conference? Has the President of the United States, the Secretary of State, or any responsible leader of this administration given to the American people any program or foreign policy to compare with that which was set forth in the Senate of the United States by the ranking Republican member of its Foreign Relations Committee—the Honorable ARTHUR VANDENBERG, the senior Senator from Michigan?

Yes, the great liberal New Deal—the New Deal which has brought to the people of the United States no increased liberty, but only regimentation, regulation and restrictive control undreamed of just a few short years ago. Regimentation, regulation, and control which touch every activity of every citizen in every corner of America. Tell me, if you can, one single human activity over which the Federal Government does not exercise some control, either directly or indirectly.

Three and one-half million civilian workers are on the pay roll of the Government of the United States tonight. More than three and one-half times as many as were found necessary at the very height of World War No. 1. Today 1 person out of every 11, exclusive of those in the military forces, obtains his livelihood from public funds—from the taxes paid by the other 10.

In the last 4 years the capital city of Washington and its environs have doubled in size, despite the moving of many Government bureaus to other cities. Great governmental agencies have sprung up everywhere. Thousands of bureaucrats rush madly here and there busily engaged in devising new ways and means to control, regiment, and direct the lives of 135,000,000 Americans. Tens of thousands of them spend their time writing new regulations, directives, and Executive orders, having the force and effect of law on business and industry and agriculture, as well as almost every other human endeavor. They are ground out in such volume and with such rapidity no one knows what they contain or what they mean. Even the bureaucrats in Washington cannot agree among themselves as to the meaning of their own regulations and orders. They are constantly quarreling and fighting among themselves.

Believe it or not, in the old days, under our representative form of government and our Constitution, the Congress of the United States passed the laws of the land. But today that no longer is true. Last year there were 10 times more Executive orders, departmental regulations, and administrative directives, all having the force and effect of law and carrying penalties of one kind or another, issued in Washington, than there were public laws enacted by the Congress.

Why bless your souls! The Office of Price Administration alone has issued more than 55,000 pages of fine-print regulations and orders affecting the business enterprises of the country. Many times an amendment to an order is issued before the original order appears in print. The same holds good for the War Production Board and its limitation orders on the producers, processors, and manufacturers of the Nation.

Then, of course, the Department of Agriculture and the War Food Administration have huge staffs continually grinding out regulations and directives to control the farmers of the country. And, I have not even mentioned the War Manpower Commission, the Selective Service System, the War Labor Board, the National Labor Relations Board, the Bureau of Internal Revenue, the Social Security Board, the Bureau of the Census, the Treasury Department, the Federal Trade Commission; the Securities and Exchange Commission, the Federal Reserve bank, the Public Health Service, the Department of Justice, or any of the other scores of Government agencies which are also forever pointing a finger at some American citizen and saying: "You can't do this and you must do that;" and "You are damn'd if you do, and damn'd if you don't."

What a long way we have come in the last few years, ladies and gentlemen, along the road that leads to state socialism.

I say to you there is nothing liberal about the New Deal. How can there be anything liberal about an administration which buys the people's support with their own money? Is it liberal to fasten upon each American family the burden of a gigantic public debt, the carrying of which will alone cost at least $20 a month for every month they may live? Can there be anything liberal about an administration or a government which takes one-fourth of the people's earnings for its own use? Can there be anything liberal in wanton waste and extravagance? The spendthrift may be happy while his funds last, but the day of disillusionment always comes, and his sufferings and his miseries are the greater for the unearned ease and luxuries he has enjoyed. For 12 long years the only answer the New Dealers have ever had for any problem has been the spending of more and more money.

Tonight Harry Hopkins, the superspender of them all, is abroad helping to set up an international W. P. A.—at our expense, of course—for the post-war years. Here at home Henry Wallace nervously studies the stars, feverishly fingers his numerology books, and constantly consults his favorite fortune teller, in the hope he may learn when—if ever—he will become Secretary of Commerce, and whether the fates will favor his gaining power over $40,000,000,000, and more, of R. F. C. funds and loans. Harry had such a glamorous time with his leaf-raking and his "Chick Sales" building programs here in the United States that he just knows he will be a success as an international W. P. A.-er, while Henry, having failed in his own publishing business and having almost wrecked American agriculture by his theory of scarcity, which called for the killing of millions of innocent little pigs and the plowing under of thousands of acres of cotton, is firmly convinced he can make a great success of pushing American business and industry around, and still have time left to make his regular morning milk deliveries to the Hottentots and the Fiji islanders.

Yes. It is a great liberal movement—this New Deal—with great plans for the future. A year ago they were trying to disinfranchise our fighting forces through the obnoxious bob-tailed ballot bill, which would have prevented our soldiers and sailors from voting for any State or local official; but only for the President, Senator, and Representative. Because of the courageous fight made by the Republican Members of Congress, including your own two stalwart Tennesseeans in the House, the right to vote the same ballot as given civilians at home was saved for most of our fighting men and women. In 10 States use of the short Federal ballot was made optional. At the time this legislation was before the Congress those of us who fought for a legal and constitutional ballot were accused of endeavoring to disinfranchise the soldiers. Yet last week an official report, filed with the Congress by the Secretary of War, showed that in the 10 States where our soldiers were given the option of using either ballot, only 2 percent chose the bob-tailed Federal ballot, while all the rest used the regular State and local ballot.

And now—1 year later—the New Deal is attempting to force through the Congress a bill to conscript all American workmen between the ages of 18 and 45; compelling them to work when and where, and at the kind of a job, some bureaucrat may decide. This bill, which is erroneously known as the May limited national service bill, would not require a man to either fight or work for his country, but only to work when and where he may be directed for the benefit and profit of some private employer selected for him. Discharged veterans are covered by the act, and even those who have been honorably released from military service because of wounds suffered in battle could be ordered into the mines or the mills at the discretion of some governmental agent. Men who refuse to accept the jobs assigned to them, or voluntarily quit their work, could be heavily fined or sent to prison for many years. The section prohibiting voluntary quitting of work could easily be interpreted as applying to any employee going out on strike. In fact, support for the bill was sought in some quarters by administration spokesmen who whispered the real purpose of the bill was to prevent strikes.

Leaders of business and industry, as well as leaders of labor, insist the passage of this measure would not increase production of war goods, but would actually reduce it. While manpower shortages may exist in a few isolated spots, there is no general manpower shortage in America. Instead, there is and has been a scandalous waste of available manpower. Congressional investigations and testimony of men of integrity have disclosed so much hoarding of labor and so many inexcusable failures to properly use the labor available that only the most loyal and ardent new dealers in the Congress are any longer attempting to justify the labor-draft bill on the basis an actual manpower shortage exists. Even Paul McNutt, Chairman of the War Manpower Commission, admitted before the Senate Military Affairs Committee that the records of his agency disclose the manpower situation in essential war industries, as of January 1 last, was better than at any time since the war began. And Secretary of War Stimson could justify his request for enactment of the legislation on only two grounds. First, that it would help morale among our soldiers on the fighting fronts, and, second, that it could be used to freeze and hold workmen in war jobs after the war is over. He admitted it would not increase the production of war goods. By inference, at least,

he also admits his desire to mislead our fighting forces overseas and to make them think we are doing something to help them, when actually we will be hurting them by interfering with war production. And just why it is so necessary to retain workmen against their will in war industries after victory is won is hard for most Americans to understand.

There are only two real reasons for the hue and cry over the supposed manpower shortage and for the introduction of the May labor-draft bill.

The first is to cover up the mistakes made by the Commander in Chief and his aides in estimating the length of the war in Europe and our war needs. All of you remember that about a year ago numerous war plants were shut down, or had their production cut, by orders from Washington; and how further reductions in war production were ordered later in the spring and summer. You will also remember how, in the last week of October, speaking from Boston, I believe, the President as Commander in Chief—oh, yes, he was Commander in Chief then, although little use of the title was made during the dark days of the Belgium break-through—how he told the American people in a broadcast to the Nation that every soldier had a gun, with a plentiful supply of bullets to fit it, right at hand. Perhaps you will also recall how on November 30, in his written report to the Military Affairs Committees of the House and Senate, Lieutenant General Somervell, Chief of the Services of Supply, boasted that every possible need of our armed forces had been met, and that all future needs had been fully anticipated.

Yes! Some one made a mistake, and that mistake was made up toward the top, although it must never be admitted the Commander in Chief or his aides ever make mistakes. So American industry and American labor, having met every demand placed upon them by force of war, must be blamed for something for which they are in no way responsible. That is their reward. That is their pay-off for out-producing all the other nations of the world—for doing the grandest production job in the history of mankind.

But the second reason for attempting to enact this legislation is a more sinister and far-reaching one. It is the desire for power and more power that permeates this administration. Put 12,000,000 men in the armed forces, and 18,000,000 in the straight jacket of the May bill in direct violation of the Constitution of the United States, and the affairs and lives of every human in America can be fully controlled by a few individuals. The final transformation will have taken place—we will have become a totalitarian Nation.

What must the Republican Party do about it all? Ladies and gentlemen, our duty and our responsibility are plain. The one real job we have before us is to protect, here at home, the liberty and the freedom for which our men are fighting and dying overseas. There is no division among our people in seeking to bring this war to an early and victorious conclusion. Boys from every walk of life, from every corner of America—boys from Democratic families and boys from Republican families—are fighting and dying side by side. Here at home their families, regardless of race, creed, color, or political faith, join in supporting the war effort. We all want a just and lasting peace. The United States has always met its every obligation to the other nations of the world. It will continue to do so in the future. Regardless of politics, we will support every honest and forthright effort toward building an enduring peace for those who follow us. But we want peace at home as well as abroad.

We, as a party, must direct our efforts toward bringing to an end the misunderstandings, the bickering, and the quarreling, which spring from the New Deal's dangerous practice of pitting class against class and group against group for the purpose of political advantage. We must fight to maintain free enterprise against the attacks of those who are attempting to destroy it; for it is only under the free-enterprise system that we can long maintain a free economy and free labor. We must see to it that America is truly once more the land of opportunity; that those who fought and won our Nation's battles are given a real freedom of choice, and the full right to build their own lives, and to carve out their own careers, as they, and they alone, may wish.

We must make certain those young men who will return from the wars, and their children, too, will receive a full and fair reward for their intelligence and their toil. We must guarantee to them the enjoyment of fair and reasonable benefits from their successful achievements. We must strike from them the shackles of bureaucratic regimentation. Instead of the Government regimenting and regulating our citizens, our citizenship must regiment and regulate the Government. We must see to it those in high places understand fully they are the servants of the people—not their masters. We must teach our people to depend upon themselves, rather than upon their Government.

Respecting the rights of all nations, we must also learn to respect and to protect the rights of America as a Nation. We must keep ourselves strong. Strong nations, like strong men, need not take advantage of the weak. Strong nations, like strong men, protect their own hearthstones, yet meet their obligations to their neighbors.

Above all else we must restore honesty and decency in Government. The people must learn once again to depend upon the word and pledge of high officials. The high and the mighty must once more obey the law and the proprieties, as well as the lowly. There must not be any favored class or royal family in America. We must return to the Constitution, under which the rights of the few are secure against the greed of the many. We must return the lawmaking powers to the Congress, and reestablish an impartial Judiciary, thus restoring the balance between the three branches of our Government—the legislative, the executive, and the judicial—as given us by our forefathers in that great Magna Carta of American liberty—the Constitution.

These things we must do, if we are long to maintain here on this continent "a Government of the people, by the people, and for the people."

Warsaw, a Symbol

EXTENSION OF REMARKS

OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. POWERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Most Reverend William A. Griffin, bishop of Trenton, at the Pontifical Mass honoring the heroes of Warsaw, Sunday, January 28, 1945, St. Hedwig's Church, Trenton, N. J.:

We are drawn together from all sections of the diocese at this pontifical mass this morning, not in any spirit of narrow partisanship or of exaggerated nationalism, but in a genuine spirit of universal admiration, love, and gratitude for the heroic men of Warsaw, and therefore of Poland, who suffered and died to keep aflame the torch of human liberty in the darkness of a war that still envelopes Europe and the world. These are the men of individually unpraised deeds, the men who are never cited by name to receive the Purple Heart or the Distinguished Service Cross, and who "leave no memorial but a world made a little better by their lives." Yet, like the heroes of our own Bunker Hill and Gettysburg, and like the martyrs of the Catacombs, the heroes of Warsaw shall remain immortal; for the ineffaceable prerogative of human liberty was engrained by their Creator in the very substance of their souls; and neither bayonet nor machine gun nor the refined torture of inhuman tyrants can subdue, much less destroy, the soul.

Warsaw is a symbol, as Bunker Hill is a symbol, as Gettysburg is a symbol, as the ancient Catacombs outside Rome are a symbol—a symbol of right against might, a symbol of justice against injustice, a symbol of the immortal spirit of liberty against the cruel absolutism of the despot. And, like Bunker Hill and Gettysburg and the ancient Catacombs, Warsaw, now in ruins, will live on centuries after its oppressors from the east and from the west either turn from the wickedness of their ways or are buried in oblivion. Because the spirit of liberty and of justice, breathed by God in the souls of men, cannot be destroyed, because in fact that spirit thrives and spreads even under the strongest opposition, the Catacombs inevitably changed pagan Rome into Christian Rome and her temples of false gods into houses of worship of the one true God.

For the same reason, 50 years after Bunker Hill, in all truth it could be said by the great American spokesman immortalizing that glorious event: "If the true spark of civil and religious liberty be kindled, it will burn. Human agency cannot extinguish it. Like the earth's central fire it may be smothered for a time. The ocean may overwhelm it; mountains may press it down. But its inherent and unconquerable force will heave both the ocean and the land. And at some time or other, in some place or other, the volcano will break out and flame up to Heaven."

Because the spirit of liberty is God-given, 5 months after Gettysburg the President of the United States could pay rightful honor to Gettysburg heroes in these immortal words: "The brave men, living and dead, who struggled here, have consecrated it (this ground) far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us the living rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us * * * that from these honored dead we take increased devotion to that cause to which they gave the last full measure of devotion * * * that we here highly resolve that these dead shall not have died in vain, that this Nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth."

Some day in the not far distant future, when Warsaw, now consecrated anew by the blood of her heroes, fondly gathers her surviving children to her bosom, she will select a spokesman whose voice will be heard around the world, as from the Catacombs and Bunker Hill and Gettysburg, triumphantly repeating and reemphasizing the inevitable supremacy of right over might, of justice over injustice; loudly proclaiming the unchangeable truth that the flame of civil and religious liberty, kindled by God Himself in the hearts of men, cannot be extinguished by any human agency no matter how powerful; and calling for rededication and new resolution that these heroes "shall not have died in vain, that this nation (Poland) under

God shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth."

So today we sing no requiem for Poland; for Poland is not dead. Rather do we chant joyful hymns of praise and thanksgiving to the God of nations; for Poland lives; and the soul of Poland is not, and cannot be, conquered.

H. R. 2121

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. MONRONEY. Mr. Speaker, I would like to call the attention of the Congress to the editorial in the New York Times of February 14, on H. R. 2121. I introduced this bill this week, hoping that by its passage many of the monopolistic practices of labor unions which are antisocial and actually antilabor can be curbed.

The bill makes every possible effort to protect the legitimate objectives of labor and labor unions, but strikes at nonlabor activities which are in restraint of trade and are actually a hindrance to a full employment program and to full production.

It seeks to restrain abuses which have grown up in many places throughout the Nation, abuses which injure the public, workers and industry, without benefiting the laboring man in any way. These abuses most generally are used to build up monopolistic power of the heads of some unions to control business activity, fix prices or encourage monopolistic practices to the general detriment and interference with normal trade and full employment.

The New York Times editorial follows:

TO CURB MAKE-WORK

Representative MONRONEY, of Oklahoma, has had the courage and clearsightedness to introduce a bill that seeks not merely to curb Mr. Petrillo personally but to curb some of the antisocial practices in which the latter has been one of the chief offenders. Mr. Monroney's bill would first of all make it illegal for any union to try to force an employer to hire its own members for a task when another union had already been designated by the National Labor Relations Board as the exclusive bargaining agent for that task. This would curb the present effort of Mr. Petrillo to take over the "platter turners" on the radio. Its general effect would be to uphold the authority of the N. L. R. B.

More important than this, Mr. Monroney's bill would make it illegal for any union to force an employer to hire or to pay wages to any person when such person is in fact in excess of the number of persons reasonably required to perform the work in which the employer is engaged. This would not only end the forced hiring of stand-by musicians but a great many make-work practices outside of the musical field. The bill would also prohibit unreasonable restrictions on the use of material, machines or equipment. This provision is amply safeguarded, from the standpoint of labor, to permit restrictions related to health, safety, or working conditions. It even permits the retardation of technological advance to provide for an orderly change in the methods of production. Finally, the bill outlaws combinations of unions and employers to monopolize any part of trade.

Here at last is a measure that would strike at the evil of make-work practices, practices which are still tolerated in spite of a national labor shortage, and at a time when every misuse or waste of labor postpones the day of victory in war.

Lincoln Day Address of Hon. Harold Knutson, of Minnesota

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an address delivered by Congressman HAROLD KNUTSON, of Minnesota, in the Ford Theater, at the Lincoln anniversary program under the auspices of the National Park Service and the Lincoln Group of the District of Columbia, as well as before the Washington Executives' Association at their luncheon meeting on Monday, February 12, 1945, at the Willard Hotel, Washington, D. C.:

It is to me a very great honor to be privileged to speak to you this afternoon on the life and accomplishments of Abraham Lincoln, and especially so in this historic place. I can think of no more appropriate place in which we can gather to pay homage to the memory of that great man. It was here that the foul blow was struck that laid low one of the greatest souls of all time.

Of Lincoln, the rail splitter, who later clerked in a store at Salem and sold grog over the counter, the world has heard much but it is the towering Lincoln who stepped into the breach in the tragic days of '61, and saved the Union, that I should like to address myself this afternoon. That is the Lincoln that we should know better.

As the procession of mankind passes in review, we observe at long intervals, and only in time of some great crisis, a figure that towers high above his fellow man, who steps to the front and by common consent assumes leadership. In times gone by the human family has been served by a number of such leaders, and in the comparatively small number George Washington and Abraham Lincoln—one the Father of his Country, the other its savior—stand out as shining and illustrious lights. Each contributed his all to the country we love, and their places in history are so firmly established, so well known, and so generally conceded, that there is little that we can say or do that will add to the luster that is so justly theirs.

As the unbelievers said of Christ, "Can there any good thing come out of Nazareth?" so there were those who undoubtedly asked of themselves, and of others, "Can it be possible that a man born in a log cabin in Kentucky, rough and uncouth, with few if any of those social attainments which we are accustomed to associate with greatness, can it be that such a man is fitted by tradition and training to occupy the greatest elective office in all the world—the Presidency of the United States?" It was but natural that they should thus inquire of Christ, and of Lincoln, for although one was born in a lowly manger in Bethlehem, the other in a log cabin, open on one side and without windows, doors, or floor, both stand out today as the two greatest individuals of all time, and their names are written in letters of eternal light that the mutations of time can neither tarnish nor dim.

We have assembled this afternoon to commemorate the one hundred and thirty-sixth anniversary of Abraham Lincoln's birth. We are here, not as partisans, but as pilgrims to worship at the shrine of the man whom God gave to the American people as their deliverer in their darkest hour of despair. In this gathering we will renew our devotion to that great leader, and our loyalty to the precious heritage that he has left us.

The rugged pioneer stock from which Lincoln sprang was nurtured amidst privation and hardship, such as are today unknown. They braved the lurking dangers of the forest wilderness with all the assurance and confidence that has ever characterized your real American. While on their irresistible march, they constantly pushed back the frontiers and hostile forces, built roads, established homes, schools, and churches, carved out farms and cities in an untamed empire that was destined to become the bread-and-butter basket of the world.

The only music that he knew as a boy and young man was the sweet song of birds, the low murmur of brooks, and the gentle rustle of the trees. Truly, if any man ever grew up in close communion with his Maker, it was Abraham Lincoln, the man of sorrows, whose sympathetic heart embraced all humanity.

His early reading was confined to six books: The Bible, Pilgrim's Progress, A History of the United States, Aesop's Fables, Weem's Life of Washington, and Robinson Crusoe, which he read by the flickering light of a smoldering fire. Holland has truly said: "The poverty of Lincoln's library was the wealth of his mind." With such a foundation for learning, one could hardly expect the development of a mind that has given to posterity the oration at Gettysburg and the Second Inaugural Address, two of the most polished gems in all literature.

To secure a true appraisal of Abraham Lincoln, we must check through a maze of evidence and material, some of it false, some mythical. In doing so, we need have no apprehension that the stature of the man will become diminished or obscured; indeed, stripped of all nonessentials, falsehoods, and myths, Lincoln attains new stature, enshrouded by a halo of light that burns with ever-increasing brilliance with the passing of time.

Contemporaries, who should have known better, underrated his characteristics of love for humanity and inflexibility of purpose. As late as 1862, Wendell Phillips is quoted as having said that the lawyers who knew Lincoln best appraised him as "the one man in Illinois least capable of saying 'No'."

The real Lincoln was as gentle as the spring breezes that warm the cold earth and bring forth the sleeping grass and flowering plants that charm and delight us, as witness his letter to Mrs. Bixby:

"DEAR MADAM: I have been shown in the files of the War Department a statement of the Adjutant General of Massachusetts that you are the mother of five sons who have died gloriously on the field of battle. I feel how weak and fruitless must be any words of mine which should attempt to beguile you from the grief of a loss so overwhelming. But I cannot refrain from tendering to you the consolation that may be found in the thanks of the Republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement and leave you only the cherished memory of the loved and lost, and the solemn pride that must be

yours to have laid so costly a sacrifice upon the altar of freedom.

"Yours very sincerely and respectfully,

"ABRAHAM LINCOLN."

When occasion required, Lincoln could be as firm as granite, as witness the grim and dogged fight that he waged for 4 long years to preserve the Union. Most other men would have succumbed to the early defeats, to the jealousies, to the intrigues, and to the disloyalties which surrounded him. Fortunately for us, and for all mankind, Lincoln was made of such unyielding stuff.

Where, I ask you, can we find another example of such a perfect blending of gentleness, humility, forgiveness, sternness, ruggedness, honesty, and singleness of purpose? Truly, Edwin M. Stanton, his great Secretary of War, spoke more prophetically than he perhaps realized when he stood at the deathbed in that modest little brick home across the street and said, "He now belongs to the ages."

Yes; Abraham Lincoln belongs to the ages, and wherever men are struggling to become free his name and his great soul are the beacon lights that give them hope and inspiration. When the cowardly assassin's bullet struck him down in this room the shot was heard around the world and evoked a wave of sorrow and indignation, the repercussions of which we yet feel.

Under the divinely inspired leadership of Abraham Lincoln was fought a long, bloody, and costly war which was to cement the several States into a more perfect and endurable Union, where all men, regardless of race, creed, or color, were to be free and equal before the law. Under his administration and guidance America became for the first time an indissoluble union. We then crossed the threshold of an era of national expansion and development that has become the marvel, if not the envy, of all the world.

Whenever I think of what the founding fathers of our beloved country endured in order to bring forth this new Republic in the Western Hemisphere, those who suffered the chilling blasts and the pangs of hunger at Valley Forge; the fever and heat of the tropics; those who fought, bled, and died at Bloody Angle that our country might be preserved; those who lowered the flag of tyranny at Manila Bay; who, on the flowering fields of Flanders snatched victory from defeat; of those heroes who with their blood consecrated the soil of Guadalcanal, Tarawa, Saipan, and Normandy—when we think of what all those heroes fought, bled, and died to achieve and perpetuate, we cannot but realize that a sacred trust, handed down from the distant past, rests upon us.

In my humble opinion, Lincoln's election to the Presidency was providential. In the light of the stirring events that followed his election to the position of Chief Executive, and the masterful genius displayed by him in meeting every great emergency, including intrigue and disloyalty on all sides, it becomes more and more apparent that Abraham Lincoln, and he alone, could have successfully prosecuted the great war for the preservation of the Union.

The war opened inauspiciously. The first battle resulted in the rout of the Union forces, and for more than 2 years the secessionists had the better of it. It was only when the grim and silent Grant carried the day at Shiloh and Pittsburgh Landing that the first rays of hope broke through the dark and war-clouded sky. Those were days that tried his soul, and Lincoln's great heart was often torn by the suffering and misery that grew out of that titanic struggle. Had he not possessed the love, confidence, and affection of the people of the North, and more especially of those who left their firesides to fight for the preservation of the Union, the cause might not have triumphed. To one and to all he was Father Abraham, the man whose heart encompassed all humanity, and it was to him that the downtrodden and the oppressed looked for help.

In passing upon the case of a lad condemned to death for falling asleep at his post, Lincoln said: "I could not think of going into eternity with the blood of that poor young man on my skirts. It is not to be wondered at that a boy raised on a farm, probably in the habit of going to bed at dark, should, when required to watch, fall asleep; I cannot consent to shoot him for any such act."

The impressive sequel to this act of mercy was brought to light when the dead body of this soldier boy was found on the battlefield of Fredericksburg and next to his heart a photograph of the President, across which he had written, "God bless Abraham Lincoln."

His untimely death, just as he had reached the pinnacle of usefulness and fame, was the greatest tragedy since the crucifixion, and, by a peculiar coincidence, the end came on Good Friday, the anniversary of the death of our Saviour.

It was only when the great Lincoln lay cold in death that his real greatness and nobility of character were appreciated and understood. He left behind him a monument as enduring as the ages, a united country, firmly established on the eternal principles of justice, welded together in the strong bonds of fraternity, and sealed by the sacred blood of the countless thousands who died that liberty might live.

Today, fourscore years after his death, Abraham Lincoln is yet a living, breathing inspiration to all the people of the world, and so he will continue to be in all the centuries yet to come.

"We tell thy doom without a sigh
For thou art freedom's now, and fame's,
One of the few, the immortal names
That were not born to die."

In these days of stress and strife it would be well if we were to take from the life of Lincoln some of the precepts with which it is so generously interspersed. Abraham Lincoln is frequently quoted by the demagog as a proponent of the dangerous panaceas that are being proposed as cures for the ills of our body politic. He is frequently quoted in support of doctrines that seek to array class against class, and which ultimately would break down the very cornerstone upon which the Republic is based. Fellow Americans, we have never had a President who gave more meticulous and scrupulous consideration to the rights of all men. We have never had a Chief Magistrate who observed the Federal Constitution with greater reverence and respect. Indeed, his great love for our country and its institutions was his outstanding characteristic. Abraham Lincoln believed in constitutional government, of the people, by the people, and for the people. He stood for sound money, for the protection of the American wage earner and producer, for adequate preparedness, and for an economic program that would bring the greatest good to the greatest number. He believed in the common man, and it is plainly discernible that one of his motivating reasons for opposing the institution of slavery was that he did not subscribe to the doctrine that free labor should be compelled to compete with slave or forced labor. At any time during the war he could very easily have set up a dictatorship under the plea of an emergency, but I am sure that the idea never once entered his honest and guileless mind, because it was foreign to his philosophy of life.

From earliest boyhood to the tragic end he believed in and fought for those principles of government that are essentially American; and so, my friends, let us not be deceived by what theorists and sophists would have us believe regarding the things that Abraham Lincoln stood for in the way of government.

An impartial study of his inspiring life furnishes convincing proof that he was sound to the core, ever devoted to the best American ideals and traditions, holding steadfast to the Constitution, veering neither to the right nor to the left, always adhering to a course of action dictated by a conscience responsive to a deep and abiding sense of righteousness.

Let us then, on this anniversary of the birth of the savior of the Republic, dedicate ourselves anew to the immortal principles for which he lived and died. Let us drink deep and often at those wellsprings of human thought and action that inspired the founders of the Republic, which stimulated and nurtured Lincoln's undying faith in his fellow man, of those heroic souls who stood with him shoulder to shoulder during the darkest hours of the Republic and made this glorious country of ours free, one and indivisible.

Their memory will ever remain one of the brightest chapters in our history. My countrymen, let us cleave to the ideals for which they fought, suffered, and died, ever keeping before us those principles of sound government which have made our country the brighest star in the grand galaxy of nations.

Not for G. O. P. Alone

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chattanooga News-Free Press for February 13, 1945:

NOT FOR G. O. P. ALONE

Representative CLARENCE J. BROWN, Ohio Republican, in his Lincoln Day address at the Read House last night, delivered a blistering indictment of the New Deal—of its incessant war on free enterprise and representative government; of its fantastic waste of the Nation's wealth and resources; of its dreamers and star-gazers, like Henry Wallace; of its greed for power and constant progress toward a socialized, totalitarian state.

But more important was the sound, patriotic program which he outlined as the path of duty for his minority party.

"The one real job we have before us is to protect, here at home, the liberty and the freedom for which our men are fighting and dying overseas," he said. "There is no division among our people in seeking to bring this war to an early and victorious conclusion. * * * Regardless of politics we will support every honest and forthright effort toward building an enduring peace for those who follow us. But we want peace at home as well as abroad.

"We must fight to maintain free enterprise against the attacks of those who are attempting to destroy it. We must see to it that America is truly once more the land of opportunity; that those who fought and won our Nation's battles are given a real freedom of choice, and the full right to build their own lives, and to carve out their own careers, as they, and they alone, may wish.

"Instead of the Government regimenting and regulating our citizens, our citizenship must regiment and regulate the Government. We must see to it those in high places understand fully they are the servants of the people—not their masters. We must teach our people to depend upon themselves, rather than upon their Government.

"Respecting the rights of all nations, we must also learn to respect and to protect the rights of America as a nation. * * *

"There must not be any favored class or royal family in America. We must return to the Constitution, under which the rights of the few are secured against the greed of the many. We must return the law-making powers to Congress and reestablish an impartial judiciary, thus restoring the balance between the three branches of our Government—the legislative, the executive, and the judicial—as given us by our forefathers in that great Magna Carta of American liberty—the Constitution.

"These things we must do, if we are long to maintain here on this continent 'a government of the people, by the people, and for the people.'"

This is too vital a program to be that of the Republican Party alone. If the freedom won for us by our forebears is to survive to bless our descendants, this must be the program of enlightened American patriotism, regardless of political affiliation or preference.

Tieing Up the United States Merchant Marine

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. WELCH. Mr. Speaker, the Committee on Merchant Marine and Fisheries will soon start hearings on a bill authorizing the sale of ships now in the American merchant marine to American and foreign purchasers. Ships purchased by aliens will then enter into unfair competition with American flag ships by reason of the added advantage they will have of the right to operate in conjunction with overseas air transportation of their respective nations. At the same time the American merchant marine continues to be hamstrung by the action of the Civil Aeronautics Authority in interpreting the Civil Aeronautics Act of 1938 to prohibit the operation of transoceanic air lines by American shipping companies.

Britain, Sweden, Denmark, Norway, and other maritime nations have no civil aeronautics authority to prevent operation of their ships in foreign trade in conjunction with air service. I have repeatedly called the attention of Congress to the action already taken by some of these forward-looking foreign shipping companies to provide for overseas air transport.

The latest to join this group has been neutral Sweden which has already constructed over a million tons of modern merchant ships for its post-war trade. At the same time it is taking steps to coordinate overseas air transport with the operation of these new ships. A forceful editorial dealing with this condition, which should be read by every friend of the American merchant marine, recently appeared in the San Francisco Call Bulletin.

Mr. Speaker, under leave to extend my remarks, I call attention to that convincing editorial, as follows:

TIEING UP UNITED STATES MARINE—FOREIGN SHIPPING ALREADY TAKING ADVANTAGE OF AMERICAN LACK OF AUXILIARY AIR SERVICE

Seemingly convinced that the American Government will strangle its own peacetime merchant marine by prohibiting steamship companies from providing international auxiliary service by air, foreign operators continue to rush their own preparations for cornering freight and passenger transportation to world ports.

Latest to announce its plans is a Swedish steamship syndicate which has acquired control of an aviation company, as indicated in the following from the weekly publication, International Aviation:

"A syndicate headed by the Rederi A. B. Svenska Lloyd, of Gothenburg, has acquired a majority of the shares of Skandinaviska Aero A. B., which has increased its capital from 150,000 krona to 500,000 krona." The article adds that the air line "plans to extend its taxi and tourist business after the war."

This items indicates that Swedish steamship companies, like those of other foreign nations, already have authority to provide auxiliary service by air. American companies which hope to have such authority, and which must have it if they are to be able to compete in international trade channels, continue to cool their heels, waiting to learn what the Congress intends to do about this matter.

Meanwhile, the American merchant marine can make absolutely no plans for its peacetime operations because it doesn't know what it will be permitted to do. The financial and other arrangements that must be made for the extensive activities these companies want to promote cannot, of course, be made in a matter of weeks.

These plans should be well along in the formative stage now, but the Civil Aeronautics Board has indicated there is no purpose in making any such arrangements when existing law, as interpreted by that Board, prohibits our steamship companies from providing auxiliary service by air.

The American people, as well as the American steamship companies, are entitled to know now, and they should know now, what sort of a peacetime merchant marine this Nation is going to have. Are we going to maintain the commanding position essential for an adequate national defense and for transportation of our manufactured and grown products to ports throughout the world, or are we going to scrap or otherwise dispose of most of our merchant fleet?

We won't be able to maintain a strong merchant marine unless the private operating companies have the authority to provide auxiliary air service. It is the duty of the Congress to establish that authority in law—now.

Lincoln's Question: Can This Nation Long Endure?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an address delivered by me at the annual banquet of the Lincoln Club of Denver, Colo., on February 12, 1945:

Today, all over the land, the American people are standing at salute, while Abraham Lincoln and all his deeds and scenes of sacrifice go passing in review. Eighty years have gone since he left this world, but he still lives and stands alone; no ancestors and no successors. Had Jesus of Nazareth walked this earth in the flesh, when Lincoln lived, those two men would have been the best of friends, for they would have had much in common.

As long as men live, they need the Lowly Carpenter; as long as men desire liberty, they will find Abraham Lincoln an inspiration. Among the heroes, he is a hero; and among the martyrs, he is a martyr. Among our statesmen, he was the statesman; and among our Presidents, he was the President. He was the first Republican President, although not the first Republican candidate for the Presidency, and he imbedded the party to which we belong, and its principles, so deep in the hearts and minds of the people that only three times in 80 years has any other party challenged its position.

It is in memory of such a man that we honor ourselves by gathering here tonight to commemorate his natal day.

As we wage a Second World War, it is well for us to contemplate Lincoln. Here at home we face problems of a magnitude which he knew, and from him draw strength to solve those problems as he solved his. It should profit our present leaders, and it should curb any reckless ambitions they may entertain, to remember that Lincoln's greatness came in retrospect and, therefore, is enduring. He was not thought of as a man of stature in his day, and neither was he a man who though he could, or who sought, to set the world agog. He neither sought nor expected the acclaim of the multitudes while he lived. It never occurred to him that he was the only one capable of holding the high office which was his. Instead, his was a deep sense of obligation to a people who so honored him.

It was his genuineness that has stood the test of time. His strength lay in the knowledge of his limitations, humility before his God. He searched not after false prophets for wisdom; he drew it from the people whom he served.

In this tragic day, in this national crisis now facing us, we need men of his homely virtues, his simple philosophy, and his innate honesty.

He has been frequently quoted by demagogs in recent years as a proponent of dangerous panaceas which have been proposed as cures for the ills of our body politic. He has been quoted in support of doctrines that seek to array class against class and which would ultimately destroy the very foundation on which our Government stands.

My fellow citizens of Colorado, we have never had a President who gave more meticulous care and consideration to the rights of all men. We have never had a President who upheld the Federal Constitution with greater reverence and respect. His unyielding devotion to our country and its institutions was his outstanding characteristic. His immortal address at Gettysburg was a prayer to the Almighty that free constitutional government would not perish from the earth. He stood for sound money, protection for the wage earner and the producer, and an economic program that would bring the greatest good to the greatest number. He believed in human rights and property rights, because they were guaranteed by law, but he also knew that one was dependent upon the other. Certainly no man understood better the problems of the common people than he did, because he was one of them.

During the Civil War Lincoln might have set up a dictatorship almost at anytime, under the plea of national emergency. History presents no instance when such an idea ever entered his honest and guileless mind. It was inconsistent with his philosophy of life. He was ever steadfast to a course of

action which sprang solely from nobleness of purpose.

Let none of us be deceived or led astray by star-gazing theorists regarding the principles Lincoln stood for in government. He not only believed in economy in government; he practiced it. He was even unwilling that the Government should pay for the horse his own son rode as a soldier in the Civil War. His check for $125, in payment of the horse, is still in existence.

His record stands out when compared with present-day ideas of national economy and stability. This Government can be destroyed from within, unless the people themselves repudiate the philosophy that it makes no difference how much we owe, because we owe it to ourselves, and that a nation can make itself poor by paying its public debt.

We have been moving away from the time-tested principles on which the Government was founded, and which have lifted the weights from the shoulders of men and given promise and hope to the downtrodden and oppressed of the earth. We have been moving at accelerated speed toward totalitarian government.

When Benjamin Franklin stepped out of old Independence Hall, in Philadelphia, on a day in September 1787, the day on which he signed the new Constitution which he helped to formulate, a friend asked him, "What kind of government have you given us?" He promptly replied, "A republic, if we can keep it."

Three-quarters of a century later, we find Lincoln at Gettysburg, asking the same question, "Can a government conceived in liberty long endure?" Now, 80 years later, we are asking the same question.

When Lincoln spoke at Gettysburg, the Civil War was at its height. He must have had in mind the danger of our destruction from within, for we were not being attacked from without.

He foresaw then what we fear now, when he pointed out, with the wisdom of a prophet:

"At what point is the danger to be expected? If it ever reaches us, it must spring up among us. If destruction be our lot, we must ourselves be its author and finisher. As a Nation of free men, we must live through all time or die by suicide."

Tonight our heroic and courageous fighting men and women are on every battle front in the world. Now and then I think of that editorial which appeared in Life magazine on New Years Day 1944, in which the author caught some of the bitter spirit of today when he wrote, "This is the last year on earth for many young men." The very thought is disturbing as one watches the young of the Nation march off to foreign battlefields to give their all at the battle stations of freedom.

A generation ago, a poet wrote of those who sleep in Flanders field, they "lived, felt dawn, saw sunset glow, loved and were loved, and now they lie in Flanders field."

The grimness of war reaches into every household and touches every human heart in the land.

There is the anxious vigil of God-fearing fathers and mothers who, night after night, murmur their devotions and utter their resurgent hopes for a son who is far afield. But this is not all. Only recently, the Administrator of Veterans' Affairs appeared before Congress to advise them that already 873,000 young Americans are being carried on the service-connected wounded rolls, and it is expected it will reach 993,000 by June 30, 1946. Here we see the progressive stamp of war upon the minds and bodies of young men.

Millions of war workers who have gone forth from their homes to find work in plants which produce the sinews of war, are disturbed over the future and what change may unfold by way of jobs and contented living. Not a class or segment of our entire population but what has felt the impact of conflict and wonders what the future may have in store.

Today, it is common knowledge that already we have expended $45,000,000,000 for the prosecution of conflict, and the national debt at the end of the next fiscal year will be just short of $300,000,000,000. People everywhere are wondering whether we can preserve the fiscal integrity of the Nation.

These fears today are assailing the hearts and minds of the common man—the forgotten man about whom we heard so much in other days.

DEEPER ANXIETY

The discerning person today can observe a deeper anxiety in the land. It stems in part from our growing familiarity with the advance of total government in other parts of the world. On every hand one hears the question whether or not, in a world where the philosophy of total government has moved so far, we can still sustain the tradition, the incentive, and the basic freedoms which are the wellspring of American greatness.

THE INSTINCT FOR COMFORT

We are like so many children; when the way is hard and tortuous, and bewilderment is everywhere, we seek comfort and assurance. We are like plants in a dark cellar in the wintertime, which send their dainty tendrils in the direction of any stray sunbeam which may come through a soiled basement window. It is a quality which is inherent in all mankind.

It was Wordsworth, the lyrical English poet, who as he surveyed the perplexities of his own generation was impelled to cry out, "Milton, thou shouldst be living at this hour."

In the same fashion, we Americans who worship not at the shrine of Milton, great as he was, but at the shrine of the humble Lincoln, are impelled in this anniversary period to cry out in the same throbbing tone of Wordsworth, "Lincoln, thou shouldst be living at this hour."

Is it not interesting that in 1940 the custodians of the Lincoln Memorial, who keep accurate count, reported that in a single year 1,629,000 persons visited that sacred shrine? They came with a kind of humility to the shrine of one whom they knew could understand if he were still alive.

Could we do better on this one hundred and thirty-sixth anniversary of his birth than to stand within the aura of his influence and seek direction and guidance which will carry us through the anxious days which lie ahead?

Can it be doubted that he still lives, that his influence can reach into every known heart? In the words of the Apostle Paul, "being dead, yet speaketh", might be said of Lincoln, and I can think of no greater fount of assurance in this anxious hour than to give ear to the whisperings from his shrine, wherewith to find comfort and refuge.

THE CHALLENGE

Let us go back, then, to Gettysburg for our test. Let us reexamine our own souls and consciences and reecho that imperishable challenge "whether a nation conceived in liberty can long endure". Can it? No longer can it be lightly dismissed, because already the challenge has struck fear into the hearts of men everywhere.

This challenge confronts not only us, but the people of other nations who have hewed out, by blood and tears, the foundation and the processes of a democratic structure, only to find them tumbling in an age when values are being so rapidly destroyed.

What provided so much interest in the Dies committee, if it were not the concern of people in all walks of life who wonder whether our form of government may be destroyed from within rather than from without?

That very thought persists today, as Congress and the country consider the subversive forces that seek to modify the form and substance of the government under which we have grown so great.

Why should there be such widespread interest, for instance, in the salvage of Poland, if it is not the same old question of nourishing the philosophy of freedom, not only in our own land but other lands as well?

Why are we at war today and why has the casualty list expanded to include 800,000 of our finest youth, if it is not to repeal the philosophy of total government before its deadly virus too vigorously besets us upon our own shores?

Why is our country so deeply interested in the affairs of the Argentine, 9,000 miles from the seat of our own Government, if it is not the fact that the virus of totalitarianism has already struck deep root and may one day overwhelm us, since we are a part of the same hemisphere?

We do not consciously phrase our anxiety, and yet it is at the very root of the turbulence of mind which we experience today. We are afraid of the menacing forces which imperil the very life of this Republic.

Let us echo and reecho, then, the challenge from Gettysburg, whether a nation so conceived and so dedicated can long endure.

THE MENACING FORCES—WAR

How amazing it is that, for 4,000 years, the nations of the world have resorted to war as a form of political action for the adjustment of their difficulties.

The yellowing pages of history tell us that 4,000 years ago the Greeks besieged and destroyed many of the finest values of antiquity in a war that lasted for 9 years with Troy and which began over the kidnaping of an ancient glamour girl named Helen. Even before that time man was using the arbitration of force, and since that time war has been the steady diet of mankind. It has ever disseminated nations and will continue to do so until the formula for lasting peace has been found.

Consider the dislocations in our own land. Nearly 300,000 business enterprises have gone out of business under the impact of war. The whole resource of the Nation has had to be marshaled, burdensome restrictions have had to be imposed, taxes have gone to unbelievable levels, and in the fiscal year 1945 the Federal Government alone will collect in excess of forty-seven billion in revenues of all kinds.

CENTRALIZED POWER

Consider the power by which government has become so thoroughly centralized already in this Nation. In 1933, with the depression and the despair as a springboard, powers were freely delegated to the executive branch by the Congress, with the general sanction of the country. Administrative agencies were created, and rules and regulations issued, which govern the very life of our people. Scarcely an activity of the citizen is left untouched. They carried their own penalties and had the force of administrative law. To make them effective, not thousands but hundreds of thousands of people were placed upon the civilian rolls of government. A host of experts—nearly 34,000—were employed to make these regulations palatable.

Control, by means of regulations, is becoming more rigid. Government is becoming the master and manager of the people's interest. The sovereignty of the States is gradually being impaired by grants and assistance of all kinds.

From 1941 to 1946, with the latter year estimated, the number of administrative rules and regulations for that 6-year period will exceed 182,000. There you have a staggering picture of government by administrative fiat, which is another name for centralized national government. As it moves on to larger proportions, and the comings and goings of the people are regulated by orders

from Washington, what shall we then say to the question of whether a nation conceived in liberty can long endure?

COURTS

For many years, there has been a growing concern about the impaired integrity of the court system of the Nation. How much blood was spilled for centuries, before we reached the degree of perfection in our court system, whereby the humble citizen may go before an impartial tribunal and there have determined any controversy which may arise between him and his neighbor, or between him and his government. However, in the original O. P. A. Act, Congress specifically stated that a citizen could not raise the question of the validity of any order, rule, or regulations issued by the O. P. A., except in a special court which had its situs in Washington.

Here, then, was the spectacle of an administrative agency, which could punish people by means of administrative fiat and then have him prevented by law from securing a redress of his grievance before a fair and impartial court which was close to home and easily accessible.

If this impairment of the judiciary continues, and more and more power is lodged in a single branch of the Government, what shall we then say of the essential freedoms? What shall we say of liberty as we knew it in the early days of our Nation? What shall we say of the freedom for which young men fight and die? What shall we say of the preservation of the democratic process and, again, what shall we say about the challenge which came rolling down from Gettysburg 82 years ago, from the humble Lincoln, whose sense of fundamental values was derived from the soil, from communion with nature, and his fellowship with the common man of that day? With him, we query the question whether a nation conceived in liberty can long endure?

What is the collectivist idea? It is the thesis that the collective welfare is important and that, if necessary, the rights, the privileges, and the welfare of the individual citizen must be subordinated entirely to it. It is but another way of saying that the common man must be kept common.

If that theory is embraced, we are on the road to the destruction of individual liberty and the very foundation of the greatness of this country. Liberty has provided the initiative for man to go forward and create benefactions for himself, his country, and the world. It is why, in all ages, millions have died for that precious thing. Yet, collectivism sweeps over the country and is expressed in Government agencies. It is so easily sold to many people and, when it gets the whip-hand, liberty dies. The challenge of Lincoln from Gettysburg again rings in our ears.

What confronts us in our own country today is, after all, a moral problem. Liberty is a moral thing. It will be defended only when there is a regenerative sweep through the land that touches every heart and stirs a new sense of values.

In Spite of the Law, Selective Service Still Takes the Farmers

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. GRANT of Indiana. Mr. Speaker, the Selective Service System continues its reckless and unauthorized draft of essential and irreplaceable farmers. This is in plain violation of the intent of the Tydings amendment as passed by the Congress and signed by the President. And during all this time, the newspapers and the corner fence posts along our countryside are filled with notices of auction sales of entire herds of cattle and of farm machinery. In today's mail, I have a collection of some of these notices taken from the newspapers in a midwestern community within the district which I have the honor to represent.

One of these reads: "26 head of cattle, 19 head of hogs, 5 head of horses, farm machinery," and so forth.

Another begins, "Having decided to quit farming," it announces the sale of 7 head of horses, 51 head of cattle, 21 head of hogs, farm implements, and so forth.

Another states, "As I am quitting farming," it offers for sale 16 head of cattle, 600 chickens, farm implements, and household goods.

Another reads, "As I have been called for service, I will sell at public auction," 20 head of cattle, 6 head of horses, farm implements, and so forth.

And another one: "A herd of 32 cows and heifers in good production." This herd has been producing milk for the Chicago market for 10 years.

And another one: "On account of the shortage of help, I will sell at public auction 24 head of high-grade Holstein cows."

And still another: "Due to my son having to leave for the armed forces, I am forced to offer at public auction 40 head of cattle," and the notice goes on, "this is one of the best dairy herds in the county and has produced an average of 10 cans of milk daily for the past year." It also offers for sale 2 head of horses, farm implements, and everything down to the family car.

Many herds of fine cattle have already gone to the slaughterhouses and others are on the way.

If the Washington planners, who are nullifying the expressed intent of the Congress, do not stop these violations and stop them very quickly, America is going to see some mighty lean days ahead and it is already very, very late in the day.

Small Business

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "Small Business" which appeared in the February 10, 1945, issue of the Lynn, Mass., Telegram-News:

SMALL BUSINESS

Everybody pays lip service to small business, and a good deal of the adulation is sentimental if not hypocritical. The time has come to recognize that small business is important to the Nation's future not because it is small or necessarily therefore lovable, but because it has an essential economic role to play. Henry Wallace talked about that role in his testimony before the Senate commerce committee, and a report this week by Senator MURRAY's small business committee buttresses his evidence.

Smallness alone may have nothing to recommend it, as bigness alone has not. The reason government must actively protect and encourage small business in that it serves as a fruitful source of new ideas, new economic growth, and competitive progress. If monopolistic practices, tax policies, or limited access to credit and technical information tend to concentrate more and more enterprise in the established big units, as in the past, then we are headed for a static economy, encrusted with caution and dedicated to stability instead of expansion.

The concentration of economic power is a direct and logical result of free enterprise. Enterprise that is free, in the sense of being immune from government attention or guidance, tends to become progressively less free, in the sense of equal opportunity. Government's responsibility is not to break up the big units—no use trying to turn back the clock—but to keep the door open for new initiative, to preserve opportunities for new business to grow big.

And this implies more than the enforcement, on the umpire theory, of a set of rules. The Murray committee, for example, explodes the notion that mere tax revision, necessary as that may be, will of itself open up capital sources to small business. Government must take an active part in guaranteeing or supplying credit, making available technological research that has too long been the monopoly of big corporations, and otherwise promoting fair competition.

Small enterprise in both manufacturing and distribution took a hard knock in the shift to a war economy—one-sixth of all firms have closed their doors in the past 4 years—and it can take an even harder one in demobilization. Safeguards have been written into reconversion legislation, but they must be enforced by sympathetic administrative policies carried out by men who clearly grasp the function of small enterprise in an expending economy.

Senator MURRAY's committee finds that to achieve post-war full employment "small business and new business must enter the field, assured in their opportunity to compete." But if small business is essential to full employment, full employment is also essential to small business. The opportunity for economic growth depends upon a steadily rising standard of living; the incentive for new enterprise upon sustained purchasing power. It is Government's job to establish the conditions under which all business, big and small, can prosper as the people prosper.

The Case of Poland

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, the only criticism that I have

heard growing out of the recent conference at Yalta has been with reference to the Polish question.

An editorial appearing in the New York Times of yesterday entitled, "The Case of Poland," states the case so well and sums up the facts in such a convincing manner that under leave granted I am submitting herewith this editorial:

THE CASE OF POLAND

Until the spokesmen of the Big Three powers met at Yalta the outlook was bleak for any satisfactory, or even acceptable, settlement of the controversy over Poland. The Russians, who had twice within one generation been invaded by the Germans across the Polish plains, insisted upon a new strategic frontier farther west, along the so-called Curzon line. Their claim for such a frontier was buttressed by the fact that east of the Curzon line there are fewer Poles than non-Poles, and by the further fact that the old frontier had been established at the end of the last war by force of Polish arms. Meanwhile, in opposition to this view, the Polish Government in exile, functioning in London, insisted that it had no mandate from the Polish people to surrender any part of Polish territory and that Russia was attempting to force a settlement of the whole question by unilateral action.

That was true before the Yalta conference met. It is now no longer true. The solution proposed at Yalta is a three-power plan, supported not only by Russia but by Britain and the United States. To be sure, the Polish Government in exile had had no hand in this decision. But the fact remains that the decision was made in the name of the three powers which alone are capable of defending the integrity of Poland against a renewal of German aggression, and by the three powers which will once more have to bear the brunt of the fighting in case such a threat develops.

Moreover, the solution has much to commend it on other grounds than this vital one that it represents a decision which the great powers are prepared to defend in Poland's interest. For, while Russia's claim to the Curzon line is recognized, with certain minor digressions in Poland's favor, Poland is assured of "substantial accessions of territory in the north and west." Meanwhile, the present puppet government set up in Warsaw by Russian unilateral action is to be reorganized "on a broader democratic basis" under the aegis of an international commission of three members, in which Russia will have a minority of one, and the new provisional government thus formed is to be "pledged to the holding of free and unfettered elections as soon as possible, on the basis of universal suffrage and secret ballot." In these elections "all democratic and anti-Nazi parties shall have the right to take part and to put forward candidates."

Because we believe that this plan offers the Polish people west of the Curzon line an opportunity to choose their own government by democratic methods; because we believe that the Curzon line itself, judged historically, is not unfair or unreasonable; because we believe that, with the accession of some new territory in the west and north, there will be ample living space in which a sturdy Poland can prosper, and because we believe that the guaranty of Polish integrity implied in this three-power decision is of great importance from the point of view of the long future, we regret the action of the Polish Government in London yesterday in flatly rejecting the Yalta plan. We think that history will say that it missed an opportunity.

Crop Loans

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of S. P. Lindsey, Jr., Director, Emergency Crop and Feed Loan Division, Farm Credit Administration, before the House Committee on Agriculture, February 15, 1945:

All the early crop loan or seed and feed loan acts as well as the act of Congress, approved January 29, 1937, under which we have operated since that date, state that any such loan shall be secured by a first lien or an agreement to give a first lien upon all crops of which the production or harvesting or both is to be financed. If, however, the loan is for the purchase of feed for livestock to be sold, a first lien on the livestock is required. The loan regulations which have been adopted embody exactly the same requirement as to security. With a congressional mandate to take such security, it becomes our administrative responsibility to see that the crop or stock so pledged is preserved, and, that upon its sale, an accounting is received. Therefore, with respect to current secured loans, it is our policy to require that all sales of security be for the account of the Governor of the Farm Credit Administration, and that the proceeds thereof be applied in liquidation of the debt until the loan is paid in full or all security has been accounted for.

It is our practice to consider that the requirements of the foregoing policy have been met when the security, such as growing crops, was not produced and marketed because of crop failure attributable to reasons beyond the borrower's control or, when the proceeds of authorized sales of security were insufficient to repay the loan in full because of poor markets and other such reasons. In those cases when the security is no longer in existence or has all been accounted for, collected effort on unpaid balances naturally must be governed by a policy that gives due regard to the entirely different circumstances which then prevail.

Accordingly, the policy which has been established to govern collection effort on these old loans is to request payment in accordance with the debtor's ability to pay without undue hardship. If a borrower has acted in good faith and cannot pay because of circumstances beyond his control, such facts receive sympathetic consideration. On the other hand, if there is evidence of the debtor's ability to pay, either in whole or in part, he will be expected to pay in accordance with his means.

No policy, no matter how conceived, can be applied automatically to the many different sets of individual circumstances represented by the thousands of persons who owe old emergency crop or feed loans. It is our custom and practice, therefore, to determine these individual circumstances either by personal calls on the debtor or by letters of inquiry. In many cases the letters of inquiry or personal calls include or take the form of a request for voluntary payment. It is quite natural that some borrowers may construe such a request for information or voluntary payment as undue collection effort. Nevertheless, it is our administrative responsibility, flowing from Federal law and the regulations of Federal agencies having charge of accountability of Government funds and property, to maintain collection effort on unpaid seed and feed loans within the framework of the foregoing policy.

The integrity of Federal funds, that is, payments which have been made on emergency crop and feed loans, must be preserved. We must be certain that all payments which farmers have made on these loans have not been either misappropriated or erroneously credited. To meet this objective, audit letters of confirmation are sent to all debtors at periodic intervals. These letters contain information as to amount of the original loans and the dates and application of all payments which have been received. In addition, they request the debtor to inform the regional office immediately if proper credit for all payments are not reflected. Such letters of confirmation of accounts may likewise be considered as undue or inconsiderate collection effort, but with other safeguards they are instrumental in preserving the integrity of Federal funds.

I feel that we are on sound ground when it is stated that preliminary requests for voluntary payments, requests for information as to a borrower's circumstances, and periodic letters to confirm accounts are not inconsistent with either the foregoing collection policy or the administrative responsibility imposed on us in the handling of Government business.

Until the passage of Pubic Law No. 518, during the closing days of the last Congress, we had no means of clearing our records of accounts owed by borrowers who had no ability to make payment, and until the passage of that act we had no authority to make reasonable settlements, by compromise or adjustment, with those borrowers who were unable to pay in full but could pay a lesser amount than that due the Government. Previously, there was no action that could be taken if such information was developed about debtors, or when field men came in contact with and learned the circumstances of individual borrowers. In administering the compromise and adjustment of accounts, we clearly have in mind the cancelation of debt when there is no ability to pay in whole or part, and the compromise and adjustment of debt by directly negotiated settlement with the borrower in accordance with his ability to pay without undue hardship. It is our interpretation of the wishes of Congress, as indicated in section 1 of Public Law No. 518, that such settlements shall be made whenever it is definitely established that (1) the indebtedness has been due and payable for 5 years or more, (2) the debtor is unable to pay in full and has no reasonable prospect of being able to do so, (3) the debtor has acted in good faith in an effort to meet his obligation, and (4) the principal amount of the debt is not in excess of $1,000.

Our experience in the last few years of good yields and satisfactory prices justifies the action of Congress in providing that these old seed loans shall be compromised, adjusted, or canceled after giving consideration to the ability of the debtor to repay. Thousands of farmers in the High Plains States, where the greatest amount of debt is outstanding, have sent in remittances covering numerous loans on which nothing had been repaid during the first few years following the granting of the loan.

Now these unpaid loans, in many cases, are being paid in full. In numerous cases farmers have stated that such payments on their old seed and feed loans leave them free of debt for the first time in many years, and in a substantial number of cases it has been stated that they have considerable assets after making such payments.

While Public Law 518 permits the disposition of accounts which cannot be collected and authorizes the final settlement, either by compromise or adjustment, of debt for an amount less than that due the Government, we must remember that there are many hundred thousands of accounts which are subject to this treatment at the present time, and that we are unable to increase our field force or office force during wartime. It may not be possible, therefore, to remove these accounts from our records in anything like the time that such action could be taken under ordinary circumstances. However, as these accounts are disposed of and settled by agreement with the borrowers, it will no longer be necessary to contact the debtor in order to determine his ability to meet an obligation to the Government. Further, once an account is removed from our records, it will be no longer necessary to write him with the view of auditing the manner in which Federal funds have been accounted for. The operation of Public Law 518 will remove this source of irritation. On the other hand the accounts, more than 5 years old, which may not be removed from our records in the orderly and sympathetic administration of this act, will consist almost entirely of debts due the Government from borrowers who are obviously able to pay.

A Few Remarks by a New Congressman

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. DOYLE. Mr. Speaker, since recently becoming a Member of this distinguished legislative body, many Members thereof, on both sides of the aisle, have told me that the time to first speak as a new Member was when I felt impelled that I simply must speak out. Also they have urged that precedent in this House did not dictate that a new Member should always be seen and not heard.

I have studied the bill most carefully. There is no mention of Henry Wallace or Jesse Jones therein; yet, having listened to the full debate and discussion on this bill, rule, and motion to recommit, I venture that most of the time has been taken on the floor in speaking against Henry Wallace. I also have heard many of the gentlemen of this House who have spoken against him as an idealist, frankly state that there was nothing against his honesty, integrity, or character.

Admitting that I have not been here long enough to be familiar with the history and background of the Department of Commerce, or of the Federal Loan Agency, or of the First War Powers Act, 1941, or of the General Accounting Office, or of the Comptroller General, all of which Departments of Government or officials are referred to in S. 375, nevertheless, it appears to me that the major debate and discussion of these two afternoons have been about a person instead of about governmental policies, procedures and programs. As I read the Constitution and law, it is a fact appointments to a Cabinet position by the President of this great Nation are only confirmed by the United States Senate. Yet, it appears to me, that Members of this House who have no jurisdiction, authority, or responsibility in the premises for or against confirmation of the Cabinet members are in fact, indirectly at least, undertaking by their stated positions on this measure to determine whether or not Henry Wallace shall be confirmed as a Cabinet member. Some of the many who have spoken have strongly said they were opposed to the confirmation. This then appears to be a determining factor in the attitude and speech of some Members, rather than the exclusive merits of the bill.

Every Member of this House who has spoken to me about it, on both sides, has told me that Members of Congress must clearly and always listen to the voice of their constituents on important matters in which their constituents express great interest. This being true, I will say of the many expressions I have received from the Eighteenth District in California on this bill, all but two have been favorable to Mr. Wallace. I have received literally dozens of communications from individuals, as well as groups asking support for Mr. Wallace—endorsing his policies, experience, and political philosophy. Furthermore, during the political campaign as a result of which I came to the halls of this great legislative body, a decided majority of expressions to me as a candidate to this office by my district were strongly for Henry Wallace.

I have no fear of the decision of the American people when they know all the facts. One of the greatest dangers to democracy in this Nation is the lack of information to the majority of people. Truth hurts no person or program for progress. Full debate and discussion based upon facts rather than personalities—decisions on major matters in light of merit of the measure, rather than ill will toward any individual or political animosity or rivalry—must determine our destiny if our democracy is to endure.

The strongly expressed wish, as made to me from my district in California, is for the George bill—they are not afraid of Henry Wallace, his idealism, philosophy, and sympathetic understanding and friendship for the rank and file of the American people.

I shall vote for the rule and for the bill, and against the motion to recommit.

Surplus Medical Supplies

REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the Surplus Reporter of February 3, 1945, lists some 344 articles of a medical and surgical nature which will go on sale on and after February 19, 1945.

In checking over the Surplus Property Reporter, I find a few of the 344 items listed as follows: 53,657 surgical knives, 36,881 surgical forceps, 27,004 sterilizing instruments, 19,995 pairs of surgical scissors, 1,536,000 tablets of procaine—these are used for local anesthetics—51,150,000 tablets of laxatives of various types, 1,200,000 tablets of strychnine sulfate, 95,954 pints of aromatic spirits of ammonia, 28,687 pounds of zinc oxide, 28,300,000 first-aid surgical dressings, 50,000 tubes of surgical catgut, 7,292 surgical masks, 44,875 pounds of ichthyol.

Most of these articles are new and unused and offered at informal bid.

It does seem to me, Mr. Speaker, that it is high time that a better coordination is had between the several branches of Government when it comes to buying the materials they need.

In order to have articles ordered, it is necessary for someone to estimate the needs and then for the order to be placed. It seems to me that the chiefs of the several staffs ought to pay closer attention to the placing of all orders. Does it not follow that when there is a surplus of property that someone has over-ordered? Does it not follow that there is a waste of money, manpower, and materials? The same factories that are selling this property as surplus are still working 24 hours a day to turn out the same articles for the military.

I can understand that there will be implements of a military nature that become obsolete and must be changed but the items that I have cited are standard, have been for 10 years, and will probably be standard 10 years from today. The Surplus Reporter carries thousands of items from screws and bolts to airplanes and brassieres.

Unless there is a more careful coordination in the buying and the selling of surplus property, this country will be rocked by a scandal it will not soon forget. A few days ago, Lindsay Warren, the Comptroller General, testified before the Committee on Executive Expenditures that perhaps $50,000,000,000 of the taxpayers' money had been wasted in the construction of war plants through war contracts and the cost-plus method being followed by the military service. This wanton waste of money, manpower, and American resources must stop. It can be done by more careful planning. The merciless spotlight of public scrutiny must be in continual focus on this segment of Government activity or nasty scandals are sure to occur.

Taylor Grazing Act

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. BUNKER. Mr. Speaker, the unwarranted attempt of the Grazing Service to raise the fees of western livestock

producers has thoroughly aroused and provoked the people of my State. The Legislature of Nevada is now in session at Carson City. It is almost certain to adopt a resolution in the next few days dealing with the subject of grazing management and fees. Should this happen, it will be a serious indictment on the operation of this Government agency in my State. The following quotations taken from a letter are cogent statements representing the views of both large and small producers in Nevada. The resolution which follows the quotations presents a strong case against the present management of the Grazing Service and the proposed increase in fees as announced by them. In my opinion, Congress must take action in this matter.

Quotations and resolution follow:

Those of us who are taking the lead for the Nevada State grazing boards and their central committee in opposing the proposed increase in grazing-service fees consider it of particular importance that those in Congress, before whom the Grazing Service officials appear in connection with its annual appropriations be advised at the earliest possible moment of the wish on the part of the stock-raising settlers concerned that no further grazing-supervision service on the part of the Grazing Service is wanted until the matter of a proper basis of fees can be settled.

The record shows that the Grazing Service, year after year, has been urging upon congressional committees the need for continual increases in appropriations for rendering additional service and that these committees have responded with the general idea that this additional service was being demanded by the users and that, generally, they would not object to compensatory increases in fees. This has gone on until the service costs are beginning to exceed the collections possible on the basis of present fee standards.

The National Advisory Board Council, in its answer to the recent proposal of the Grazing Service for increased fees is on record to the effect that the service rendered should be limited to the extent possible with such collections as the present fee scales produce and we believe that this stand represents the general attitude of the stock-raising settlers concerned.

Steps have been taken urging the various States representatives on the National Advisory Board Council to advise their congressional delegations to urge upon the members of the congressional committees concerned the importance of granting no further appropriation increases for grazing-supervision increases until a proper basis of fees within the provisions and intent of the Taylor Act can be determined.

It may be that the Grazing Service appropriation already is before either the Budget Bureau or the House Subcommittee on Interior Department Appropriations. We are rushing this letter and enclosure to you, therefore, in the hope that you can see fit to contact either or both the Budget Bureau and the said committe econcerning this matter at your earliest possible convenience. In our efforts to require the Grazing Service to carry out the intent of Congress when it enacted the Taylor Act in the matter of a proper fee basis, we regard it as of material importance that the record show, as soon as possible, that it is not the wish of the stock-raising settlers concerned that further increases in appropriations be granted as matters stand.

Assembly Joint Resolution 8

Whereas the Taylor Grazing Act specifies that the grazing fees required to be paid under its provisions are to be reasonable; and

Whereas when the said act was before the Congress in 1934 the matter of the reasonableness of the said fees, as to their economic effect upon the enterprises of the stock-raising settlers and the business and tax structures of the local communities concerned, was brought up by members of the Senate Public Lands Committee with officials of the Interior Department, and, to secure support of the Senate committee in enactment of the said act, assurances were given the said committee by the Interior Department officials that—

Their intention under the act was that of maintaining and upbuilding the public ranges for the benefit of the local interests consisting of the stock-raising settlers and States concerned.

They had no intention at all of depriving the settlers of rights derived either under State laws or by customary usage or of using the said act to exploit the grazing values of the ranges for revenue-producing purposes, and instead intended only that the fees to be charged should pay for the costs of administering these values, and nothing more; and

Whereas in 1941 a grazing-fee study made by the Grazing Service and contemplating an increase in the existing fees of some 300 percent, was set aside after a series of hearings, at the request of the representatives of the stock-raising settlers, with a definite promise by the Grazing Service to defer any steps looking to increased fees pending the end of the war, when opportunity could be had to determine what post-war economic readjustments might then have to be undergone by the range stock-raising industry; and

Whereas despite both the said assurances by the Department of the Interior officials that only a cost of administration fee was intended and the promise of the Grazing Service officials that the matter of increased fees would be deferred for the duration, the Grazing Service recently has announced its intention of increasing the fees, effective for 1945, by approximately 300 percent, attempting to justify such increase, not on the cost of grazing administration but instead upon the value of the range, and without any consideration whatever of the economic effect upon either the enterprises of the stock-raising settlers or the business and tax structures of the local communities concerned: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of Nevada (jointly), That unless the officials of the Department of the Interior and the Grazing Service speedily and forthwith show a proper disposition to conform with and carry out the said assurances and promises in connection with their administration of the Taylor Grazing Act, the said act should be repealed, at least insofar as its application to the public lands in Nevada is concerned, and that until the question of how much the stock-raising settlers are to be required and how much they can afford to pay for range administration is decided that no further increases in Grazing Service appropriations be granted, and we hereby memorialize the Congress of the United States and its committees concerned to take the steps necessary to these ends; and be it further

Resolved, That certified copies of this resolution be sent to each of the Members of the Nevada congressional delegation, to the governors of each public-land State, to the chairman of the Senate Public Lands Committee, to the chairman of the House Subcommittee on Interior Department Appropriations, to the Secretary of the Interior, and to the Director, United States Grazing Service.

Perpetual War Declared

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. SHAFER. Mr. Speaker, the statement issued by the Big Three after their Crimean Conference means that there will be no peace in our time, if the provisions of the agreements reached are carried out. To carry out the provisions it is clear that the United States will be called upon to maintain in Europe an expeditionary force in perpetuity.

Under the commitments we become the guarantor of boundary lines which I do not believe can be preserved in peace. They can be maintained only at the cost of perpetual fighting, and it is quite clear that we are to do the fighting.

There will be wars piled upon wars because of the manner in which the loot of Europe is to be divided under the proposals. No international organization working under the Crimean agreements can save Europe from these wars. All that such an international organization can do will be to compel us to participate in those wars.

It is also clear that if the United States is to maintain a European expeditionary force, we will have a perpetual emergency in America. This means that all of the emergency war powers that have been granted to Mr. Roosevelt will continue indefinitely. There will never be an end to the emergency we are now in.

In a nutshell, that means an end to our constitutional form of government which 12,000,000 of our sons and daughters were told they went forth to defend. It means that the people of America will have nothing to look forward to but bureaucratic regimentation and control and Government compulsion.

Simultaneously with the distribution of the statements of the Crimean Conference agreements there arose in the United States, according to many news commentators, a chorus of approval. The New Deal propaganda machine was working in high gear. It sought to give the impression that every one was in agreement with the decisions which were announced.

I have found no such unanimous approval as was indicated over the radio and in the press. I, for one, and I know I am not alone in Congress, am unwilling that we should be called upon to maintain a standing Army on both sides of Poland to preserve the territorial distribution which this conference has made. Likewise, I do not see why there should be three military spheres of influence in France, if the international supergovernment which we are talking about has any chance of being effective.

Perpetual war is no method for preserving peace.

It might be well to ask, Where would we have been in Greece 2 months ago

had this agreement been in effect at that time? Would the United States have been fighting for Great Britain or would we have been fighting for the E. L. A. S. who are said to have had the blessing of Stalin's government?

The Crimean agreements indicate that all Mr. Roosevelt and Mr. Churchill had to do at the conference was to agree with Mr. Stalin. This is well indicated by the fact that they made a right-about-face when they agreed to recognize the Lublin government of Poland after having recognized the Polish Government in exile only a few short weeks ago.

It is amazing that the three leaders of the world could meet and issue a statement of the results of their conference without mentioning another war in which the United States is bitterly engaged. Yet that is what has happened. No mention whatever was made in the conference statement of the terrific struggle now being fought in the Pacific area. No mention was made of what, if any, aid will be given the United States in our war with Japan. It must be admitted that the statement announced at Yalta shows an utter disregard for our problems in the Pacific.

When we entered the European conflict we were hailed as great participators in the movement for the betterment of humanity. It would give the people of America great pleasure to hail Russia and Great Britain in a similar manner in regard to our war with Japan.

"Debunking" the Poll-Tax "Bunk"

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled " 'Debunking' the Poll-Tax 'Bunk' " which appeared in the February 1945 issue of the Southern Planter. This is the oldest agricultural journal in America and has its headquarters at Richmond, Va. The editor of the Southern Planter is Mr. Paul D. Sanders.

The editorial follows:

"DEBUNKING" THE POLL-TAX "BUNK"

Self-preservation is the first attribute of a politician. That is why the "machine" politicians in Virginia are fanatically fighting repeal of the poll tax as a voting requirement. They have found in the poll tax their most useful tool for perpetuating their term of office. By disfranchising the vast majority of people and permitting only a pitiful minority to vote, a handful of officeholders in every county, through the influence of "their sisters, their cousins, and their aunts," can swing almost any election. This is a vicious sort of thing in a democratic society.

The very fact that politicians are fighting poll-tax repeal is ample evidence that they are afraid to face an unhampered electorate. None of them will admit this, however. Instead, they give as their excuse for opposing poll-tax repeal, such bunk as "revenue from the poll tax goes to support the public schools;" "the poll tax keeps the riff-raff from voting;" "it disfranchises the Negro and guarantees white supremacy;" "it insures a sound fiscal policy for Virginia." Anyone remotely familiar with the problem knows that all of these arguments are bogus.

Divorce the poll tax from the right to vote, universally assess and collect it, and the tax will yield three times its present revenue for the schools. The so-called riff-raff if they be defined as those who permit the poll taxes to be paid in a block by politicians and voted accordingly, can only vote under the present system; while many of our best citizens are being disqualified. The racial issue is pure demagogery. Of the 10,000,000 Americans who are unable to vote because of the poll taxes, at least 6,000,000 are white citizens. Less than a fourth of Virginia's total population is colored. North Carolina, with a much larger Negro population than Virginia, abolished the poll tax as a prerequisite to voting 25 years ago and that State is a shining example in the South of everything good in government for the common man, of both colors. And, as far as sound fiscal policy is concerned, is their anyone who surely believes that Virginia, South Carolina, Georgia, Alabama, Mississippi, Arkansas, Tennessee, and Texas, the poll-tax States that polled a total of 3,113,082 votes in the Presidential election last fall, are operating under a sounder financial policy than the other 40 States of the Union that polled 44,856,706 votes, or 94 percent of the total? The question is as ridiculous as the arguments that promote it.

The whole argument in favor of the poll tax is a foil, a smoke screen to hide the ugly fact that the politicians, now in power, want a small electorate that can be controlled by the officeholders. The poll tax as a voting requirement in Virginia is doomed just as surely as day follows darkness. And the quicker it passes, the better it will be for all the people.

Nonresidents Buy More Vermont Property

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted me to extend my remarks in the RECORD, I wish to include an article which appeared in the Brattleboro (Vt.) Reformer of February 13, 1945:

NONRESIDENTS BUY MORE VERMONT PROPETRY—SALES IN 1944 SECOND HIGHEST ACCORDING TO REPORT BROKERS

MONTPELIER.—Licensed real-estate brokers in 1944 sold 303 Vermont properties, involving $1,362,550, to out-of-State buyers, who spent, it was estimated, $143,460 for repairs. These figures, compiled by the publicity service, department of natural resources, do not include sales not handled by brokers and do not include reports from all of the license brokers in the State.

This report includes data supplied by 67 out of a total of 288 real-estate men licensed by the secretary of state as of November 20, 1944. There were a number who reported no sales to out-of-State people and about half of those licensed made no report at all.

A total of 17,700 inquiries about Vermont property were received by those who reported. Of these 1,272 resulted from State advertising and the brokers say the State ads helped in making 69 of the sales. There may have been some indirect help in the other sales as it is difficult sometimes to trace out what interested customers in Vermont.

Since the beginning of the record in 1931, only once before has the recorded number of sales gone over 300, but the amount of money involved was exceeded in 2 years. There may be significance in the figures recorded since the war began. The following is the record:

Year	Sales	Amount	Repairs (estimated)
1931	106	$437,100	(1)
1932	90	278,875	$29,520
1933	114	335,425	47,400
1934	125	365,459	100,000
1935	173	542,750	165,385
1936	157	680,800	206,600
1937	239	731,105	499,900
1938	164	501,710	185,800
1939	200	840,825	297,500
1940	244	780,010	318,300
1941	380	1,559,270	801,620
1942	198	880,225	219,750
1943	269	1,478,460	138,750
1944	303	1,362,550	143,460

[1] No report.

Censorship

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. REED of New York. Mr. Speaker, George Washington once said:

In proportion as the structure of government gives force to public opinion, it is essential that public opinion be enlightened.

It is important that sovereign citizens in a free government should be fully informed of all commitments, agreements, and alliances made or entered into by their President in the field of foreign affairs.

There is nothing more dangerous to free government than a rigid censorship applied to matters which relate to the vital interests of a free people. It is only where a sovereign people are permitted to know the truth, the whole truth, and nothing but the truth that they can pass accurate judgment upon the wisdom of the public acts of those whom they have entrusted with power to negotiate for them with foreign countries.

Under leave to extend my remarks, I insert an article by Arthur Krock from the New York Times of February 9, 1945:

THE ISSUES OF CENSORSHIP AND SILENCE

(By Arthur Krock)

WASHINGTON, February 8.—In his Lincoln Day speech here tonight Governor Dewey joined the ranks of those who lately have renewed criticism of the censorship policies and the official silences of the administration. Asserting that American public opinion is ready for responsibility for "the vital decisions affecting the rest of the world • • • decisions which flow from victorious battles" in which this Nation has played so great a part, Mr. Dewey demanded that "the actions to be taken (at the Big Three conference and elsewhere) shall not be concealed and shall not be devious."

This is another voice, and a powerful one, raised for the purpose of ending the system that has prevailed since the war began, and before, whereby the American people have had to await speeches in Commons by Prime Minister Churchill and Moscow announcements ordered by Marshal Stalin to learn what happened in plenary Allied councils at which the President was a participant. On utterances and publications abroad, and not on their own government, the American people, under this system, have been forced to depend for the most important news of our wartime political policy. It was through Mr. Churchill, for instance, they discovered that the United States had assigned to Great Britain full control of Greek national problems following liberation. From the same source they were informed that the President was fully advised at Teheran of Russian-British comity on the Polish boundary question. And now through the Foreign Minister of Italy comes the first news of the terms of the Allied-Italian armistice signed nearly 2 years ago.

Recently it has been increasingly stated in the press that two fundamental changes in our foreign policy have been made by the President: one, we have abandoned the position that decisions on all the political problems of the war must await the end of it; two, this Government will take an active part in the detailed settlements of the European sections of these problems. But Mr. Roosevelt himself has made no such explicit statement at any time.

On almost every occasion when the chiefs of the great Allied states have met the first news of the meeting has come from abroad and not from Washington. Washington has eventually confirmed these reports, but nearly always there has been pointless delay. The system reached the height of absurdity several days ago when official permission was not obtainable here to announce in a Washington dispatch that Harry L. Hopkins and Secretary Stettinius were in Rome, although foreign dispatches and wirelessed photographs were proclaiming the fact at that very time.

It may be that the growing protest, in which Governor Dewey has joined, will break down the system by producing sufficient pressure of public opinion. But if this happens the order will have to be given by the President. He is the author and guardian of this type of censorship. He is personally responsible for the exaggerated concept of security which forbids the press to announce even that he has gone to Hyde Park or Warm Springs, or to reveal how much he has been absent from Washington on such journeys since the war began. Protected, as Mr. Churchill is not, from a requirement to account for his stewardship to the people through their elected legislators, he faces for question only his press conferences, and these are conducted on his own terms.

Therefore, unless the President has decided he is ready to modify this policy, or a combination of congressional and public opinion induces him to do so, Mr. Dewey and other critics will be shouting into the wind. All lesser officials are subject to his orders, and wherever congressional groups are told anything of importance—which is not often—they are put on honor to keep it secret. All concealments, all evasions, all half-truths, all black-outs of the movements of nonmilitary persons are justified either on the argument that military and individual security requires it, or on the argument that wise and constructive solutions of war-created political problems will be jeopardized or frustrated by any other policy.

Certain movements of nonmilitary persons, especially the President, must be shielded. The time and method of Mr. Roosevelt's departure for the conference in the Black Sea area were known to many persons here, and not a few knew his destination. It was also known that Mr. Hopkins had left in advance for Great Britain, France, and Italy to explain the President's foreign policy views to Allied officials, and that he, instead of the Secretary to State, had been chosen for that duty. Many were aware that James F. Byrnes, Director of the O. W. M. R., had been assigned to foreign errands at a time when domestic issues close to his responsibilities were becoming acute. But this correspondent has seen no criticism of the concealment of all such details until the interests of security are satisfied.

It is quite a different matter, however, to carry policy to the point described by Mr. Dewey, and to oblige the American people to rely on spokesmen of other nations and the press and radio of other lands for the news they have a right to hear first from their own Government and through their own channels of public information. But that is how it has been and will be so long as Mr. Roosevelt holds to his concept of personal government, and interprets his elections as mandates to proceed on the parental theory of administration.

The Dairy Farmer Needs a Better Deal

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. HAGEN. Mr. Speaker, about 150 United States Senators and Representatives in Congress gathered at the Mayflower Hotel, Wednesday evening, February 14, to hear Mr. John Brandt, president of the National Cooperative Milk Producers Federation, discuss the increasingly serious problems confronting the dairy farmer. He was introduced by our colleague, Representative AUGUST ANDRESEN, of Red Wing, Minn. Representative ANDRESEN is looked upon as an agricultural authority in Congress.

Mr. Brandt, in his usual graphic style, told his listeners of the increased production by the dairy farmers in spite of adverse labor and price conditions, and he made an eloquent plea for a better break for the farmer and his family.

Washingtonians may have read the full-page advertisements sponsored by the Land O' Lakes Creameries, Inc., of Minneapolis, and published February 16 in most of the Washington, D. C., newspapers, which gave some interesting information on the part the dairy farmer is playing in the war effort. Others may be interested in reading it also.

The advertisement follows:

AMERICA'S NO. 1 WAR PRODUCER

There are millions of him.

The top producer in this war is the American dairy farmer.

With the manpower shortage and less equipment, this man has produced 13 percent more milk. This man has kept right on producing 50, 60, 70, 80 hours per week—actually 50 percent more output per man.

The farmer has kept right on producing by himself because American needs milk and butter and cheese. Because he knows 39 percent of the total food consumed by the armed forces comes from the cow. Milk and butter are vital.

Yet, America today is failing to recognize the dairy industry as a No. 1 vital war plant—in manpower or prices.

Actually, the dairy farmer loses money today when he produces butter.

We need a new parity formula for the dairy farmer. Our present parity formula is antique. It does not even include the cost of labor—the biggest cost item to a dairy farmer.

Cows need milking twice a day. No Sundays off. No holidays. Who says labor isn't important?

Who says labor doesn't cost money?

Labor is the biggest cost item of our war effort, and rightly so. Why leave labor out of the formula that governs production?

The dairy farmer is the No. 1 war producer. He has proved it. But his efforts, his labor, need recognition now.

This is a balancing problem. Government must decide where to direct men and money. If America wants to keep dairy production high, the dairy industry needs a higher priority.

JOHN BRANDT,
President, Land O' Lakes Creameries, Inc., Minneapolis, Minn.

Deferment of Farm Laborers Under Selective Service Act

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith a joint resolution adopted by the Legislature of the State of Minnesota memorializing the President and the Congress of the United States to grant and to extend deferment to farm laborers under the Selective Service Act:

Whereas Minnesota farmers, desiring to render the fullest measure of patriotic service to the Nation, have worked unselfishly for long hours, bearing unprecedented hardships, to meet the increased demands for food that have been placed on them by the war; and

Whereas in addition to the thousands of men they have furnished to the armed forces, our farmers have seen great numbers of farm laborers upon whom they normally depend drawn into the defense plants by the high wages offered there; and

Whereas the growing shortage of farm labor is making it increasingly difficult for farmers to meet the food quotas prescribed by the War Food Administrator; and

Whereas successful prosecution of the war to final victory will require not merely continued reliance on bigger than normal food supplies but in all probability even greater quantities of food, and

Whereas Congress, appreciating the gravity of the problem facing our farmers and the importance of keeping up our vital food production, has declared in adopting the Tydings amendment: "Every registrant found by a selective service board * * * to be necessary to and properly engaged in an agricultural occupation or endeavor essential to the war effort shall be deferred from training and service in the land and naval forces as long as he remains so engaged and until such time as a satisfactory replacement can be obtained," and the national director of selective service in a statement on January 23 has reaffirmed his adherence to this policy: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, in regular session assembled, That we ask the President, Congress and our Federal officials to follow and uphold the spirit of the Tydings amendment in dealing with matters affecting farm labor and that we memorialize the President and Congress to take all further steps and to prescribe all further regulations that may be necessary to insure to agriculture an adequate farm labor supply; and be it further

Resolved, That the secretary of State of Minnesota is hereby instructed to transmit a copy of this resolution to the President of the United States, the presiding officers of the Senate and House of Representatives in the Congress of the United States and to each of the Members in the Congress of the United States from the State of Minnesota.

LAWRENCE M. HALL,
Speaker of the House of Representatives.
C. ELMER ANDERSON.
President of the Senate.

Passed the House of Representatives, the 7th day of February 1945.

G. H. LEAHY,
Chief Clerk, House of Representatives.

Passed the Senate, the 8th day of February 1945.

H. Y. TORREY,
Secretary of the Senate.

Approved February 9, 1945.

EDWARD J. THYE,
Governor of the State of Minnesota.

Resolution of Boston Chapter, No. 10, Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was adopted by unanimous vote of Boston Chapter, No. 10, Disabled American Veterans, Boston, Mass., at regular meeting of November 20, 1944.

Whereas certain members of the armed forces of the United States, whose names were on eligible registers for appointment to positions in the Post Office Department, were not available when considered for such appointments by reason of their absence in military or naval service; and

Whereas other eligibles, junior to them on said civil-service registers and who have not been in military or naval service in the present war, have received during the war permanent appointments to such positions in preference to and with seniority rights over said members of our armed forces and returned war veterans; and

Whereas such appointments constitute grossly unfair discrimination against said members of the military or naval service and said discharged veterans and impose on them a severe penalty because of nonavailability for appointment due to patriotic service to our Nation in time of war: Be it

Resolved, That Boston Chapter No. 10, Disabled American Veterans, hereby protests against said injustice and discrimination and respectfully petitions the President of the United States by Executive order or Congress by suitable legislation to restore these members of our armed forces or discharged veterans to their original relative standing on the civil-service registers by voiding said permanent appointments made during the war which are prejudicial to the civil-service rights of said members of our armed forces or discharged veterans and cause permanent appointments to be deferred and made in exact order from the civil-service registers after the termination of the war; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, Hon. David I. Walsh, Hon. Sinclair Weeks, and Hon. John W. McCormack.

HENRY B. PARK,
Commander.
JOHN W. MCAULIFFE,
Adjutant.

The foregoing resolution was approved by unanimous vote of the executive committee, Department of Massachusetts, Disabled American Veterans, at regular meeting of November 25, 1944, statehouse, Boston, Mass.

FRANCIS J. ROCHE,
Senior Vice Commander and Acting Commander.
LEON CHASE WAITE,
Adjutant.

Decisions of the Crimean Conference Regarding Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I incorporate statements made by the Polish-American Congress of Chicago, Ill., and the Polish Telegraph Agency, of New York, N. Y.

The recent decision of the Big Three has deeply saddened and further wounded the hearts of Americans of Polish descent, by the slicing and cutting up the land of their ancestors for the fifth time. The decision giving all the land east of the Curzon line is a tremendous loss and a staggering blow to the cause of freedom, especially to the heroic Polish Nation, and is in violation and a direct contradiction of the provisions and principles of the Atlantic Charter.

The Joe Stalin recommended Lublin Government that was wished and forced on the Poles is made up of hand-picked Communists, and it is said, they are not even citizens of Poland, for they were formed to incorporate Poland into the Soviet Union.

The forcing of a Government without the freely expressed wishes of the people concerned, will wipe out and void freedom and bring serfdom to the people of Poland.

The statements follow:

On February 12, at 7:30 p. m., the British Foreign Office handed the Polish Ambassador in London a text of resolutions concerning Poland, adopted by Roosevelt, Churchill, and Stalin at the Yalta Conference between the 4th and 11th of February.

Before the conference began, the Polish Government handed a memorandum to the Governments of Great Britain and the United States, in which hope was expressed that these governments should not be a party to any decision regarding the Allied Polish State without previous consultation and consent of the Polish Government. At the same time, the Polish Government declared itself willing to seek solution of the dispute initiated by Soviet Russia through the normal international procedure and with due respect for the rights of the two parties concerned.

In spite of this, the decisions of the Three-Power Conference were prepared and taken, not only without participation and authorization of the Polish Government, but also without their knowledge. The method adopted in the case of Poland is a contradiction of elementary binding principles and constitutes violation of the letter and spirit of the Atlantic Charter and the right of every nation to defend its own interests. The Polish Government declares that decisions of the Three-Power Conference, concerning Poland, cannot be recognized by the Polish Government and cannot bind the Polish Nation. The Polish Government will consider severance of the eastern half of the Polish territory through imposition of the Polish-Soviet frontier following along the so-called Curzon Line as a fifth partition of Poland, now accomplished by her allies.

The intention of the three powers to create a "Provisional Polish Government of National Unity" by enlarging the foreign-appointed Lublin Committee with persons vaguely described as democratic leaders from Poland itself and Poles abroad can only legalize Soviet interference in Polish internal affairs. As long as the territory of Poland will remain under sole occupation of Soviet troops, a government of that kind will not safeguard to the Polish Nation, even in the presence of the British and American diplomats, unfettered right of free expression.

The Polish Government, which is the sole legal and generally recognized Government of Poland, and which for 5½ years has directed the struggle of the Polish state and nation against the Axis countries, both through the underground movement in the homeland and through the Polish armed forces in all theaters of war, have expressed their readiness—in a memorandum presented to the Governments of Great Britain and the United States—to cooperate in the creation of a government in Poland which will be truly representative of the will of the Polish Nation. The Polish Government maintains its offer.

POLISH-AMERICAN CONGRESS, INC.,
Chicago, Ill., February 13, 1945.

A VOICE OF PROTEST AGAINST DECISION TO GIVE RUSSIA HALF OF POLAND

Following is the statement issued to the press wire services Tuesday night, February 12, 1945, by Charles Rozmarek, president of the Polish-American Congress, upon the appearance in the newspapers of the report of the Big Three Conference, held at Yalta, in the Crimea:

It is with sorrow, dismay, and protest that we greet the decision of the Big Three to give all land east of the so-called Curzon line to Russia in direct contradiction to all sacred pledges of the Atlantic Charter. This tragic revelation is a staggering blow to the cause of freedom.

The docile submission to Russia's demand for all the lands seized during the partitions of Poland as Germany's collaborator and even Lwow, which, prior to the war, was never at any time under Russian rule, even illegally, is a distortion of our war aims. It means reaffirmation of the Molotov-Ribbentrop line of 1939, which gave one-half of Poland and all of Lithuania, Latvia, and Estonia to Russia.

When the Germans were at the gates of Moscow and Stalin was making frantic pleas for help, Stalin renounced his claims to all the territories he had seized as Germany's partner. As soon as Russia, thanks to American lend-lease aid, began pushing the Germans back, Stalin reaffirmed the Molotov-Ribbentrop boundary line and abruptly broke off relations with the London Polish

Government, which he had always recognized as the only legitimate Government of Poland.

It is also shocking to learn that the members of the Stalin hand-picked Lublin government, composed of professional Communists, who are working for the incorporation of Poland into the Soviet Union, are to continue in power in a newly reorganized government, in violation of the Constitution of Poland. The imposition of a government "without the freely expressed wishes of the people concerned" would mean the end of freedom and the beginning of serfdom for the people of Poland. America would never tolerate within its borders any government that would owe its allegiance to a foreign power.

America cannot aline herself with forces seeking the destruction of democracies. By permitting the advocates of slavery to have their way in all things, we will reap the backwash of our spiritual and political weakness as the world did after the shame of Munich.

The spectacle of an avaricious silly, already devouring 10 of her neighbors in whole or in part and of instigating civil strife in the countries not yet under the Russian sphere of influence, unless checked in time, will mean not only the downfall of Christianity but of civilization itself.

Republican Statesmanship

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ernest K. Lindley:

REPUBLICAN STATESMANSHIP

(By Ernest K. Lindley)

Governor Dewey, as nominal leader of his party, has again joined his voice with those of other influential Republicans in notifying the world that the American people are overwhelmingly united in their international objectives.

No President engaged in critical international negotiations could ask much more of the opposing political party at home than Roosevelt has received from the Republican Party during the last few weeks. Senator VANDENBERG's speeches, the letter from the freshmen Senators to the President, in which the Republicans joined their Democratic colleagues, Senator FERGUSON's resolution, John Foster Dulles' speeches, and Dewey's Lincoln Day address—all have strengthened the President's hand. The shrunken group of dissenters, with the notable exception of Senator WHEELER, a Democrat, have remained silent. As a rule these declarations have not only endorsed the President's declared objectives, they have urged him to pursue them with the utmost vigor. Thus, instead of acting as a brake as the Republican leadership in the great majority did during the period leading up to the present war, it is acting as a spur. It is urging the President to make far-reaching commitments and to obtain them from our allies.

This would be dangerous only if it were to whip up exaggerated expectations of what can be accomplished immediately. There is a note of perfectionism running through some of the recent Republican utterances—although no stronger than in those of the President and former Secretary Hull. If the failure to achieve in every respect what we regard as a just peace should cause a swing back to cynicism and isolationism under Republican leadership, the sincerity of some of the recent Republican utterances would become suspect. However, like the President, Dewey and VANDENBERG have both warned or acknowledged that we cannot expect to win every argument with our allies. Dewey said explicitly: "Our people are perfectly aware that they can not have everything just as they want it. Our allies have strong views of their own.

"We know that conflicting views must be reconciled. But we insist that decisions be made with us and not without us—with our representatives in the discussion every day on every subject and not occasionally or part of the time."

These Republican spokesmen have been emphasizing furthermore, that if we don't like what our allies do we are not going to pick up our marbles and come home—that on the contrary, we will continue to work for a peace that is both secure and just. VANDENBERG's proposal of treaties pledging the demilitarization of Germany and Japan is unconditional. He says, in effect, that it is vital to the interest of this country that when these wars have been won they shall be kept won. But, he also says, we are not going to underwrite other features of the peace settlement if they seem to us flagrantly unjust. This does not mean that we will not take part in a world security organization. It means rather that we will use our influence to try to correct arrangements which we do not like.

Dewey said: "We shall accept in the future neither isolationism nor abdication." This is a succinct warning that our reaction to disappointments at the series of peacemaking conferences will not be withdrawal. The worth of these declarations, as an expression of firm opinion within the Republican Party, and within the Nation as a whole, will be tested by the reaction to the specific international agreements reached at the Black Sea and ensuing international conferences. But it is hard to conceive how Dewey, VANDENBERG, and the other Republican leaders who have spoken on foreign policy during the last few weeks could have done more, by words alone, to convince the world that the President, in international affairs, acts for a united Nation. They have attained a high level of statesmanship.

Minnesota Veterans' Hospital Facilities Are Praised by Patient

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. HAGEN. Mr. Speaker, I have known for a long time that the Veterans' Administration hospital facilities in Minneapolis, Minn., rank high among the Nation's hospitals for veterans.

Therefore, I was pleased to recently receive the following letter from a veteran friend who had just spent 8 months in the veterans' hospital in Minneapolis:

MINNEAPOLIS, MINN., *January 17, 1945.*

Hon. HAROLD C. HAGEN,
United States Representative
in Congress, Washington, D. C.

DEAR HAROLD: I was discharged from the veterans hospital January 1 and am getting along very well. Of course, I still use a cane but will be able to dispense with it shortly.

At this time I want to tell you, as I have told everybody with whom I have come in contact, about the wonderful treatment I received there. Everyone from the ward surgeon, who took care of me, down to the most menial of the staff, gave me every consideration. In all the 8 months I was there I never heard a cross word spoken to one of the patients.

Money could not buy the care that we had. If ever you can do anything that will be of assistance to the staff, Harold, I hope you will do so. You can take my word for it, they deserve everything that they can get.

It is so seldom that anyone takes the time to tell them that their work is appreciated that I with you would write me a letter that I can show to my doctor, the head nurse, and a few others, showing that I, for one, feel as I do about that institution. I will appreciate it.

I will be at this address until sometime late in February, when I will go back to Bemidji.

Sincerely,

DAN.

P. S.—Think you should plan on visiting the hospital sometime when you are going through. There are always patients from your district there.

D. J. MOORE.

Italy's Appeal for Justice

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein the appeal made by Premier Bonomi to President Roosevelt, Prime Minister Churchill, and Marshall Stalin:

On the even of decisive military events the Italian Government venture to request that the heads of the United Nations who are now discussing the fate of the new Europe reexamine the very severe conditions imposed upon Italy in September 1943.

At the moment, when earnest exhortation is being addressed to all classes of the Italian nation toward a supreme effort of cooperation with the Allies on the front line, in the rear, and in the patriots' warfare, the Italian Government feel it their duty to emphasize once again that the ambiguous situation of cobelligerency thwarts their efforts to raise and maintain throughout the country that intensity of purpose and determination which can only result from the consciousness of a sacrifice achieved in freedom and dignity.

It is therefore also in the interest of the common cause that the Italian Government asks for a new settlement based on a confident and full association with the Allied Powers in the place of the present one-sided formulas of control and guardianship set up by the armistice.

For the same reason the Italian Government hereby directs to the United Nations their earnest appeal—

1. To see that the Italian people who are still undergoing almost unendurable hardship be granted, particularly in the matter of food and transportation, the possibility of satisfying at least their most elementary needs.

2. To suppress the financial burdens which, by an extensive interpretation of the armistice, has been weighing for 15 months upon

the exhausted resources of an already devastated country and has been hindering any reconstruction and monetary rehabilitation.

3. To afford to one-half million Italian soldiers in Allied hands the possibility of giving their whole contribution, not as prisoners of war but as free men, both in the field and in the factories, to the struggle for a new world to which the whole Italian people devote their will and hope.

The people and Government of Italy are striving for the establishment of a free, orderly, and stable democracy. The Government feels, however, that should the liberation of the most populated and industrious regions of Italy find the country still under the incumbent menace of inflation and hunger and its Government in a humiliating position, for which they are in no way responsible, it would be extremly difficult to allay the causes of unrest, disorder, and discouragement, and to foster in these long-suffering regions the energy indispensable for the reconstruction of a new Italy within a world of free democratic institutions and effective cooperation The Italian Government submit these considerations to the generous understanding of the heads of the United Nations in the full confidence that their appeal will be repaid with the same spirit and loyalty and friendship by which it was inspired and in order that the gallant effort of the Allied armies may bear their full results and that the hopes of the Italian people fighting against the German and Fascist oppression be not frustrated.

We Must Keep Our Sovereignty

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address I delivered at the twentieth annual Lincoln Day dinner of the Lucas County Republican Club in the Commodore Perry Hotel, Toledo, Ohio, February 12, 1945, entitled "We Must Keep Our Sovereignty":

Fellow Republicans, I greatly appreciate the invitation to address you on this occasion. The annual custom of honoring the birth of the great man and statesman, Abraham Lincoln, has always been an important event, but peculiar circumstances attend the present state of our Nation which give it greatly added significance.

Lincoln's great task, as we know, was to preserve the Union. However, we are too apt to think of the service he rendered to his country as having had to do exclusively with an issue between the North and the South. We seem to forget the trouble he had with foreign countries. The record indicates that certain foreign powers were greatly concerned in seeing the Union dissolved. The early covert recognition by England of the belligerency of the Confederacy together with other historical data leads one to conclude that foreign influence must have played an important part in inducing the South to start the war and perhaps also in agitating the slavery question.

In his Twenty Years of Congress, James G. Blaine, who certainly is an authority on the causes of the Civil War, left these lines:

"In Europe, the general opinion, founded in many influential quarters on the wish, was that the Union would be dissolved; that with the success of the South there would be still further division between the East and the West; and that the only compact power would be the Confederacy founded on slavery, with the world's greatest staples as the basis of its wealth and its assured development. We had but recently narrowly escaped war with England on account of the Trent affair, and in the crafty and adventurous Emperor of France we had a secret enemy who saw in our downfall the possible extension of his power and the strengthening of his throne. * * * Confederate bonds were more popular in England than the bonds of the United States. The world's treasuries were closed against us. The bankers of Europe * * * would not touch our securities. Their united clientage included the investors of Great Britain and the Continent, and a popular loan could not be effected without their aid and cooperation. We were engaged, therefore, in a threefold contest—a military one with the Confederacy, a diplomatic and moral one with the Governments of England and France, a financial one with the money powers of Europe."

By intrigue and sharp diplomacy, certain European powers have too often been successful in insinuating themselves into our Government and exercising baneful influence over it. The Revolutionary War was fought to relieve our people of the fetters of foreign exploitation. George Washington, in his Farewell Address, in speaking of the danger of the spirit of party, solemnly warned his countrymen of the ever present danger of foreign schemery when he said:

"It opens the door to foreign influence and corruption, which find a facilitated access to the Government itself through the channels of party passion. Thus the policy and will of one country are subjected to the policy and will of another."

However, the troublesome influence which was wielded in the United States by foreign powers met more than its match in Abraham Lincoln. He subdued it and in doing so once more restored to our people their national sovereignty, the power to be master of their own house.

Now once more we see intervening in the affairs of our country the same baneful foreign influence with which Lincoln had to contend, but on a much greater scale, and it is this about which I wash to speak to you tonight.

We are hearing much these days about the need for world government. We are told that this becomes necessary because of the great havoc wrought upon civilization by modern implements of war, and that unless super-government is established and given sufficient police power to prevent wars, civilization is in danger of being annihilated.

Those who further the cause of world government invest their creation with grandeur and the most laudable objectives. It would bring about better relations between nations, greater cooperative spirit, abolish war, and bring everlasting peace and goodwill to mankind. And they warn us that, if their plan is not adopted in toto, more terrible wars will follow and the world will be plunged into chaos and night.

The terms internationalism and isolationism are being used by the proponents of the new world order as representing two opposing schools of thought dealing with this proposed scheme. It is presumed by them that internationalism favors the plan while isolationism opposes it.

Judging from the attitude taken by the powers that be in Washington, and some other quarters, internationalism is something entirely new in the world and is of a highly, magnanimous and benevolent nature, which if adopted will bring to all the nations so much mutual goodwill and affection for each other that the causes of international strife will disappear.

On the other hand, isolationism, so these forces tell us, is a wicked thing and by its very nature just the opposite of internationalism, greedy and malevolent in the extreme, and if allowed to have its way will further muddy the waters of international relations, add to the strife among nations and lead the world into greater tribulation.

Now it is not my purpose this evening to indulge in any subjective examination of the position which the administration takes on this subject. I propose to present to you some objective observations respecting this proposed plan for a world government which are based upon ascertainable facts.

However, before proceeding with my discussion, I must pause to object to the monopoly which the administration seems to feel it possesses of being the sole judge as to what really constitutes so-called internationalism as well as so-called isolationism. Though we have perhaps lost much of the foundation of our liberty, we still have enough freedom left to express at least a modicum of independent judgment.

I further object to the administration's calling every one who does not agree with its foreign policy an isolationist, and its presumptuousness in defining this term as being obstructive and inimical to human progress.

As you know, blueprints have already been made for constructing some of the main parts of the political machinery which is to constitute the proposed world government. By examining these blueprints we ought to get some idea as to the true nature of its parts, what the finished product might look like, and how it would be likely to work. Of course, in the brief time at my disposal it is impossible for me to do more than touch upon a few high points. It would require many hours to explain in detail the plans which have been drawn up for creating this proposed scheme.

Two units of the international political machinery are now in process of being assembled. They are the Dumbarton Oaks proposal "for the establishment of a general world organization," and the Keynes-Morgenthau scheme or the so-called Bretton Woods proposal for an "international monetary fund and bank for reconstruction and development."

The Dumbarton Oaks proposal provides for establishing a world general assembly. Forty-five countries would become members and each country would be entitled to one representative.

The general assembly would have the right to consider the general principles of cooperation in the maintenance of international peace and security, including the principle governing disarmament and the regulation of armaments, etc. Each member of the general assembly would have one vote. The United States would have one vote, Iceland one, Haiti one, and so on.

In addition to the general assembly there would be established the security council. This would consist of 11 members, 5 of whom would be permanent and 6 nonpermanent. The United States, United Kingdom, Soviet Union, China, and France would be entitled to permanent seats in the body.

The security council would "be empowered to take such action by air, naval, or land forces as may be necessary to maintain, or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of members of the organization."

This means that, should this proposal be adopted, the Congress of the United States would lose the power to declare war which the Constitution vests in it.

Under the Constitution the Congress has no authority to give away its power to declare war. It would be the grossest violation of the Constitution for the Congress to divest itself of the power to declare war without the Constitution having first been amended.

I am against Congress surrendering to any foreign nation or group of nations any of its power to declare war, with or without an amendment to the Constitution, and so are you.

We would lose our national sovereignty should Congress pass this provision.

Let us now examine a few of the more important provisions contained in the Keynes-Morgenthau scheme, or what is called the Bretton Woods proposal for an international monetary fund and bank. I shall discuss only that part of the scheme relating to the international monetary fund.

I refer to this proposal as the Keynes-Morgenthau scheme, because it was concocted by Lord John Maynard Keynes, who is an adviser to the British exchequer and Governor of the Bank of England, and because it is being promoted in this country by Henry Morgenthau, Secretary of the Treasury.

At about the same time in 1943 London made public the Keynes' plan for an international clearing union, and Morgenthau's proposal for an international stabilization fund. Mr. Morgenthau later released two revised drafts of his plan.

A reading of the two proposals showed that Mr. Morgenthau's monetary experts had done little else but set up in legislative draft form the essential provisions contained in the Keynes' scheme. Nor has the Bretton Woods proposal for an international monetary fund changed this situation.

All of its important provisions stem directly from the Keynes' plan.

The primary motivation for the creation of this scheme is the financial distress and weakened trade position in which Great Britain fears she may find herself after the war, and her desire to restore London to its former position as the world's banker.

One of its main objects is to place United States gold stocks and other resources at the disposal of the British Government for the support of the pound sterling. It is no secret that London hopes, through this scheme, to help it regain its position as the world's financial center.

Let me quote here Lord Keynes himself on this point. In presenting his scheme to the House of Lords, he said:

"So far from an international plan endangering the long tradition, by which most empire countries, and many other countries, too, have centered their financial systems in London, the plan is, in my judgment, an indispensable means of maintaining this tradition."

At Keynes' suggestion, Morgenthau's two first draft proposals contained a provision which would have required the United States to underwrite and assume debts, which then amounted to four or five billion dollars, which Great Britain owed to India, Egypt, South American, Scandinavian and other countries.

The language used in writing this provision was complicated, even weird. It seemed to resemble hieroglyphics more than English.

Anyway, it was unraveled and its hidden purpose revealed, whereupon Mr. Morgenthau got out another draft in which he omitted the provision to finagle the United States into assuming Britain's foreign debts. That provision is also not contained in the Bretton Woods proposal. But this does not mean that the United States would not pay those debts should this proposal be adopted. On the contrary, the Breton Woods proposal could and would be so operated as to make us pay Britain's foreign debts.

Now just who it is that would pay those debts, and how would they be paid? You people right here in this room would help pay them out of your hard-won earnings. You would have to give up some of the fruits of your own labor to pay them. That should be plain to you.

Do you know any reason why we should pay Great Britain's foreign debts?

It is, of course, all right if you want to do that. But in any event you would probably like to have the Administration lay its cards on the table face up so that you might see just what is being dealt out to you, instead of having it secretly reach into your pockets and relieve you of their contents.

Do you see what can happen to you when we lose our national sovereignty, how this makes possible foreign intrigue in our Government to take by sly and subtle means the bread from your mouths?

The Keynes-Morgenthau scheme provides for a capitalization of $8,800,000,000. Of this amount the United States would furnish $2,750,000,000, or about one-third of the total. Each country would pay in a certain amount of gold on the one hand, and paper money on the other.

However, since our dollars are internationally convertible into gold at their face value on demand and is, therefore, the same as gold, our entire subscription would be in gold.

This would not be true of most of the currencies paid in by the other countries. A goodly portion of the money they paid in would not be worth its face value and some of it would be almost worthless.

But the arrangement which this scheme sets up makes it possible for the weakest currencies to buy just as much goods as the strongest. I cannot go into the technicalities of this arrangement, but suffice it to say that the reason why the poorest quality money in the scheme would buy just as much as the best is because of the gold and dollars the United States would put into it.

One of the main objects of the plan is to strengthen the weak currencies of other countries with United States gold and dollars.

Now the point here is that, by as much as the resources of the United States gave purchasing power to the currencies of other countries, we would be giving away our goods. In other words, the arrangement would have the effect of lifting up the standard of living of foreign countries and pulling down our standard of living. Do you want your earnings taken away from you in that manner? Do you want the United States to become part of a scheme which will make you give away some of your goods and which will have the effect of lowering your standard of living to the level of that in foreign countries? I do not want that to happen, and neither do you.

We must keep our sovereignty and make it impossible for foreigners to persuade our Government to secretly permit them to take advantage of us in this way.

The scheme would serve largely as a lending agency. The countries belonging to it would be divided into two groups, lenders and borrowers. The United States would become the principal, if not the sole, lender. One country's credit would be no better than that of any other. Credit worthiness of a member country would not be considered by the scheme in making loans to it.

About 20 of the countries that would belong to the scheme have defaulted on their international debts. But that would not affect their credit standing. In fact, it would appear that the poorer its credit the better off a country would be. Again let me remind you that it would be some of your dollars that the scheme would lend to foreign countries.

It is conservatively estimated that the United States would furnish approximately 70 percent of all the lendable funds in the scheme, yet, we would have only 27 percent of the voting power. The borrowing countries would have the majority of stock and would control the lending policies. Why should we allow ourselves to be duped into a crazy thing like this?

We tried a so-called foreign lending scheme something like this once before. During the armistice after World War No. 1 and the twenties you people, along with the rest of us, loaned or, to speak truthfully, gave away, and without knowing we did it, many billions of dollars to European countries.

Those countries used the dollars they got from us to buy our goods. Our factories boomed, stocks zoomed, speculators went crazy, and everybody felt himself getting rich. Then when the well went dry along about 1928 or 1929 the balloon bursted and we were caught in the crash. The foolish idea we had that we were getting rich was completely deflated and a lot of us found ourselves in the poorhouse.

Now it was the making of those phony loans to foreign countries that was largely responsible for the boom in the twenties, the crash in 1929, and the depression which followed. And the depression provided those conditions out of which the Roosevelt administration concocted its synthetic emergencies with which it destroyed our honest money, gold, undermined the Constitution, put us on the road to regimentation, and opened wide the portal of our Government to foreign influence.

One of the most sinister provisions in the Keynes-Morgenthau scheme is that which would take from the Congress of the United States the control of our money and give that control into the hands of the international crowd which has contrived this scheme. Our Constitution vests control of our money in the Congress of the United States.

Under the scheme, any control over our money remaining to the United States would be vested in the President. However, some of the control over our money which would be taken from Congress would go to Stalin, some to England, and so on.

There is no provision in the Constitution that is more valued or better known to the American people than the one which vests in the Congress the power over our money. Time and again our courts have been called upon to consider this grant of power and without a single exception they have ruled that Congress and Congress alone possesses all power over our money.

Yet, here we have this brazen Keynes proposal, embodied in the form of a tentative international agreement, which Mr. Morgenthau, Secretary of the Treasury, is vigorously promoting, and to which our President has subscribed, to make it possible for a group of international schemers to take from the Congress of the United States the sovereign power over our money, the very essence of the entirety of our sovereignty. Has our Nation so completely lost its soul that the perpetration of this can be possible? I do not believe it has and neither do you.

Then there is a provision in the scheme which would give Stalin, Roosevelt, and the British Government the power to lower or debase the gold value of the money of all the countries belonging to it. This would make possible universal repudiation of debts among all the member countries, which is the purpose of this provision.

Do we as a nation want to defile our long and faithful record of performance in always meeting our international commitments by becoming part of a scheme, one of whose sinister purposes is universal welshing on international debts and giving to such deed respectability by legalizing it? I do not believe we do, and neither do you.

It is hard to believe that any responsible citizen of the United States could even seriously suggest that the Congress should surrender to this international crowd its power over our money, and to have the United States engage in a program whose purpose is to make it legal for governments to cheat each other out of paying their debts. But I assure you that this shall not pass with my vote. However, this proposal would not stand the least chance of passing if our people were properly informed as to its true significance.

It must not be thought that the $2,750,000,000 which the United States would put into the scheme would be all of its contribution. That would be only a starter. After it was set up the President would be empowered to put any additional amount into it he cared to.

Should Congress pass this proposal, you people assembled in this room must expect to pour more and more of the fruits of your labor into the bottomless pit of this scheme.

Some of you may recall my having attended the International Food Conference at Hot Springs, Va., in the summer of 1943. You may also remember how unwelcome was my presence there. Nevertheless, I did get in and I saw much. I learned that the delegates gathered there had comparatively little real concern about food, that this term was used largely as a cloak to hide their real designs. The principal interest of most of the foreign delegates seemed to be in establishing a world government and bank financed by the United States, where they could go and borrow money. International cooperation meant to them getting something from Uncle Sam for nothing.

But I want to relate something I saw there which I am sure will interest you. The Soviet delegation played a very prominent role at that meeting. It consisted of 12 members. Alexy Krutikov was its chairman. Alexy Krutikov was second vice president of the Conference. Alexy Krutikov was a member of the executive committee. Alexy Krutikov was a member of the steering committee. Alexy Krutikov, according to press reports, was chairman of the drafting committee. Alexy Krutikov was chairman of section 2, which was given such subjects as the following for consideration and to make recommendations relating thereto:

(a) Credit or capital developments.
(b) Cooperative services.
(c) Land tenure.
(d) Other similar activities and education.

What kind of consideration would it be expected Stalin's agent would give to these questions as they relate to the United States? Is it thought he would consider our system of private ownership of land and other property, good or bad, according to American standards or Russian standards?

Are we to believe Stalin sent his delegates to Hot Springs to persuade him to institute in his own country a system of private ownership of farms, as we have in the United States, or that he sent them over here to persuade us to adopt his system which prohibits the ownership by any person of even a single foot of land.

Was not the answer to this question given when, according to a news dispatch from Hot Springs, Russian influence was detectable in a proposal that was made advocating community farming?

Then came the final session, the grand climax of the whole affair. Alexy Krutikov was accorded the high honor of moving the adoption of the recommendations made by the conference. The delegates went wild with excitement apparently intoxicated with their own achievements; Judge Marvin Jones, chairman of the conference, rushed over to Alexy Krutikov, head of the Soviet delegation, embraced him in a bearlike hug and thumped him on the back, which was heralded as symbolizing the conference's great success. (Washington Times-Herald, June 4, 1943.)

If this administration is not planning to sovietize the United States, why did it invite Stalin to send his emissaries over here to tell us that we ought to have the same kind of economy and government as he has?

Now put to yourselves this question: With this examination of the blueprints for some of the main parts of this proposed political machinery, how does it look to you? Do you see in it the hope of the world as painted by its designers? Does it appear to you that the finished structure would be so constituted as to make for everlasting peace and good will among all men? Or do you feel as did Lord Keynes, whose ingenious brain contrived this scheme, and who therefore, ought to know, when in a speech before the House of Lords, during a slight mental lapse, let the cat out of the bag by saying:

"There is one important respect in which the British proposals seem to be gravely misunderstood in some quarters in the United States. There is no foundation whatever for the idea that the object of the proposals is to make the United States the milch cow of the world in general and of this country (England) in particular."

Honest and square dealing never needs defense.

I have been criticized for opposing this scheme without offering a substitute for it. Fellow Americans, there is no substitute for this propsal, and can't be any. One does not think of substituting something else for dishonesty and crime, or in any way compromising with it. One thinks only of avoiding or destroying it.

If England or any other country wants our help, let it come to us with its proposition face up so that both of us can see what we are signing.

The most good we can do England right now is to refuse to have anything more to do with Lord John Maynard Keynes, because I believe he is as dangerous to his own country as he is to ours. Lord Keynes is perhaps the most effective apostle of phony money that ever lived, and has John Law backed clear off the map.

We will win the war against Germany and Japan. There is no question about that. But we face a foe which may test our souls as much as has the war.

That enemy is "the insidious wiles of foreign influence," as Washington called it, and which he warned us "is one of the most baneful foes of republican government."

Should any of you doubt my appraisal of the seriousness of this situation, pause for a moment and reflect upon the following statement which was made by our Secretary of State, Mr. Stettinius. When he was asked by news reporters to explain the various failures in Poland, Greece, Italy, and way stations, Mr. Stettinius replied:

"Gentlemen, don't you see, we are to some extent at least the prisoners of our allies in these matters?"

It is the foreign influence and intrigue that is primarily responsible for undermining the Constitution and destroying our liberty. There is no hope of our being able to stop the everincreasing drift toward communism until we rid our Government of this evil.

Now, when this scourge is frustrating our hard-earned and God-given right to be masters of our own destiny and to enjoy the infinite blessings of a truly sovereign nation, we must invoke the true spirit of nationalism of the immortal Lincoln who in his time vanquished and thrust from our midst this baneful foe of the Republic.

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign States; a perfect Union; one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies."

Lifting of Racing Ban Urged

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD a letter and memorandum from David A. Buckley, Esq., of New York and Virginia, a distinguished member of the bar and a well-known breeder and owner of horses, analyzing the situation resulting from the racing ban issued by Justice James Byrnes on December 26, 1944.

If Mr. Buckley's facts and contentions are true, I cannot see how a continuance of this ban can be justified. I have today forwarded the originals of Mr. Buckley's statements to Justice Byrnes for comment. It follows:

NEW YORK, *February 16, 1945.*

Hon. WILLIAM B. BARRY,
New House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Inasmuch as you are the representative from Queens in which most of the important race tracks of New York State are located, I call your attention to the statements issued by Mr. Justice Byrnes on December 26, 1944, which virtually stopped racing in America.

The various racing authorities and all concerned with racing have since then expressed their desire to cooperate and, indeed, the record of racing groups during the past year, by their donations and accrual of large funds for charitable purposes and for purposes in connection with the war, have demonstrated this.

However this advice was issued without much discussion, if any, and the facts which are gradually developing show that it may cause unnecesary hardship and loss without serving any substantial purpose.

The ones who really suffer on account of the stoppage of racing are the small horse owners and trainers, employees, and the small breeders throughout the country. I would estimate that at least 75 percent of the race horse and breeding interests in the country are represented by small owners and small breeders.

The large owners and large breeding interests can continue without much trouble until racing is resumed.

However the small breeding groups will have to curtail their operations and the small horse owners will virtually be pushed out of business. Of course many of them probably have already sold out because the numbers which could be shipped out of the country are comparatively small.

It will be found, I believe, upon examination, that the employees of the tracks or in other parts of the racing picture were pretty well located either in the armed forces or in war work before this order was issued. Comparatively few were available at the tracks, at least from my personal observation. I saw very few who would be much in use in the war effort. The remaining grooms and others were men chiefly along in years who had been working all their lives in this one occupation.

In addition, in the New York area, according to the official records of the War Production Board, there is no labor shortage as this is known as No. 4 area, that is an area in which there is plenty of labor.

This is further shown by the fact there have been huge lay-offs and by the fact that there are more than 1500 factories in this metropolitan area which are vacant or are not being operated.

Amongst the others who suffer from this order are the States which are deprived of taxes in a very substantial manner.

Practically the only object, if the manpower is eliminated, is the so-called absenteeism.

The figures which have been released in the newspapers show that in the Hollywood area, the absenteeism the month before racing was commenced was greater than it was during the racing period.

There are sufficient facts concerning absenteeism throughout the country to demonstrate that one amusement extra in an area does not make any difference in war work.

I know from plenty of experience which I have had in plants that I have run in various sections of the country that absenteeism is something which arises from excess moneys, the fishing season, the hunting season, and other reasons, separate and distinct from any particular amusement.

In many families where there are three or four people working, it is necessary at times for a certain amount of absenteeism to occur because the people in the family have no chance to be with each other and even to do such small things as shopping. The result is that they take a day off now and then for these purposes.

Diverting from the subject for the moment, the reservoir of manpower in this country is in the efficiency or in the use of manpower now available.

For instance, in one plant in which the Navy took an active part the total number of employees was reduced from 12,000 to 7,000, a saving of 5,000 employees and yet the plant had a greater production than it had before.

I imagine that if all the bin of racing was scraped to the bottom, there would not be 5,000 war employees secured throughout the entire country.

The racing associations are not likely to suffer very much, even if racing is not resumed for some time, because whatever profits they made were pretty well taken in taxes as very few of them have a tax base sufficient to offset excess-profits taxes.

The result thereof is that the breeding interests in this country, if racing is not resumed, at least in part, will seriously suffer and the breeding of horses which has occupied the time and money both of individuals and the Government for a long time, will be considerably lessened. The possible export markets for breeding in this country will be turned over to the British and the United States for all of these sacrifices will have to look to racing continuing under certain conditions in England, France, Egypt, India, Australia, and various South American countries, while it is stopped here.

Under the circumstances I think that as a breeder and an owner of horses, I am entirely warranted in asking you to inquire into this situation not only on behalf of small breeders and small horse owners in this country but also on behalf of your constituents and the interests of New York State resulting from taxes created within the boundaries of your own district.

Sincerely yours,

DAVID A. BUCKLEY.

Supplementing my letter of February 16, 1945, I give you herewith information as to many details:

1. Racing in New York is held at the Jamaica, Aqueduct, and Belmont tracks. The first two are in Queens, in the city of New York, and Belmont is just over the New York City and Queens line at Elmont. It is next to Queens Village. Each of these tracks is served by the Long Island Railroad, and by subways and busses. The remainder of flat racing in New York State is negligible. Trotting races exist throughout the State at county fairs principally and serve large crowds—fairs like Syracuse and Mineola and the main trotting meets at Westbury, Saratoga, and many other places.

2. The tax income of the State from racing amounts to approximately $30,000,000, and is mostly from the three tracks mentioned above.

3. Horses at the tracks are cared for by grooms, exercised by riders, and ridden in races by jockeys. The grooms now left at the tracks are mostly old men who have been in that line all their lives. There are about 12,000 race horses in the United States and 1 man can take care of 3 or 4 horses. The total in this service is therefore about 4,000. One exercise rider takes care of from 6 to 12 horses. Therefore there are about 1,000 to 2,000 riders at tops. As to jockeys, I have seen figures of 500. Of course, many of the jockeys also exercise the horses in the morning, so that there are only about 100 jockeys outside of the exercise boys. The grand total of all above at maximum is therefore about 6,000. If racing is abolished, about one-half of this force will still be necessary, unless the horses are all shot and buried now. The saving in manpower or the use of more men is therefore negligible.

Horses at the farms include stallions, mares, weanlings, yearlings, pensioners, and injured horses. There are about 6,000 foals registered each year, which would indicate that there are between nine and ten thousand mares. Weanlings and yearlings at the farms would equal that figure, so that we have about 20,000 on the farms. This makes 2,000 now in that work. At the present on the farms children are helping after hours, as in most places the younger men are gone. I doubt whether a total of 2,000 men are in this work. On Virginia records it would show a total for the country of 1,200.

The above are all the labor involved if the thoroughbred horses are allowed to continue alive.

If they are all shot, the feed will be saved and the few farmers engaged in this eliminated. Their business will also, of course, be eliminated and the values of their farms destroyed. The international trade in thoroughbred horses will then go as a monopoly to England.

4. If racing is operating, there will be in the period from April to November one track always operating in New York, one track operating in the Middle West, and one track operating in New England. During part of this period one track will be running in New Jersey, Maryland, Kentucky, Florida, and California. Some small racing goes on at half-mile tracks during this period in Rhode Island, Maryland, and Ohio. There is hardly ever more than one track operating at any one time, and dates are awarded to the different tracks so that their meets do not conflict. During the rest of the year—that is, December to April—so-called winter racing exists in Florida, New Orleans, Hot Springs, Ark., and California.

It is entirely possible to do all the racing in the New York area at one track, all the racing in Chicago at one track, divide New England into three divisions, use only one track in Maryland, New Jersey, Florida, California, and Kentucky. If all winter racing were abolished, it would not be badly missed, except by the State of Florida. Horsemen got along without winter racing for a long time.

Since racing normally operates in any vicinity in one track at a time, the number of help involved is limited, as they move from one track to another. Restaurant help, mutuel employees, etc., are the same at each track. In other words, all the employees who have to serve the crowds are the same at each track. There are about 500 in each locality and in this respect some localities take the same men as others. For instance, Stevens Catering serves Maryland, Florida, and New York. The mutuel employees also move to the winter tracks. For all practical purposes, therefore, the total crews necessary include 1 for New England, 1 for New York, 1 for the Middle West, and 1 for the coast. This would make a total of about 2,000. These consist of middle-aged clerk types, waiters, etc. A good many of these could get other positions as waiters. Many are located in labor areas, such as New York, where there is unemployment at present, and most of them are over 45 years of age. Anyone who has seen the waiters and mutuel clerks will tell you they look more like an average of 60 years at present.

5. The above is the story of racing. It is not a big story, as the facts show. It is highly publicized, of course, as all matters of public entertainment are. The engaging element of chance lends it romance. Its history and tradition and the superb beauty of the thoroughbred horse make it a universal attraction.

6. Racing in other countries is continuing—England, Ireland, France, Egypt, India, Australia, Canada, Mexico, and various South American countries are all operating.

7. Our country as a breeding center was badly smashed in the early part of this century through the action of Governor Hughes in New York. Our horses were shipped out to France and England. During recent years we have been reestablishing our breeding, and our American lines are being accepted throughout the world. England is constantly trying to block us because this is an important agricultural industry. However, we have American lines of breeding which do not exist in England, and we are well on our way to compete successfully in this field, which will make us friendly relations in many parts of the world.

The history of breeding shows that it is important to all lines of agricultural activity to encourage the study and practice of breeding. The concepts developed for the breeding of horses bring forth minds thinking for perfection. The breeding of other animals is greatly affected and helped. England with its Guernseys and Aberdeen Angus and supremacy in many breeding lines is a perfect example.

So you see the story of racing is the story of breeding of the land, the farm, and the thoughts of people.

If it touches the romance of chance, the thrill of a great victory, it is all in balance, a harmony of people on the land and in the cities.

DAVID A. BUCKLEY.

The Job Budget

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Moley from Newsweek of February 19, 1945:

THE JOB BUDGET

(By Raymond Moley)

Whether March comes in like a lion or a lamb for the proposed new Secretary of Com-

merce, the country is indebted to Mr. Wallace for a revealing lesson in political economy. For that candidate for the Commerce job has presented the first detailed plan for spelling out the promise of 60,000,000 jobs. Since his plan was created through the collaboration of several members of the administration, it bears the stamp of an authority transcending in importance his own fortunes. It richly deserves analysis.

The proposed "job budget" involves the source of the 15,000,000 jobs between the 45,000,000 of 1939 and the 60,000,000 promised.

First, it is proposed that 5,000,000 new jobs, which is half the size of our entire industrial employment for 1939, be used in building new plants and factories. This would mean that in 2 years we would add to existing facilities a brand new industrial plant twice as large as the whole pre-war British industry. The money for such expansion could hardly be expected to come from private creditors, since no banker in his right mind would fail to note that we were not fully using our plant capacity in 1939 and that we have since built a new war industry at a cost of twenty-two to twenty-five billion dollars.

Mr. Wallace said that "the Government should recognize its responsibility for sharing part of any special or abnormal risk of loss attached" to such financing. Mr. Wallace's statement on this point concluded with the sentence: "And this does not include the workers who would be needed to operate these plants after they are built." I add this because, at this point, the reader must believe that I am misrepresenting Mr. Wallace's proposal. I confess that I returned to the text of his Senate testimony again and again to be sure that my eyes had not deceived me.

In describing the way in which government should finance the new construction, Mr. Wallace made a comparison with the F. H. A. guarantee of new mortgages on homes and was immediately confronted with the crucial difference between financing a new business and financing a home. It is the difference between a loan and equity financing. When pressed on this point, Wallace said he would like to present "details" later.

When the Government guarantees a loan on a home and the owner loses the home, another owner moves in. In most such cases the F. H. A. doesn't lose. If the house cannot be sold for enough to cover the mortgage, the F. H. A. loses a small percent of its guaranty, but even this is covered by the insurance premium of one-half of 1 percent paid annually by all F. H. A. home owners.

But if a grocery business or a small manufacturing plant fails, the business practically disappears. And even in piping times, only 30 percent of new groceries live to be 2 years old. In such failures, the Government which provides equity capital loses most of its investment. If the Government is willing, the proprietor may even get money to try again. It should be said further that when a new manufacturing business is opened with new machinery, some older plant will probably lose out. It will, that is, if the new plant succeeds. No measure is provided in the job budget for this consequent loss of employment.

The next item in the job budget is 3,000,000 jobs created by increasing foreign trade threefold. This is a commendable ideal. British expectations are more modest, for the British seek an increase of only 50 percent in foreign trade. When Senators pressed Mr. Wallace about "what the people abroad have to sell us," he answered: "They have tourist service." The amount of new foreign trade which could be covered by tourist service could hardly be expected to employ even a small fraction of the 3,000,000.

Another figure on the list is 2,000,000 jobs in home construction.

The final item in the job budget was unemployment doles and increased social-security payments to 5,000,000 persons. These payments more properly belong in a leisure budget. They do not involve jobs. Perhaps this is why Mr. Wallace reduced the 60,000,000 total to a "floor" of 57,000,000. Maybe that floor is not too delicate to sustain Mr. Wallace, but his heft is apparently buoyed up by celestial wings.

Crimea Compact

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of February 14, 1945:

CRIMEA COMPACT

Day after day, night after night, whether skies smile or snow falls on the home front, young men, fighting to defend their Nation and restore freedom to the world, are being wounded, become prisoners, or die in action.

Day after day, night after night, by wire from Washington, the news that these young men have been injured, have been imprisoned behind barbed wire, or have died the deaths of heroes, comes to the homes of the high and the low throughout our land.

Day after day, night after night, exactly 27 years ago, on the same terrain, against the same foe, and under the same conditions, other young men whose sons fight now were being wounded and imprisoned, and some were dying.

To those who fight so bravely now, and to those who so bravely wait at home for the doorbell to ring; to those to whom the war is not a headline but a heartbeat; to those who have not only an altruistic stake in it, but a very human one—a human life, the compact of Crimea will be especially appealing in its major aspects.

It had a ring of action to it in its pledge to shorten the war with blows at Germany from all points of the compass. It had a ring of tough determination in its pledge to cut out the German canker which for decades has been the sore spot of the world. And it had the ring of confidence in its pledge that this time the peace to be made would keep for more than a generation.

It bears out the very thing we hoped for and which our foemen hope against, that the proceedings would be carried out in a harmonious atmosphere and that the three great powers who must preserve the peace would be drawn closer together. Considering each leader naturally thought of his own land first, such unity was miraculous.

It is not a perfect compact because it will not please everyone. But it would be hard to find any compact, worked out by men with finite minds and signed with human hands, that was perfect. Many times that magnificent document, our Constitution, has been amended to meet, not in an idealistic way alone, but in a realistic way, the changing world in which we live.

But it is progressive. It is better than anything the combined freemen of the world ever had before in the way of agreements. It aims in a more definite, concrete way to bring to pass the ultimate thing for which young men bear wounds, suffer imprisonment, and offer up their lives—peace.

What abrasive points and unsettled problems remain, we can hope, in the light of what has been accomplished, may be ironed out more satisfactorily at future meetings. That is not impossible. We traveled a long way from Teheran to Yalta.

But in all considerations of the compact, there is one which cannot be ignored. The Nazis, for home consumption, called it a hate program. It was a clever designation. It was far-sighted. It held out a tiny ray of hope for them and a warning for us.

They did not expect any love program as far as they were concerned. They called it a hate program because they were sowing a seed, the seed of the Third World War in German hearts against the day, if the day ever comes, when the Big Three bicker and fall apart, and the purpose of the Crimea Compact is forgotten—peace, lasting peace.

Mr. Wallace's Pay-Off

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following article from the Christian Century:

MR. WALLACE'S PAY-OFF

(By Oswald Garrison Villard)

The President put himself so thoroughly in the wrong in his ousting of Jesse Jones that it is impossible to withhold some sympathy from the ex-Secretary of Commerce even if one has heretofore not been enthusiastic about him. Franklin Roosevelt has the reputation of being one of the cleverest of politicians. Yet every now and then he makes a blunder so crass as to seem inexplicable. This is one of them. Whether he expected that Mr. Jones would not publish the letter of dismissal, or whether he just failed to appreciate how it would appear in the public prints, he signalized the beginning of his fourth term with an act of what would have been called pure stupidity if done by one of his immediate predecessors in the White House. After exalting Mr. Jones and his work without any reservation, he put on paper cold-bloodedly the reason why he was being ousted, telling him that he was being dismissed because the man he probably dislikes more than any other in Washington wanted his job.

ATTITUDE TOWARD OFFICE

This revelation of President Roosevelt's attitude toward high office, this fresh proof of how lightly he takes the Cabinet of the United States, is astounding in a veteran of 12 years in the Presidency—to put it as politely as one can. Even a tyro, one would think, would have written a graceful, quiet note expressing his sorrow that the present relationship must terminate and the hope of further cooperation in the service of the country. But no. Something drove the President to let the daylight in on the whole transaction. There for everyone to see is the usual Rooseveltian performance—the "Dear Jesse," the familiar tears of oh, such profound regret, and such moving thanks for the superb public service rendered, and then the offer of a nice ambassadorship to salve the wound, just as in the case of Adolf Berle, who has been shipped off to Brazil—without mercy for the Brazilians. Add to this the President's frank confession that Henry wanted Jesse's job and would not take any other, with the reminder to Jesse that after all Henry really did the best service of anybody in helping to re-elect the donor of all

these good things, and you have a perfect picture of the way public office is bandied about by the President. There is no pretense that the public interests were respected or that Henry Wallace was fitted for the new job. He wanted it, he had earned it, and so Jesse must go.

THE "SPOILS" PHILOSOPHY

This is the sort of thing we used to believe was restricted chiefly to the bosses of petty and crooked political machines, who regarded public office as private spoils. It was the fundamental philosophy of Tammany Hall that the fellow who worked hardest for the success of the ticket got the best job. It constituted one of the greatest difficulties before the civil-service reformer. The one thing that does not enter the picture in the Wallace case is whether this move will in any way facilitate the reorganization of this country's economy and commerce when the war is over. Mr. Wallace has many valuable qualities, including courage and determination to carry on the historic fight to free the political life of this country from the domination of big business. Without question he has been more loyal to the New Deal than many of the avowed New Dealers. He was badly treated at the last convention, Vice Presidency being taken away from him only because the President betrayed him, yet he took that betrayal with Christian charity and forgiveness. He not only showed no ill will or anger, but, as the President says, spoke for his reelection with greater zeal and devotion than any other of the leading Democratic politicians. Even that, however, does not entitle a man to a Cabinet seat which, whatever may have been the past practice, ought certainly to be awarded for something else than campaign services. But the President told the newspapermen only a couple of weeks ago that "Henry won't starve" in the next 4 years, and so a job had to be produced, and Henry was so unkind as to refuse anything but Jesse's.

WALLACE SHOULD HAVE REFUSED

I submit that if Henry Wallace were as fine a man as he was before he took public office and got into the political game he would have scorned an appointment obtained and bestowed in this fashion. However much he may hate Mr. Jones, it would seem as if he should have—if the President has not—a greater respect for public office, and especially for the Cabinet, than to insist upon forcing himself into a post for which he is not qualified either by his experience in life or by his relationship to the business community. Surely the President might have prevailed upon him to take the office of Secretary of Labor. The ex-Vice President is extremely popular with labor, and the office of Secretary of Labor is now so completely stripped of important functions that Mr. Wallace would have had the opportunity to play a really useful role as a sort of "minister without portfolio," with permission to give time and attention to developing some of the innumerable policies for our postwar reorganization about which Mr. Roosevelt has no time to think. But no, he had to be Secretary of Commerce.

This has naturally recalled the open break between Mr. Wallace and Mr. Jones, and their public attacks upon each other in 1943, which led the President to remove Mr. Wallace from the additional job he was then holding as head of the Board of Economic Warfare. The suspicion that Mr. Wallace saw his chance to get even with Secretary Jones will forever persist. Should the Senate reject the nomination or restrict the secretaryship to its original purposes, without the tremendous additional powers bestowed upon it since the war began, it would at least let the world know that there are some Americans ready to protest against this method of dealing with the Cabinet when the United States is in the greatest crisis in its history. Unfortunately the case will hardly be decided on its merits. Too many of the judges are themselves deeply immersed in the game of dealing in offices, and tied down by party affiliations. There will be much less concern with the injury done the public service by President Roosevelt's letter than desire on the part of the reactionary Democrats, especially those from the South, to vent their personal grievances.

REHABILITATION OF CABINET NEEDED

What the hour called for was obviously a complete rehabilitation of the Cabinet. But the truth is that the President has never respected the Cabinet, has never regarded it as a body of men to counsel with him in regard to national policies and literally to share with him the responsibility for those policies. He has wanted yes-men, as did Woodrow Wilson. It will be recalled that the situation got so bad under Wilson that Mr. Lane and other Cabinet members consulted as to whether they could move the President to tell them what he was planning to do; for example, during the Lusitania crisis. But never has the Cabinet reached so low an ebb in this respect as under Mr. Roosevelt. Of late years there have not even been regular Cabinet meetings, and there can be no question but that its members have often known no more about what was taking place, what national and international policies were being formed and put into execution, than any intelligent newspaper reader. I have heard it stated unqualifiedly by persons in a position to know, that no dispatch came through to the State Department during the conferences at Cairo and Teheran to tell Mr. Hull or anybody else what was going on.

Need anyone look further to ascertain why it is that the President is such a bad administrator? He will not cooperate with others, however much he may expect them to cooperate with him. As has been pointed out in the case of the State Department, he has deliberately worked against subordination by dealing directly with lesser officials—for instance, with Consul General Murphy in the North African matter, and constantly with Sumner Welles—until Mr. Hull's patience wore out. Insubordination has been an outstanding feature of the Roosevelt administration, yet it is certainly impossible to blame cabinet members when one of them assured me that for months and months he had not been able to present his needs and desires to the President. Even that is by no means as bad as the revelation in the President's letter to Mr. Jones that the work Mr. Wallace did for the success of the ticket is the only reason "that I am asking you to relinquish this present post for Henry."

ANOTHER BLOW TO DEMOCRACY

The seriousness of this Wallace episode lies in the fact that it is another blow at our democratic machinery and its standing in the eyes of the world. But the President does not see that he is endangering our democratic processes and giving the totalitarians among us another opportunity to indict our republican form of government. He sees nothing whatever wrong in Miss Perkins' drawing her salary at her empty desk when the most important functions of her department are divided between 10 or 11 different bureaus, boards and commissions. It does not occur to him that, especially in wartime, waste, duplication of effort, inefficiency and working at cross purposes by consent of the Chief Executive are far more dangerous to the Nation than any strike or outright treason of that American boy who has just been captured in his effort to play the spy upon his own country.

The President has never shown an understanding of how far the influence of a bad example in the highest office carries, and how deeply it affects multitudes who think that the man in the White House sets the proper civic and ethical standards for his fellow citizens to emulate. If he has no hesitation in making a football of a Cabinet office, ought we to be surprised that dozens of Americans are being sentenced to long terms in Italy and France for having disposed of Army supplies almost in sight of the enemy in order to enrich their own pockets?

United States Future Depends on Avoiding World War No. 3

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Worcester Telegram:

UNITED STATES FUTURE DEPENDS ON AVOIDING WORLD WAR NO. 3

(By Maj. George Fielding Eliot)

Self-preservation is the first law of Nature. Self-preservation is the first consideration which we Americans must have in mind as we plan our policy for the post-war years. Let's not make any mistake about it, for, if we do, it is likely to be our last mistake. Before Pearl Harbor there was a great deal of dissension in this country as to whether we should get into the war or stay out of the war.

After Pearl Harbor there was no dissension because we had been attacked, and nobody questioned the necessity of defending ourselves. Next time we will not have any choice about getting in or staying out. Next time the whole of the United States will be just as exposed to sudden attack as was Pearl Harbor, 2,000 miles out in the Pacific Ocean.

MISSILES OF FUTURE

After all, a bombing plane is just an instrument for delivering high-explosive missiles against a chosen target. Now the progress of scientific discovery is about to provide us—and others—with means for delivering such missiles which are far superior to the bombing plane in range, in accuracy, and in economy of power. A few more years of experiment and research will bring these means to even higher stages of efficiency.

No spot on the face of the earth will be safe from sudden and overwhelming attack.

BASIC PRINCIPLE

That is what I mean when I say that self-preservation is the basic principle which should guide our future policy. Every American should keep this fact in mind. Every American should be properly aware of the grim truth, for realization of that truth and intelligent action based upon such realization is essential to the individual safety of every one of us, and to our collective security as a nation.

I recently listened to a distinguished Englishman describe what he saw as he came into an area of London where a German rocket had just fallen. "There were two blocks of smashed houses. The streets were blocked with debris.

WHAT ROCKET DID

"Broken glass was scattered over a considerable area. Atop a crumbling bit of brick wall, I saw all that was left of a baby. A couple, dazed and staggering came down the street.

"The man was leading a little child by the hand. The woman was carrying a baby from

which blood dripped on her feet as she walked. A little farther on four American soldiers lay dead on a heap of rubble. The rescue squads were at work, but it would take them many hours to reach some of the shattered bodies, which lay beneath the ruins * * *."

Remember, the people of Britain once believed that they were secure from such horrors because of their insular position, ringed round by the sea which the British Navy ruled. It was hard for them to abandon that instinctive feeling of security even after the lessons of World War No. 1, even after repeated warnings by many of their public men.

SOOTHED THEIR FEARS

They elected and kept in office those leaders who told them comfortable fictions and soothed their fears, rather than those who sternly warned them of the certainty of peril and demanded sacrifice and action to avert it. We Americans are inclined to do the same sort of thing.

But we must not. We dare not. For the next time may be too late.

I have seen some of the experiments which our own military scientists are conducting. I have seen some of the foreign matériel which they are examining and analyzing. I have talked with military and scientific people who have been in Britain and France and who have seen what the effect of some of the Germans' weapons is, even under the present conditions of great difficulty and strain for Germany. And frankly, it scares me stiff.

MUST ORGANIZE

It would be a good thing if we were all sufficiently scared, if we could all understand just what we are up against if we do not now so organize this shrinking planet of ours that no future Hitler or Tojo can suddenly hurl the bolts of World War No. 3 against an unsuspecting America, comfortably proceeding about its lawful occasions and comfortably believing that there will be plenty of time.

It isn't a question of doing something for the British, or the Russians, or the Chinese. It isn't a question of mixing ourselves up in the European mess. It isn't a question of getting into war or staying out of war.

It is just a stark, grim question of self-preservation—do we want to live or do we want to perish? Either we use our immense power and our immense influence in the post-war world to organize and police the world community so that nobody can again build up the machinery of a new war of aggression, or we might as well start digging the holes into the which we shall have to bury ourselves and our families in order to survive when the rockets begin to fall in Pittsburgh and Chicago and Oklahoma City.

FACE UNDERGROUND

Either we have an organized, enforced and vigilantly maintained peace all over the world, a peace supported by the peoples of the world because that is the only way that they and their children can continue to live in the sunlight and grow food and bring up families and have any hope at all for the future, or we go underground and exist—those of us who exist at all—like moles in the dark, burrowing into the earth in order to prolong by a few weeks our miserable lives.

That is where we stand today. We live or die by the measure of our wisdom, our courage, and our willingness to face the hard facts of a future from which we cannot escape. We can mold that future if we will only realize what it holds for us—its threat as well as its golden promise.

If we fail, we stand on the threshold of a new dark age compared to which the Dark Age that followed the collapse of Graeco-Roman civilization will seem in retrospect but a passing hour of twilight.

Montana and the Orient

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, on February 13, 1945, I appeared before the Civil Aeronautics Board urging it to give serious consideration to the application of Western Air Lines to establish direct air-line service between Great Falls, Mont., and Alaska and the Orient.

The most direct and the most feasible route to these important areas of trade is from Great Falls, which has more clear flying days—in excess of 300 every year—than any other terminal in this country. It offers a shorter route than New York, Chicago, or Minneapolis in the East and certainly is more ideally situated than Seattle or any other center in the West.

Furthermore, Great Falls has the necessary fields, hangars, and equipment to start operations on this route at the earliest practicable moment. The Army Transport Command has used the port of Great Falls for the transportation of planes and needed supplies to Russia. This was done only after other ports in the United States had been used and found wanting. The only place where the planes and material needed by Russia to carry on her fight against Germany could be sent from in the shortest period of time and by the safest route was from Great Falls. Over 6,000 planes and millions of pounds of war material have, since the port was first used, been sent by air from Great Falls, Mont. No time has been lost and no inconveniences have been encountered in transporting war material and passengers during the war, and no time will be lost or inconveniences suffered if Great Falls is designated as the American port to Alaska and Asia in the post-war period.

This is a tremendously important matter, and I want to compliment the Board for the time and study it is giving this hearing, and the fairness and impartiality with which it is considering all applications.

Great Falls, Mont., not only has the facilities; not only is it the route now being used by the Army Transport Command; but, in addition, it will cut the flying time and lessen the cost of transporting material and passengers to Alaska and the Orient. It has everything worth while to offer in its behalf, and I sincerely urge the Civil Aeronautics Board to take all these factors into consideration before arriving at its final decision.

In addition, Mr. Speaker, I should like to insert at this point in the RECORD an article by Ben H. Pearse, which appeared in the Washington Evening Star of February 15, 1945, showing how this route will function when Russia enters the war against Japan:

ALASKA-SIBERIA ROUTE ALL READY FOR USE IF RUSSIA WARS ON JAPS

(By Ben H. Pearse)

If and when American hopes are realized for Russian participation in the Japanese war after the defeat of Germany, an air route linking the United States and Siberia by way of Alaska is ready for instant use ferrying planes and flying supplies to air bases within easy range of Japan and the Manchurian border.

While no break-down has been given of lease-lend planes delivered to Russia in official reports, it is known that the Alaska-Siberia route has been favored in recent months because of the time element. While the Persian Gulf Command has delivered millions of tons of equipment through Iran, airplane shipments find a shorter and less congested route through Alaska. Pursuit planes, which do not have enough range for the long overwater hops across the Atlantic and have to be crated and shipped by boat, can be flown straight from the factory here to the Russo-German front in a matter of days.

Since the recapture of Attu and the evacuation of Kiska by the Japs, little attention has been paid to development along the Alaska route largely because attention shifted to other theaters. Nevertheless curtailed operations continue there with air and naval raids on the northern Kurile Island bases of Paramishiru and Shimishu appearing in Navy communiques from time to time. Of the Alaska-Siberia route, almost nothing has been said since last August when the Russians permitted disclosure that lease-lend planes were being turned over to a Soviet military mission in Fairbanks, Alaska.

There are indications, however, that this route has not been left out of consideration by the Army despite the shift of attention to other theaters. Air travelers landing at commercial airports in Canada from Edmonton north of White Horse, have noted construction going on during the past year, although Kiska was evacuated 18 months ago. While nothing has been said about its extent, it is known that a $10,000,000 airport was planned for Edmonton, solely for the use of military aircraft, which would be considerably beyond the necessities of present traffic.

Deferment of Farm Laborers Under Selective Service Act

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. H. CARL ANDERSEN. Mr. Speaker, the Legislature of the State of Minnesota on February 9 passed the following joint resolution memorializing the President and the Congress of the United States to grant and to extend deferment to farm laborers under the Selective Service Act:

Whereas Minnesota farmers, desiring to render the fullest measure of patriotic service to the Nation, have worked unselfishly for long hours, bearing unprecedented hardships, to meet the increased demands for food that have been placed on them by the war; and

Whereas in addition to the thousands of men they have furnished to the armed forces, our farmers have seen great numbers of farm laborers upon whom they normally depend

drawn into the defense plants by the high wages offered there; and

Whereas the growing shortage of farm labor is making it increasingly difficult for farmers to meet the food quotas prescribed by the War Food Administrator; and

Whereas successful prosecution of the war to final victory will require not merely continued reliance on bigger than normal food supplies but in all probability even greater quantities of food; and

Whereas Congress, appreciating the gravity of the problem facing our farmers and the importance of keeping up our vital food production, has declared in adopting the Tydings amendment: "Every registrant found by a selective-service board * * * to be necessary to and properly engaged in an agricultural occupation or endeavor essential to the war effort shall be deferred from training and service in the land and naval forces as long as he remains so engaged and until such time as a satisfactory replacement can be obtained," and the National Director of Selective Service in a statement on January 23 has reaffirmed his adherence to this policy: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, in regular session assembled, That we ask the President, Congress, and our Federal officials to follow and uphold the spirit of the Tydings amendment in dealing with matters affecting farm labor, and that we memorialize the President and Congress to take all further steps and to prescribe all further regulations that may be necessary to insure to agriculture an adequate farm-labor supply; be it further

Resolved, That the secretary of the State of Minnesota is hereby instructed to transmit a copy of this resolution to the President of the United States, the presiding officers of the Senate and House of Representatives in the Congress of the United States, and to each of the Members in the Congress of the United States from the State of Minnesota.

Mr. Speaker, the production of food will decline sharply this year unless some steps are taken immediately by the Congress to see to it that the selective service obeys the spirit and intent of the law as embodied in the Tydings amendment.

The fact that the Legislature of the State of Minnesota has passed this joint resolution is evidence in itself that a very serious situation confronts the Nation as far as the production of food is concerned.

Action To Avert Lend-Lease Losses Urged by Senator Tunnell

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. REED of New York. Mr. Speaker, now that the Congress is soon to be asked to authorize an increase in the debt limit from $260,000,000,000 to $300,000,000,000, it is important to keep the spending record straight. The Bureau of the Budget could, if it would, disclose the arrogance with which foreign government officials have refused point-blank to give any accurate accounting for funds advanced to them. Under leave to extend my remarks, I insert an article from the Washington Times-Herald under date of February 16, 1945:

ACTION TO AVERT LEND-LEASE LOSSES URGED BY SENATOR TUNNELL—UNITED STATES DENIED RIGHTS TO AIRPORTS BUILT WITH OWN MONEY, VISITOR TO FRONT SAYS

(By William Moore)

The story of the billions of taxpayers' money that have been poured into north Africa and the Middle East was told to the Senate yesterday by Senator TUNNELL (Democrat) of Delaware.

It was an eyewitness story, but it was not complete.

There were incredible gaps, some of which the white-haired Senator blamed upon inadequate accounting, some upon no accounting at all.

ACCOUNTING INADEQUATE

The British, he said, had failed—declined in fact—to make an accounting of reverse lend-lease. The War Department accounting of its expenditures he found wholly inadequate as he told of a million-dollar American airfield in French Morocco listed by the Army as costing $52,000.

TUNNELL warned the Nation that it has no commercial rights to the great airports it has built and is dependent upon the British, in some cases, for permission to use them at all.

STIFLING AMERICAN TRADE

Moreover, TUNNELL said, the British are stifling American trade in north Africa and the Middle East by limiting the number of dollars that nations can acquire to buy American goods. And those goods, from which he said American taxpayers should be getting a fair return, include such surplus war property as camps, hospitals, air bases, radio stations, port facilities, prison camps, assembly factories for airplanes and trucks, and warehouses.

TOURED NORTH AFRICA

TUNNELL's story was his report on his recent tour of north Africa and the Middle East with Senator BURTON (Republican), of Ohio, for the Senate War Investigating Committee.

In the report, TUNNELL pleaded for immediate establishment of an American policy to protect American interests. He said other nations are not delaying decisions on such matters despite the war, and warned that delay will be extremely costly to American taxpayers.

Before telling of conditions on the other side of the Atlantic, he told of visiting Bermuda on the first leg of his airplane trip.

UNITED STATES HAS NO RIGHTS

There he found the airport on which the United States has spent $42,000,000 and is still spending—without obtaining any airplane or other commercial rights.

"No matter how much we spend on the airport," he said, "it cannot be used by our Government or our people for commercial purposes after the war."

Turning to the British refusal to account for reverse lend-lease, TUNNELL said on one occasion when the British did make an accounting, they credited themselves with 17½ times the amount for which the Navy credited them—$175,000,000 instead of ten million.

BALANCES IN DOUBT

"Lend-lease and reverse lend-lease accounts," TUNNELL said, "are in such condition that it is impossible to tell with certainty the exact status of balances for intratheater transactions. There are two serious discrepancies between methods used by our forces and those of the British.

"The first is the refusal of the British to price invoices on materials and services lend-leased to us. The second is the policy of the British to charge 42 percent on their cost for transportation, insurance, and handling charges on material and equipment, whereas the American charges have been 25 percent.

"Both the Army and Navy have been seeking to persuade the British to price their invoices. The British have consistently refused to do so on the basis that they did not have sufficient bookkeeping manpower.

DISCREPANCY SEEN

"Warehouses full of unpriced invoices will be accumulated which, if ever priced, will have to be priced by persons not familiar with the original transaction. Apparently the British maintain prices for their own records and unquestionably there will be a discrepancy between our estimate of British reciprocal aid and the estimate the British will have.

"As an example, the British presented a report of some $175,000,000 worth of material transferred to us on lend-lease, which was appraised by our Navy at only ten million."

TUNNELL offered no estimates on the cost of American military installations in the Azores, second stop of the trip, but commented that we use facilities there by permission of the British, although the islands are owned by Portugal.

Discussing the American airport at Casablanca and the other 15 airfields visited, TUNNELL told the Senate that American representatives are firmly opposed to giving up any American establishments unless the nation benefiting pays, and pays a fair price. But there are no agreements or treaties, he said, to protect American rights.

One airport now being secretly built, TUNNELL said, is being established without even any discernible title acquired by the United States.

The Casablanca airport of Sale, TUNNELL said, was improved by the Americans at a cost of $1,000,000. But the French have turned it over to the British, who are using it commercially.

NO HELP FOR UNITED STATES

"Neither the United States nor any American air lines," TUNNELL explained, "have obtained any franchise to operate in North Africa." On the other hand, the British Overseas Airways Corporation is running regularly scheduled commercial flights.

TUNNELL said the costs of North African and Mediterranean airports were not accurately kept by the War Department. He said that, while it is known the Casablanca airport cost $1,000,000, the Army books showed an "out-of-pocket" cost of only $52,000.

Of 25 airports for which he and BURTON asked the Army for costs, TUNNELL said, the Army was unable to give estimated totals on 8, and reported that information was not available at all as to the cost of 5 of these. On 2 other airports listed by the Army, TUNNELL said, the Army reported:

"No record is available of a United States Army Air Forces installation."

Since TUNNELL did not elaborate on his prepared report, Senators were left wondering as to whether or not these airports should be counted as lost or missing.

Discussing the British interference with American trade, TUNNELL said:

"At the end of this war, we shall have airports which can be made beacons of commercial activity to an extent never before dreamed of. Notwithstanding, our commerce may be limited by lack of commercial treaties, by an entire absence of the right to trade with many of the nations of the world.

"In addition, there is what is known as the sterling bloc, which together with local conditions make it practically impossible for Americans to trade in these lands. The natives have no way of paying for American goods with American dollars.

DOLLARS ARE SCARCE

"There is an acute scarcity of dollars in most of these areas, notably Egypt, Palestine, and Iraq. These countries and others are in what is known as the 'sterling area,' which means that dollars received in these

countries are required to be pooled in London.

"These countries are then permitted to acquire dollars for the purchase of imports from the United States only to the extent permitted by the British. * * * The sterling bloc is an impediment to free trade with this area."

Recalling complaints of Senator CHANDLER, Democrat, of Kentucky, that Americans always "sit at the foot of the table" in dealings with the British, TUNNELL said of a visit to Italy:

"We found that although our representative, Admiral Stone, is the chief commissioner of the Allied commission administering the armistice, there are two British officials who are superior to him."

The Crimean Conference

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mrs. LUCE. Mr. Speaker, the press of America has by no means unanimously proclaimed the results of the Crimean Conference a victory for American ideals. Much of the criticism of the Crimean Conference, however, particularly by the columnists has been partisan. But Mr. David Lawrence is a man whose true desire for international cooperation has never been questioned. Therefore, the following two columns are of particular interest in this moment, for they seem to express much of the spiritual uneasiness with the Crimean Conference aroused in many men of good will and generous impulses:

[From the Washington Evening Star of February 14, 1945]

AMERICAN IDEALISM DEFEATED AT PARLEY—REICH'S ECONOMIC EXTINCTION IS FEARED AS RESULT BY WRITER

(By David Lawrence)

American idealism has been defeated as conspicuously at the Crimean conference as it was at Paris 26 years ago. The late President Wilson, caught in a cycle of expediency, made concession after concession to European statesmen who were grabbing territory and spoils of war, pinning his hopes on the League of Nations to correct the inequities of the Versailles Treaty. Then America refused to enter the League.

Today all that President Roosevelt can hope for is that the United Nations organization some day may save something out of the wreckage of American ideals and hopes. For America will enter the new league.

The wreckage of ideals is confirmed in the Crimean communique. On August 14, 1941, and again in January 1942, the Atlantic Charter was exhibited to the world as a solemn pledge that the signatory countries "seek no aggrandizement, territorial or other."

Yet Latvia, Lithuania, and Estonia have apparently been annexed by Russia since those dates and a Polish puppet state under Russian domination has been set up and now its title and authority is confirmed.

RUSSIA TO DOMINATE GROUP

Russia, moreover, is to dominate the Reparations Commission which is to sit in Moscow and extract for an indefinite time from Germany whatever labor, raw materials or other compensation can be extracted.

It was the reparation demand to be paid for "in kind" that stripped Germany of her coal and rolling stock in the early 20's and prevented the German republic from recuperating and forced her, instead, into bankruptcy in 1923, on the heels of which a few years later Hitler got his chance to whip up his political strength among the unemployed and distraught German people.

American idealism, which cried out in the twenties against the kind of punitive peace that ultimately eats like a cancer into the conquerors as well as the conquered, has been forced into silence today by the louder cries of revenge.

As the Pope so eloquently said in recent months, a peace based on revenge gets nowhere. For it means large standing armies, compulsory military training for our youth, huge burdens of taxation, and a recalcitrant spirit among the vanquished peoples. It means undergrounds, sniping, and a reign of terror in central Europe. And many millions of Americans will have to stay in uniform to enforce such a truce and prepare for a third world war.

But the world doesn't learn. Each age apparently is swept by its own hysteria and its own emotional slogans. And each generation passes on to the next the task of paying in the blood of millions of unborn children for the sins and mistakes of its predecessor generation.

The mind of Josef Stalin, who gives no democracy or freedom of worship to his own people, can realistically enough throw a crumb to Prime Minister Churchill and President Roosevelt by promising to assist in free elections in the liberated areas and by lip service to the Atlantic Charter, but any one familiar with continental elections in disputed areas knows what happens to such so-called elections when military controls are present.

Only a government submissive to the dictates of Moscow can live hereafter in Poland, Yugoslavia, or the other satellite States. Russia now has her sphere of influence, and America and Britain find themselves compelled to recognize it.

The same high-sounding phrases have been given to the world again this week as were issued at the Moscow and Tehran conferences in November and December of 1943. The same promises of military coordination and of a desire to work together in a peace as well as war were promulgated then.

The same European Advisory Commission was pointed to in 1943 as a pious body to examine questions arising day by day out of the liberated countries, and joint action was pledged. But that pledge was broken by Britain through her single-handed action in Greece and in Italy and by Russia in her encouragement of and setting up of the Lublin Government in Poland.

GERMAN GANGSTERISM FEARED

Just as in the communiques from Moscow and Teheran, so another vision of a future world at peace has been painted with dramatic words in the Crimean communique. But behind those words stands stark realism. In the decision to destroy Germany's economic life and make it impossible for her for many years to come to live as a peaceful partner in the European family, the Crimean Conference has condemned Germany to a life of underground gangsterism and outlawry.

The Nazis will certainly be able to step-up German resistance now and, after organized resistance has finally been crushed at high cost in human life, the adherents to the underground probably will be larger proportionately than they were in France.

When Hitler tried to crush the spirit of the French people, he found himself checkmated. The decision at the Crimean Conference will arouse the same desperate resentment and martyrdom in Germany. The world might as well prepare for perennial bloodshed in Europe and economic chaos.

It is a sad day for civilization when all that the three most powerful statesmen of the world apparently can do in an international conference is to consign a whole people to economic extinction by a system of punitive reparations that really condemns all of Europe to an era of economic anarchy.

[From the Washington Evening Star of February 15, 1945]

CANDID EXPLANATION ADVISED ON PARLEY—WRITER SAYS VALIDITY OF STEPS MUST AWAIT SENATE APPROVAL

(By David Lawrence)

The American people are entitled to some candid answers to specific questions when President Roosevelt returns here from the Big Three conference. Among them are these:

1 What were the "hard bargains" driven by the President, as the phrase is publicly used by one of his spokesmen? In exchange for an American willingness to participate in policing the affairs of Europe, what did the United States get?

2. Did the President sign a commitment in behalf of the United States defining the future boundaries of Poland and if so, do the other governments understand that this does not come within the President's war powers but must be submitted in the form of a treaty to the United States Senate where it is subject to approval or rejection by a two-thirds vote?

3. Does the United States acquiesce in the annexation of Latvia, Lithuania, and Estonia, which were grabbed by Stalin when he was Hitler's partner in 1939 and 1940, and is not this annexation, plus the change in Poland's boundary, a violation of the Atlantic Charter, which pledges Russia not to seek any "territorial aggrandizement"?

WILL UNITED STATES SHARE IN REPARATIONS?

4. Did the President agree on any formula for the allocation of reparations arising from war damage done by Germany and is the United States to have any share of the reparations, and, if so, is the American representative to be provided for by treaty or by statute as was proposed after the World War?

5. Was Stalin's price for possible aid against Japan and for agreeing to the Roosevelt formula of voting procedure in the United Nations Security Council, the giving of American consent to the partition of Poland and the annexation of the Baltic states?

6. Will the Russian and other Allied armies withdraw and exercise no military control while free elections are held in liberated states?

7. Has any limit been placed on the extent to which the new commission on reparations, which is to sit in Moscow, can extract materials or payment in kind from the German people? Also has forced labor been included as one of the payments in kind that will be required? Will any maximum be placed on the payments and will Germany be told of this maximum so she can adjust her internal economy to meet the payments?

These are pertinent questions to which the American people have a right to get answers either directly or through Congress. For while the provisions of our Constitution may be annoying to some of the totalitarian minds of today both in this country and abroad, it is nevertheless a requirement that conditions fixing the terms of peace must be submitted in treaty form to the Senate.

SENATE APPROVAL NEEDED

The decisions of the Big Three, therefore, are not decisions so far as the United States is concerned until the Senate approves, especially if such decisions relate to the conduct of affairs or policies or pledges of the United States affecting matters arising after a state of war shall have ended.

Mr. Roosevelt does not equire congressional approval for any agreements relating to the

conduct of military operations during the war, but peace conditions and the underwriting of the peace of Europe do require action by the Senate.

The biggest unanswered question is what promise or secret commitment was made that has led to such rejoicing in Russia and such widespread approval in the British press, where it is vaguely hinted that the President agreed to American participation in the enforcement of certain policies with respect to the peace of Europe.

What were these pledges and what is the extent of America's responsibility in a military way for post-war duties in keeping Germany disarmed and enforcing the program outlined at the Crimea Conference?

Certainly the official communique issued this week doesn't tell us much of the story or give us a hint as to the sequels that lie ahead for the United States.

Foreign Affairs Committee Member Questions Foreign Economic Administration on Accuracy of Reports Concerning Certain Operations of Lend-Lease and Lend-Lease in Reverse

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. MUNDT. Mr. Speaker, to the end that the country and the Congress may be as fully informed as possible concerning the methods, operations, and records of lend-lease, I am inserting in the RECORD at this pcint a copy of a letter which I today sent to Mr. Oscar Cox, adviser to the Administrator of the Foreign Economic Administration.

The letter is self-explanatory. If the F. E. A. grants me permission, I shall be glad to insert its reply in a forthcoming issue of the RECORD so that a complete report will be available on the matters under review in this letter.

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 16, 1945.

Mr. OSCAR COX,
Foreign Economics Administration,
Washington, D. C.

DEAR MR. COX: This morning, during our Foreign Affairs Committee hearings, I asked you some questions concerning the authenticity of certain newspaper stories reporting on the findings made by Senator JAMES M. TUNNELL, of Delaware, and Senator HAROLD H. BURTON, of Ohio, in connection with lend-lease operations abroad. You replied that some of these matters were beyond the exclusive purview of lend-lease and that on others it would require some time to gather accurate information upon which to base your replies. It was suggested you appear before our committee next Monday, together with any other Government representatives necessary to bring our committee the complete picture in response to my questions based on the Tunnell-Burton report.

Since the chairman of the Foreign Affairs Committee has asked that the meeting on Monday be an executive session, and since I believe it in the public interest for the public and the Congress to know the true facts on the matter discussed in the Tunnell-Burton report, and since a discussion in secret session of problems poised in the public press can be of little value to the Congress and the country as a whole, I am writing you this letter, listing the specific questions on which I should like to have accurate and additional information, and I am placing the letter in the Appendix of today's CONGRESSIONAL RECORD. As my letter is being made public, and as the public has a legitimate interest in knowing the true facts in connection with the problems raised by Senators TUNNELL and BURTON, I hope you will decide to make public your reply to this communication and to join me in the request that your appearance before the committee on Monday be at a regular public hearing.

In all events, here are the questions on which I should like additional information and I want to call attention to the fact that these questions do not grow out of unsupported rumors or out of facts finding their way into general circulation without foundation; they are based on public statements made in writing by two responsible Members of the legislative branch of this Government. Your complete and candid replies will therefore be appreciated.

1. Have lend-lease funds, directly or indirectly, been used in the acquisition, improvement, and/or expansion of any air bases located on soil outside of the United States? If so, is it correct that no commercial rights to the use of these great airports have been specifically reserved to the United States and must we seek in the future permission of some foreign power to use these bases commercially? If it is not a military secret, what future protection has the United States as to our use of these bases by our military forces?

2. Is it correct as stated by Senators TUNNELL and BURTON in their report as I find the statement on page 43 that it is "the policy of the British to charge 42 percent on their cost for transportation, insurance, and handling charges on material and equipment turned over to us under reciprocal aid in the theater, whereas the charges of the American forces for such items have been 25 percent?" If correct, what is the reason for this discrepancy? What has been its approximate extra cost to the taxpayers of the United States?

3. Is it correct as stated by the two Senators on page 44 of their report that "Both the Army and Navy have been seeking to persuade the British to price their invoices. The British have consistently refused to do so on the basis that they did not have sufficient bookkeeping manpower." The Senators go on to say that, "After extended negotiations the Navy secured from the British Admiralty an understanding which became operative on January 1, 1945, that they would price invoices on all transactions subsequent to that date," and that, "The Army has as yet been unable to secure a similar commitment from the British." If these statements are correct does it follow that information given our committee on lend-lease in reverse is substantially simply an approximation or a conjecture because actual values cannot be determined without a consideration of invoice prices? It would appear that the two Senators must have had this in mind when they report, "The seriousness of the foregoing can readily be appreciated when it is realized that warehouses full of unpriced invoices will be accumulated which, if ever priced, will undoubtedly have to be priced by persons not familiar with the original transaction, who possibly will not have the proper catalogs or other reference sources to determine accurately the value of such lend-lease transfers." This doubt on the part of the Senators is further indicated when they say, "As an example, the British presented in their official documents a report of some $175,000,000 worth of material transferred to us on lend-lease, which was appraised by our Navy at a value of only $10,000,000."

4. The Tunnell-Burton report to the Senate also states that the airport at Sale, north Africa, was constructed largely at the expense of the United States and was abandoned by it in 1943. I now quote from page 7 of the Tunnell-Burton report, "Great Britain is now using this airport. It seems that either on the day that it was abandoned by the United States or shortly thereafter the French transferred it to Great Britain. An inquiry into the cost of this airport to the United States disclosed the fact that the military had not kept a very accurate record of the costs.

"We were told that the airport cost something over a million dollars. Later, from the books kept for this purpose, we were told that the actual out-of-pocket cost was about $52,000. This is mentioned only for the purpose of showing that in the haste of war, tremendous expenditures are made which are entirely justified. However, if the airports are not to be kept by the United States, they should be paid for at a reasonable price by those who do keep them." On page 7a of this report I find the statement, "In some of our new airports, we are informed our rights will end 6 months after the termination of the war." This and similar transactions may or may not have a connection with lend-lease. Please give me the facts in this connection.

I feel confident that you agree with me that lend-lease can best serve the interests of the United Nations and the United States by making available to the general public complete information on all its transactions, save those having some military significance and it seems obvious that none of the questions set forth above can have any conceivable military significance.

With best wishes, I am,

Cordially yours,

KARL E. MUNDT,
Member of Congress.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent to the President of the United States by 14 college presidents:

FEBRUARY 8, 1945.

President FRANKLIN D. ROOSEVELT,
The White House,
Washington, D. C.

DEAR PRESIDENT ROOSEVELT: All American citizens are united in a common determination that never again shall this country be found lacking in the military strength to insure its security. Educators from every State in the Union have declared themselves in favor of an adequate program of national defense. Incident to such a program is the proposal for compulsory military training. We whose signatures are appended to this letter believe that this proposition should be thought through now while we are conscious of the realities of a world at war. As a nation we are better able at this time to reach a wise decision on this important matter than we shall be after the war is over, when again we shall be lulled by a false sense of security. Contrary to the opinion expressed by some, we believe that the judgment of the people of the Nation is now more sound on this issue than it will be after peace is declared. We know too well the reaction which occurs after

a conflict is over—the general desire to forget it.

If adopted now, we believe that a sound plan for universal military training will enable the United States to speak with greater authority at the peace table in favor of an international organization to enforce peace.

Its adoption now will reassure the other peace-loving nations of the world that the United States proposes to cooperate with them in outlawing war and will not again retreat into isolationism.

We believe that it is more fitting in our form of government to insure national security through a democratic plan of military training rather than through the maintenance of a large professional standing army. These are the only alternatives. We believe that the maintenance of a large standing army is contrary to the traditions of our people and opposed to the best interests of the Nation.

The adoption now of a proper plan of universal military training involves no perpetual commitment. If out of the coming discussions among the nations an effective international plan to insure peace should emerge and the unrighteous ambitions of aggressor nations permanently blocked, the Congress would always have the authority to modify or abrogate the military training system.

For these reasons it is our firm belief that the proposal for a system of universal military training should be considered now; its advantages and disadvantages carefully weighed and appropriate action taken without subjecting the Nation to those hazards which are involved in postponement and delay.

Sincerely yours,

John G. Bowman, chancelor, the University of Pittsburgh; Edwin S. Burdell, director, Cooper Union; Robert C. Clothier, president, Rutgers University; Karl T. Compton, president, Massachusetts Institute of Technology; Thomas S. Gates, chairman of the board, University of Pennsylvania; Ernest M. Hopkins, president, Dartmouth College; Robert L. Johnson, president, Temple University; Stanley King, president, Amherst College; William Mather Lewis, president, Lafayette College; Charles Seymour, president, Yale University; Franklin B. Snyder, president, Northwestern University; John J. Tigert, president, University of Florida; Levering Tyson, president, Muhlenberg College; Blake R. Van Leer, president, Georgia School of Technology.

The Wallace Appointment

EXTENSION OF REMARKS

OF

HON. FRANK T. STARKEY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. STARKEY. Mr. Speaker, in these days when we hear and read so many intemperate and extravagant statements used to back up argument in the various controversial matters before the Congress, I would like to include in the RECORD an editorial from the St. Paul Dispatch of my home district. It concerns the appointment of Henry Wallace to the post of Secretary of Commerce and is, I believe, a splendid example of good sense and restraint in dealing with such controversial matters.

Although the St. Paul Dispatch is listed as an independent newspaper, it invariably supports Republican candidates and Republican policies in national issues. I do not know, but I can guess that it probably opposes Mr. Wallace's appointment. Nevertheless, it does not subscribe to the campaign of vilification against a man who even the most reactionary among us, on sober reflection, will admit has most of the qualities of an outstanding American.

I quote the Dispatch editorial:

THE WALLACE RESOLUTION

The Minnesota House is to be complimented for returning to committee the ridiculous resolution against confirmation of Henry A. Wallace as Secretary of Commerce, stating among other things that the former Vice President "has indicated a greater interest in the welfare of citizens of foreign countries than he has in the citizens of America."

Henry Wallace, in the course of this fight, has been accused of intending to fold up the R. F. C. supported war industries as soon as the war is over and of intending to keep them going; of being an advocate of scarcity economics and a champion of a philosophy of abundance; of having acted short-sightedly in the depression and of having a too-distant view of the future now; of being a "religious mystic" and of consorting with communistic enemies of religion. The proposers of the resolution brought before the house, however, were sufficiently ingenious to introduce an entirely original allegation. He has a greater interest in the welfare of the citizens of foreign countries, they say, than in that of Americans.

Henry Wallace has no greater interest in the world than the welfare of American citizens. There is room for a difference of opinion on the particular measures through which he may, from time to time, seek to advance that interest. But to suggest that he is less interested in his own country than in some other country is the sheerest nonsense.

The house is well rid of this resolution. There is enough name calling and motive questioning in public life without having Minnesota's Legislature join in this undignified slur upon a man whose motives are not open to reproach whatever his methods may merit of praise or criticism.

The Battle Against Inflation

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. AUCHINCLOSS. Mr. Speaker, it is always an inspiration to see America at work and it is thrilling to see America at work during a national emergency. Labor and management, urged on by the common desire to win the victory, have wrought wonders in production and in providing for the needs of our fighting men and women. All Americans are proud of this record and hope and pray that management and labor, working together in the days after the peace, will continue this spirit of cooperation.

One of the great industries in the district I represent is engaged in the manufacture of many kinds of bandages and medical supplies for both the Government and the civilian population as well. Johnson & Johnson, Inc., has not only kept up a continual stream of supplies abroad but they have also fought the battle on the home front by holding the line against inflation. Let me quote a few of their prices today in comparison with the prices in 1918, and remember that the dollar does not purchase as much today as it did then:

	1918	1945
Red Cross bandage 2 inches by 10 yards	$0.20	$0.10
Red Cross cotton, 1 pound	1.25	.98
Johnson's baby soap, per cake	.25	[1].25
Red Cross adhesive tape, ½ inch by 5 yards	.35	.10
Johnson's dental floss	.25	.10
Johnson's baby powder	.25	.21
Red Cross gauze, 36 inches by 5 yards	1.25	.50

[1] 2 cakes.

Johnson & Johnson typifies the spirit and patriotism of the American businessmen by doing everything they can through their long years of experience, to keep prices down and cooperate with the Government and its fellow citizens in the battle against inflation. As the Representative of Johnson & Johnson in the Congress, I am proud of their record and I am glad to testify to their loyal cooperation in playing fair with the American people. I include herewith a letter I have received from Mr. Arthur B. Hill, vice president of Johnson & Johnson, which explains their policy in this important matter:

JOHNSON & JOHNSON,
New Brunswick, N. J., February 8, 1945.

The Honorable JAMES C. AUCHINCLOSS,
The House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: We are certain that you are sympathetic to the tremendous job ahead in safeguarding the consumer against dangerous price increases. In our opinion it is second in importance to the winning of the war. Through the Office of Price Administration our Government has and is doing a most commendable job in price control. Johnson & Johnson is supporting this program wholeheartedly by carrying the "no inflation" message to the public through the medium of 300 newspapers, national magazines, farm, professional, and trade journals.

We submitted this promotional material to Mr. Chester Bowles, O. P. A. Administrator, and I quote here an excerpt from his reply.

"I think you and your people have done a grand job on the advertisements and window posters which compare the prices of Johnson & Johnson commodities with the prices of the same items during the last war.

"Actually, since May 1943 the cost of living has increased only about 1½ percent according to the Bureau of Labor Statistics. We have a tough job ahead of us if we're going to hold that line, but I think it is important to the whole stabilization program that the public have a true picture of where we stand. Misconception about the trend in the cost of living could only lead to increased inflationary pressures."

We thought you would be interested in the actual results of our long established policy of the lowest possible price consistent with the highest quality products. The attached

sample advertisement is evidence of our accomplishment.

We feel that this is an opportune time for this publicity since the fight against inflation is most important to the economic future of our country.

Respectfully yours,

ARTHUR B. HILL,
Vice President.

An Undercover Drive

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch:

AN UNDERCOVER DRIVE

One way of selling an attack on progressive democracy is to disguise it as a campaign against high taxes, and that's exactly what Frank Gannett's Committee for Constitutional Government and the American Taxpayers' Association are doing. Their method is as underhanded as their intent.

These groups are lobbying extravagantly with State legislatures while the people's attention is elsewhere. Seventeen legislatures have approved a proposal for a twenty-second amendment to the Constitution. This measure is called the millionaires' amendment because it would prevent Congress from taxing incomes and estates more than 25 percent.

Congressmen themselves were vastly surprised when Representative WRIGHT PATMAN, of Texas, disclosed nearly a year ago that the secret lobbies had had so much success. The public has had ample time to become surprised, too, yet the twenty-second amendment crowd works quietly along.

The undercover method is not new. It was tried once before, and the eighteenth amendment was the result. Legislatures bowed to the prohibition lobby while the people's back was turned and millions of young men were gone to war. Prohibition endured for more than a decade to shake confidence in democratic processes.

Under a 25-percent limit on income taxation, there would be little difference in the rate of taxes paid by millionaires and those paid by persons with the lowest taxable income. Federal revenue would be reduced in time of a costly war, and low-income groups would face higher taxes to pay off the national debt. A Federal sales tax would be one almost inevitable result.

In any case, the purchasing and investment power of most of the people would be restricted. This could turn the Nation's economic problems into an economic crisis.

The last time the people's purchasing power was depressed, the millionaire population fell off considerably. Therefore, it is unlikely that the proposed millionaires' amendment would help the millionaires.

If unwise for its supporters, the twenty-second amendment would be ruinous for most of the people. Little business would suffer before big business, and if the wealthy found it hard to pay taxes on their incomes, the less wealthy would find it hard to get an income. Would anyone profit by this reactionary scheme?

Seventeen legislatures ought to rescind approval of the twenty-second amendment. Thirty-one more should be on the alert against it. Congress should investigate the whole business unless it wishes to be bypassed helplessly. And the people must realize what this under-the-counter offer amounts to before it is too late to say "No sale."

Genius Still Lives

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1945

Mr. CURTIS. Mr. Speaker, countless Americans have rendered extraordinary service to our Republic in this great war. I think that it is well that the people of America should know about some of these individuals. I have in mind Sgt. Alfred G. Dannull, A. S. N. 38008048, and whose address is Atlanta, Nebr. He is the son of Mr. and Mrs. F. A. Dannull. Sergeant Dannull is now assigned to the National Advisory Committee for Aeronautics at Langley Field in the Enlisted Reserve Corps. He has served 2½ years overseas.

Sergeant Dannull's unique contribution in this war has been his various inventions that have made our equipment more effective and in turn saved time and lives. Sergeant Dannull graduated from the West Denver High School in 1933, studied 4 years at the Emily Griffith Opportunity School, 2 years of which was in mechanical engineering and 2 years in electrical engineering. He entered the service in March 1941 and prior to being returned to this country he was assistant foreman and tool designer at the Second Strategic Air Depot.

Sergeant Dannull's inventions comprise a long list. He is one of those unusual inventive geniuses that rarely appear on the scene. Some of his inventions are of such a confidential nature that they cannot be disclosed. A partial list of his inventions are as follows:

First. A dynamometer or proney brake, used to check dynamic tension of the slip clutch in landing gear retracting motors, tail wheel and bomb-bay-door retracting motors and aircraft-engine starters. This unit has saved many crack landings and a lot of gear trains in aircraft engines, and this brake has now been in use in the European theater of operations for the past 2 years. In the December 1944 issue of the Air Force magazine, an article said of this invention:

Through use of Dannull's invention mechanics determine before installation in aircraft the efficiency of small electrical motors, thus preventing mechanical failure in flight. The device, constructed from salvage jeep and Fortress parts, has prevented many crash landings caused from inability to lower landing wheels.

Second. A blind rivet gun, used to head Cherry, Goodrich, Cholbert, and pop blind rivets, which are used to rivet patches over bullet and flak holes. With the use of this gun, patches could be installed from the outside. Prior to its manufacture, it was necessary to do this work from the inside, necessitating the removal of large sections of sheet metal in order to turn or buck the rivets. At one station alone, approximately 200 to 500 man-hours a day were saved by using this gun on sheet-metal work and, as no gun of this sort had heretofore been available in his theater of operations, Sergeant Dannull manufactured several of them and distributed them to all the depots that were doing repairs on battle-damaged aircraft. This most useful invention was also mentioned in the Air Force magazine for November 1944 which said:

Rosie the Riveter would become grass-stained with envy if she were to hop over to an Eighth Air Force Service Command station in England and see the blind rivet gun designed by Sgt. Alfred G. Dannull.

A boon to sheetmetal men who formerly had to peel off large sections of sheet metal or skin in order to get to the inside or under-surface to turn rivets when patching flak holes, the gun now makes shooting rivets into inaccessible sections of skin on heavy bombers as easy as money from home.

Using tapered rivets with the large end inserted into the opening and encased by a closely fitted jacket, a hand-operated bellows-type lever pulls the rivet from inside to out, forcing its greater diameter against the jacket, thus expanding it into a washer which holds the rivet securely.

Third. A universal platinum-point dressing tool, used for reclaiming magneto points and other circuit-breaking points. This unit saved many sets of points at a time when they could not have been replaced in this theater of operations.

Fourth. A frequency modulator, used for changing cycles of electric current from 60 cycles to 400 cycles for the testing of radar equipment.

Fifth. Sealed bearing packing unit, used to pack sealed rollers and ball bearings with grease, enabling them to reclaim any type of sealed bearings, many of which were not carried in their replacement stock.

Sixth. A gear case for checking turbo superchargers, regulating control units, and so forth, that were used in the theater of operations.

Seventh. A glyco boiler core extractor, used to extract the cores of glyco boilers, which are located in the exhaust manifold on B–17's, and so forth. Prior to the use of this extractor the boilers had to be salvaged due to the fact that they could not be dismantled and thus repaired. Commenting further on the above-mentioned inventions of Sergeant Dannull, the Air Force Magazine in an item from the Eighth A. A. F. service command station in England, in December 1944 said:

Other inventions of Sergeant Dannull, a machinist at a strategic air depot bomber repair base, are a universal platinum point dressing tool for reclaiming magneto points; a frequency modulator for testing radar equipment; a unit for packing with grease sealed roller and ball bearings; a multiple gear case for dual tachometer for testing superchargers used on Fortresses; a puller for removing the core from the glyco boiler, located in the exhaust manifold, which prior to Dannull's invention often had to be salvaged.

Eighth. An armature shaft puller, used to pull flexible drive shafts from generator armatures without damaging them, an important precaution as no more shafts were available at that time in this theater of operations.

Ninth. An armature undercutter, used to undercut the mica between the commutator bars on generator armatures. No machine of this type was available in this theater and was necessary in generator overhaul.

Tenth. An electronic static and dynamic balancing unit, used to check the balance of wheels, turbo superchargers, and any other part that needed to be balanced.

Eleventh. An electric rivet gun that could be used in the field, where air pressure was not available.

Twelfth. A large number of gear, bearing, and race pullers, as well as other special tools too numerous to itemize, that were essential in the maintenance of aircraft.

There are also a number of items of his own design on the secret list in the European theater of operations which are produced in large quantities.

Mr. Speaker, the story of Sergeant Dannull is interesting and thrilling. It is good news to the brave flyers and their families and the other members of our armed forces who use Sergeant Dannull's equipment. In addition to that, it is living proof that genius still lives and that there is still a great field for inventive minds. We owe much to Sgt. Alfred G. Dannull.

Donovan's Plan

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. SIKES. Mr. Speaker, I call attention to a timely and well-written editorial in today's Washington Post on the subject of a coordinated and effective United States information service. One of our great weaknesses in diplomatic and in military activities, has been the lack of adequate information about the other fellow. This editorial discusses rationally a sound solution to the problem. I earnestly recommend its careful reading:

DONOVAN'S PLAN

A good deal of whatever unfavorable reaction there was on Capitol Hill to the plan for a central intelligence service may be traced to headline reading. The plan should be read as a whole. It should be reviewed in the light of what in this war intelligence has actually accomplished. It should be pondered with the aid of a little exercise of the imagination on what a better intelligence service might have accomplished. This is important. For the basic assurance of our national security in time to come is the absorption of the lessons of the last 4 years. And the greatest lesson is that national security depends upon knowledge of what is going on in the world, not appraised merely as a fact-finding or informational job, but synthesized by brains at the elbow of the policy makers.

At to the plan itself, it is said to be the product of General Donovan, head of the Office of Strategic Services. Donovan is one of the trail blazers in our war organization. Before the war, in studies on the spot of 'tween war campaigns, he was impressed by the lamentable showing of intelligence services. Only the German had a rating on a par with the advancement in new war techniques. Accordingly, when this war broke out, he organized the group now known as the O. S. S., which functions under the Joint Chiefs of Staff. It is a kind of brain trust for the men charged with making decisions based upon exact knowledge of all the detailed elements in hitherto unknown situations.

The proposed Central Intelligence service does not call for the absorption of existing intelligence agencies, either civilian, like the Federal Bureau of investigation, or military, like G2 of the Army and the Office of Naval Intelligence. It would simply use their product, and evaluate it. It would be put in position to call for the interchange of the data they possess and collect. It would be responsible for policy directives. It would channel the "dope" to the Executive for the formulation of national and international policy. More than the saving of the present system from a post-war break-up is envisaged, more than transfer of authority over the military side of it from the Joint Chiefs to the executive office. There would be the addition of the priceless ingredient of coordination and over-all control which is still lacking in intelligence work as in so many other phases of our administration.

Examples galore could be given of faulty intelligence which has produced disaster and worse to modern nations. Russia got a bloody nose in Finland in 1939, because of a failure to appreciate the Finnish situation. For the same reason Britain tripped up recently in Greece. The same deficiency led to our own discomfiture when Rundstedt lunged through the Ardennes. In these cases what is called strategic intelligence was at fault. An excellent example of strategic intelligence was the job done in Normandy before the liberation of France. But there are all kinds of intelligence work. There is, for example, technical intelligence, which remits to the factories the lessons learned on the battlefield on weapons. We cannot pretend that in this war it has been either first class or expeditions. Then there is such a thing as clandestine intelligence. Mr. Sumner Welles was using it when he forewarned the Russians 6 months prior to the event that the Germans intended to invade Russia in mid-1941. Perhaps the greatest coup in clandestine intelligence in this war was the report of the robot bomb factories in the Baltic, which were subsequently destroyed by the R. A. F. The man who got this news through saved Britain.

Brains make intelligence, not snooping. No correct "estimate of the situation," which precedes all military planning, is possible without this kind of intelligence service. Intelligence should equally be the eyes and ears of the Nation in time of peace. After the war the Government should not be left to frame policy on the basis of blind guesses. Statesmen in peace as well as generals in war require "estimates of the situation."

The German radio, picking up the details of the Donovan proposal, makes great play of the plan, which is called an evil design to control the post-war world. Most of the headlines are faithfully repeated, except, of course, the charge that the new plan is a super-Gestapo. That would not do in a country which is at the mercy of secret police. It so happens that no police or law enforcement function would be vested in the proposed over-all intelligence service, either at home or abroad. It would simply save policy-making from being done in the dark. If, for instance, the President is asking for appropriations for the armed forces, those appropriations must be for the purpose of meeting situations which, as we have learned from experience 'tween wars, are not known to ordinary observers, but are discoverable only by trained intelligence officers.

The Donovan proposal deserves consideration on its merits as a contribution to our national security. It is an effort to make a sum out of the parts of our intelligence services. Some of those parts have done well, some have done ill. Working together they could do an economical, efficient, and fundamental service which hitherto has been neglected on the ground that intelligence work is somehow tainted. For our part we have not yet gone beyond the stage of wanting to see the military intelligence branches strengthened and unified as a basic preliminary to the merger of the armed forces.

The World Day of Prayer

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. LUDLOW. Mr. Speaker, this is the World Day of Prayer.

Today millions upon millions of people in our own and Allied countries are praying that this cruel war with its ravaging waste of life and treasure may be brought to a victorious conclusion as speedily as possible and that and a just and permanent peace may be established throughout the world.

After all of the suffering and travail humanity has gone through, no peace will be acceptable except a peace of the ages and in my opinion there can be no peace of the ages that is not founded on principles of Christian faith.

So I think it is entirely proper that those who believe in the saving grace and power of Christian influence should today be sending up their prayers to the throne of God, and to my mind it seems one of the dramatic incidents of the war that millions upon millions of people in our country are joining in these supplications with millions on six other continents.

In this connection, I present for printing in the RECORD, a letter I have received from a splendid Christian woman, Mrs. Ralph L. Holland, president of the Indianapolis Council of Church Women, as follows:

INDIANAPOLIS COUNCIL OF
CHURCH WOMEN,
Indianapolis, Ind., February 2, 1945.

The Honorable LOUIS LUDLOW,
House of Representatives,
Washington, D. C.

DEAR MR. LUDLOW: Last year you spoke of the World Day of Prayer in the House of Representatives. This year the Indianapolis Council of Church Women feels that the World Day of Prayer is more important than ever for its members are convinced with each passing year that the united prayers of millions of Christian women around the globe avail much and offer a beacon of light in this chaotic world.

Ten million women in 10,000 communities in the United States will join women of six continents to pray on Friday, February 16, the first Friday in Lent which is the World Day of Prayer, that Christians everywhere may be reeducated spiritually and strengthened to take up the task of helping to build a Christian world order, and to produce a just and lasting peace.

We believe that the world is upside down in an abyss of chaos and destruction because Christians have not practiced the teachings of brotherhood and good will. It can only be righted as Christians everywhere rededicate themselves to a policy of goodwill and justice for all nations.

The women of the United States will give an offering to further this conviction. It will be used to provide religious and humanitarian services for the migrant workers and sharecroppers who harvest our crops; to employ religious directors in seven United States Government schools for Indians; to bring Christian literature to the women of China, India, Africa, Iran, and South America, and further to help support seven Christian colleges for women in Asia—three in China, and four in India.

In such expressions of fellowship, reconciliation and Christian love lie the hope for the peace of the world.

With sincere appreciation of your services as our Representative in the Congress, and with every good wish. I am,

Very sincerely,

MRS. RALPH L. HOLLAND.

Henrietta Szold

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. CELLER. Mr. Speaker, Henrietta Szold has passed on. A gentle soul has gone. Her memory is, however, engraved on the hearts of multitudes and will live on. She died in Palestine where she wished to die, and in the hospital which stands as a monument to her tireless energy and her devotion to Palestine. She ever was solicitous of the poor and oppressed members of the race of Abraham. She was a firm adherent of Zionism and labored ceaselessly for that worthy cause. She founded Hadassah and solidified the ranks of women and girlhood in support of Zionism. She was loved by all who came under her benign influence. Her tolerance, her love of mankind endeared her to all—Jew, Gentile, and Moslem. I herewith submit a news item from the New York Times. It is a worthy tribute to her:

HENRIETTA SZOLD DIES IN JERUSALEM—HADASSAH FOUNDER, KNOWN AS OUTSTANDING WOMAN ZIONIST, STRICKEN AT AGE OF 84—LIFE'S WORK FOR JEWRY—BEGAN CAREER AS AN EDITORIAL SECRETARY IN 1892—RESCUED YOUNG VICTIMS OF NAZIS

JERUSALEM, February 13.—Henrietta Szold, American-Jewish women's leader and the founder of Hadassah, who had been seriously ill in Hadassah University Hospital on Mount Scopus since December, died today at the age of 84. She will be buried in the Jewish Cemetery on Mount of Olives tomorrow.

SAW HEAVY TRACHOMA TOLL

Miss Henrietta Szold was inspired to establish Hadassah, which originally was the sponsor of the American Zionist Medical Unit, but subsequently developed into the women's Zionist organization in this country, by the appalling prevalence of trachoma, an eye disease leading to blindness, and other maladies which she observed on a visit to Jerusalem in 1909.

In the course of that trip Miss Szold—already nearly 50 years old, and with a long career in Americanization work among Jewish immigrants to this country—conceived the idea of district nursing in the Holy Land, to which she devoted the remainder of her life and which made her world famous.

She was born in Baltimore on December 21, 1860. She was a daughter of Rabbi Benjamin Sophia Schaar Szold. After studying in the Baltimore schools she became a teacher in private institutions there. Her career in organized Jewry began in 1892 when she became editorial secretary of the Jewish Publication Society.

She served in that capacity almost a quarter of a century, editing the American Jewish Yearbook from 1904 to 1908. With the organization of Hadassah—the name came from the Biblical designation of Queen Esther, one of the greatest of Jewish heroines—she became known as the outstanding woman Zionist and as one of the outstanding American and world Zionists.

Within a few months of the beginning of Hadassah, Nathan Straus became interested in its work. He financed the sending of the first two district nurses to Jerusalem—the first of a long series of benefactions to Palestine, many of them granted through the women's organizations.

During the First World War the work was handicapped by the drafting of doctors and nurses. In 1916 Palestine appealed to the Zionist Organization of America for doctors, nurses, and medical necessities; the need remained great. The response to the appeal was entrusted to the 4-year-old group. In 1918, 44 physicians, dentists, nurses, sanitation experts and administrators were sent to the Holy Land. They constituted the first formal Hadassah medical organization.

The vast project has never lost momentum. Figures showing the decrease in blindness and in infant mortality are dramatically conclusive. In a part of the world where trachoma, malaria, and skin diseases were normally prevalent, Hadassah built up clinics to combat those enemies of humanity by combating the ignorance that fostered them. The preventive aspect of its work was stressed from the beginning by its leaders, among whom Miss Szold remained conspicuous. Infant welfare stations—the first in the Near East—sprang up under Hadassah sponsorship, and school hygiene was introduced in 1918.

ACTIVE ZIONIST IN GENERAL

It is difficult to separate the story of Henrietta Szold from the story of the organization she founded. But her work for Hadassah did not prevent her participation in general Zionist activities, both in Palestine, in Europe and here. She was in Pittsburgh for the assembly of the old Federation of American Zionists in 1918 and her report was widely discussed. About 2 years later, when the federation had become the Zionist Organization of America, she left for Palestine to direct the medical work there.

Returning in the spring of 1923, she was greeted by more than 3,000 persons at a meeting at the Hotel Pennsylvania. She outlined the wide range of problems facing Zionism in Palestine and hailed the rugged pioneering spirit of the early Jewish settlers there. She was optimistic about the future of the Jewish national home, but she pointed out that patience was essential. She did not underestimate the task that faced the movement to rebuild.

In the fall of 1924 she was guest of honor as Hadassah—which had started with a handful of members—opened a drive for 5,000 others. In 1925, presiding over the Hadassah convention in Washington, she urged American Jewish women to assume all responsibility for financing medical work in Palestine.

Within a few days the organization decided to construct a series of hospitals in the Holy Land. Miss Szold announced that the Zionist Organization of America had formally recognized Hadassah as the sole women's Zionist body in the country, and the organization entered the modern phase of its existence.

Miss Szold presided at a memorial meeting to Theodor Harzi, generally regarded as the father of modern Zionism, in July 1925. She sailed for Palestine again in 1926 to take charge of the construction of the Nathan and Lina Straus Health Center in Jerusalem, which had been made possible by a large gift from the philanthropist. Forwarding her annual report from Jerusalem, Miss Szold stressed the immediate need for improved hospital facilities.

She was back in New York in December 1926, furthering the Hadassah organization in many ways. When, in March 1927, the cornerstone of the $250,000 health center was laid in Jerusalem, she presided over the large gathering of foreign consuls, government officials, church dignitaries, and representatives of Christian, Jewish, and Moslem organizations.

Miss Szold was a vice chairman of the stormy Zionist convention in Atlantic City in June 1927. At its close she was unanimously chosen vice president. Louis Lipsky was elected president and headed the delegation to the fifteenth World Zionist Congress in Basle that August. Miss Szold was one of the delegates and served as a vice president of the international gathering.

Her election as a member of the world Zionist executive committee in Palestine followed. It was the occasion for a large testimonial dinner in November. Miss Szold was now honorary president of Hadassah.

At the Zurich convention in 1929 Miss Szold warned of the possibility of the development of a theocratic state in Palestine. "I am religious and Jewish myself," she declared at this time, "but I do not believe in the rule of priests. School children must not be drawn into religious and political strife." She was again elected to the executive committee as the convention closed.

In May 1930 she received an honorary degree of doctor of Hebrew letters from the Jewish Institute of Religion, headed by Rabbi Stephen S. Wise. She was in Jerusalem at the time, returning to America in October.

A few months after her seventieth birthday the New York chapter of Hadassah planted a tree in her honor in Central Park. She frequently was honored by Zionist groups, and mention of her name at meetings invariably brought prolonged applause. In recent years, despite her advanced years, she remained in close touch with the latest developments in American Zionism, although staying at the scene of the actual Zionist progress. On October 16, 1934, she laid the cornerstone for the new building of Hadassah-Rothschild Hospital on Mount Scopus, site of the Hebrew University. The hospital was expected to serve as an important medical center for research and post-graduate work and as a haven for scholars exiled from Germany.

Five and one-half years later, on May 9, 1939, the hospital was formally opened without fanfare or pomp. The crowning achievement of the American women's Zionist or-

ganization and the American Jewish physicians committee had been interrupted by disturbed conditions in Palestine. Miss Szold delivered a spirited address on Hadassah's accomplishments in Palestine, culminating in the erection of the medical center.

AIDED VICTIMS OF NAZIS

In 1935 German Jewish children had to be rescued from Nazi persecution, and Miss Szold, then 75, became the director of the movement which brought them from Germany to Palestine. She supervised every aspect, met the boats at Haifa and welcomed the children in the new land, placed them in cooperative agricultural settlements and stayed with them in their new environments.

When a Nation-wide movement in this country was launched to celebrate Miss Szold's seventy-fifth birthday, the foremost Jewish woman of contemporary time was on the high seas from Palestine to America. The celebration under the auspices of Hadassah lasted 30 days and coincided with Chanukah, the Feast of Lights. For her social work she was made a honorary citizen of Tel Aviv, and the New York Times said editorially that the occasion should not pass without mention of her translation from the German manuscript of the first two volumes of The Legends of the Jews, by Lewis Ginsberg, and continued:

"Miss Szold deserves the thanks of the English-speaking peoples for bringing out of Germany this work before it was burned, if, indeed, it was on the list."

The eightieth birthday of the prophetess in Israel was marked by celebrations in Palestine and throughout the United States. President and Mrs. Roosevelt signed their names in a huge birthday book which contained 94,000 signatures, and 500 birthday gatherings took place in 46 States. A birthday gift of $25,000 for the protection of the welfare of the people of Palestine during the war was cabled to Miss Szold as a tribute to the veteran Zionist leader. In an editorial, "A pioneer at 80," the Times again praised her outstanding qualities as a social worker:

"Her beautiful spirit has known no religious, racial, or political frontiers. She has earned an untold wealth in love and admiration. May she long enjoy it."

Personally Miss Szold was a woman of quiet charm. Her hair was abundant and gray, her eyes dark and expressive. She was always characterized by poise, sincerity, and efficiency and had been described as the "most brilliant Jewish woman in America." She engaged in considerable literary and translating work and was exceptionally proficient with Hebrew. Quietly, and over a long period of years, she wove her name inextricably into the pattern of Jewish progress in Palestine.

In March 1944 Miss Szold was given the degree of doctor of humanities in absentia by Boston University, during a two-way broadcast between Boston and Jerusalem.

Miss Szold was stricken with pneumonia in August 1944, and although she recovered she was too weak, at her advanced age, to return to her home. Her office was accordingly moved into the Henrietta Szold School of Nursing, adjacent to the Hadassah-Rothschild Hospital, from which she continued to carry on her work until she was again stricken ill on December 13.

On December 18, 1944, Hadassah cabled her $105,000, of which $5,000 was an outright gift in anticipation of her eighty-fourth birthday 3 days later, for use for any emergency project she deemed important, and the balance was the first remittance against a quota of $650,000 which Hadassah had pledged itself to raise by September 1945 for the maintenance and education of Jewish refugee children in Palestine.

Edison the Great Liberator

EXTENSION OF REMARKS

OF

HON. FRANK L. SUNDSTROM

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. SUNDSTROM. Mr. Speaker, this House passed House Joint Resolution No. 76 on February 8, 1945, designating February 11 of each year as Thomas Alva Edison Day, and requesting the President of the United States to issue annually a proclamation calling upon officials of the Government to display the flag of the United States on all Government buildings on such day. It is my sincere hope that the Senate will do likewise in order that we may honor this great American.

An address by George E. Stringfellow, a long-time business associate of Thomas A. Edison, before the Kiwanis Club of New York City on February 14, 1945, pays tribute to Mr. Edison:

Ninety-eight years ago last Sunday, Thomas Alva Edison was born in the little town of Milan, Ohio. Before this truth-seeking lad was 10 years old, he set up a chemical laboratory in his home.

Today, the name "Edison" symbolizes electricity, good will, and progress. Thought flashed over continents; cities garlanded in light, silent smokeless motors turning wheels in factories, transporting goods economically, and human beings in safety and comfort, are all associated with the magic name of Edison.

When this symbol of good will and world progress passed on to his rich reward 13 years ago, one of his closest associates remarked, "Every incandescent light is his remembrance, every power house his monument; wherever there is a phonograph or radio, wherever there is a moving picture, sound or silent, Edison lives."

Edison not only gave us these wonders of modern life, he multiplied the services of the telegraph and the telephone. He gave us the nickel-iron-alkaline storage battery, the Ediphone dictating machine, the thermionic tube—which was the forerunner of our modern radio tube—and the microphone transmitter whch has played such an important part in the development of radio broadcasting. The list of his accomplishments is staggering and their ramifications are overwhelming.

Perhaps no man ever lived who was more industrious than Edison. His days were long in hours but so filled with inquisitive and creative activity that his labors were all leisure and his leisure was all labor.

Edison believed in the goodness of human nature and in the evolution of a better society. He once said, "We are groping on the verge of another great epoch in the world's history. * * * The invitation to constructive thought is becoming irresistible to every branch of human effort. Creative thought," he continued, "will raise the human race to higher and higher standards."

It was this ethical idealism which motivated him from the early days of his youth to the end of his long and productive life. Fame and wealth came to him, but he treated money as an incident.

Had he not possessed this passionate desire to serve the human race, Edison could have retired early in life to a quiet research laboratory, free from the hub-bub of the hurly-burly business world.

When he was 82 years old, the world celebrated the fiftieth anniversary of his invention of the incandescent lamp. President Hoover and other notables came to do him honor. The next day he was back at work. Indeed the day that the fatal illness overtook him, the 84-year-old genius was busily engaged in the problem of extracting rubber from goldenrod.

Edison waged no wars of human destruction; he fought no bloody battles; he stirred no fires of raging hatred; nor pandered to the baser passions of the race. Yet, the world recognizes Edison today as one of the mightiest conquerors of history. He conquered the elements and gave to humanity the greatest ascendancy over the forces of nature the world has ever known. He brought the dawn of a new civilization to a race of men emerging from the darkness of superstition and drudgery. His contributions to science helped to make the United States the greatest industrial nation on the face of the earth.

Light and understanding—these were Edison's great gifts to humanity. He made light a social force. The luxuries of kings became the household necessities of millions of the poorest. The phonograph, which he invented, has been characterized as one of the most original inventions in the annals of technology. The phonograph has brought the world's greatest artists into the homes of the humblest. His inventions made the moving-picture industry, the telephone, the telegraph, and the radio possible or practicable. He did much to make the United States a nation of humanity and brotherhood.

Edison stands in history today among the leaders of the men of genius of all times. Perhaps he did more than any other man in history to bring the peoples of the remote parts of the earth closer together.

Someone has said that "They are truly great who, as the centuries slowly pass, are found by each succeeding race nearer to the heart of human love."

Such a man was Thomas Alva Edison. During the first World War someone asked him, "Could you invent something more deadly than poison gas?"

"Yes," answered Edison, "I could * * * but I don't want to destroy life; I want to make the world a better place in which to live." He concluded, "The dove is my emblem."

By the force of his matchless genius, tireless energy, and idealism he struck the shackles of drudgery from untold millions of human beings and lifted the world into the light of a new civilization.

Thomas Alva Edison was one of the greatest liberators of mankind the world has ever known.

Dairying and Tydings Amendment

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. DOYLE. Mr. Speaker, under leave granted me heretofore to extend my remarks in the RECORD, I desire to include in this statement a letter dated January 11, 1945 from the Protected Milk Producers Association of Hynes, Calif., signed by Ned M. Clinton, manager, and C. L. Smith, manager of Central Milk Sales Agency, Downey, Calif. Also, a

letter dated December 1, 1944 to me and signed by M. Oliveria, manager of Superior Milk Producers Association, Bellflower, Calif.; Ned M. Clinton, manager of Protected Milk Producers Association, Hynes, Calif.; C. L. Smith, manager of Central Milk Sales Agency, Downey, Calif.; M. Toste, manager of Los Angeles Mutual Dairymen, Los Angeles, Calif.; Gail McDowell, manager of Western Consumers Feed Mo., Hynes, Calif.; L. C. Kenworthy, manager of Producers Distributors, Pasadena, Calif., and Frank S. Glass, manager of Natural Milk Producers Association, San Gabriel, Calif., and also a letter dated January 16 and one dated January 29 by me to Mr. Ned Clinton, manager of Protected Milk Producers Association, Hynes, Calif.

Mr. Speaker, I have been honored to be elected Representative to this great legislative body from the Eighteenth District of my native State of California. This Eighteenth District is all located outside the great metropolis of Los Angeles city, but all within Los Angeles County, from the important city of South Gate on the north to the fourth largest city in California, to wit: Long Beach, on the shores of the Pacific Ocean—a distance of about 17 miles north and south; and from the important towns of Artesia and Norwalk on the east, to Compton, Dominguez, Willowbrook on the west, or a distance of about 13 miles east and west. This Eighteenth District is surrounded on the west by the Seventeenth Congressional District, represented by my colleague, CECIL KING; on the north by the Nineteenth Congressional District, represented by my colleague, CHET HOLIFIELD; on the northeast by the Twelfth Congressional District, represented by my colleague, JERRY VOORHIS; and on the east by the Twenty-second Congressional District, represented by my colleague, JOHN PHILLIPS.

In this Eighteenth District there are not only the great naval installations at Long Beach and Terminal Island in Long Beach, and the great shipyards of Consolidated and Craig together with the aircraft plants of Douglas and Consolidated Vultee, but also literally dozens upon dozens of smaller, but possibly not too much less important in this war, plants producing necessities of the war with which to win this global conflict and upon which winning, must be set up a global and enduring peace.

But, as food is also an absolute necessity of peace and war, so my great Eighteenth Congressional District of California is unique in that it not only contains industrial plants of world renown and naval installations of history-making importance, but it raises and nurtures most valuable herds of dairy cows. Certainly fresh wholesome milk is not less important than any food content known to man for daily use. Generally speaking, the great fluid-milk-producing section of the Eighteenth Congressional District is termed as being no small portion thereof. The herds are not only of the best of stock; the milk is not only rated highest by all known tests; but the men and women owning and operating these dairy herds in this time of war are of the finest and most patriotic of our citizenship.

As we discuss the Tydings amendment to the Selective Service Act, and its bearing on the agriculture and dairying of this great Nation of ours, I must speak of the service subject as it applies to my constituents in my native State of California. Having lived in the great city of Long Beach, Calif., for about 35 years before being elected to this House, I generally knew of the great herds of milk cows and the nationally famous hay markets situated a few miles from Long Beach in the Eighteenth District; but, not until the last Presidential campaign did I personally and intimately learn the great strategic importance and value of this great dairy occupation to the war effort. And, at this time when there is so great a need for men from 18 to 45 years of age, I consider it appropriate and imperative that I call to your attention some pertinent facts with reference to this important dairy industry in this district, for it not only applies to my district, but to all agricultural districts wherein the production and marketing and distribution of fluid milk is a chief occupation.

Hundreds of my constituents are rightly concerned lest through misunderstanding or lack of information the Tydings amendment is no longer given its proper interpretation and emphasis as applied to dairy workers. These dairy workers are not seeking any special privilege nor asking any special treatment, and the operators of these great dairies producing so much of the fluid milk used in the Los Angeles metropolitan area are only asking that the Tydings amendment continue to be applied.

Most of the great bulk of the fluid milk supplying Los Angeles metropolitan area comes from dairies within less than 50 miles of the Los Angeles city hall, and a good portion of that daily and essential supply of food comes from herds in the Eighteenth Congressional District. It may surprise you that the average dairy herd in the Eighteenth Congressional District is 100 cows, and that production per animal in my district is more than twice the national average. Thus to handle such herds and essential food, particularly the milking of these important thousands, requires an unusual technical skill. In my district dairymen must needs depend upon hired help, and some of the milkers are naturally within the draft age. Already the serious manpower shortages have resulted in a marked shortage of skilled, technically trained milkers, and there is a shortage of such milkers now for a period of the last 2 years. Formerly, one man could be expected to milk 25 cows at each milking. Now, however, he must average almost twice as many, and some of the men skilled handle as many as 75 cows.

Needless to say, such technically expert young men are a vital link in the food production chain. I am informed in all of Los Angeles County that there are 330 milkers between the ages of 18 and 26 and that they are milking between eighteen and twenty thousand cows morning and night, resulting in approximately 400,000 quarts of milk a day; and that this total by these 330 young men is about 20 per cent of the total milk production in Los Angeles County, of which the Eighteenth Congressional District herds contribute a very substantial part. All of these 330 men have been called by their selective service boards for physical examinations. Mr. C. V. Castle, farm adviser in Los Angeles County, says:

> What will happen if they go into the Army? There is absolutely no replacements for them. We of the U. S. D. A. war board are doing everything in our power to help dairymen keep these essential milkers. If more than a mere handful are taken away the milk supply of this area will be seriously reduced.

Recently, at a committee hearing with General Hershey, I heard him declare substantially that it was his opinion that the young men milking these dairy herds, if called by their selective boards, should exercise their right of appeal, so that it might be clearly defined in each case as to what the status was of each registrant under the Tydings amendment with reference to their present occupation and the present manpower shortage. I have so advised my constituents in the dairy industry. I am informed that it will probably develop that almost without exception none of these expertly, technically trained young men heretofore deferred in a II–B classification as essential to agriculture can be replaced. They are now undergoing examination by reason of call of their selective-service boards in Long Beach and Los Angeles. The operators of these great dairying herds and industries are not asking for special consideration or any favors. They only ask that the Tydings amendment be fairly and fully construed with reference to the irreplaceability of these technically trained men, upon whom so much of the daily life for fluid milk hundreds of thousands of men, women, and children, both able and ill, daily depend. Many of them, months ago, could have left their lesser wages and gone to war industries, where hours would have been shorter and the pay greater, but they have loyally stood by, worked for less and worked longer, in the production of one of the absolute necessities of life, to wit, fluid milk. The production of this necessity of life, therefore, in great quantities is one of the great products of the Eighteenth Congressional District of California.

At a later hearing before the Agriculture Committee in this Congress, which I had the privilege of attending and at which General Hershey was present, it appeared as possible that the second and clarifying directive which he sent January 22, 1945, to all of the State directors of selective service, had not been promptly sent by the State directors to all of the local boards of selective service at their respective areas. But, I am pleased to say that in response to my wire to him of February 5, 1945, the Director of Selective Service of the State of California replied that he had sent notice of such clarifying directive by General Hershey to all the local selective boards in California promptly on Janu-

ary 23, 1945. At the hearing, General Hershey urged that the discretion remaining with selective service boards under the Tydings amendment was believed to be sufficiently inclusive and broad, to make it possible that every farm worker could be drafted at the discretion of the local board acting in the premises, if in fact they are men needed in the Army. This as I understand it, is the interpretation of the situation. He is now quoted as having said at the hearing:

If I didn't believe the Tydings amendment broad enough to make it possible to take everybody, I would ask Congress for a new law.

And at the same hearing, Representative PACE, of Georgia, informed General Hershey that he believed that draft boards are evading and avoiding the Tydings amendment. This was reported in this morning's papers.

I am sure that the local selective boards which have been doing such a magnificent piece of voluntary service in this terrible war, will continue to fully appreciate the heavy responsibility upon their shoulders; and that they will not act in haste or ill-consideration of each and every case coming before them; even though there has been misunderstanding and confusion regarding the interpretation of this Tydings amendment in farming, dairying and agricultural districts over the Nation. I am confident that there will be utmost consideration and intelligent, diligent cooperation in the Eighteenth Congressional District in California to the necessary end, that in the production of food in the form of fluid milk, there will be no undue haste; that every case will be most carefully considered in relation to the facts as they exist, and the Tydings amendment still applying in each case. I repeat again, I have not heard of a single case in the Eighteenth Congressional District in which even one lad is seeking special favors or consideration; nor, have I heard of a single case in which selective-service boards in that great district have yet acted hastily or unjustly. I compliment both the boards and draftees in this great dairying population.

The time will come in the not-too-distant future, I hope, when the munitions of war will not be known as necessities in the life of man. This war must cease and this world which now lives so close together in terms of distances, time, and transportation must either learn to live together or it will fall apart. This world has shrunk into a neighborhood. It must learn to live in terms of world brotherhood or it will not live as a civilized world at all.

The conference of the United Nations at San Francisco, called by the three great world leaders of the United Nations, on April 25, 1945, will shape the destiny of all the living peoples of the world and of the near-born and of the unborn for generations yet to come. Let us work and pray, each in our sincere and humble way, that peace on earth and good will toward all men shall triumph. Nothing else counts as much in the victory of mankind all over the world.

The following letters are the ones previously referred to in these remarks:

PROTECTED MILK PRODUCERS ASSOCIATION,
Hynes, Calif., January 11, 1945.

Congressman CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR SIR: At the outset of the war in Europe there was established in the San Pedro Harbor area a number of shipyards and, more recently, plane factories. There were a large number of milkers who left their milking jobs at that time because of the inducement of higer wages. The dairymen met this situation by changing from hand milkers to machines, and in so doing were able to meet wage conditions because machine milkers milked twice as many cows. This job requires younger and quite active men, as they milk 60 cows twice daily and turn out approximately 1,080 quarts of milk each 24 hours. To maintain this production, it is necessary to have skilled men, just as any other job requires.

One important fact is that the dairy industry here has not been able to increase production to meet the greater demands, both for increased military and civilian defense workers, but just hold even with pre-war production. More milk has been made available by discontinuing the sale of cream and other dairy products; also some production on a temporary permit basis from the San Joaquin Valley. This production amounts to about 15 percent of the total milk received in this market.

At the present time there is being shipped out of Los Angeles milk supplies direct to military establishments in the following amounts:

Texas, 6,000 quarts daily.
Nevada, 8,000 quarts per week.
Arizona, 2,500 quarts daily.
San Diego (military), 40,000 quarts daily.
Los Angeles (military), 102,000 quarts daily.

In addition, fleet and all other warships shipping out of the ports of San Diego, Long Beach, Wilmington, San Pedro, and Huenema (in Ventura County) are also supplied with milk produced in this area.

There is in effect the War Food Administration quotas regulating the civilian supply, and there is no doubt but that much more milk could be sold if it were available.

There are approximately 105,000 dairy cows in this county most of which are in the Eighteenth Congressional District. The average dairy farm has 100 head of milking cows and is operated on a small plot of land on a high-production basis.

More than 80 percent of the entire Los Angeles metropolitan area milk supply is produced in the area comprising the Eighteenth District.

There are only approximately 330 men in the age group of 18 to 26 now deferred in Los Angeles County and the removal of any of these men would result in decreasing the milk supply.

Six hundred and eighty-five dairy farmers in this district produce and market 32,400,000 quarts of milk monthly to the Los Angeles metropolitan population of 3,280,000. This production is the largest of any single county in the United States.

Figures quoted herein were obtained from the offices of the Market Milk Administrator, War Food Administration, Bureau of Market Enforcement, State Department of Agriculture, and Los Angeles County Livestock Department.

Very truly yours,
PROTECTED MILK PRODUCERS ASSOCIATION,
NED M. CLINTON, *Manager.*
CENTRAL MILK SALES AGENCY,
C. L. SMITH, *Manager.*

HYNES, CALIF., *December 1, 1944.*

Congressman CLYDE DOYLE,
Long Beach, Calif.

DEAR SIR: About 54 percent of all the fluid milk sold in the State of California is produced and consumed south of Kern and Santa Barbara Counties. In the southeast area of Los Angeles County, which is in your district, dairy farming is a major business and supports many of the small communities with businesses such as: supply houses, banks, hay dealers, cow dealers, truckers, milk transport companies and all the kindred businesses associated with the personnel requirements of all the various types of labor used in carrying on their business. It is estimated that there is disbursed to the dairymen in this territory approximately $3,000,000, monthly.

Before the war the milk industry, both producers and distributors, operated under chapter 10 of Agricultural Code, which dealt with the stabilization and marketing of fluid milk and fluid cream.

The procedure under this act was for the bureau of market enforcement of the State department of agriculture to obtain facts relative to the production costs for producing both fluid and manufacturing milk. Upon procuring these facts, public hearings were held, after which prices were established which distributors must pay producers for milk fat in a particular marketing area.

Like surveys were made of distribution operations and, after hearings, resale prices for both wholesale and retail sales were established under which no sales were permitted.

At the beginning of the war, when Congress passed the price-control bill under which the O. P. A. was established, the first move was to freeze resale prices, leaving all production costs uncontrolled. It was pointed out to various Federal officials and Members of Congress by members of our producer groups at the time, that this was an impossible condition. Shortly, production costs, especially of feed and labor, increased to where under the State law, it was necessary to raise producer prices in order to maintain the local milk supply. This raise when granted cut the distributor's margin as the O. P. A. ceiling took precedence over the State law. To correct this situation, the O. P. A. raised the resale price one-half cent per quart of milk and later froze the producer price; stopping any further increase to producers while still leaving the producer cost of production items uncontrolled.

In time, these uncontrolled prices led to producers again being placed in a position where they must either receive more for their milk or discontinue production at a time when the Government was asking for greater production of this very necessary food. The producer groups met and sent representatives to Washington. These men met with the California delegation and were supported very strongly by the entire delegation.

A subcommittee of three was appointed, consisting of Congressmen CLARENCE LEA, JERRY VOORHIS, and JOHN PHILLIPS. This subcommittee, after attempting to get the price adjusted, finally secured the present subsidy plan, under which the price received by the producer remained the same as set under the O. P. A. regulation. The difference necessary to maintain production was being supplied by payments direct to the producers by the Federal Government. These subsidy payments, while taking care of the immediate problem of returning sufficient to the producer to keep him in production, left a good deal of uncertainty in the minds of many producers. The extension or renewal of payments are at the decision of men in the various Federal bureaus. If payments are either discontinued or materially reduced without a like drop in production cost, it would be disastrous to local dairy farmers

who purchase almost their entire supply of feed and must compete with metropolitan and war industries for labor.

This procedure is in contrast with the operation under State control wherein our returns were based on actual cost and under which the consumers of Los Angeles and Long Beach purchased milk at the lowest cost of any of the large cities in America.

As long as parity price of grain is maintained and the high wages paid labor as established by wage stabilization order, War Food Administration, it will be necessary for the dairyman to continue to receive his present returns, either through subsidy payments or price increase.

Los Angeles County is the largest dairy county in the United States and has over 103,000 dairy cows which supply the metropolitan area. Our average herd in this area is about 100 cows per herd, as compared to New York State of 16.68 cows per herd.

Our dairies are operated on a feed-lot basis on small tracts of land and are fed by purchases of all their grains, hay, and purchase-cow replacements from other sections of California and bordering States. Due to the requirement of efficient production and in order to be competitive and to stay in the production of milk, under our local conditions we must have highly skilled milkers who are trained to maintain production and milk more cows per man and produce more fat per cow than any other section of this country. It takes several years of training to produce such men and at the present time sufficient labor is our most serious problem. Many of our men have been called for military duty and others have sought easier work in war industries.

This memorandum is submitted for your information with the hope that it will be helpful in bringing about some understanding of our problems and also bring about a mutual relationship between yourself and our organizations in dealing with the many problems confronting us.

Sincerely yours,

Superior Milk Producers Association, Bellflower, Calif., M. Oliveria, Manager; Protected Milk Producers Association, Hynes, Calif., Ned M. Clinton, Manager; Central Milk Sales Agency, Downey, Calif., C. L. Smith, Manager; Los Angeles Mutual Dairymen, Los Angeles, Calif., M. F. Toste, Manager; Western Consumers Feed Co., Hynes, Calif., Gail M. McDowell, Manager; Producers Distributors, Pasadena, Calif., L. C. Kenworthy, Manager; Natural Milk Producers Association, San Gabriel, Calif., Frank S. Glass, Manager.

NOTE.—These men form the Los Angeles Producers (milk control), appointed by the director of agriculture of California.

JANUARY 16, 1945.

Mr. NED CLINTON,
Manager, Protected Milk Producers Association, Hynes, Calif.

MY DEAR MR. CLINTON: Following up my wire to you of January 10 and receipt from you of splendid letter, I immediately and briefly communicate to you further, as follows:

This morning I attended a committee meeting and conference of approximately 75 Congressmen with General Hershey of Selective Service. I made notes of some of the testimony and facts brought out before the committee, and, while I do not claim that this hurried report to you is verbatim of what was said, it is substantially what was brought out in relation to the important subject of the Tydings amendment and deferment of agricultural workers under the recent directive concerning same. General Hershey in part stated substantially as follows: 1. That the Tydings amendment could be best illustrated by a table with four important legs, to wit: First, the applicant must be a bona fide farmer. Second, he must be necessary. Third, his work must be necessary to the war effort as a farmer. Fourth, he must be irreplaceable. If anyone of these four legs is not present, then it would appear that under the Tydings amendment an agricultural worker applicant could not be qualified for continued deferment.

General Hershey stated directly: "I do not destroy the Tydings amendment; I have not ordered it destroyed." The Tydings amendment is not an exception; it made his conditions as absolutely essential before a deferment was justified. Before the enactment of the Tydings amendment, probably some of the farmers were too much stripped of farm labor. Because of the Tydings amendment, however, we probably now have 364,000 more deferred. The initial determination as to whether or not the Tydings amendment is applicable must be made by the local draft boards. They are in a position to determine all the facts in each case better than anyone else. They have done a grand work all over the Nation and without ever receiving a cent of compensation.

If any State director of Selective Service or anyone else is telling local boards to destroy the Tydings amendment, that person is not doing it with the authority of the national director of selective service. I have never authorized any such action. The Tydings amendment is the law. I believe the Tydings amendment has been liberally interpreted. But, in the last 3 months, it has been necessary to strictly interpret it. The local boards must make their decision in view of the Tydings amendment. No one can destroy it and it is not the intention to do so. You can't take any young farmer under this directive from his work in agriculture unless the local board first initially indicates it and is in possession of all the facts, first determines that the selectee does not come under the Tydings amendment in one or more of its essential provisions.

The meeting was called, my friend, Ned Clinton, to discuss the question of whether or not agriculture is to be considered as an essential industry. It appears that the matter will not stop with this important meeting.

General Hershey made it very clear that the needs of the war demanded that every possible selectee between the ages of 18 and 26 be now called into the service and that there was no time for delay. I emphasized time and again that the local boards were initially the determining factor as to what selectees were now called and those who were not. He also stated that he felt it was proper for any and every person who differed with any local board ruling to exercise his right of appal to the limit so as to avoid the largest possible number of mistakes. He also stated that he did not intend this directive referring to agricultural workers to be taken as an order or indication to any local board to go contrary to the provisions of the Tydings amendment or of any law or regulation applicable to the situation.

I am mailing a copy of this communication also to Messrs. Smith, Toste, McDowell, Kenworthy, and Glass, for their immediate information. I hope the same may be helpful until there is some further more definite development. Let me know if you have any suggestion or idea how I can be more helpful to you on your important problem than I am now.

Sincerely,

CLYDE DOYLE.

JANUARY 20, 1945.

Mr. NED CLINTON,
Manager, Protected Milk Producers Association, Hynes, Calif.

MY DEAR MR. CLINTON: You will be pleased to know that here is a copy of General Hershey's clarification directive to State directors and draft boards:

"Questions of interpretation of State directors advice No. 288 have been brought to my attention by Members of Congress and by others.

"The directive of January 3, 1945, State Directors Advice No. 288, did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State Directors Advice No. 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.

"Section 5 of the Selective Training and Service Act, known as the Tydings amendment, places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by this section. Notify all local boards immediately.

"Dated January 22, 1945."

I think this directive should make it clear to local draft boards that they are the authority, subject to appeal, in the determination whether or not a registrant does meet the terms and conditions of the Tydings amendment so as to be qualified as an essential agricultural worker. It should make it clear therefore that nothing which preceeded this clarification directive was intended to nullify the Tydings amendment. The Tydings amendment is found in section 4 (k), Public Law No. 772, Seventy-seventh Congress which amends section 5 of the Selective Service Training Act of 1940 and provides as follows:

"(k) Every registrant found by a selective-service local board, subject to appeal in accordance with section 10 (a) (2), to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained: *Provided*, That should any such person leave such occupation or endeavor, except for induction into the land or naval forces under this act, his selective-service local board, subject to appeal in accordance with section 10 (a) (2), shall reclassify such registrant in a class immediately available for military service, unless prior to leaving such occupation or endeavor he requests such local board to determine, and such local board, subject to appeal in accordance with section 10 (a) (2), determines, that it is in the best interest of the war effort for him to leave such occupation or endeavor for other work."

I will appreciate it if you will see that the papers in your dairying district give this publicity so that the apparent misunderstanding will be corrected.

Sincerely yours,

CLYDE DOYLE.

Appreciation Expressed for Sympathies Extended on Death of First Lt. Clyde Doyle, Jr.

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. DOYLE. Mr. Speaker, the sincere and spontaneous expressions of sympathy and understanding made to me as a Member of this House upon the tragic occurrence of the death of my distin-

guished son, First Lt. Clyde Doyle, Jr., of the United States Army Air Corps, were so inspiring and strengthening to me that I appreciate your courtesy in allowing me to make this expression of my appreciation therefor. I do it not only in my own behalf, but in behalf of Clyde's mother, his two sisters, his widow, and his other relatives.

From the time the news reached me of the fatal airplane crash, I had extended me, from dozens of Members of this House, regardless of political party, words and evidences of sympathy, understanding, and good will. For instance, without my asking it, my California colleagues requested that I be granted a few days' leave of absence to go to his bedside with his mother as he lay unconscious for over 2 days. Then, also without my knowing it, my distinguished colleague, JERRY VOORHIS, of California, with the consent of this House, worded a beautiful but unsought tribute to my son. Then my California colleagues again, unsought by me, arranged that the House would grant me leave of absence to accompany his mother, his widow, and the honor guard to the memorial services for my son in Long Beach, Calif. I did not go because I knew my dead son would, if alive, speak and tell me to stay here on the job, for he was well cared for, and the job here was the most important thing in his estimation for me to do. Then the floral tributes sent by the California delegation to the services at Long Beach, Calif., the extended hand of sympathy with brief words; or with no words at all; the many letters I have received from Members of this House, regardless of party, the allowances made; the many calls at my office by House Members and their wives and secretaries. And these expressions of human sympathy and understanding still continue to come. This, my colleagues, is an intimate proof to me that death knows no party lines.

I am informed that over 20 other Members of this distinguished House have also given their only sons in the performance of war duties during this world holocaust. Yet my son and their sons are but few of the thousands upon thousands of forthright, life-loving American lads who have already made the supreme sacrifice in honorable performance of their highest duty to this Nation and to the world. They and each of them have done this, in order that we who live on might be better able with increased vigor and devotion and sacrifice and good will—every minute we live—to so conduct ourselves as Members of this great legislative body that they shall not have died in vain, and that coming out of this global war there shall be a triumphant and enduring peace.

My son and every son of every Member of this House, having made the supreme sacrifice, have soared into higher and greater responsibilities and privileges of service to mankind. No doubt these other fathers who are Members of this House feel as I do, which is that they are now of necessity working not only to do a job for themselves as citizens, but that they must work also for their sons who have given their lives. My son and I would have been law partners, some day, probably. Now we are partners in working for an enduring world peace.

While flying Army airplanes on the fighting fronts in the frigid north of the Alaskan-Aleutian area, my son wrote and challenged me to actively participate in politics on the home front for an enduring peace. That is the main reason why I am a Member of this Congress.

In closing, may I respectfully venture this thought, to wit, that if every other Member of this House who has also lost his son in this war could join with me in voicing his sentiments at this time, with one accord, we would speak out and say to you, our colleagues, that nothing concerns us so much nowadays as does our increasing, constant dedication to the proposition that a way must be found whereby wars must cease.

Letter Urging Immediate Adoption of Recent Three-Power Proposals

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following letter sent me by Mr. Frank Siegel, New England regional director, United Office and Professional Workers of America, 294 Washington Street, Boston, Mass., in support of the recent Three-Power proposals, and urging immediate adoption of same by the Congress:

UNITED OFFICE AND PROFESSIONAL WORKERS OF AMERICA,
Boston, Mass, February 14, 1945.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR SIR: Liberty-loving people everywhere enthusiastically greet the Three Power decisions at Yalta that guarantee a speedy victory in the war and promise total destruction to fascism in all its forms.

Roosevelt, Stalin, and Churchill have assured the conquered millions of Europe that liberation is at hand for them and that a terrible but just punishment awaits those who have promoted international mass murder, misery, and starvation.

Japanese Fascists will also understand the meaning of these declarations which give renewed courage to our boys plugging away in the Pacific and to the people of Asia.

The people of the occupied and newly liberated nations also know from these decisions that the people and Governments of the United States, the Soviet Union, and Great Britain will work together to help these countries destroy every last remnant of fascism and will help them set up wherever necessary self-governing, fully representative, democratic governments.

Above all, the Three Power decisions help assure a future of hope and promise for all the people in the world for which millions, including tens of thousands of Americans, have already paid the full price.

In the world security organization patterned along Dumbarton Oaks which will arise as a result of this historic conference and from the unity of purpose and unity of will amply demonstrated by America, Russia, and Britain during the course of the war, we Americans can surely feel that together with our allies we are taking great strides toward preventing the repetition of future world strife. Together with our allies and all freedom-loving people we can now move into a bright, new world of future and promise—a world flourishing with trade, industry, science, and the arts—a world of hope and opportunity with expanding living, health, and educational standards for all people.

The Federal Congress can and must implement these decisions at once by voicing the Nation's emphatic support and by immediately enacting legislation to adopt the Bretton Woods proposals, "the cornerstone of international economic cooperation and the guide to post-war prosperity."

Our thousands of members in New England eagerly await an expression of sentiment on your part and would like to hear directly from you.

Very truly yours,

FRANK SIEGEL,
New England Regional Director.

Leading Artists, Writers, Actors, Composers Endorse Coffee Resolution, House Resolution 100, Asking for Severance of Diplomatic Relations Between the United States and Franco Fascist Spain

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. COFFEE. Mr. Speaker, on January 22, 1945, I introduced House Resolution 100, asking to have an expression from the United States House of Representatives to the effect that diplomatic relations between the United States and Franco Fascist Spain should forthwith be severed. This resolution was in response to feeling entertained by millions of Americans, that our appeasement of fascism anywhere should no longer be tolerated.

In the October 1944 issue of Coronet magazine appears an article of mine entitled, "Why Not a West Point for Diplomats?" in which I suggested that the State Department should be purged of those elements which continue to favor appeasement of Fascism, and I offered a remedy. As a result of this article, I have received thousands of communications from all over America and more thousands from men and women in the armed services located in every section of the world in which can be found American citizens in uniform, warmly praising the article and its objectives and expressing hearty endorsement of the plan therein outlined.

The American Committee for Spanish Freedom was organized last fall for the purpose of coordinating, developing, and clarifying sentiment in the United States

with respect to the present government in Fascist Spain. At the head of its artists' and scientists' division is Mr. Olin Downes. Recently a number of these artists and scientists assembled and drew up a statement of endorsement of the Coffee resolution (H. Res. 100), which is self-explanatory.

Scrutiny of the eminent names attached to this resolution will be enlightening. They include some of the outstanding creative minds of America.

I have, on frequent occasions, urged Congress to consider this idea and to take steps seeking to induce our Government to stop appeasing Spain. My colleagues will recall that I introduced the first resolution in Congress specifically providing for an embargo on the export of essential or raw matériel of war to Japan, and I continued crusading for such objective until Pearl Harbor. We are paying the price for having built up that Frankenstein and supplying Japan with matériel now coming back to us in the form of bullets. Let us not repeat the mistakes of the past.

I attach hereinbelow a statement of the American Committee for Spanish Freedom, incorporating the document numerously signed by artists, writers, and thinkers. I commend its reading to my colleagues and to the country.

Here it is:

Now that Winston Churchill has relieved Generalissimo Franco of any faith he may have had in the support of the British Government, the statement by a hundred of the most prominent leaders in the fields of art and science against Franco's present position and American recognition of it becomes increasingly important. These leaders have organized as the Artists and Scientists Division of the American Committee for Spanish Freedom under the chairmanship of Olin Downes to work for severance of diplomatic relations with Spain.

As their first activity they have signed an open letter to Congress which says: "We, the undersigned, desire the severance by the United States of all diplomatic relations with Franco Spain. The great war in which we are now engaged will have been in vain if German fascism is permitted to exist anywhere in the world when this war ends. The present government of Spain was created by the governments of Adolf Hitler and Benito Mussolini, and became a formal signatory to the Axis pact in 1939. Francisco Franco, the head of the Spanish Government, has always supported and worked for a German victory under the guise of a specious, hypocritical neutrality.

Spain, under Franco, has become in effect a colony of the Third Reich, her factories and her soil devoted to producing cloth, guns, and food for the Nazis; her merchant marine devoted to carrying Nazi spies to the New World, and oil, wheat, cotton, and arms from the Americans to the German Wehrmacht; her wolfram, copper, iron, and coal mines devoted to producing the raw materials for the German weapons which kill American and all other United Nations' soldiers; her shipyards devoted to repairing German warships damaged in engagements with American and British forces. The controlled press and radio of Fascist Spain are overwhelmingly devoted to spreading the propaganda of the Axis and painting a false, derogatory picture of the United Nations and their leaders.

The continuation of this Fascist Government or any version of it in the post-war world endangers the whole good neighbor policy, which it constantly undermines in Latin America, and can easily provide the breeding place for a third world war.

American recognition of the Franco-Fascist regime is at the present time one of the controlling factors in keeping it in power against the constantly expressed will of the people of that country.

We therefore urge that you, the Congressmen of the United States, pass the resolution introduced in the House of Congressman JOHN M. COFFEE (Democrat, Washington) asking for severance of diplomatic relations with Franco Spain and assistance to the republican forces in that country. This statement is signed by Olin Downes, chairman, and Louis Adamic, Stella Adler, Claudio Arrau, S. N. Behrman, Albert Bein, Wm. Rose Benet, Leonard Bernstein, Alvah Bessie, Anita Block, Dr. Ernest P. Boas, Van Wyck Brooks, Prof. Edwin Berry Burgum, Bennett Cerf, Stewart Chaney, Aaron Copland, Norman Corwin, Marc Connelly, Russell Crouse, Dr. Leo Davidoff, Jo Davidson, Hallie Flanagan Davis, Howard Dietz, Dean Dixon, Guy Pene DuBois, Anton Dolin, Vernon Duke, Clifford Evans, Howard Fast, Wm. Feinberg, Betty Field, Charles Friedman, Wanda Gag, Wm. Gailmor, Hugo Gellert, Ira Gershwin, H. Glintenkamp, Wm. Gropper, Chaim Gross, Oscar Hammerstein, Dr. I. W. Held, Lillian Hellman, Oscar Homolka, Miriam Hopkins, Leo Huberman, Burl Ives, Crockett Johnson, Jan Kiepura, Otto Klemperer, Arthur Kober, Beatrice Kaufman, George S. Kaufman, Dr. Foster B. Kennedy, Rockwell Kent, Alexander Kipnis, Julian E. Levi, Paula Laurence, Louis Lozowich, Pierre Luboshutz, Leonide Massine, Fritz Mahler, Albert Maltz, Alicia Markova, John T. McManus, Helen Clare Nelson, Isamu Noguchi, Sono Osato, Yella Pessl, Mishel Piastro, Gregor Piatigorsky, Anton Refregier, Elmer Rice, Dr. Bela Schick, Wm. L. Shirer, Arthur Schnabel, Lisa Sergio, Herman Shumlin, Edgar Snow, Moses Soyer, Dr. Sigmund Spaeth, Johannes Steel, Donald Ogden Stewart, Estelle M. Sternberger, Hazel Scott, Martha Scott, Genevieve Taggard, Mark Van Doren, Pierre Van Paasen, Nym Wales, Max Weber, Margaret Webster, J. Raymond Walsh, Kurt Weil, Dr. Gregory Zilboorg.

Shall the War Department Equipment in Europe Be Used in the Pacific War?

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. ENGEL of Michigan. Mr. Speaker, the Associated Press on January 31, 1945, carried an article to the effect that the War Department had decided to abandon all equipment in Europe and rearm European troops sent to the Pacific theater anew. I am inserting in the RECORD today the Associated Press article referred to, together with a letter I wrote to the Secretary of War which is self-explanatory:

WILL ARM TROOPS ANEW FOR JAPAN—UNITED STATES WILL LEAVE BULK OF EQUIPMENT IN EUROPE

WASHINGTON, January 31.—American troops shifted from Europe to the Pacific after Germany's defeat will leave the bulk of their equipment behind, under present plans, and will be armed anew for Japan.

Purpose of this military decision, it was learned tonight, is to hasten the final outcome by bringing substantial forces to bear against the Japanese months and months ahead of the time otherwise possible.

LARGE-SCALE PRODUCTION

The sending of new arms and supplies from the American production arsenal, however, will require continued large-scale war production and slower reconversion to civilian industry after V-day in Europe.

This strategic decision was said to stem from these military considerations:

First. That the giant strides already made across the Pacific Ocean will make it possible to employ large bodies of troops—presumably in operations on the Asiatic mainland—much earlier than was anticipated 6 months ago.

MORE EXPEDIENT

Second. That it would be more expedient, in view of transport problems, to let soldiers from Europe and munitions from America converge for the show-down assault against Japan, than to undertake the slower task of shipping both from Europe.

Otherwise months of effort would be required, the plan's proponents held, in reassembling the weapons, vehicles, and supplies from depots and bases spread over the map of Europe, in preparing them for reshipment, and in hauling them over Europe's battered transportation system to ports congested with troop movements.

HEAVIER COSTS

It held further that the heavier costs incurred in producing new equipment would be far outweighed by the resultant quicker ending of the war and the saving in lives which this would represent.

Presumably the property abandoned in Europe would be forwarded ultimately to the new theater, returned to this country, or sold as surplus on the spot. Disposal plans from the outset have envisaged the sale of the bulk of war surpulses in the country where peace overtakes them, since salvage value would hardly cover the cost of handling and shipment home.

The reported decision sheds additional light on recent official warnings that VE-day will not mean the wholesale demobilization of domestic industry previously planned.

Production schedules for 1945 have been boosted $500,000,000 higher than in 1944, despite the prospect of Nazi collapse this year, and the Army service forces have given notice that their war contract curtailments, instead of running about 45 percent after VE-day, will be about half as deep. W. P. B. recently asked the Army and Navy to place contracts at once for the full year ahead.

W. P. B. also has withdrawn its announcement of last fall that industry would be granted virtually a free hand when the war narrows to a single front, and that some 350 of the existing 500 industrial controls would be dropped automatically.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 13, 1945.

Hon. HENRY L. STIMSON,
Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: I have before me an Associated Press report dated January 31, 1945, which reads in part as follows:

"American troops shifted from Europe to the Pacific after Germany's defeat will leave the bulk of their equipment behind, under present plans, and will be armed anew for Japan."

The report then proceeds to give certain reasons why this is being done stating that the property in Europe would be ultimately forwarded to the new theatre or sold as surplus on the spot. The report reads further in part as follows:

"The reported decision shed additional light on recent official warnings that V–E Day will not mean the wholesale demobilization of domestic industry planned."

"Production schedules for 1945 have been boosted $500,000,000 higher than in 1944, despite the prospect of Nazi collapse this year, and the Army Service Forces have given notice that their war contract curtailments, instead of running about 45 percent after VE-day, will be about half as deep. W. P. B. recently asked the Army and Navy to place contracts at once for the full year ahead.

"W. P. B. also has withdrawn its announcement of last fall that industry would be granted virtually a free hand when the war narrows to a single front, and that some 350 of the existing 500 industrial controls would be dropped automatically."

I would like to have you furnish me the following information:

1. A complete copy of the War Department release upon which the Associated Press based this statement, if it was based on the War Department release.

2. Any explanation and reasons why this policy has been adopted, if it has been adopted.

3. The hearings on the War Department appropriation bill for the fiscal year ending June 30, 1946, were postponed at the request of the War Department. The committee was informed at that time that this was done so that the War Department might increase its requirements. Was this requested increase asked for based upon the above policy?

4. Is the War Department shipping any new equipment to the Pacific under this policy now, that is, equipment which is to be used by European troops which will be sent to the Pacific at the conclusion of the European war?

5. To what extent was the War Department's support of the War Manpower bill based upon the requirements of military matériel and equipment made necessary by this new policy?

6. In view of the fact this policy, if adopted, will involve the expenditure of hundreds of millions and perhaps billions of dollars of the taxpayers' money and in view of the fact that all appropriations under the Constitution must originate in the House of Representatives, I feel that the policy is one in which Congress and particularly the House of Representatives and our subcommittee should have a voice.

7. In order that Congress may have an opportunity of voting on this policy, I respectfully request that you instruct your budget officer to submit to Congress:

(a) A statement showing how much of the moneys appropriated thus far for the fiscal year ending June 30, 1945, has been and is being expended under this policy.

(b) That he segregate and show separately in the War Department budget for the fiscal year ending June 30, 1946, any items and the cost thereof of matériel and equipment which the War Department proposes to purchase under this policy.

I am asking for this information in order that I may frame an intelligent motion should I desire to do so, either in committee or on the floor of the House, striking such items from the bill, thus giving Congress an opportunity to express itself on this so-called policy.

I am frank to state that the extent to which I shall support the next War Department appropriation bill will depend in a large measure upon the question of whether or not you have adopted this policy and the adequacy of your reasons for adopting it, if you have.

In view of the fact that this is a question in which every Member of Congress and the public is interested and in view of the publicity given to the original Associated Press report, I am taking the liberty of inserting the report together with a copy of this letter in the CONGRESSIONAL RECORD. I shall, of course, be glad to insert in the RECORD your reply.

Very truly yours,

ALBERT J. ENGEL.

Commissioning Communists in the United States Army in Violation of Law

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. RANKIN. Mr. Speaker, in this morning's paper it is stated that "the War Department has issued a directive to all commanding officers at home, behind the lines, and at battle fronts, stating that there shall no longer be any distinction between Communists and Americans in the United States Army"; in other words, providing for the commissioning of Trotskyite Communists who are dedicated to the overthrow of this Government, as officers in the United States Army, in violation of a law passed by Congress and signed by the President.

Mr. REED of New York. Will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from New York,

Mr. REED of New York. Is that reciprocal. Are we to be taken into the Russian Army?

Mr. RANKIN. This has nothing to do with the Russian Army. I doubt if these Trotskyite Communists could get into the Russian Army. Stalin would probably send them to Siberia. Remember that, while they were plotting the overthrow of this Government, they were also plotting to get rid of Stalin and put Trotsky in his place.

It is a known fact that every Trotskyite Communist in America is dedicated to the overthrow of this Government by force and violence. Of course, he will tell any kind of a lie to get a commission in the Army of the very Government he wants to overthrow.

This is the most dangerous step I have ever known the War Department to take, and I am calling upon the Committee on Military Affairs to investigate it at once.

The article to which I refer reads as follows:

The War Department has issued a directive to all commanding officers at home, behind the lines, and at battle fronts, stating that there shall no longer be any distinction between Communists and Americans in the United States Army.

Under the directive previous confidential instructions, barring Communists from officer training and some 19 various assignments involving military secrecy, were countermanded.

MUST BE LOYAL TO UNITED STATES

The directive states that no prejudicial action shall be taken on the basis of membership in the Communist Party or allegiance to the Communist Party unless it can be proved such loyalty supersedes loyalty to the United States.

It also states that no individual shall suffer because his views on social questions shall be the same as the views the Communist Party has advanced.

The directive, which is being construed throughout the Army as giving Communists the green light for all Army jobs, is at direct variance with Federal law and Department of Justice opinions that Communists preach overthrow of the American Government.

SIGNED BY GENERAL DUNLOP

The directive was issued under date of December 30, 1944. It was signed at the direction of the Secretary of War by Brigadier General Dunlop at that date acting Adjutant General of the Army.

It was reported that the issuance of the directive had been forced because Army commanders had been referring all applications for commissions from Communists to the War Department. From last October 30 to the date of the issuance of the directive the Department had approved 200 communist commission applications without rejecting one.

The War Department's directive was sent to the commanding generals of the air, ground, and service forces, the commanding officers of ports of embarkation, base commands, and all posts, camps, and stations; the commanding generals of theaters of operations, defense commands, departments, service commands, and military district of Washington, and the commander in chief, Southwest Pacific area.

BASIC CONSIDERATION

The directive, referring to the submission of the question of Communist commission applications to the War Department, said that questions have arisen as to the "significance of membership in and sympathy with the views of the Communist Party."

"The basic consideration is not the propriety of the individual's opinion, but his loyalty to the United States," the directive said. "Membership in, or strict adherence to the doctrines of the Communist Party organization is subject to influences that may tend to divide his loyalty.

"However, many good soldiers are subject to conflicting influences that may tend to divide his loyalty. Such influences must be appraised in the light of the individual's entire record."

CAN BE MEMBER OF PARTY

"No action will be taken under the reference letter that is predicated on membership in or adherence to the doctrines of the Communist Party unless there is a specific finding that the individual involved has a loyalty to the Communist Party as an organization which overrides his loyalty to the United States."

The letter referred to is a confidential communication sent to the same officers under date of January 31, 1944, outlining procedure for "the disposition of subversive and disaffected military personnel," which letter is set aside by the latest directive.

"No such finding should be based on the mere fact that the individual's views on various social questions have been the same as the views which the Communist Party may have advanced."

HATCH ACT QUOTED

"Except in clear cases, no action shall be taken against persons who are being trained for combat assignments and have demonstrated a high degree of ability to serve the United States in that manner, including a willingness to accept combat duty."

This directive stands in sharp contrast to the Hatch Act, which states: "It shall be unlawful for any person employed in any capacity by any agency of the Federal Government, whose compensation or any part thereof is paid from funds authorized or approved by any act of Congress, to have membership in any political party or organization which advocates the overthrow of our constitutional form of government in the United States."

The law provides that any such person discovered in Government employ shall be removed immediately.

On May 22, 1942, Attorney General Biddle declared in deportation proceedings against Harry Bridges, west coast labor leader:

"The Communist Party of the United States of America, from the time of its inception in 1919 to the present time, is an organization that believes in, advises, advocates, and teaches the overthrow by force and violence the Government of the United States."

In 1942 Biddle attempted to denaturalize a foreign-born citizen, because he was a member of the Communist Party and allegedly attempting to overthrow the Government. The citizen was William Schneiderman, Russian-born, head of the Communist Party in California. The Supreme Court upheld his naturalization.

RED CLAIMS SCOUTED

Since the dissolution of the comintern by Stalin and the dissolution of the Communist Party and the substitution by Earl Browder, of the Communist Political Association, the Communists claim to have shed their aim to overthrow the Government.

However, this claim was scouted by Members of Congress, who emphasized that the Communist Political Association is advocating establishment of a dictatorship of the proletariat, which cannot be done in the United States without overthrow of the Constitution.

The new Communist line was announced by Robert Miner, party leader, as "we know that all of the great founders of scientific socialism affirmed the Marxist view of the dictatorship of the proletariat which is the very 'core' of that science. * * * So we see the correctness of Lenin's saying, 'A Marxist is one who extends the acceptance of the class struggle to the acceptance of the dictatorship of the proletariat.'"

OPEN TO COMMUNISTS

Under the directive the following highly confidential posts are now opened to Communists:

1. Officer candidate schools, as candidate.
2. Aviation cadet training.
3. Security and intelligence duties.
4. Duties in connection with secret and confidential cryptographic systems of equipment.
5. Duties in connection with radar.
6. Duties in connection with the information, education, and orientation of troops or the educational recondition of troops. (To include training for such duties.)
7. Headquarters units of companies (similar units) and higher organizations.

OTHER POSTS FOR REDS

8. Clerical duties.
9. G–3 and S–3 duties.
10. Duty as an operator of means of signal communication.
11. Instructor or administrative personnel of replacement depots.
12. Duties requiring maintenance and repair of confidential or secret equipment.
13. Duties affording habitual opportunities to observe confidential or secret equipment closely.
14. Duties allowing knowledge of the tactical dispositions of submarine mine fields.
15. Signal corps units providing communication, signal intelligence, photographic, repair, or depot supply services.
16. Ordnance units providing ammunition or depot supply services.
17. Quartermaster units providing gasoline or depot supply services.
18. Chemical units providing chemical munitions or depot supply services.
19. Engineer units providing depot supply services.
20. Duties affording frequent access to secret and confidential matter or opportunity seriously to injure the war effort.

This opens the gates of the most technical and secret branches of the Army to Communists.

Story of Our Patent Office

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. STEFAN. Mr. Speaker, when I envision the economic crisis that is certain to follow this war, and when I contemplate the various means and methods we must adopt to assure our industrial and commercial stamina in the future, I am always convinced that one of our chief reliances must be inventions. And inventions connote our patent system and the agency which administers it.

In conflict in which we are now engaged with totalitarianism our Army and our Navy have been aided by inventors in the achievement of our own victories and those of our allies. Not yet can we reveal the number and kinds of mechanisms and methods that have contributed to the defeat of our enemies and the preservation of our liberties, but I know that these have been among our most powerful weapons and defenses. Not all of these inventions are of purely military nature, and not every one of them has been evolved since the beginning of our battle with the Axis. Many of them are, however, of vital importance of our forces on land, at sea, and in the air, and were the products of peacetime.

Since the outset of hostilities the inventions patented and those in process of patenting have been appraised—and in many cases—adopted by the Army and the Navy. A special division of the Patent Office was established to examine the many thousands of pending applications to determine the military usefulness of the mechanisms and compositions they disclosed. A large number of these are of such importance to the prosecution of the war that they have been withheld from patenting under authority of an act of Congress—Public, No. 700—and have been subjected to secrecy because their publication would be of assistance to the enemy.

LINCOLN WAS INVENTOR

Had we been without a patent system that has for 155 years spurred invention we might have been deprived of the armament that is now vanquishing our foes in Europe and in the Orient and Hitler might now be the master of all the peoples of Europe and a menace to us.

In the First World War the mightiest influences were the submarine, the airplane and the tank—all of American creation. Even the iron-clad warship of today had its beginning in John Ericsson's *Monitor*, and that, in turn, was encouraged by Abraham Lincoln, himself the inventor of a devise for buoying vessels over shoals patented in May 1849. Richard Gatling achieved in 1862 a very notable improvement in machine guns. These mere glances into the history and accomplishments of our patent system inspire me to record that invention is the act either of making known and usable that which was previously unknown, or of enhancing the usefulness of that which, though already known and used, is susceptible of larger utility. And by rewarding the first inventor with a patent for his product we spur the inventiveness of others. That is precisely the influence our patent system has exerted on genius so that this Nation and the whole world have benefited by its fruitfulness.

PATENT OFFICE 155 YEARS OLD

The framers of our Constitution have left the most eloquent proof that they appreciated the need and the value of inventions even then and at the dawn of the industrial age. By the adoption of section 8 of article I of our Constitution they empowered Congress—

> To promote the progress of science and useful arts by securing for limited times * * * to inventors the exclusive rights to their * * * discoveries.

Though many other provisions of the Constitution were opposed at the convention of 1787 and afterward, that authorization was accepted without question. Its ratification antedates by some years that of our Bill of Rights. On January 8, 1790, President Washington, in his address to the second session of the First Congress, urged that there be given "effectual encouragement to the exertion of skill and genius at home." Within 3 months President Washington approved the act of Congress establishing the patent system of the United States.

The authority to grant patents under that law was lodged in a board consisting of the Secretary of State, the Secretary of War, and the Attorney General. The subject matter of a patent was required to be "any useful art, manufacture, engine, machine or device, or any improvement thereon not before known or used." The members of that board—the first administrators of our patent system—were impressive figures even in that era of great patriotism and statesmanship. They were Thomas Jefferson, author of the Declaration of Independence; Henry Knox, a general in the Revolutionary War; and Edmund Randolph, one of the most able and illustrious members of the constitutional convention. Jefferson's experience as a member of that board seems to have altered his views as to monopolize insofar as the exclusiveness of rights represented in patent is concerned. After serving for 8 years as an administrator of the patent system he wrote:

> Certainly an inventor ought to be allowed a right to the benefit of his invention for some certain time. Nobody wishes more than I do that ingenuity should receive liberal encouragement.

To this he added, years afterward, the statement that "many ingenious improvements are made in consequence of the patent right giving exclusive use of them for 14 years."

Jefferson himself was an inventor, but his inventions antedated the patent system. Until 1861 the term of a patent was 14 years.

THE FIRST PATENT

The first patent issued under the Initial Act of Congress was that to Sam-

uel Hopkins, of Vermont, for a Method of Making Pot and Pearl Ashes. That could hardly be regarded as a significant addition to the arts, but less than 4 years later there was granted a patent for an invention that, with the refinements added to it by subsequent inventors, has long been a boon to important sections of our agriculture and manufacture. That was Eli Whitney's cotton gin, which aided the production of textiles then and ever since.

THORNTON SAVED PATENT OFFICE

In 1802 President Jefferson appointed Dr. William Thornton to have charge of the issuance of patents. The bureau which Dr. Thornton headed was a section of the State Department. James Madison, afterward President for 8 years, was Secretary of State. Dr. Thornton was born in one of the Virgin Islands. He studied medicine at the University of Aberdeen, Scotland, and after receiving his degree came to the United States and acquired citizenship here. He became more prominent as an architect and as director of the Patent Bureau than as a physician. It was he who designed the Capitol, his reward for that service being $500 and a plot of land. By a freak of fate he was superintendent of the Patent Office when the British burned the Capitol and other buildings in Washington in 1814. He successfully pleaded with the British commander to spare the office and save from destruction "what would be useful to all mankind." He died on March 27, 1828, after 26 years of service.

RAPID INCREASE OF PATENTS

By reason of normal propagation, immigration, and the addition of new territory the population of the United States had increased from 3,929,214 in 1790 to approximately 17,000,000 in 1836. In the same 5 decades our country's trade and industry had made great progress. In 1790 one patent was granted. The total in the following 46 years was 9,956. Among these were patents awarded to Cyrus H. McCormick for his reaper and to Samuel Colt for his revolving gun—popularly known as the 6-shooter—and destined to become a potent factor in the winning of the West, and both in the prosecution of war and in the preservation of peace.

But the patent system was not functioning as effectively as its great creators would have wished. Accordingly, in 1836, through the initiative of Senator John Ruggles, of Maine, Congress revised and improved the requirements and procedures so as to assure greater novelty and utility in the inventions protected. There was reestablished the examination that was provided in the Act of 1790 and later waived. This requisite of originality and usefulness has continued down to the present. In fact, the Ruggles Act of 1836 is the basis of our patent system today. Senator Ruggles received the first patent granted under the act of Congress he sponsored. It was issued on July 13, 1836, and covered a locomotive steam-engine for rail and other roads, its purpose being to increase the tractive power and prevent the sliding of the wheels. This device anticipated if it did not actually inspire the cog-railroads that came to us in later years.

FIRST COMMISSIONER OF PATENTS

The law of 1836 constituted the Patent Office as a separate bureau of the Department of State and gave to its administrator the title of Commissioner of Patents and required his appointment by the President. His salary was $3,000 a year. In the period from 1802 to 1836 there were but five chiefs of the bureau of patents—Dr. Thornton, Dr. Thomas P. Jones, Dr. John D. Craig, J. C. Pickett, and Henry L. Ellsworth. After the enactment of the statutes in 1836, Ellsworth was appointed by President Jackson as the first Commissioner of Patents. He continued his service until 1845. Very often a statement he made in his report to Congress in 1844 is quoted as an example of the chimerical. He declared that—

> The advancements of the arts, from year to year, taxes our credulity and seems to presage the arrival of that period when human improvement must end.

It may be that Commissioner Ellsworth's optimism—or pessimism—was begotten by a great invention that had been tested that very year—that is, Samuel Morse's telegraph. Morse received his patent on June 20, 1840, but the first telegraphic message was transmitted from Washington to Baltimore in 1844, and prompted Nation-wide enthusiasm. Ellsworth was deeply interested in Morse's discovery and aided him in obtaining from Congress an appropriation of $30,000 to determine the operativeness of the new invention. In the same year that Ellsworth made his often-quoted statement there was issued to Charles Goodyear a patent for the vulcanization of rubber. To this day and in the crisis of our defeat of despotism we are immeasurably indebted to that discovery. Within 2 years Elias Howe patented his sewing machine, which, with the betterments it has undergone, has become a big factor in our industry. Since Ellsworth's misvision there have been granted more than 2,360,000 patents—among them those for the rotary printing press, the elevator, block signals for railways, the mower, the refrigerator, the typewriter, the air brake, celluloid, the telephone, the phonograph, the incandescent lamp, the automobile, the electric trolley car, the adding machine, the motion-picture machine, the airplane, various plastics, and television. How many myriads of our people are employed in the manufacture, sale, and use of these mechanisms and compositions?

Would these benefits have come to us without the inducement of patents? Perhaps history can supply the answer to that question. It informs us that in all the ages that preceded the establishment of our patent system there were not evolved as many and as momentous inventions as have come to us in the last 150 years. We are deeply indebted to the genius of the Hebrews, the Egyptians, the Greeks, and the Romans, but their inventiveness was less fruitful than our own. Our patent system, then, is one of the best proofs and one of the richest recompenses of our ingenuity.

The agency which administers and effectuates our patent system is in many respects unique among our Federal departments and bureaus. The Patent Office is almost coequal with our Government. In the period from 1802 until the present the Office has been administered by 36 superintendents or Commissioners. One of these, by the way,—Benjamin Butterworth of Ohio—after serving from 1883 to 1885, became a member of Congress. He was again appointed Commissioner by President McKinley in 1897. In 1849 the Office was transferred from the State Department to the Department of the Interior, created the same year. The first Secretary of the Interior was Thomas Ewing, whose grandson, of that same name was Commissioner of Patents from 1913 to 1917, and from 1888 to 1890 an examiner in the Patent Office.

Our present Commissioner is Conway P. Coe, who was appointed by the President in June 1933.

PATENT OFFICE SELF-SUSTAINING

Now I shall instance what I believe to be another singularity of the Patent Office. In the last 109 years it has not only earned its way but has returned profits. Its receipts in that long period have exceeded its expenditures by more than $2,000,000. That is a fine record of service plus surplus and, I believe, one without parallel among the other Federal agencies.

There is now, and for some time has been, deprecation of patents as monopolies. I shall close this statement with a brief commentary on that viewpoint. Like any other right bestowed and buttressed by our Constitution and our laws, that of the patent may be misused and abused to the public detriment. That is true also of every provision of our Bill of Rights, but violations of that sacred charter are not penalized by its revocation; they are vindicated and preserved by the punishment of the guilty individual. Accordingly, wrongful exploitation of patents is corrigible by the remedies and recourses our laws now afford. My conclusion and conviction, therefore, is that we must perpetuate our patent system as a powerful propellant of our progress, both industrial and social.

Mr. Justice Frankfurter

REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. McGEHEE. Mr. Speaker, the behind-closed doors maneuvering, planning, and under-cover work of one man connected with this administration, after 12 years, has been revealed to us through the press. I have wondered many times why the press long ago had not divulged to the public, if they knew it, the efforts of this man who has for this period of time been trying to change the whole

set-up and structure of this great Government of ours, which it has so prospered under for 150 years.

The papers on yesterday revealed that Frankfurter, a member of our Supreme Court, has now launched out on a program of controlling this country and probably the world, by and through the henchmen who are endowed with the same philosophy that he is.

It has been known for quite a while his tactics in securing the appointment of men in key positions of this Government and how he connived with others of his faith and belief behind closed doors. Each of them, one at a time, because they were close to our President, make separate appointments with the President and each urge him to place a certain man in a position, each taking one phase of the would-be appointee's ability to administer the special position, but never recommending one except that he was of the same ideologies as he and his ilk and clan. This has been done to the extent that practically every department of our Government is now infested with those who see eye to eye with Frankfurter. His intent and purpose is that eventually he can change the form of this Government in accordance with his ideas.

I am wondering what he is going to do with the Montgomery Ward case when it comes before the court. Any primary student throughout this land knows that the seizure was illegal. Justice Sullivan, who rendered the decision, should be given a congressional medal of honor for following the dictates of his own judicial training and not taking orders.

I want to say to you, in my opinion, which is also the opinion of thousands of good patriotic American citizens, that this man Frankfurter, together with a few others, are the Rasputins of this administration. I am suggesting to the Dies committee that they go immediately into and delve into the actions of Frankfurter, with a view of bringing impeachment proceedings against him and relegating him back to private life and, if possible, send him back to the land from whence he came and let him teach his un-American doctrines there rather than try to contaminate a patriotic American citizenship.

Mr. Speaker, this article charged that Frankfurter has the New Deal administration and the Supreme Court under his thumb and that he now cherishes the ambition to be chief justice of an international court of justice to be set up under the Dumbarton Oaks program. The article further charges that Frankfurter has confided to his friends that he is certain he can have the President nominate him for the post and that Churchill will favor him and he believes Marshal Stalin will also. I am of the opinion that Stalin will favor him, but I am loath to believe that our President and Churchill would. I say Marshal Stalin will no doubt favor him because of his championship of the causes of Sacco and Vanzetti, the Reds who went to the chair for murder in Massachusetts and his work in behalf of the I. W. W. deportation cases.

This article says that Theodore Roosevelt said this of him:

He has taken an attitude which seems to me to be fundamentally that of Trotsky and other Bolshevik leaders in Russia, an attitude which may be fraught with mischief to this country.

Also, according to this newspaper report, Frankfurter will shuffle Cabinet posts and Supreme Court seats at a furious pace.

Mr. Speaker, when, oh when, except when the monk Rasputin handled the Czar in this manner, has any nation experienced such influence over the entire national set-up as it is alleged that this un-American is influencing the higher officials of our country. Members of Congress, let me admonish you, let me beg of you, let me plead with you, that as Representatives of the greatest citizenship in the world, wake up, take action and throw out of the key positions they are now holding and wielding an influence that is changing the very form of our Government, those of the ilk and clan of Frankfurter. If you do not, what chance have your boys and girls who are coming along today, going to have in life?

Michigan Farmers Are Not Magicians

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. CRAWFORD. Mr. Speaker, Michigan farmers are as far advanced in the science of farming as any farmers anywhere. But they are not magicians. Any belief of Washington bureaucrats to the contrary, Michigan farmers cannot wave the branch of an apple tree over the soil and produce great quantities of sugar beets, onions, peppermint oil, potatoes, navy beans, grains, fruits, and other crops for which our State is noted.

It takes back-breaking work to produce record-breaking crops. It takes mechanical skill and experience, too, and for the most part Michigan farms are operated by farm families. Our children start learning the science of the soil in childhood.

War Food Administrator Jones is calling for something like 312,000 additional acres of sugar beets, 49,000 additional acres of beans, 127,000 additional acres of potatoes and also great increases in milk and dairy products as well as slaughter animals.

How will it be produced when farms are being stripped of their young men? That is what is happening in Michigan and I have pending before the Rules Committee a bill to provide for the investigation of the drafting of these skilled farmers contrary to the Tydings amendment. I hope the committee will see fit to authorize some sort of an investigation into this matter. The situation is serious.

Anyone who says that the older people can produce the food required for our armies and navies and our allies and conquered peoples just do not know anything about farming. Even from far away Australia that country's Minister of External Affairs is predicting starvation greater than that which followed the previous World War.

The people of Michigan who know what is involved in food production—and we are producing a tremendous amount of food for our Army, Navy, and our allies—are alarmed. Our State legislature has called upon Congress to act in this farm-labor crisis.

Its plea to Congress follows:

House Concurrent Resolution 8

Concurrent resolution memorializing the Congress of the United States to enact legislation protecting farm labor as critical in the war effort

Whereas farm labor has not been placed on the critical list in the war effort; and

Whereas local draft boards apparently do not have sufficient power to classify physically fit producing farmers between the ages of 18 and 26 as critical in the war effort, and to defer the drafting of men critically essential to the production of the food supply of the Nation and armed forces, but are obliged to meet their draft quotas; and

Whereas with rationing and shortage of food supplies, it is vitally important that farm production be kept at the maximum, and it is short sighted to imperil production of crops and livestock: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Congress of the United States is urged by the Michigan Legislature to enact legislation protecting farm labor as critical in the war effort, which action should be taken immediately to forestall a possible emergency, due to the recent ruling of selective service; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the President of the Senate and Speaker of the House of Representatives of Congress, and to the Michigan Members in the Senate and House of Representatives of Congress.

Adopted by the house January 25, 1945.
Adopted by the senate January 31, 1945.

NORMAN E. PHILLEO,
Clerk of the House of Representatives.
FRED I. CHASE,
Secretary of the Senate.

The extent to which confusion has swept the farm areas of Michigan as the result of the "let the old men do the farming" policy is set forth in an editorial in the Michigan Farmer, our State's 102-year-old farm journal, for February 7. It follows:

TOO MUCH CONFUSION

Comments we have received, through the mails and otherwise, since our January 20 issue containing the editorial on drafting young farmers reached our subscribers would indicate a state of confusion exists in many places. Several have argued that the picture was not just as we presented it. Some declared information coming to their attention indicated that all farm boys between the ages of 18 to 25, if found physically fit, would be drafted, regardless of how important they might be considered locally in the land army. It was intimated that the county war board and local draft board had no alternative but to put the farm boy in I-A if he met the physical requirements.

We are not placing the responsibility for this confusion upon the shoulders of any person, persons, or group. No doubt several things contributed to it. But we do want to clear the air by pointing out that the facts in our editorial still stand. A telegram from

General Hershey to all State directors of the Selective Service System on January 22 called attention to the Tydings amendment which "places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by this section."

A second conference with Lt. Col. P. V. Engstrom, used as the authority in our earlier editorial, assures us once again that this Tydings amendment is to be observed. That county war boards continue to make their recommendations. And local draft boards decide which farm boys within this age group shall go into the armed services and which shall remain on the farm to produce the greatly needed food. Any evidence of cases to the contrary should be brought to our attention.

Washington's double talk has done little to untangle the mess into which it has thrown farm States, and as late as last Saturday, February 17, the Michigan Farmer again sets forth the situation in an editorial entitled "Still Confused."

The editor of the Michigan Farmer hits the nail on the head when he says, "Only Congress can force a change in what is admittedly an erroneous and dangerous policy." Selective Service officials have not shown any inclination to step into the mess and straighten it out. It will take some legislation similar to House Resolution 122, which I introduced on February 7, or some similar bill introduced since then, to keep these essential crop producers on the farms.

The editorial follows:

STILL CONFUSED

Confusion still reigns along the farm front in regards to the drafting of farm boys within the 18-to-25-year-old group. We are told that there is urgent need for at least as much foodstuffs in 1945 as we produced last year. We are told that there is a shortage of some 4,000,000 workers on American farms. We are told that new farm machinery will not be as plentiful as last year. We are told that our armed forces need 150,000 men a month for replacements. We are told that every able-bodied man within the 18-to-25 group will be needed to fill these quotas. We are told that the Tydings amendment is still in effect and must be considered when drafting farm youth. We are told that it is the responsibility of the local draft board to determine which boys go into the armed services and which continue to serve on the home front. All of these statements are credited to men or agencies of authority, mostly located in Washington.

Letters and comments coming from out in the State would indicate this confusion extends into the local draft boards, for there seems little uniformity in the way they operate. Some are liberal, others are hardboiled. Evidence of military pressure is frequently reported. Here and there a member resigns because he resents any trespassing upon the authority of the local groups.

PLANNING DAYS ARE HERE

It is most regrettable that this fog of confusion seems to grow more dense with the passing of time because these are the days when plans are laid for the year's production on the farm. If we are to lose our young able-bodied farmers it just naturally follows that the older folks left to carry on will of necessity reduce their plans to fit their manpower and equipment. Selective Service officials point out that production should not be disturbed greatly because these boys represent only a small percent of the farm labor group. Measured in units we can agree but when it comes to production ability we fail to appreciate their viewpoint. A general is only one person, just as is a private, but we can understand that one is much more valuable than the other in the carrying on of a war. Many of these farm boys are officers in the food front army. Too many people, including some high Government officials, look upon farming as a job for the unskilled, rather than a business requiring a great variety of knowledge if it is to be a success.

And none of these arguments takes into consideration the possibility of unfavorable weather that might seriously hamper and curtail our farm production program, even with ample manpower and equipment.

WRITE YOUR CONGRESSMAN

The farms of Michigan should not harbor youths who are only trying to avoid serving in the armed forces. But they should not be robbed of the important help needed to produce the food so necessary in the winning of this war and the writing of a just peace. We owe this protection to our boys on the fighting fronts of the world.

Farmers who feel they are not being treated fairly, in accordance with the Tydings Amendment, should file appeals at once and then immediately write their Congressman in Washington, giving a true picture of the local situation. Only Congress can force a change in what is admittedly an erroneous and dangerous policy. Your editor would appreciate hearing from all who do write their Congressmen so that he can keep fully informed on the situation, and lend assistance wherever and whenever possible.

Capt. Marcel Graux

REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. BULWINKLE. Mr. Speaker, during the last war I commanded a battalion of artillery in France. A French officer was attached to my battalion.

I heard from him several times, the last time being in 1921. On Saturday last I received a letter from him. He was a fine officer and a great artilleryman. I thought probably the Members of the House would like to read it. May I not call briefly to your attention the following letter:

NEUILLY (SEINE), *January 10, 1945.*

MY DEAR MAJOR BULWINKLE: Permit me, please, to call you by this title again. The Lieutenant Graux sends you his best remembrances and his wishes for a Happy New Year. I am trusting that you and your family are well, and I should be much pleased to know it.

Here in Paris we are just getting out from an awful period. I was taken again by mobilization in September 1939 and was entrusted with the command of a battery "guns 75 and horses." We were on the Meuse in Belgium near Fumay from May 10 till May 15, 1940. On this day German units had already crossed the Meuse at Sedan and crushed liaisons and commands 60 kilometers behind us. I tried to go through the German troops with three batteries of the regiment, but finally after traveling and fighting during the whole night, we were surrounded and massacred by tanks. I succeeded to escape with a few men, after a long walk.

A new unit was reformed in Normandy with 75 guns and motorcars, and was driven back to the south of France. I was demobilized in August 1940, and then I lived in Paris with my wife, my daughter, and my son. During 4 horrible years, humiliations of the defeat, of the armistice, of the occupation; privations of every kind in the large towns, with the right of abundance for enemies and collaborators using the marché noir (black market).

I worked for the intelligence service in 1941–42, but about 20 of my friends were arrested in February 1943. I escaped once more, being at the hospital when the gestapo came into our house. I was engaged with the F. F. I. for Paris liberation. These days will remain the most beautiful and enthusiastic in my life.

Now I have put on again my military dress; first in our security service and then having succeeded to be engaged by the French liaison section-headquarters communicatory zone. I am in Paris at this time. I am much pleased to assist once more your dear and beautiful Army of which we admire here the courage, organization, armament, and successes.

Here in Paris our life remains very hard, but we have to be patient until our transportation will be rebuilt and given back to civil affairs after our complete victory, which I think we can expect for 1945.

Such is the short recapitulation of these years. I hope my letter will reach you shortly through being posted by the Army, and that I shall get back good news from yourself and your country.

Now, if any friend or relation of yours, officer or private, would be pleased, being long since absent from his country, to know something of a French home, we should be very happy to welcome him. I should myself be very glad, being introduced to the friends of yours fighting now on our own frontiers.

Please also let me know, if possible, of the officers of the One Hundred and Thirteenth Regiment, in particular of Captain Morrison, Vairin, Crayton.

Ever remembering your kindness to me, I am, with my best wishes,

Sincerely yours.

GRAUX.

Let San Francisco Review Yalta

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. REED of New York. Mr. Speaker, records show that from the year 1500 B. C. to A. D. 1860 more than 8,000 treaties of peace meant to remain in force forever were concluded. The average time they remained in force was 2 years. These broken treaties were not made by the people themselves nor by their representatives, but by rulers with the power of life and death over their people and with power to make and break treaties and to make war. The result of such vast powers usurped by ambitious rulers has left a record of only 227 years of peace during a period of 3,357 years. It is estimated by one eminent authority that more than 15,000,000,000 persons have sacrificed their lives in the wars of historic times. I

agree with David Lawrence that it is high time every phase of the commitment made in Yalta be examined. Under permission granted to extend my remarks and to include an editorial, I insert Let San Francisco Review Yalta, by David Lawrence, published in the United States News under date of February 23, 1945:

LET SAN FRANCISCO REVIEW YALTA

(By David Lawrence)

Did not the American people envision an organization of nations with democratically chosen representatives which would sit like a court of judges and develop an equitable formula for handling the major problems growing out of this horrible war—adjustments of boundaries and territorial changes, vital questions of self-government of peoples, and the humane treatment of millions of men, women, and children forced to move from one country to another?

Did we not envision a tribunal of justice which could sit sternly in judgment on the sins of the enemy but at the same time would see to it that the innocent peoples of all European countries had a chance for economic sustenance? Was not that the kind of peace conference which we have thought would be held at the end of this war?

Instead we have three men already making commitments in secret and pledges that will bind the so-called peace conference which at best can now be only a perfunctory mechanism of ratification.

The meeting at Yalta, in the Crimea, was the most important international parley since the peace conference at Paris in 1919. And history has repeated itself. President Roosevelt has been out-traded and outmaneuvered by the pragmatic-minded statesmen of Europe, just as was President Wilson.

Mr. Roosevelt pins his hopes on the curative potentiality of the United Nations organization as Mr. Wilson did with his League of Nations. Europe, which at the Paris peace conference sold out idealism and principle for territorial greed and aggrandizement and a punitive peace, finally produced an embittered Germany that accepted Hitler as a better alternative than the misery and chaos of economic ruin forced upon her by excessive reparations. The League proved powerless to correct the mistakes of the Versailles Treaty.

Is the same thing in evolution now?

A reparations commission has been ordered. It will sit in Moscow, of all places. Germany's economic mechanism is to be destroyed and she is to make payments in kind, which means she is to be deprived of the sinews of economic recovery or rehabilitation. It is easy for the Allies to announce that they have no intention of destroying the German people but realistically their program of reparations means exactly that ultimate result.

After the last war, the Allies for years extracted locomotives, coal, machinery, and other payments in kind and the struggling Weimar Republic in Germany finally went bankrupt. Economic chaos ensued and unemployment multiplied until Hitler came along with a dictatorship to which millions of Germans in their desperation acceded.

Then the dictators of Europe began to trade with each other. Mussolini made a deal with Hitler and afterward Hitler and Mussolini made a deal with Franco. Soon Hitler made a deal in 1939 with Stalin and let loose the Nazi bombers on Warsaw. Presently Stalin made a deal with the totalitarian government at Tokyo. The objective was always supposed to be peace.

Yes, it was this same Stalin who insured Hitler's armies against attack from the east in 1939, so that an opportunity was afforded Russia to grab the Baltic States and administer a death blow to Poland.

It was the same Stalin who formally subscribed to the Atlantic Charter in January 1942 and, joining us, demanded a second front in Europe while he retained his friendship and trade with Japan in the Far East.

Now our President is making a deal with Stalin, and Churchill is standing by. Let us see what each gets out of this extraordinary performance wherein the United States is committed to post-war agreements on territory and other understandings of a far-reaching nature without so much as a representative of the United States Senate present, to say nothing of the absence of a treaty for submission to the Senate—by which method alone, our Constitution says, the authority of the United States can be lawfully pledged.

We are told hard bargains were driven at the Crimea Conference.

WHAT DID STALIN GET?

Acquiescence in his grab of the Baltic states of Estonia, Latvia, and Lithuania. Annexation of territory that previously belonged to Poland. Acquiescence in the sphere of influence set-up which will mean Stalin-controlled governments in Poland, Hungary, Czechoslovakia, Yugoslavia, Bulgaria, Rumania, and in the Baltic areas. Reparations from Germany that could include forced labor. More lend-lease dollars and goods from America.

WHAT DID CHURCHILL GET?

Acquiescence in the sphere of influence idea, which assures British domination of the Mediterranean and north Africa. A promise of continued American military power to enforce whatever settlements have been privately agreed upon.

WHAT DID ROOSEVELT GET?

The widely heralded honor of being "chairman" of a conference consisting of three men. The doubtful privilege of sponsoring a new voting procedure in the soon-to-be-erected organization known as the United Nations Security Council, whose academic scope is already foreclosed by the practical process of Big Three conferences from which all the other nations, large and small, are excluded. A promise of a formula of "free elections" in liberated areas, which, of course, is meaningless while military controls are present. Russian aid in the Far East—perhaps of doubtful value in the long run because of the consequent need of dividing the energies of our Navy in opening up new supply lines in the foggy and weather-bound north Pacific.

WHAT DID THE AMERICAN PEOPLE GET?

A promise of continued war with heavier and heavier casualties against a stiffened and perhaps fanatical resistance by the German people, who have everything to gain now and little to lose by adopting desperate measures. A promise of a big standing army and compulsory military training for American youth as we furnish men and materials to keep Germany's underground forces permanently disarmed and to suppress rebellions in the liberated countries, while American boys are killed by snipers and guerrilla fighters for years to come.

This isn't promise of peace for anybody. This is a promise of more war, because economic anarchy breeds gangsterism and dictatorship and incessant strife. The high-sounding phrases of the Crimea communiqué can be found almost verbatim in the communiqués issued after the Moscow and Teheran Conferences in 1943. A European Advisory Commission was set up then by Russia, Britain, and the United States to deal with all problems arising out of the liberated countries. Joint and not individual action was pledged then, too. But Stalin ignored the pledge and so did Churchill, and now we resolve again with more phrases about Allied solidarity and unified action.

Many of us will still believe that the President's position at the Crimea Conference should have been that which we took earlier in this war, namely, that peace settlements must await the day of victory and that the peace conference must be free from any previous commitments or pledges on territorial questions made in secret or otherwise.

Russia could not quit the war against Germany if decision on her territorial demands were deferred any more than we could turn from the fight against Hitler because we failed to persuade Russia to wait for the awards of a peace conference, at which all interests, including the people of Poland, would have had a chance to be heard through a government of their own choosing, as specifically provided for in the Atlantic Charter, which says:

"They (Russia, Britain, the United States, etc.) desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned."

We cannot concede that Russia is winning this war alone against Germany and so deserves everything she asks for. If American lives had not been sacrificed on the western front and if we had not supplied airplanes and other materials under lend-lease, Russia could not have mounted her offensives. The American viewpoint has back of it moral right as well as sacrifices of our manpower thousands of miles away from continental United States.

For American idealism was defeated at Yalta. American constitutionalism was scorned at Yalta, and the pledges given in the Atlantic Charter that no nation—neither Russia, nor Britain nor any other country—will seek "territorial aggrandizement" were flagrantly violated at Yalta.

The covenant of the League of Nations provided a machinery for periodic revision of the peace treaty itself. The United Nations Charter must also provide a means of review of the agreements reached at the conference of the Big Three at Yalta. Unless this is done, it is not likely that the United States Senate will ratify the treaty or furnish the other guaranties that are expected to supply American military power to enforce the settlements made at the close of this war.

"Let San Francisco Review Yalta" was the title over an editorial in the Scripps-Howard papers last week. It is an excellent slogan for the American people. For it points the way to a means of correcting the mistakes at Yalta and of really fulfilling the promises explicitly written in the Atlantic Charter.

Continuation of Premium Price Plan for Copper, Lead, and Zinc

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the Senate of the State of Arizona:

Senate Memorial 1

Memorial requesting continuation of the premium price plan for copper, lead, and zinc

To the Congress of the United States and the War Production Board:

Your memorialist respectfully represents:

In the interest of the prosecution of the war, the Congress enacted and the War Pro-

duction Board carried into effect what is known as the premium price plan for copper, lead, and zinc.

The premium price plan was designed, not to afford a profit to producers, but to bring out more of these essential metals than the low ceiling prices could provide—to encourage overquota production involving careful planning, capital investment, and increased production costs which can only be liquidated over a long period.

Hundreds of producers, large and small, have done and are doing their part to carry out the program.

Announcement has been made that the premium price plan will be closed as of July 31, 1945, and as to certain classes of premiums prior to that date, on 30 days' notice.

This action, if carried out, will work a very great and unjustified hardship upon a large number of producers, and especially small-mine operators, who have made investments and incurred obligations in compliance with the Government's wishes, which have by no means been liquidated, and which were assumed and undertaken with the understanding that the duration of premium prices was guaranteed until the national emergency ends.

Wherefore your memorialist, the Senate of the State of Arizona, urgently requests:

1. That the premium price plan for copper, lead, and zinc, including all classes of premiums, be continued to June 30, 1946, and that no provision be made for the cancelation of any class of premiums during the intervening period except in cases necessitating individual operating corrections.

2. That the Congress appropriate sufficient funds for carrying out the existing plan until such date.

Adopted by the senate February 5, 1945.

Approved by the Governor February 7, 1945.

Memorial Exercises for Frances E. Willard

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered at the memorial exercises for Frances E. Willard in Statuary Hall, Saturday, February 17, 1945, Washington D. C.:

Officers and members of the District Woman's Christian Temperance Union, my friends, and fellow citizens, it is most appropriate that we thus annually observe the passing of Frances E. Willard and remember her great deeds.

As evidence of her outstanding character and accomplishments Miss Willard alone represents her sex in Statuary Hall. Women have attained greatness in every phase of life equal to that attained by men, but, thus far, only one woman has been honored by having her statue here—Frances E. Willard.

On this eventful occasion, during these war days to which our women are making such valuable contributions, as we think of Miss Willard it is also proper to think of womanhood in general.

Someone has said that God could not be everywhere all the time therefore he gave us our mothers. This same week we have observed the birthday of Abraham Lincoln who said, as many of us could truthfully say, "Whatever I am I owe to my mother."

Of all the crusaders for temperance, decency, and right living no one ever surpassed Frances Willard. She initiated the fight for the extensions of all the privileges of life to women in like proportions as they had been extended to men.

Born on September 28, 1839, in the State of New York, later moving to Ohio, still later to Wisconsin, and then to Illinois, the rather frail little girl to whom had been given the name Frances Elizabeth, grew into young womanhood.

During a serious illness, about the time of her graduation from college, she resolved to devote her life to Christian work; to which pledge she rigidly adhered.

In the field of education Miss Willard made great contributions but her natural theater of operations was as a reformer. Although considered an impractical dreamer by many, Miss Willard fought for the political franchisement for equal opportunities and responsibilities in homes, in professions, in industry, and in affairs of state.

She insisted on provision for vocational guidance being provided for girls; upon education for citizenship; upon physical education and sports; she advocated the 8-hour day, a minimum-wage law, union churches, and many other ideas which in her day were considered the ravings of an impractical dreamer. In 1896 Frances E Willard, speaking in England declared: "We cannot help looking forward to a time when the universal church shall come into a larger understanding of the unities that so vastly outweigh its diversities—until, like the sun in the heavens, they shall render the stars of the present twilight invisible."

When she was a little child, Frances Willard signed a total abstinence pledge in the family Bible. This pledge read:

"A pledge we make, no wine to take
Nor brandy red that turns the head,
Nor fiery rum that ruins home,
Nor whisky hot that makes the sot,
Nor brewer's beer, for that we fear,
And cider, too, will never do:
To quench our thirst, we'll always bring
Cold water from the well or spring.
So here we pledge perpetual hate
To all that can intoxicate."

When she had grown to womanhood, she heard reports of the Women's Temperance Crusade in Ohio, and her first temperance speech was made in support of that movement. As a young schoolteacher, she was an ardent supporter of temperance, and assigned themes on the evils of intemperance and the value of abstinence to her pupils. Especially at Northwestern University was this subject stressed.

After leaving Northwestern, she went east and studied the temperance situation in cities of the East; she visited the slums of New York and saw there the dire poverty and the intolerable suffering caused by intemperance. So impressed was she by the need of service in this field that she refused the offer of an educational position and returned to Chicago, where she accepted the presidency of newly organized Christian Temperance Union of Chicago.

Miss Willard had a genius for organization and she threw herself whole-souled into the task of organizing the women of Chicago for temperance. She conducted gospel meetings for the intemperate in Farwell Hall, Chicago, every day, and through this work many drunkards were reformed. She became corresponding secretary for the Illinois W. C. T. U. in 1874, and was a delegate to the convention at which the National Woman's Christian Temperance Union was organized in the fall of 1874. It was she who prepared the famous Declaration of Principles which have guided the body through the years.

At that time her name was proposed as president of the national organization, but she felt that those older in the work than she should hold that responsibility, and she became corresponding secretary.

In 1877 Dwight L. Moody had her conduct daily meetings with women in connection with his revival meeting in Boston.

During those days her labor was a work of love for humanity, for she served without salary. Many times she walked to her meetings because of her lack of funds. She even endured hunger in her sacrifice for the worthy cause. Finally when these privations brought on illness, she was compelled to accept a small salary.

In 1879, Miss Willard was elected president of the National Woman's Christian Temperance Union, which position she held (being reelected each year) until her death in 1898. In this capacity, she traveled up and down the country lecturing, guiding, stimulating, organizing, agitating. For 12 years she averaged a meeting a day and dur-1 year she lectured in the capital cities of all the States and Territories of the United States, save two.

This guiding genius of the national temperance cause early recognized the importance of the printed page. She wrote six books, and edited the Union Signal. She believed in temperance education and promoted this cause for schools, colleges, and churches. She agitated for legislation, and participated in securing constitutional prohibition amendments in various States. This phase of the work was one of the most fruitful services she rendered.

Not only was Miss Willard interested in her own country, her community was world wide. She went into Canada and visited every province in that country, organizing for temperance. She agitated the question of a World-Wide Woman's Christian Temperance Union. In 1883, she was in San Francisco and learned there of the opium traffic, especially among Chinese girls, and the resultant vice conditions. With her, to see a need was to take some step to meet that need. And so definite plans for the organization of a World's W. C. T. U. took shape. Miss Willard wrote what is called the Polyglot Petition against the liquor and the opium trade and addressed it to the governments of the world. This was presented to the International Anti-Alcohol Congress in Belgium in 1885. Miss Willard was the first vice president of the World's W. C. T. U. and really acting president. In 1888 she lectured in England and Scotland.

As a result of her organizing and administrative genius, the Woman's Christian Temperance Union became a most broadly comprehensive organization, functioning through numerous departments, among them: Scientific temperance instruction, Christian citizenship, child welfare, legislation, evangelism, anti-narcotic, medical temperance. So numerous were the activities carried on that it was declared that she maintained a "do everything" policy.

Many beautiful tributes have been paid to the marvelous achievements of this noble woman, who early in life learned from the hymnal:

"A charge to keep I have,
A god to glorify,
A never dying soul to save
And fit it for the skies."

Throughout the world are many memorials to her name. There are hospitals bearing her name, notable among them being the Frances Willard Temperance Hospital in Chicago. There are educational institutions which honor her memory. Northwestern University has its Willard Hall. To this hall, Lady Henry Somerset presented a marble bust of Miss Willard, on which were inscribed the lines of Whittier:

"She knew the power of banded ill,
But felt that love was stronger still,
And organized for doing good
The world's united womanhood."

In 1905 the State of Illinois voted to place this marble statue of Miss Willard in the Hall of Fame in our national capital. It was accepted by Congress February 17, 1905, at which time both House and Senate paused to pay tribute to her. Addresses of eulogy were delivered. On the pedestal of the statue are Miss Willard's words:

"Ah! it is our women who have given the costliest hostages to fortune! Out into the battle of life they have sent their best beloved with fearful odds against them. Oh, by the dangers they have dared; by the hours of patient watching over beds where helpless children lay; by the incense of 10,000 prayers wafted from their gentle lips to heaven, I charge you give them power to protect along life's treacherous highway those whom they have loved."

The Frances E. Willard Settlement in Boston is a successful venture in carrying out some of her most cherished ideals. More than 300 schools, libraries, and hospital wards bear her name, not only in America, but in many other lands as well.

Miss Katherine Lent Stevenson wrote of her:

"How great she stands!
A mountain peak, her soul!
An ocean wide, a river sweeping on with full free tide;
A sacred shrine where holiest things abide;
How great she stands!
Stand, radiant soul!
Here in the center of our Nation's heart;
Forever of its best life thou'rt a part;
Here thou shalt draw thy land to what thou art;
Stand, radiant soul!"

A nation, a church, a people do well to remember the life and service of so noble, so self-giving, so loving a soul.

As a reformer, Miss Willard has not been surpassed. No woman or man of her time has accomplished more for the protection and upbuilding of her fellow men and the cause of temperance.

She was a brave, true soldier, a great commander and finally and best of all a kind and gentle woman who loved her fellow beings with such an unstinted devotion that she has been christened the "mother of all mothers."

When called by that Master with whom she walked so closely all through life, she answered with tones of utmost content: "How beautiful it is to be with God."

Negro Squadron Donates Gift To Promote Interracial Good Will

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Washington Star recently, stating that the Ninety-ninth Pursuit Squadron of Negro flyers returned a gift of $1,000 to Ford Local, No. 600, Detroit, Mich., to be used for interracial good will. This shows a true American spirit and expresses their desire that the sorry spectacle of religious bigotry and racial hatreds be eliminated when the war is over.

We must have trust in one another, and we must be prepared not to allow our great Republic and Nation to be exploited during the confusion and uncertainty in the period of transition from war to peace economy.

NEGRO SQUADRON DONATES GIFT TO FIGHT PREJUDICE

DETROIT, February 10.—A War Department spokesman reported today that the Nation's first all-Negro fighter squadron, now in action in Italy, has returned a $1,000 gift from a Detroit union local with the request that it be used to better interracial good will.

Truman K. Gibson, Jr., civilian aide to Secretary of War Stimson, said Ford Local 600, United Auto Workers, C. I. O., has agreed to contribute the money to a national fund which will provide an annual award for "the person or group contributing the most toward racial good will."

Mr. Gibson said Maj. George S. Roberts, former commander of the Ninety-ninth Pursuit Squadron, told him his flyers made their decision because of their desire for understanding and advancement of the Negro.

Address of Hon. Joseph F. Guffey, of Pennsylvania, at Roosevelt Victory Dinner

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the distinguished senior Senator from Pennsylvania [Mr. GUFFEY] at a Roosevelt victory dinner at Erie, Pa., February 17, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are gathered here this evening to dine and fraternize, and celebrate the reelection of Franklin D. Roosevelt to the Presidency of the United States. I want to congratulate the liberal voters of Erie County for the excellent job you all did in Erie County last fall. While you did not carry the county for the Prresident, you did reduce considerably the number of votes by which the county was lost in the Presidential election of 1940. That is a job of which you of Erie County may be proud.

Last fall's election is over and we must now plan for the future. It is incumbent that we, as liberals, shall not declare a political holiday. Our opponents are not doing so. Already we see signs of a terrific battle between the liberals and the conservatives. Such a battle is personified by the actions of the conservatives in Congress who are doing everything within their power to prevent the confirmation of the nomination of Henry A. Wallace for the position of Secretary of Commerce.

Senator ROBERT TAFT said during the course of debate recently that Mr. Henry Wallace was not qualified to hold an important position in the Government. Since Henry Wallace asked the voters of Ohio to defeat Senator TAFT last fall, his statement was not altogether unexpected.

Let us look at the record and see how bad Wallace really is. What is there about him to cause some Senators to fight him with such venom? Mr. Wallace's sin is that he has never knuckled under to special interests. He has been more than fair to them when their interest coincided with the public good, but merciless in his fight against them when they were pushing some measure against the general welfare. Take the story of how Mr. Wallace saved $874,000,000 to the United States Treasury, which otherwise would have gone unjustly to enrich certain processors who had done nothing whatever to earn the money.

When the A. A. A. was declared unconstitutional and with it the processing tax which financed the cost of the agricultural program, many of the processors thought that inasmuch as the tax had been declared unconstitutional, the tax money belonged to them. Mr. Wallace called this a legalized steal and immediately asked the solicitor of the Department of Agriculture to work with the appropriate committees in Congress to draw up "unjust enrichment tax" legislation to see that the money already collected from the farmer or consumer was not returned to the processor who had done nothing whatever to earn it. The legislation was passed. Mr. Wallace's men in the Department of Agriculture worked with the Treasury to carry it out. In justice to the processing trades, it should be said that the majority of them recognized the justice of the action taken by the Government under Mr. Wallace's leadership. The courts sustained the Government in 92 percent of the cases contested. The overwhelming majority of the cases were settled out of court because the justice of the Government's position was so apparent. Of course, there were some individuals who thought they had their hands on windfall gains amounting to millions of dollars and who had a strong feeling of resentment against Mr. Wallace for the strong leadership which he furnished.

Take the ever-normal granary which Mr. Wallace fathered. Some of the grain interests did not like this. But it was an essential step to take on behalf of the farmer and the consumer. The American people are thankful for the extra 100,000,000 bushels of wheat and 450,000,000 bushels of corn which Mr. Wallace had stored up in the ever normal granary when the war came on. This huge stock of extra grain made the difference between crippling hunger and efficient working and fighting for many millions in England and Russia.

In the ever-normal granary were also huge stocks of cotton, and in April of 1939 Mr. Wallace was responsible for initiating the trade of 600,000 bales of cotton for 90,500 long tons of rubber. The rubber cartelists in the East Indies were holding production down at that time to 50 percent. Naturally they and their business friends didn't like what Mr. Wallace started. Ninety thousand five hundred tons of rubber is a lot of rubber—enough to make 18,000,000 average automobile tires. Both the automobile user and the war effort were served by this war visioned action by Henry Wallace.

The Wallace farm program in the thirties almost doubled the farm gross income and almost trebled the farmers' net income. There was nothing incompetent about the way Wallace got the cooperation of the farmers, the Congress, and the administrators in the executive branch of the Government to do a difficult job which had been precipitated by the scarcity policies of industry. Mr. Bernard Baruch has repeatedly said that Mr. Wallace as Secretary of Agriculture did a superb job of administration.

Let's look briefly at this administrative job. Under the Triple A, which became law in May of 1933, Mr. Wallace had to pick the men who would build an organization which would contact county by county and State by State the majority of the six million

farmers of the United States. The chief responsibility was placed on the county committees elected by the farmers themselves. This annoyed a few politicians, but it was sound administration to decentralize what otherwise would have been an impossible task. These county committeemen trained in local responsibility have been invaluable in the war, serving on the county war boards to ration scarce materials and machines in the best way to promote the maximum war effort. To these men as much as to anyone goes the credit for the phenomenal job of all-out agricultural war production.

Mr. Wallace, as Secretary of Agriculture, was responsible for the food-stamp plan. He told Mr. Milo Perkins to work out the most friendly relationship possible with the wholesale and retail distributive trades. It was almost as difficult an administrative job to come into effective touch with several hundred thousand distributive outlets as it had been to work out the Triple A in cooperation with several million farmers. But the job was done and it was done efficiently and effectively. One of he men who worked with Mr. Wallace at that time was J. Frank Grimes, President of the Independent Grocers' Alliance. Mr. Grimes recently wired Senators "I strongly urge full complete support of Henry Wallace's appointment as Secretary of Commerce. My experience with him, when chairman of the important food and grocery conference committee, has earned my deep respect for his ability and integrity. I believe he is ideally suited to be Secretary of Commerce and urge you to support him unwaveringly."

When Wallace saw the war coming on in 1939 he appointed a special advisory committee composed of representatives of business, agriculture, and labor to advise the Department of Agriculture on the problems which would inevitably arise in case war should materialize. Mr. Wallace gained the wholehearted esteem of both the businessmen and the representatives of labor on this committee.

Nine billion dollars were lent to farmers while Wallace was Secretary of Agriculture, while Jesse Jones in R. F. C. was lending $6,000,000,000—and the percent repayments on the agricultural loans ran higher than on the R. F. C. loans. Wallace loaned money to over a third of the American farmers while Mr. Jones through the R. F. C. helped only one-half of 1 percent of the American businessmen. Wallace it was who used Presidential backing to force Mr. Jones to give the farmers 4-percent instead of 5-percent money. He it was who insisted on safe storage facilities at reasonable rates. He it was who insisted that the Commodity Credit Corporation be transferred to the Department of Agriculture so that the products could be stored more economically. More than $15,000,000 in storage charges were saved after complete control came into the hands of the Department of Agriculture. This was done merely by enforcing ordinary, sound business procedure. The purpose of the Commodity Credit Corporation was not the making of money, but it is interesting to note that in spite of the fact that the loans made were nonrecourse loans resulting in large accumulations by the Government of farm products, nevertheless the final collection and liquidation experience of the loans made prior to 1941 was remarkably good.

The only Vice President who ever did any work in the executive branch of the Government was Mr. Wallace. No President would ever have asked a Vice President to engage in Executive work except in time of war. Certain coordination jobs necessary to the war effort could only be done by the President or by someone who outranked the Cabinet officers. The various Cabinet officers had to be coordinated with respect to economic warfare and war production. Mr. Wallace, at the request of the White House, stepped into both situations only a few months prior to Pearl Harbor. He was serving as chairman of both the Board of Economic Warfare and S. P. A. B.—later the War Production Board—when Pearl Harbor was struck, and he broke bottlenecks which nobody else could have broken except the President.

And so I say to Senator TAFT, "Yes; Wallace is a bad man for the enemies of the general welfare. He is a bad man for those who do not believe in justice for agriculture. He is a bad man for the cartelists. He is a bad man for those who want 10,000,000 unemployed."

Wallace's multitudinous business contacts, made on behalf of the general welfare, make him an ideal man for Secretary of Commerce. If he only shows one-half the ability as Secretary of Commerce that he showed as Secretary of Agriculture, the businessmen of the United States will soon come to feel that he is the best Secretary of Commerce they have ever had. I believe and I think Mr. Wallace believes that the vast majority of businessmen are sound, forward-looking, and eager to cooperate with Government in doing a first-class job of furnishing the maximum number of positions for willing workers in the production of peacetime goods for a peacetime market.

How bad is Mr. Wallace in the eyes of the Allied and neutral nations? What will Mr. Wallace's rejection by the Senate mean to our harmonious relations with the peoples of other nations? The answers to these questions are put most briefly by saying that Mr. Wallace has a standing abroad second only to that of President Roosevelt. The British know that his full-employment ideas are less radical than those of Sir William Beveridge, to which even the British Tories are giving the most respectful consideration. The British are unable to understand why the Tories of the United States fight both President Roosevelt and Henry Wallace with such viciousness.

Mr. Wallace has long taken a deep interest in the peoples of Latin America. This was recognized by the President when he appointed Mr. Wallace as Ambassador Plenipotentiary to Mexico in December 1940, on the occasion of the inauguration of President Avila Camacho.

Mr. Wallace's trip to Mexico was such a success that the President asked him in the spring of 1943 to visit the west coast of South America. The western Latin-American countries felt that they had been neglected by high ranking United States officials. Mr. Wallace, by that time, had learned to speak in Spanish and everywhere he was tumultuously received. At the huge outdoor stadium in Santiago, he spoke in Spanish to more than 80,000 people on behalf of the Allied cause.

When the situation in China became unusually difficult in the spring of 1944, the President asked Mr. Wallace to carry a message to the Generalissimo Chiang Kai-shek. His mission was undoubtedly a contribution toward that understanding between China and Russia which is essential if the war against Japan is to be terminated with the minimum loss of American lives and peace in the Far East is to be established on the firmest possible basis. On his trip to China, Mr. Wallace visited many agricultural experimental stations and factories in Soviet Asia. In so doing he established friendly relations with the technical people of Soviet Asia.

In all these trips, Mr. Wallace worked with the closest possible relationship with the State Department. Everyone cooperated with him in the best possible way and a magnificent job was done of creating the maximum of good will on the part of millions of people toward the United States. Mr. Wallace has painstakingly created good will capital for the United States which an international advertising man might value at hundreds of millions of dollars. The United States Senate can destroy all of this in a twinking of an eye and in so doing start the American people on a path which will be beset with unimaginable difficulties.

On May 8, 1942, Mr. Wallace made before the Free World Association his famous century of the common man speech. This speech was translated into more than 20 languages and broadcast far and wide among the neutral nations and among the Axis nationals. Millions of copies were distributed. In this speech Mr. Wallace said:

"Some have spoken of the 'American century.' I say that the century on which we are entering—the century which will come out of this war—can be and must be the century of the common man. Perhaps it will be America's opportunity to suggest the freedoms and duties by which the common man must live. Everywhere the common man must learn to build his own industries with his own hands in a practical fashion. Everywhere the common man must learn to increase his productivity so that he and his children can eventually pay to the world community all that they have received. No nation will have the God-given right to exploit other nations. Older nations will have the privilege to help younger nations get started on the path to industrialization, but there must be neither military nor economic imperialism. The methods of the nineteenth century will not work in the people's century which is now about to begin. India, China, and Latin America have a tremendous stake in the people's century. As their masses learn to read and write, and as they become productive mechanics, their standard of living will double and treble. Modern science, when devoted wholeheartedly to the general welfare, has in its potentialities of which we do not yet dream.

"And modern science must be released from German slavery. International cartels that serve American greed and the German will to power must go. Cartels in the peace to come must be subjected to international control for the common man, as well as being under adequate control by the respective home governments. In this way we can prevent the Germans from again building a war machine while we sleep. With international monopoly pools under control, it will be possible for inventions to serve all the people instead of only the few.

"Yes, and when the time of peace comes, the citizens will against have a duty, the supreme duty of sacrificing the lesser interest for the greater interest of the general welfare. Those who write the peace must think of the whole world. There can be no privileged peoples. We ourselves in the United States are no more a master race than the Nazis. And we cannot perpetuate economic warfare without planting the seeds of military warfare. We must use our power at the peace table to build an economic peace that is just, charitable, and enduring.

"If we really believe that we are fighting for a people's peace, all the rest becomes easy."

No wonder the forward looking people of the United States, and the common people of the world, believe in Mr. Wallace. It is not Mr. Wallace's competence which is on trial before the Congress. It is the Congress which is on trial before the people of the world.

That is the record with respect to Mr. Wallace. If the farmers, the white-collar workers, the businessmen, and the laboring men, and women of this country are to improve their position in life, they, you and I, will have to be on our guard continuously, fight these Conservatives, and prevent a return of the days of Harding, Coolidge, and Hoover. I feel sure that the Liberals and Progressives of this county, and the Nation ,as a whole, will recognize and meet the issue.

Franklin D. Roosevelt is to us the symbol of a unified liberal Democratic Party. The hope of realizing liberal ideals on a national scale depends on the continuance of a unified liberal Democratic Party. A conservative

Democratic Party can never win the Nation. It can never win in Pennsylvania.

The whole world recognizes today that the liberalism for which Roosevelt stands is on trial, not only before the people of the United States, but before the whole world.

Some of the leaders of the Democratic Party do not as yet realize how dangerous is the reactionary bipartisan bloc. It has been acting for a long time. But now for the first time it is unmasked for the whole world to see. The confirmation of Henry Wallace is one of the greatest tests the Democratic Party has ever faced. I know because I read my telegrams and letters. The people are stirred as they have rarely been stirred by any domestic issue. The Democratic Party is on trial. The rejection of Henry Wallace will give him a greater standing in the eyes of the people than he has ever had. His rejection will not hurt him, but it will hurt the Democratic Party and the people of the United States.

This is what the reactionary Republicans led by TAFT are trying to bring to pass. VANDENBERG is trying to make the vote on Wallace a test of Party regularity. The shrewd Republican leadership through the help of some conservative Democrats is out to destroy the Democratic Party as a united progressive force. If a Republican-Conservative Democratic Alliance brings about the rejection of Henry Wallace, the people will know exactly what it means. In their own good time they will act. They will never again be deceived by a reactionary bi-partisan bloc. The issues will be clear. We are either going to kill the conservative bi-partisan bloc or the conservative bipartisan bloc is going to kill the Democratic Party. The conservative bipartisan bloc has picked the battle ground. We welcome the fight. If the Democratic leaders do their duty, there is no question about the outcome.

Child-Care Program—Equal-Rights Amendment

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a letter from Mr. R. J. Thomas, international president, U. A. W.-C. I. O., together with resolutions, in support of the child-care program and in opposition to the equal-rights amendment:

UNITED AUTOMOBILE, AIRCRAFT, AGRICULTURAL IMPLEMENT WORKERS OF AMERICA (U. A. W.-C. I. O.),
Detroit, Mich., February 7, 1945.

To All Members of the Seventy-ninth Congress:

Recently representatives of our 300,000 women members in the U. A. W.-C. I. O., all war workers, met in Detroit to discuss problems affecting their lives, both as workers and as citizens.

The delegates in unanimously approving a child care and equal rights amendment resolution instructed my office to send copies of the resolutions to you so that you might have an expression of our 300,000 women members on these two important subjects, which very likely, will be on the legislative calendar in this session of Congress.

Our women in the international union are vitally concerned that the child-care program, under the Lanham Act, not only be continued but greatly expanded. We constantly receive reports from our local unions showing that production of war equipment is suffering because of the failure of local communities to set up adequate facilities for the care of working mothers' children. You will also note that the resolution heartily endorses the proposal of the Senate subcommittee on wartime health and education that a commission for children and young people be established in the Office of War Mobilization.

Our union has long been a strong opponent of the so-called equal-rights amendment and the conference delegates expressed themselves clearly and forcefully against this vicious piece of legislation.

We trust that you will give both of these resolutions your most serious consideration.

Sincerely yours,

R. J. THOMAS,
International President, U. A. W.-C. I. O., Director, War Policy Division.

CHILD-CARE RESOLUTION ADOPTED AT THE NATIONAL U. A. W.-C. I. O. WOMEN'S CONFERENCE, DETROIT, MICH., DECEMBER 8–9, 1944

Since the early days of the defense period the U. A. W.-C. I. O. has carried on an increasing campaign to have adequate child-care facilities and services provided for children of working mothers. The union has supported the Lanham Act program and has consistently asked for expansion and improvement of existing services and extension of facilities where the program is not meeting needs of war-worker families. Our interest in the wartime child-care program is twofold: (a) That of giving assurance to women, while they are producing tanks and planes and guns to defeat our enemies, that their children be protected and secure; (b) during a period of wartime tensions and post-war adjustments, that children be given maximum opportunity for growth and development.

As a result of the federally supported program during the war period thousands of C. I. O. members and their families know from first-hand experience that nursery school and extended school programs provide good care which helps the mental, emotional, and physical development of children. During a period of great national crisis the program has brought positive value not only in helping women stay on the job but in strengthening family life and parent education. The program has also increased community interest and understanding of the needs of children: Therefore be it

Resolved, That this conference urges:

1. That the Lanham Act child-care program be continued with Federal assistance under the Federal Works Agency until the end of the emergency and that funds be made available not only for the continued operation of projects now in existence, but for expansion of projects which are seriously needed in some communities. That the program be strengthened so as to provide—

(a) More adequate night-care centers.

(b) Group care for the child under 2 years.

(c) Care for the sick child.

(d) An expansion of the child-care program for school-age children.

(e) Community recreation programs for school-age children.

(f) More flexible opening and closing hours.

(g) Better buildings and equipment.

(h) Improved teaching methods and health supervision.

2. That the program be extended in those communities in which services are failing to meet the needs of the working mothers.

3. That the Federal Works Agency make its program sufficiently flexible so that the following groups of families can have child care:

(a) Children whose parents have been laid off and who are shifting from one job to another or from one area to another.

(b) Mothers whose husbands are in the services or whose husbands are war casualties. This group of families which has suffered so much are particularly entitled to help in readjustment to a home without a father or a father who is disabled.

(c) Families who are victims of acute housing shortage and who are forced to live in dilapidated, overcrowded, unhealthful slums.

4. That the school-lunch program be expanded and extended to the many communities in which there is no adequate provisions for school lunches for children.

5. That we thoroughly endorse and urge upon Members of Congress the proposal of the Senate Subcommittee on Wartime Health and Education that a Commission for Children and Young People be established in the Office of War Mobilization. This Commission would, as stated in the Pepper report, "effect through existing agencies a coordinated program to provide for the basic need of all children."

6. That the National Political Action Committee, C. I. O., be urged to conduct a vigorous campaign to rally public and congressional support for continuation of a wartime child-care program and for a comprehensive and adequate program for all children in the post-war period.

7. That copies of this resolution be forwarded by Members of Congress and appropriate Federal agencies.

EQUAL RIGHTS AMENDMENT RESOLUTION ADOPTED AT THE NATIONAL U. A. W.-C. I. O. WOMEN'S CONFERENCE, DETROIT, MICH., DECEMBER 8–9, 1944

A so-called equal rights amendment has been before the Senate and House of Representatives for over 20 years. It has been and still is opposed by the National C. I. O. and the International Union as well as most of the large women's organizations.

Under the guise of establishing "equal rights for men and women," passage of the amendment would actually rob women of many rights and protection which they have won.

Since 1874, when the New Hampshire women's hour law was passed, organized labor has supported the passage of State laws regulating the hours, conditions of work, wages of women workers, maternity aid, widows' pensions, and aid for dependent children. Such legislation has been particularly needed for women working in restaurants, hotels, laundries, beauty shops, and retail stores, and other intrastate industries not covered by Federal law and frequently not well organized in labor unions.

The proposed "equal rights amendment" would wipe out the gain of nearly a century of progress for women: Therefore be it

Resolved—

1. That this conference goes on record as opposing the "equal rights amendment."

2. That we call upon Members of Congress to oppose and vote against the "equal rights amendment."

3. That we urge the National P. A. C.–C. I. O. to conduct a campaign to rally public and congressional support of a real "equal opportunities" bill.

4. That copies of this resolution be sent to all Members of Congress.

Farm Labor

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of the State of Michigan:

House Concurrent Resolution 8

Concurrent resolution memorializing the Congress of the United States to enact legislation protecting farm labor as critical in the war effort

Whereas farm labor has not been placed on the critical list in the war effort; and

Whereas local draft boards apparently do not have sufficient power to classify physically fit producing farmers between the ages of 18 and 26 as critical in the war effort, and to defer the drafting of men critically essential to the production of the food supply of the Nation and armed forces, but are obliged to meet their draft quotas; and

Whereas, with rationing and shortage of food supplies, it is vitally important that farm production be kept at the maximum, and it is short sighted to imperil production of crops and livestock: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Congress of the United States is urged by the Michigan Legislature to enact legislation protecting farm labor as critical in the war effort, which action should be taken immediately to forestall a possible emergency, due to the recent ruling of selective service; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the President of the Senate and Speaker of the House of Representatives of Congress, and to the Michigan Members in the Senate and House of Representatives of Congress.

Adopted by the house January 25, 1945.
Adopted by the senate January 31, 1945.

NORMAN E. PHILLEO,
Clerk of the House of Representatives.
FRED I. CHASE,
Secretary of the Senate.

Proposed National Service Legislation

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Oregon Daily Journal of Portland, Oreg., of February 13, entitled "Drop the Work-Fight-or-Jail Bill," and I also ask unanimous consent to have printed in the Appendix an editorial from the Oregonian dated Thursday, February 8, 1945, entitled "Becoming the Judges." I think there are two or three paragraphs in the editorial last referred to which are particularly apropos to the public discussion this morning, and I should like to read them. They are as follows:

In other words, the War Department is not primarily concerned with any lag in production. There are—so far as we know—no shortage or threatened shortages which make it mandatory for the Congress to lay aside its right of judgment, because of extreme necessity, and accept without question the military judgment. On the contrary, the War Department itself admits that its primary purpose is to reform the civilian population and force it to conduct itself more in accordance with what the military may desire.

* * * * *

One can agree that no one deserves a free ride and yet not agree with the right of the military to pass judgment upon the people of the United States. That is not their job. Their job is to ask for what they need for the fighting and object only if they do not receive it. Under the democratic theory, the Army and Navy are our defense in emergency, and every contribution must be made to them in accordance with the danger that confronts us. But woe to the democracy in which the army and navy become the judges of the nation which they started out to protect.

The VICE PRESIDENT. Without objection, the editorials will be printed in the RECORD.

The editorials are as follows:

[From the Oregon Daily Journal, Portland, Oreg., of February 13, 1945]

DROP THE WORK-FIGHT-OR-JAIL BILL

The work-fight-or-jail legislation before the Congress ought to be dropped. It isn't too little, but it is too late. Discussion of the bill has created endless confusion; to pass it would be confusion worse confounded.

Moreover, evidence accumulates that American workers on a voluntary basis will complete and exceed the quota in the most extraordinary war production job in history. A work-fight-or-jail law thrown in among them would reduce initiative, the most valuable quality in meeting emergency. It would be a slap at every worker who has done his best, not to escape jail, but for his country.

Already, there is immense difficulty in deciding which Government agency would administer—whether War Manpower or Selective Service. A real question has been raised, whether the Army and Navy are not drawing perilously near military government of civilians when they become principal promoters of such legislation. There is the further question whether the draft should be adopted to control workers who work for private employers.

This does not mean that slackers in war work should escape, any more than slackers in military service. But they can be laid hold of by a strengthened manpower administration without placing the willing, patriotic worker in the same bonds and under the same shadow. Public opinion supports stern measures for work slackers. The patriotism that has invested $268,000,000,000 in this war, 40 percent from current revenues, according to the latest statement by Secretary of the Treasury Morgenthau, can, however, be relied upon for the requisite investment in toil to produce.

There is a local situation that further challenges the need for drastic work-fight-or-jail legislation. We are informed by L. C. Stoll, war manpower director for Oregon, that by the end of June the employment demands of war industry in this area will rapidly reduce. The issue then will be guidance of workers who want to remain here and work.

The Congress can spend its energy to greater value in behalf of the war program than to wrestle further with the work-fight-or-jail bill. For example, disposal of war surplus without breaking down the market or setting a field day for speculators. For example, organization to enforce peace. For example, the streamlining of the Congress itself. For example, unifying and tightening of all policies related to the winning of the war.

[From the Oregonian, Portland, Oreg., of February 8, 1945]

BECOMING THE JUDGES

Those who have supported the so-called work-or-fight bill in Congress against their own better judgment, and on the plea that they simply could not go against the judgment of the War and Navy Departments, now have an excuse—and, in our opinion, a compulsion—to reverse themselves.

Secretary of War Stimson and Under Secretary Patterson, appearing Tuesday before the Senate Military Affairs Committee, are officially reported by Senator THOMAS of Utah, committee chairman and spokesman, to have declared that "the legislation is needed primarily for morale and secondary for military purposes." Under Secretary Patterson is said to have carried the thought further by declaring that in this war no one is entitled to a free ride.

In other words, the War Department is not primarily concerned with any lag in production. There are—so far as we know—no shortages or threatened shortages which make it mandatory for the Congress to lay aside its right of judgment, because of extreme necessity, and accept without question the military judgment. On the contrary, the War Department itself admits that its primary purpose is to reform the civilian population and force it to conduct itself more in accordance with what the military may desire.

So far as this page is concerned, it believes the War Department has gone entirely outside of its proper field of activity, and we hope that the Senate will defeat even the modified bill passed by the House. It further believes that the War Department was led to this extravagance by the White House, which in turn wished to impress the men on the fighting front with its response—even though it did not seriously expect or push action—to the gripe of the soldiers and sailors concerning those at home who are not fully doing their duty.

Actually, the overwhelming majority of those at home really are doing their duty. They are performing the most amazing feat of production in the history of the world. If the White House and the War and Navy Departments had emphasized this side of the picture, they would have reassured the men who are out in the fox holes. As matters have turned out, they have only stirred further doubts and intensified the problem which they have said they wanted to solve.

And if the White House was serious about this matter, why didn't it make a real issue of the matter 3 years ago—in that crucial winter of 1942, immediately after Pearl Harbor? Why didn't it fight through in 1943 or 1944? At the most, until now, there has never been more than a token recommendation. The compulsory mobilization of the country was an entirely logical program when affairs were so desperate in 1942. As we have said before, it is silly now, when the Russians are almost within rifle range of Berlin and the big push on the western front is a matter of hourly expectation. The office

workers needed for the paper work of civilian conscription could not expect to get their typewriters oiled before there was a decision of one kind or another in the European war. It would only add a lot of confusion and set a precedent for civilian conscription that no American wants if it can be avoided—not, certainly, when free labor has produced so magnificently.

One can agree that no one deserves a free ride and yet not agree with the right of the military to pass judgment upon the people of the United States. That is not their job. Their job is to ask for what they need for the fighting and object only if they do not receive it. Under the democratic theory, the Army and the Navy are our defense in emergency, and every contribution must be made to them in accordance with the danger that confronts us. But woe to the democracy in which the army and navy become the judges of the nation which they started out to protect.

The Head of the Table

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. LUDLOW. Mr. Speaker, inspired by a fervent hope that God will have a place at the head of the peace table, a constituent of mine, Mrs. Hobart M. Trotter, of 2020 East Forty-sixth Street, Indianapolis, Ind., wrote this beautiful and meaningful poem:

THE HEAD OF THE TABLE

We'll never have peace eternal
The din of war will never cease,
'Til God is asked to guide the hands
That write the plans for peace.

Should not the One who made the world
Be asked to share the plan
To decide the fate of nations
And the destiny of man?

Who has a better right than God,
Who rules our future fate,
To make another paradise
And save this world from hate?

The links in the chain of friendship
Will be strong as a steel cable
If the men who make the peace plans
Ask God to sit at the table.

There will be peace for all the nations
If men are willing and able
To reserve for our Heavenly Father
The seat at the head of the table.

—*Mrs. Hobart M. Trotter.*

The Federal Ballot

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I desire to insert an editorial discussing the Federal ballot, which recently appeared in the St. Louis Globe-Democrat, of St. Louis, Mo.:

THE FEDERAL BALLOT

Supporters of the administration-sponsored Green-Lucas bill providing for absentee soldier voting, claimed that servicemen were stabbed in the back when Congress rejected the bob-tailed Federal ballot and placed the responsibility for the vote on the respective States where it belonged legally. The outcry was terrific. The States, it was shouted, couldn't do the job and men overseas might as well be formally disfranchised if they had to depend on a State ballot. Let's see what actually happened.

The War Ballot Commission which was set up to handle the Federal ballot—to be used when the States could not or did not function—has just disclosed that 109,479 voters from the Army, Navy and Merchant Marine preferred the Federal ballot, as against 2,800,000 who used State absentee ballots, according to an estimate by State election officials. Twenty States authorized use of the Federal ballot, but only 5.3 percent of the soldiers from these States used the Federal form. (The Federal ballot carried the names of candidates for President, Vice President and Members of Congress only, whereas the State ballot permitted voting for State, county and even city officials).

Secretary of War Stimson, reporting on the meager use of the Federal ballot last November, said it raised the question of whether it is "of sufficient utility to justify its continuance of a voting procedure in time of war." He declared that "most servicemen who desired to vote were able to obtain, then vote and return, their State absentee ballots, leaving relatively few who needed to, or legally could use, Federal ballots." Further, the Federal ballot wasn't as simple as it appeared to be, because 9 percent of those cast were invalid.

Supplementing Secretary Stimson's observations was a criticism by General Eisenhower, who pointed out that the Army was given the job of handling the Federal ballot just at the time when it was busiest with the occupation of Europe. He said in some instances it had been necessary for officers handling the ballot" to crawl from foxhole to foxhole under enemy artillery, mortar, and small arms fire while distributing official war ballots to personnel engaged in combat."

It is everybody's hope that before another Presidential election is held in 1948, the war will be ended and the calls for absentee ballots will be comparatively negligible. But if such is necessary the Federal War Ballot Commission makes the reasonable suggestion that the names of all candidates be made available for ballot printing not later than August 1. In the last election the names of 22 Federal candidates were not determined until after August 10, and their names were sent to absentee servicemen by radio. The commission would also require States which do not recognize the Federal ballot to make that date known before May 1. The date now is July 15 and several thousand servicemen cast worthless ballots because they did not know their States would not count their votes.

In view of Secretary Stimson's disclosures it is unlikely another Green-Lucas bill will be presented to Congress. It was politically inspired legislation, designed to limit the absentee voters to a select list of candidates, including the President, who was, incidentally, their Commander in Chief. Moreover, the Green-Lucas bill was unconstitutional, as it was a clear invasion of the right of each State to control its elections.

Its proponents were certainly in error when they said the State laws were ineffective and that the absentees preferred the Federal ballot. They are referred to Secretary Stimson for details of how far they were wrong.

The House Acts Wisely

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of February 17, 1945:

THE HOUSE ACTS WISELY

By passing the George bill, however narrow the margin, the House has avoided a position which would have been both politically unwise and inconsistent with good government.

The Members of the House were not opposed to the George bill as such. This is shown by the fact that only 2 votes were cast against it on the final ballot. On the earlier motion, to recommit, however, which would have killed the bill, the vote was 204 against and 196 in favor of recommital.

From this it is clear that the opposition was not hostile to the bill—the only matter properly before the House—but was trying to maneuver the Senate into a position where that body would refuse to confirm Henry Wallace as Secretary of Commerce. In other words, the House minority was trying indirectly to exercise a veto power over a Presidential nomination, although under the Constitution that is the exclusive function of the Senate.

As matters stand, the prospect is that Mr. Wallace will be confirmed when the vote is taken on March 1. The President has stated that he will sign the George bill, which strips from the Commerce Department the Reconstruction Finance Corporation and its subsidiaries, and, on this condition, the Senate is expected somewhat reluctantly to acquiesce in the Wallace nomination to the trimmed down Cabinet post.

If the House had killed the George bill, however, the Senate would have been forced into voting on the nomination without any assurance that the Federal loan agencies would be kept from the control of Mr. Wallace, and in that situation the chances are that the nomination would have been rejected. This would have meant, in practical effect, that the House had vetoed a nomination by the President which the Senate was willing to accept—a result which could not be justified on any ground and which could have been explained only on the basis of very narrow politics.

It is much better that the matter has been worked out so that Mr. Wallace can take over the Commerce Department. There may be some surprise that he should want the post, in view of the lack of confidence in him, which is reflected in the votes of both brances of Congress, but if he does want it, and if the President wants him, the House has no right to stand in the way.

Smith-Connally Law

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in

the RECORD, I include the following editorial from the Washington Star:

NOT A BAD LAW

The National Labor Relations Board has just made public a report of its experience in the first year of operation under the strike vote section of the Smith-Connally law. The report should make interesting reading for those who professed to fear the worst when the law was passed.

This is not to say that the N. L. R. B. is wholly pleased with the operation of the law. The report finds indications that labor organizations are using the strike ballot machinery to "dramatize and focus public opinion on their demands" and to "bring pressure in the form of a strike threat to bear upon governmental agencies dealing with labor disputes, either in the hope of obtaining more favorable decisions or more rapid ones."

It is the statistical phases of the report, however, which seem most significant. During the fiscal year 1943–44 a total of 1,089 strike notices were filed with the Board. Of this total, 688 were withdrawn, 232 led to strike votes, and 115 were otherwise closed. Out of the whole business only 64 strikes resulted. When that is compared to the total of more than 4,000 strikes that occurred throughout the country during the period covered by the report, most of which were staged in defiance of the strike ballot provision of the law, it gives a very convincing answer to those who opposed the statute on the claim that it would encourage rather than discourage strikes.

This view was taken by the President when he vetoed the bill, only to have it passed over his veto. On the record, however, it seems clear that passage of the law has not tended to "stimulate labor unrest" and has not been construed as "giving Government sanction to strike agitations."

What is needed now is not abandonment of the law, which some still advocate, but a strengthening of its penalty provisions so that all phases of enforcement can be handled with the effectiveness which has characterized the work of the N. L. R. B. in carrying out the strike ballot provisions.

Medal for Congressmen?

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. CRAVENS. Mr. Speaker, pursuant to the leave granted to extend my remarks in the RECORD, I am including the following editorial from the Fort Smith Times-Record, of Fort Smith, Ark., under date of February 12, 1945:

MEDAL FOR CONGRESSMEN?

Fort Smithians who heard William A. Lydgate speak here the other night spontaneously applauded when the editor of the Gallup poll proposed that a medal be established for any Member of Congress "who shows bravery and devotion to duty over and above the call of politics."

That applause was more than appreciation of a bit of humor aimed at an American institution which has been the butt of countless jokes. It was expressive of consciousness of a hard fact in American democracy—the persistent gap between the people and the Government with the people consistently ahead in readiness for action to meet problems that arise.

Lydgate cited specific instances of this in his lecture: That 91 percent of the people favored a greatly increased air force in September 1939, despite which Congress 6 months later granted money for 59 planes instead of the 1,200 asked; that the public was 4 months ahead of Congress in regard to selective service and 1 year ahead on price-wage control; and that it has long had its mind made up about world-peace organization.

The lecturer, whose business it is to learn what people are thinking, touched upon the key to democracy's success when he said that individually citizens may be grossly wrong but that collectively their opinions constitute "a salty, earthy judgment which frequently adds up to better judgment than that of so-called political experts." Democracy, he said, requires only that the average judgment add up to common sense—and this is true of the American public if it has the facts. The problem, he suggested, is how to pipe some of this common sense to Washington.

The chronic lag between public readiness and congressional action is one which occasions serious effects at times but it is not likely to be eliminated. It is a weakness which grows out of one of our strengths: The fact that in the long run our policies are likely to be firmly grounded in public opinion. The gap between public acceptance and Government action is a period in which popular opinion gathers cumulative force which makes final action more truly representative of the will of the people.

This is not to say that congressional delay is in itself an admirable thing. Certainly it is desirable that the lag be reduced, within the limits of safety. Too often, delay has been occasioned by fights touched off by Congressmen or other public officials who are ignorant, misled, or prejudiced or who are more concerned with their own political welfare than with major problems of public welfare. In this connection Lydgate's proposal of an award of honor for the Congressman who rises above political considerations is quite justified.

But let this be said in defense of Congressmen: They are elected as being representative of the people. While their average ability is greater than that of the general public, among themselves they share the weaknesses of the public they represent. Individually they may have their blind spots and may be grossly wrong, but collectively their judgment usually adds up to pretty good sense when they finally get around to action. And when they make mistakes the people must share the blame. Congress could improve itself a lot, and we wish it would—but we're not ready to trade it off.

Another Big Three

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona (Pa.) Tribune of January 27, 1945:

ANOTHER BIG THREE

One of the most constructive legislators in the National Government is Senator HARRY F. BYRD, of Virginia. Senator BYRD has included the views of James A. Farley, with his endorsement in the CONGRESSIONAL RECORD. BYRD and Farley have one similarity which is a burning desire in the hearts of both men to serve America first, regardless of political consequences to themselves. So naturally, BYRD agrees with Farley's statement that it is up to the people of the United States "to balance their agriculture with industry and to make it possible for the people, through increased incomes, to satisfy their wants and their needs." Farley urged that no effort be made to "buy business." He said, "I am not one who would advocate giving free sites to industries, years of tax exemption, special concessions, and franchises, guaranties of roads and highways, waterwords, etc."

Senator BYRD agreed that "the New Yorker puts his finger on one of the rackets of modern industrial progress," and he cited instances in which communities have attempted to "buy business" by freedom from local taxation, plus bonuses out of the local public funds.

BYRD and Farley agree that "real legitimate business does not ask, does not expect, and would not have these baubles hung in front of their faces."

American industry and business will be literally breaking their backs and unloosening all of their energies—when the Government gives them the green light—to reestablish enterprises that are necessary to sustain our Nation. The Government took over, for war production, and that made it possible to save the world.

Wise citizen and Top Counselor Bernard Baruch was praised by Senator BYRD, and quoted as having said, "The system of individual effort, which we call the capitalistic system, is the best in the world. It has proved itself in peace and in war. I believe in trying to better that system, instead of tearing it down. * * * The protection of the essentials leads to certain social and economic levels, which promise progress."

Lincoln Birthday Dinner Address by James A. Farley

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "With Malice Toward None," delivered by the Honorable James A. Farley at the Lincoln Birthday dinner of the Catholic Club of Norwalk, Conn., on February 12, 1945.

There being no objection, the address as ordered to be printed in the RECORD, as follows:

WITH MALICE TOWARD NONE

To any American, the opportunity to talk to his fellow-citizens about Lincoln is an honor, and also an exercise in humility. I am not going to presume on the opportunity. Many men have spent their whole lives studying and writing about Lincoln. I know very well that I could not add to their efforts. So I hope instead you will let me talk for a few minutes about a very great man, who for years has been a guiding star in many of the problems with which I have been confronted.

One of the proofs of Lincoln's greatness is that he does have something to say to everyone, high and low, rich and poor, no matter

what his occupation. Most of us who have briefly emerged in national affairs will swiftly pass. Great men do not pass; and Lincoln was one of these.

I, myself, am very glad that his old associate and friend, William Henry Herndon, who was angry at seeing Lincoln made into a legend, decided to try to collect the material which would paint a picture of the man. Herndon, you remember, had known him as a country lawyer, a neighbor, a politician, a district worker, a job seeker, and a friend. It was his simple faith that the more people knew about the real Lincoln, the greater he would be.

For this reason, Herndon spent the latter years of his life in bringing together everything he could find about Lincoln, good or bad, big or little. As a result, we have not a picture of an angel in a church window but a knowledge of the man, great enough to give inspiration to every American; a Lincoln so human that everyone of us feels he has had him for a friend. Not many men in history could pass that test.

A famous New York newspaperman, Don Seitz, used to spend much of his time outside his job in studying Lincoln. At the close of many years' work of this kind, he made this statement "I would have Lincoln freed from all the sentimentality that has enmeshed him, from the embraces of the sob sisters of fiction and those who try to tie him to romance and religion, to stand forth coldly and clearly in his highest form as an American politician of the first rank."

I do not know that Lincoln's principal significance is as a politician, but that was certainly one of his great contributions, and it is worth thinking about a little in these times.

There is a striking contrast between the view which was held about Lincoln while he was alive, and the personality which has emerged since his death. It is not easy for us today to believe that Lincoln was pictured in his lifetime as a weak man. It was said that he did not follow a clear line of policy; that he wavered; and that he was dominated by stronger men around him. It has taken a good many years for the history books to make us realize that none of these judgments, which were freely passed by his contemporaries, was even remotely true.

Being a first-class political leader, Lincoln had the wisdom to call in and consult all sorts and kinds of men. Again with fine political instinct, he frequently allowed his visitors to believe that they were really initiating the policy of the country. More than one man of the period published his diary or papers, and showed that he was laboring under the delusion that he, and not Lincoln, carried off many of Mr. Lincoln's best strokes. Only later, as the whole truth comes out, have we discovered that it was Mr. Lincoln who made the policy, though he was humble enough and adroit enough, to allow lesser men to believe that they were running the Government.

Somewhat the same thing was true of his alleged indecision. We know today that he was constantly calculating the political support needed to bring the Union together. He was constantly trying to bridge the wide gaps between all sorts of groups. Each one of these groups thought they had the only method of saving the country; yet Mr. Lincoln knew that if the country was to be saved he needed to get them all working together.

This, I think, explains a good deal of the misunderstanding of the time. What seemed like hesitation then, we now know was really a long and carefully thought out campaign to bring grgoup after group nearer to common ground, and on that common ground to build the political structure which enables a democratic government to function. It was politics, if you please. It was cruel to the President; but it saved the country.

And today, 80 years after his death, we honor the man who was great enough to think out that political structure, humble enough to permit other men to take the credit for it, and brave enough to stand, without complaint, the endless amount of criticism and abuse which it aroused.

This is a model worth following; and it is worth remembering when loose tongues are raised against the people on whom falls the burden of carrying the country through difficult times.

Mr. Lincoln is frequently thought of as a war President. Yet the policy which has made him great in American history was his persistent use of political methods. He was convinced that wherever political measures could be used, force might be avoided. He stuck to this both before, and in the middle, and at the end of the Civil War.

Politics, as he practiced it, was a means by which people are brought to agree on a line of action; brought to agree in numbers great enough so that the policy can be carried out. He was no stranger to all of the means that were used at the time. They were, in fact, much the same means as those which are used today. Politics has not changed in the past 80 years except that, I really believe, it is cleaner and less devious today than it was then.

So we find Lincoln endeavoring to make political compromises, rather than to force the issue which led to the Civil War. He differed on the point from many of his colleagues and rivals. Seward, capable New York politician, had taken a position which represented the opinion of New York, but did not give enough common ground on which the entire country could stand.

Lincoln's antislavery sympathies were certainly as strong as Seward's. But when he made his famous campaign in 1860, he was careful to emphasize those elements which would hold the country together, rather than those which would split it in two. Let me be bold enough to risk a theory of my own as to the history of that period.

It seems to me at least possible that if Lincoln had taken office immediately upon his election in November 1860, instead of having to wait until March of 1861, the Civil War might possibly have been avoided. The reason I think so is this.

Passions were running high in 1860, and the only chance of avoiding the Civil War lay in bringing together, by political methods, the moderates, both of the North and of the South.

But during the months between election and inauguration, a President-elect cannot do very much to guide political movements. He is obliged to leave the hold-over President as free as he can, and President Buchanan seemed obviously unable to handle the situation.

Lincoln was doing his best to see that the extremists in the North did not force matters to an impossible point, and he was trying, so far as he could, to establish contact with the more thoughtful southerners, who realized the dangers which would come from forcible uprising. Actually, the moderates in both the North and the South probably were a majority.

Yet the people who were making the most noise were the extremists. On both sides of the Mason and Dixon line they were building up hatred, at a time when Lincoln's policy was to build up understanding. Until he actually reached the White House there was not a great deal he could do, and during that fatal period emotions were being aroused all along the line. If ever we needed Lincoln, the politician, it was then.

No one can prove an historical "might have been," but having had some contact with politics, I really wonder whether Lincoln's very great gifts in handling politics and politicians might not have been able to bring about a solution by political methods instead of by war.

There is a lesson to be learned from this. Today we can go over the history of that period and we can see that the extremists on both sides were probably wrong. We know that Lincoln was not the uncouth and brutal figure which some southern hotheads made him out. The southern group who felt so bitterly obviously were sincere, and thought they knew what they were talking about, and yet they were dead wrong, and history proves it.

Those northern extremists who thought Lincoln was a floundering weakling were equally mistaken. Because he did not press for immediate reform they believed him a failure. On one occasion the New York Times actually proposed to replace him with a dictator. Today history has shown that they were as wrong as their southern counterparts.

Perhaps we—all of us—will be a little more humble and a little better advised if we take the lesson to ourselves. Bitter feelings are not unknown in politics today. We do not have to go back to the Civil War to find people who feel strongly about national affairs, indulge in personalities, and very sincerely believe evil of men, without reason.

Intolerance, as a political weapon, has been used in connection with issues other than that of slavery. If we remember the lesson of the Civil War—a lesson which is better taught by the life of Lincoln than in any other way—all of us may be protected a little against our natural inclination to feel violently and talk violently.

All of us may realize that we do not always know the whole truth, and that sometimes it is wise to suspend judgment. All of us, in time, may even learn to feel that the men who are trying for a common agreement are usually safer guides than the men who are trying to make divisions or stir up hostility.

As a man, I think the use of hatred, and of intolerance, and of evil stories, is plain wrong. As a man who has been active in politics, I had an added dislike of that kind of tactics. The reason is simple. These weapons make it impossible for men ultimately to agree; while it was my job in politics to try to find ways by which they could agree.

Lincoln's doctrine was that democracy would be impossible if nobody ever agreed, and particularly if a minority felt that it could break ranks and go its own way when political decisions had been reached. This is as true now as it was in his time.

Consequently, I know that if issues are not discussed on their merits, but on personality; if any political group tries to stir up hatred, and of course thereby provokes hatred on the other side, or if resort is had to the tactics of abuse, it becomes extremely difficult for these groups ever to agree again.

Men tend to repay hatred with hatred, or insult with insult, and if that process is allowed to go on, it becomes impossible for them finally to cooperate in carrying out any course of action. And yet, in a democracy like our own, our entire national life is a vast cooperative scheme. To the technical politician, extremism is not only a crime, it is a blunder.

I think Lincoln taught us this, and though from time to time some may forget, the country as a whole has learned its lesson. It cost us the life of our ablest and noblest statesman. But I think that if he were to come back today, he would say that the sacrifice was not in vain.

In this year of 1945, we see a world writhing in agony as group fights group, doctrine clashes with doctrine, and nations war upon nations. Nevertheless, even in this mad disorder and strife, the United States has steadily preserved the ideal of good will, of

moderation, of justice. Even in our wildest internal political conflicts today, we do usually remember that there is something to be said for the other fellow's point of view. Even in the terrible rage of war we do have the tradition of justice to opponents, as we demand it for ourselves, our allies, and the victims of aggression.

We are able to attack social problems which are often bitter in the extreme, and still find the way of moderate common sense toward an ultimate goal of progress.

Without trying to usurp the place of the historian, I think I may say that we owe this in great measure to Abraham Lincoln. Indeed, I think it is not impossible that Lincoln himself hoped that this might be one result of his life's work. His second inaugural address, which contains, as you remember, the famous words, "With malice toward none; with charity for all," was itself a plea for greater understanding.

Thurlow Weed, a politician of the time, wrote him a note of praise. Mr. Lincoln's answer is not as well known as is the second inaugural address, but what he said was this:

"Thank you for yours on the notification speech and on the recent inaugural address. I expect the latter to wear as well as—perhaps better—than anything I have produced; but I believe it is not immediately popular. Men are not flattered by being shown that there has been a difference of purpose between the Almighty and them. To deny it, however, in this case is to deny that there is a God governing the world. It is a truth which I thought needed to be told, and, as whatever of humiliation there is in it falls most directly on myself, I thought others might afford me to tell it."

This was Lincoln anticipating the coming peace, and trying to bring back the state of mind and the political attitude which would make real peace possible. He was engaged in his last and greatest attempt to bring this about, and to reunite the country, almost to the hour of its death.

Time after time, since then, this country has had its problems and its troubles. Time after time wild tongues have again been loosed. Yet the lesson of a great spirit and a great man has remained with us to make of this country a union so firm that even the forces of today which are tearing Europe and Asia apart beat harmlessly against our coasts.

The Union was saved, with God's help, for all time. But the real authors of its salvation were the great spirits, North and South, who followed Lincoln's plan, who cast hatreds aside, and in Lincoln's sympathetic spirit attempted to make the Government a means by which this Republic binds all Americans in common brotherhood.

The bond was forged faithfully and well. In its time it has overcome the peril from within, and now we see that it is no less stanch and true against the peril from abroad. That is our legacy from Lincoln and our blessing from God.

Yalta Conference Agreement

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a discussion of the Crimean Conference agreements by the Senator from New Mexico [Mr. HATCH] and myself over the N. B. C. network at 10:45 p. m., Friday, February 16.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Senator BALL. The decisions announced at Yalta cover four major subjects. First is the coordination of military efforts of the Big Three to hasten the end of the war. A very important paragraph reads: "Our combined military plans will be made known only as we execute them, but we believe that the very close working partnership among the three staffs attained at this conference will result in shortening of the war. Meetings of the three staffs will be continued in the future whenever the need arises." I think that means that all the propaganda efforts of both Germany and Japan to divide the Allies in the prosecution of the war have failed completely. Do you agree, Senator HATCH?

Senator HATCH. I do, Senator BALL. The agreement will allay fears expressed here of disunity. It is bound to shorten the war and hasten ultimate victory. It is tremendously significant that Russia has now joined the Joint Chiefs of Staffs. The Big Three are getting closer together instead of drifting apart as victory nears. I believe the second subject covered relates to the surrender terms and control of Germany following victory. We have heard much about the term "unconditional surrender."

Senator BALL. Senator HATCH, I think unconditional surrender has always meant unconditional surrender of all German armed forces and that only. I believe the Big Three were wise in not making the terms of surrender which they agreed upon at Yalta public at this time, because Goebbels would simply twist and use them to stiffen German resistance. It is a great advance that we have agreed on those surrender terms.

Senator HATCH. Some agreements on Germany were announced, like the decision to completely demilitarize Germany and to destroy nazi-ism.

Senator BALL. That carries out the proposal Senator VANDENBERG made last month that the United States should now commit herself to help demilitarize Germany. I was impressed also by two words in the paragraph on reparations, the words "in kind." I agree that Germany should repair as much as possible of the damage she has caused, and I believe it is more practical to do so in kind instead of in cash.

Senator HATCH. Senator BALL, the statement by the Big Three summed up my convictions on Germany in this paragraph, I quote: "It is not our purpose to destroy the people of Germany, but only when nazi-ism and militarism have been extirpated will there be hope for a decent life for Germans, and a place for them in the comity of nations." End quote. The agreement also sets up a central control commission for Germany. It has been rumored that Russia was going to dominate Germany through the Free Germany Committee which she had set up. I believe the agreement finishes those rumors. What do you think, Senator BALL?

Senator BALL. I think the agreement is very clear on two points: First, that the Big Three agreed on surrender terms. Russia is not going to impose one set of terms in eastern Germany and the United States and Britain another set in western Germany. Second, each nation, including France, will occupy a separate zone in post-war Germany. A central control commission on which all four nations will be represented by their supreme commanders will be set up in Berlin to determine policies which will apply in all zones.

Senator HATCH. I have no objection whatever to the occupation by the different countries of different zones in Germany. We would encounter tremendous administrative difficulties if we attempted to amalgamate the civil and military personnel of four nations into a single organization. The zone system is much simpler. The necessary overall coordination of policies in all the zones would be achieved through the central control commission. The third subject covered by the agreement, Senator BALL, is one in which you and I have been intensely interested for some time. That is the establishment of an international organization to maintain peace in the future. Do you get any encouragement from the agreement?

Senator BALL. I think we and our allies made a rapid progress at Yalta in that direction as we could hope for, Senator HATCH. First, a full dress conference of the United Nations to draft the charter of an organization along the lines of the agreement reached at Dumbarton Oaks was called for April 25 at San Francisco. The American delegation to that conference has already been named. Second, the big three reached a tentative agreement on voting procedure in the security council which was left unsettled at Dumbarton Oaks. The treaty establishing this organization should reach the Senate within the next 3 or 4 months.

Senator HATCH. May I interrupt to say that I found encouragement in the very last paragraph of the statement, which definitely ties victory in this war and the establishment of the proposed international organization together as means of keeping the peace. Clearly all the leaders involved in this conference recognized that military victory alone would not suffice for the future, that victory must be tied to a permanent international organization if there is to be any hope for peace. I think that was a very realistic approach to the problem of future peace in the world.

Senator BALL. Victory merely gives us and the world another chance to solve the age-old problem of preventing major wars. The voting procedure in the Security Council is likely to provoke some debate. The council will have 11 members, 5 of them permanent because of their great power and major responsibility—the United States, Russia, Britain, China, and probably France. The other 6 seats will rotate among smaller nations. The dispute at Dumbarton Oaks was whether unanimity of the great powers should be required in all actions by the council, which in effect would give each of the 5 permanent members a veto over any action, even in a dispute to which it was a party. It is reported that the compromise agreed on would permit the council to investigate and make findings and recommendations in any dispute without unanimity, but that unanimous approval of the permanent members would be required for the use of military force. I imagine there will be opposition to this sort of solution because it does to a degree violate our common law that a party to a dispute cannot sit in judgment on that dispute. However, to me it is realistic and workable. We are establishing this organization to prevent major wars. If the organization attempts to coerce by force any one of the great powers, we have a major war and it has failed. Futhermore, the quota forces at the command of the council would be insufficient for such a task. It would not be an international policing job, but all-out war, and in the United States, that would require a declaration by Congress.

Senator HATCH. Here, of course, we are speculating as the voting procedure solution has not been announced. Theoretically I cannot approve of any nation sitting in judgment on its own case. In circumstances such as you outlined, the objection would be academic. If any situation reached the point where force was to be applied to any one of

the great powers, then, as you have said, the machinery has broken down and we are already in a major war. I hope we won't quibble too much over possibilities which may never come to pass.

Senator BALL. It would be unfortunate if we did, Senator HATCH. Now we come to the fourth and perhaps the hottest subject covered by the agreements reached by the Big Three, the interim political decisions in liberated Europe. What do you think is the most significant decision reached there, Senator HATCH?

Senator HATCH. To me it is that Great Britain, Russia, and the United States have agreed that there shall be no more unilateral decisions in Europe but that the three great nations will act in concert. What do you think of that?

Senator BALL. I agree with you. I think the unilateral decisions that were made in Greece and Poland were a real threat to the harmony of the Big Three. This decision for joint action and responsibility and the speeding up of international organization were the two major achievements hoped for from the conference.

Senator HATCH. The agreement also provides for joint action to supply emergency relief to liberated countries, for free elections with secret ballot and universal suffrage at the earliest possible date. The Big Three reaffirmed the principles of the Atlantic Charter and also agreed on the procedures by which in concert they would apply those principles. They also provided that the Foreign Secretaries would meet every 3 or 4 months regularly to discuss problems which are bound to arise. I think it is the first major step we have made toward actually applying the Atlantic Charter, and I am for it 100 percent.

Senator BALL. There has been one criticism of these decisions about Europe, namely, that they will involve the United States in all of Europe's quarrels. My own reaction is that twice in 25 years we have had upward of 2,000,000 fighting men in Europe. To me that demonstrates that we have a tremendous and vital stake in the fair and just settlements of quarrels that do arise in Europe without letting them explode in war. I believe that our participation in these decisions is the best way to prevent another war.

Senator HATCH. I would rather try our influence in times of peace to prevent war than to send our men to the battlefields to win wars after they have already started. The Polish settlement announced is one which probably doesn't meet the approval of all of us. Personally, it doesn't meet with my entire approval. I think there is much to the contention of the Polish government in exile. The eastern boundary seems to be settled at the Curzon line with slight variations. What do you think of that, Senator BALL?

Senator BALL. The western boundary of Poland is left up in the air to be settled at the peace conference. Presumably Poland will be compensated for territory lost. It is unfortunate that the clearly Polish cities of Llow and Vilna were not included within the new Poland. This is the one major decision reached which does any real violence to American principles of international justice. Russia did agree that the Lublin Committee which she has recognized shall be revised to include representatives of the government in exile and then will be recognized by all the Big Three as the Polish Provisional Government of National Unity. Even that includes a pledge for a free election in Poland as soon as possible, so that the Polish people will have a chance to choose their own government. I believe the decision on Yugoslavia was much better.

Senator HATCH. I agree, Senator BALL. Finally, may I say that while the agreement in all of its parts does not meet with my complete endorsement and approval, I see in it a spirit of give and take on the part of all. After all, that is the only way in which agreements can be reached. I am very hopeful that this, to me, very progressive step will be but a forerunner of better things and better understanding to come.

Senator BALL. My own view, Senator HATCH, is very similar to yours. I don't think everything was perfect or to our liking. We did not dictate the Yalta decisions, but it is very obvious that neither did Britain nor Russia. The decisions convinced me that the peoples and governments of these three great powers are together on the great fundamental objective of winning the war and thereafter maintaining peace, stability, and justice in the world. We must continue to travel that road because it is the only road that holds any hope for humanity.

Definition of a Good Citizen

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Definition of a Good Citizen," delivered by George E. Stringfellow, chairman of the citizenship committee, New York District of Kiwanis International, at the presidents' conference, Albany, N. Y., January 28, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been requested to speak for a few minutes on citizenship.

It seems to me that in order to discuss this subject with some degree of understanding a definition of citizenship is necessary.

The word "citizen" has a venerable history. It meant, in ancient times, the freemen of a city. That lover of democracy, Aristotle, defined a "good citizen" as one who shares the civic life of a city.

I like that definition for two reasons:

First, by changing it to "one who shares the civic life of the Nation," we have a definition of a citizen of the United States that could not easily be improved; and

Second, I like the idea "shares the civic life," which, of course, means that a citizen shares the rights and privileges as well as the responsibilities. It is easy enough to share the rights and privileges. They are protected by Federal and State constitutions, courts of law, and the agencies of law enforcement. But to share the responsibilities means work.

On that subject that great American, Theodore Roosevelt, said, "The first requisite of a good citizen is that he shall be willing to row his own weight."

To enjoy the rights and privileges of citizenship we must discharge certain responsibilities or lose those rights and privileges even though they are protected by constitutions. In fact, the need of safeguarding our liberties was never greater than today. We who are privileged to remain at home—while millions of our citizens are in the armed forces—must realize that we are trustees for them, that we owe them an obligation to preserve American institutions and American freedoms so that when they return, they will not find their substance wasted and their country materially and spiritually impoverished. We owe them the responsibility of protecting their liberties at home while they are protecting ours on the battle fronts of the world.

Too often that segment of our human family represented by service clubs, leaves the discharge of the responsibilities of citizenship and the control of government to the political machines who are made up, too often, of men and women, whom we would not employ in our own businesses, whom we would not retain as lawyers and for whose knowledge, ability and experience we have no respect and in whose character we have no confidence.

A large number of our citizens, including some Kiwanians, take the position that politics are dirty and, therefore, they want nothing to do with politics. They seem to overlook the fact that politics affect every phase of our lives, every minute of our lives, and that politics will be as clean or as dirty as our decent citizens demand.

In this country, where citizens are still free to choose public servants who make and enforce the rules by which we live, there is no justification for our electing second-raters. The explanation is that too many of our citizens are unmindful of or unwilling to discharge their civic responsibilities. If we don't stand for something, we'll likely fall for anything.

The real clash these days is not so much between right and left as between right and wrong.

We should consider a person who takes no interest or part in public affairs not as a harmless citizen but as a useless character. It is just as impossible to have good government without working for it as it is to have a top without a bottom.

Good government, when we have it in the United States, begins in the primary election, where we nominate candidates to run in the subsequent election. When high grade candidates are nominated and supported in the general election, regardless of party label, positive, capable public servants will invariably result.

We can and should, as individuals and as an organization, aid in setting a standard for public servants and the youth of our country, which will be acceptable to all who are desirous of decent and efficient government.

To attain this desirable end, we need men in public office who possess:

"Strong minds, great hearts, true faith, and willing hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor, men who will not lie;
Men who can stand before a demagogue, and damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

It must be clear to every thinking person that our Government will never be any better than you and millions of others like you help to make it and that it will be as bad and corrupt as you and millions of others like you permit it to be.

To be characterized as a good citizen is one of the highest recognitions that can be bestowed upon any person in our Republic.

If we Kiwanians, by our example, encourage other citizens to scrutinize public issues, the character and ability of candidates for public office, and speak out boldly and courageously against that which is not in the public interest and fight tenaciously for that which is decent and honorable, then, and only then, will we be worthy to be characterized as good citizens.

Statement of Chairman of National Labor Relations Board on Submission of Ninth Annual Report

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by H. A. Millis, Chairman of the National Labor Relations Board, consisting of a summary of the Ninth Report of the Board to Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The one outstanding characteristic of our agency's activities during the past fiscal year may be summarized in this fashion: The National Labor Relations Board with continuing and increasing frequency is being called upon to act the judge rather than the prosecutor. That is, the overwhelming number of cases filed with us ask the resolution of questions concerning union representation; a declining number of cases call upon us to police unfair labor practices by employers. Thus:

During the past year, as in the preceding 12 months, more election cases were filed with the Board than in any single year of the Board's history.

The number of election cases filed represented an increase of more than 3,000 percent over the number received in the first year of the Board's operation.

On the other hand, fewer unfair labor practice cases were filed than in any of the 7 preceding years.

For the sixth consecutive year the proportion of unfair labor practices cases to election cases before the Board continued to fall. The ration of unfair labor practice cases to election cases, in fact, has been completely reversed. Whereas in 1937 the unfair labor practice cases comprised 71 percent of the cases before the Board; in 1944 the election cases accounted for 72 percent of all cases presented to us.

Viewing these election cases on the level of our daily tasks at the Board, we find:

Every working day of the year, throughout the Nation, an average of 15 collective-bargaining elections are conducted.

Daily, wherever prosecution of the war effort is the mission, an average of 3,400 American workers vote in Board elections to determine their collective-bargaining representatives—indeed, including the votes cast by members of the merchant marine in far-off and infested waters.

More than 80 percent of the total number of workers eligible to vote cast valid ballots, a far greater percentage of participation than is common in political elections.

I am gratified with the record of the Board's work during the past year. The Board's record reflects increasing use of the procedures of collective bargaining and wider acceptance of the principles underlying the National Labor Relations Act. Each of these two significant developments is borne out by what is rapidly becoming an industrial habit in American labor relations: While labor organizations consistently turn to the Board's democratic election process to adjust representation disputes, the illegal practices of employers have continued to diminish.

This acceptance of the principles underlying the act is no accident. For, employees and employers alike have come to know their rights and duties under the law with an exactitude borne out of close observation of 9 years of administration by the Board, with ultimate review of orders by the Federal courts. Labor, employers, the American bar, the judiciary, and the Board, itself, through thousands of Board decisions and nearly 600 court decisions have acquired an awareness and precise knowledge of industrial labor relations. As a result the parties to the collective bargaining relationship have become experienced in determining what line of conduct each must follow to comply with the provisions of the law and to receive its benefits. In essence, we have today a body of law which is understandable and which is becoming increasingly precise.

What the Board's administration of this body of law signifies in wartime is readily ascertained when we look at the requirements and consequences of our wartime economy. With employment at a new high American workers have speeded output of vital material and have worked long hours to smash production quotas. The full exertion of this manpower was not always made under the most ideal conditions. Tensions developed. Incidents which might have gone by unnoticed in peacetime very easily become sources of friction in time of war which might flare into serious interruptions of vital production. It was in this area of labor relations that the Board performed yeoman service. For, in disposing unsettled questions of majority representation and allegations of unfair labor practices the Board was removing the fuze caps from high-potential explosives which might have shattered both production and morale.

That the Board is overwhelmingly preoccupied with vital war operations is demonstrated by the frequency with which the Board's services were invoked in certain industries. During the past fiscal year more than half of the cases filed with the Board originated in eight major industries engaged in producing basic war equipment and supplies—iron and steel (which includes the production of ordnance), machinery, aircraft, chemicals, textiles, food, and electrical equipment. In terms of the number of employees involved, more than 50 percent was concentrated in only four of these industries. Aircraft alone, for instance, had 399 election cases, as compared with 121 in 1942; approximately 237,000 employees voted in elections conducted in this essential industry, representing an increase of 300 percent over the votes cast by aircraft workers in 1942.

To observe that discharges for union activity, refusals to bargain and other illegal activities are relatively giving way to the more constructive issues of representation is not to close our eyes to that segment of American industry which still, for one reason or another, violates the law. During the past year a total of nearly 3,000 workers were reinstated to remedy discriminatory discharges, while 350 in addition were reinstated after strikes caused by unfair labor practices. Back pay amounting to almost $2,000,000 was paid to a total of 3,700 workers who had been the victims of unlawful practices. Company-dominated unions were disestablished in 100 cases. Collective bargaining negotiations were ordered in 136 cases.

During the past year, a total of 9,176 unfair labor practice and representation cases was filed. Of these, 6,603 were representation cases. The unprecedented number of elections conducted in the past year, 4,712, brought to 19,031 the total number conducted in 9 years; the 1,072,594 valid votes cast during the past year brought to 5,220,983 the total number of votes cast since the inception of the Board.

The number of elections involving only 1 union, 3,645, comprised 77 percent of all elections held. Independent unions participated, either alone or opposing another labor organization on the ballot, in 969 elections, or 21 percent of the elections conducted. Affiliates of the A. F. of L. and C. I. O. opposed each other in only 575 elections, or 12 percent of all the polls. Of these the C. I. O. won 286, A. F. of L. 244, with 36 resulting in a no-union vote.

For several years the Board has followed the practice of holding elections in order to ascertain the desires of employees as to representation by unions. While the election device is now commonly accepted, it is not required by statute; the law expressly provides that the Board "may take a secret ballot of employees or utilize any other suitable method" to ascertain the exclusive representative. However, it has been our experience that the secret ballot is the most acceptable method of resolving representation disputes. A necessary condition to the continued use of this practice is that the atmosphere of a collective bargaining election be free of any coercive tactics or undue influence directed at the employees, whether attributable to the employer, a contesting union, or any other source. The Board stresses the atmosphere of a collective bargaining election because it is deeply concerned that employees shall be protected in their statutory right to select representatives of their own free choice.

A regrettable tendency to make elections the occasion for the exertion of pressure on employees by means of propaganda campaigns, subtle threats, and other devices has been observed in recent months. In one case these manifestations reached such proportions that they required the Board to take the unusual step of protecting the integrity of its election machinery by resort to the courts. The Board was successful in the one instance in which this procedure was adopted and obtained an order from the circuit court of appeals restraining the employer from in any manner interfering with the conduct of the election as well as from "interfering with its employees in their selection of bargaining representatives at said election by statements, either oral or written, by using methods having the effect of requiring employees to vote or not to vote, and by aiding and abetting in the circulation and distribution of election campaign material, or otherwise participating in any campaign with respect to the election."

The Board is desirous of continuing to utilize the election method to determine bargaining representatives. To that end it will use its powers to the fullest extent in order to insure that elections conducted by the N. L. R. B. result in the uncoerced and free choice of the employees.

Court litigation for enforcement or review of the Board's orders during 1944 was the most successful in the Board's history. Five Board orders reached the Supreme Court, and each one was enforced in full. The circuit courts of appeals reviewed 88 Board orders and enforced 74, or 84 percent, in full; eight orders were enforced with modifications and six were set aside.

The fiscal year 1944 coincided with the first year's operation of the strike-vote provisions of the War Labor Disputes Act. Under this statute we were assigned the task of conducting strike ballots, after 30 days' notice, and to certify the results to the President. During the year a total of 1,089 strike notices were filed. Before the expiration of the 30-day period 688, or 63 percent were withdrawn, many of them on the eve of polls for which all preparations had been completed. Strike votes were conducted in 232 cases, involving 381 separate voting units. In each poll the employees were asked to vote "yes" or "no" on this question: "Do you wish to permit an interruption of war production in wartime as a result of this

dispute?" In 323 of the 381 polls at least a majority of employees voted in favor of interruption of work. Only 34 polls showed majorities voting against a strike, there being 12 polls in which no votes were cast and 2 others resulting in a tie vote.

The Yalta Conference

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Power Politics Given a Blow," published in the February 17, 1945, issue of the Charlotte (N. C.) Observer, one of the leading newspapers of the South. The editorial deals with the recent Yalta Conference.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POWER POLITICS GIVEN A BLOW

Those who are complaining that the United States did not get everything it wanted at the Yalta Conference have forgotten that this is a world of compromise, that life is a game of give and take in which nobody ever gets everything he wants.

Likewise, a nation that goes into an international conference with the determination to have its own way in all respects and to make no concessions will quickly break up the meeting.

On one of the most important issues before the Yalta meeting, however, President Roosevelt carried his point in a way that will have a profound influence in maintaining the future peace of the world.

In his inaugural address, the President promised that he would attempt to get Russia and England to accede to a system of international commissions to administer the governments of liberated or occupied countries until the people of those States are able to choose their own governments by peaceful means.

This would be a substitute for the old method of puppet governments and spheres of influence that have always led to international bickerings and finally to wars.

It now develops that Winston Churchill and Anthony Eden were in hearty accord with this plan from the beginning, because they were alarmed by American resentment against the unilateral methods that were being used by Russia in the Balkans and by England in the Mediterranean. They succeeded in making Stalin see that persistence in such methods might eventually drive the United States back into isolation.

It was agreed, therefore, that in the future an international commission consisting of representatives from the three great powers and France will administer the affairs of each liberated or occupied country until the people are able to choose their government peaceably.

That will eliminate such situations as arose in Greece when all factions at once grabbed for power as soon as the Germans were out and brought on a civil war that England had to stop.

It means also that there will be no unilateral or puppet government set up by the first army that reaches Berlin, but a provisional government administered by a commission on which each of the four powers will have equal representations.

Unification of Small Nations in Confederations

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Small Nations May Unite in Three Big Confederations," written by Constantine Brown and published in the Washington Sunday Star of February 18, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMALL NATIONS MAY UNITE IN THREE BIG CONFEDERATIONS—PAN-ISLAMIC, PAN-SLAV, AND CENTRAL EUROPEAN GROUPS FORECAST WITH ALL HAVING CLOSE TIES TO SOVIET

(By Constantine Brown)

Three big confederations are in the making at the confines of the U. S. S. R.—the Pan-Islamic, the Pan-Slav, and the Central European. The principal characteristics of these new creations are that while they are far from each other, they are being encouraged and sponsored by the brilliant Politbureau in Moscow, which functions independently of the Commissariat of Foreign Affairs. While the latter serves only as the contact agency with foreign powers, the actual political plans are being framed and put into effect by the Politbureau, whose members are anonymous as far as the general public is concerned.

The Pan-Islamic Confederation is closer to becoming a reality than most observers have suspected. The most powerful Arab ruler, King Ibn Saud of Saudi Arabia and Hejaz, has finally approved the protocol of the Pan-Arab Conference held last October at Alexandria, Egypt. The shrewd Arab monarch had not endorsed the agreement signed by all the other Arab nations in the Middle and Near East and by the Egyptians because he was not certain who would become the foremost power in Europe and Asia.

The Arabs are great believers in outward signs. When Ibn Saud heard that President Roosevelt and Prime Minister Churchill had decided to meet Premier Stalin on his own territory, he knew he could join the Arab states without much risk. The fact that the King of Saudi Arabia and Hejaz has now joined the other Arab states leads observers to believe that the Pan-Islamic Confederation already is in existence and will require only a mere formality before it becomes officially known as such.

RECOGNIZE NATIONAL SPIRIT

Russian diplomacy has worked hard to bring the confederation into being. Moscow dispatched diplomatic missions to Syria, Lebanon, Saudi Arabia, and Egypt, Trans-Jordan and Iraq. All these countries formerly were regarded as being within Britain's exclusive zone of political and economic influence. The Russian diplomats were not the usual type. The heads of the missions and many of the attachés were Russian moslems who made a point of being seen regularly in mosques just like the rest of the officials of the countries to which they were accredited. They spoke Arabic fluently and all were "believers"—a vitally important point in the dealings with the Mussulmanic countries.

The Russians were fully aware that the national spirit had made much progress throughout the Middle East in the last two decades. They encouraged it and were able to prove conclusively that Russia, unlike the Western powers, was not seeking to exploit the natural resources and people of the Arabic states. The Russians are believed to have been able to convince the Arabs of the sincerity of their intentions. They have fought the British influence in the Middle East, sometimes militantly, at other times through passive resistance.

Up until 1943 the Arabic states had been propagandized by the Germans and the Italians who had promised them complete liberation from the British sphere of influence. When the Nazi armies advanced close to Alexandria and the Suez Canal some of the less cautious Arab leaders, such as the Premier of Iraq, staged a short-lived rebellion against the British. It failed because Field Marshal Erwin Rommel never reached Alexandria.

But now when the Russian Armies are rolling back the Germans, the leaders of the Arab States believe that by getting together in a vast confederation which would have close ties to them may become a reality.

The Russians have played their cards very intelligently. For instance, they have discouraged the Zionist movement in their own territory where zionism is illegal and its leaders have been sent to Siberia. They also are reported to have refused exit visas to about 35,000 Rumanian Jews who wish to go to Palestine after having been kept in concentration camps for several years by the Nazis and their satellite government. Whatever else may have prompted the Russian leaders in Bucharest to refuse these exit visas, it is certain that the Arabs' opposition to having Jewish immigrants come into Palestine has played an important role in the decision.

From what is known here it appears that this Pan-Arab Confederation eventually will include the entire Moslem world from Afghanistan, on the borders of India, to the Eastern Mediterranean, the Red Sea, and the Persian Gulf.

The Pan-Slav Confederation already has been formed but has not yet assumed its official name. It extends from the western borders of the Black Sea to the Adriatic and will comprise Bulgaria, the newly Tito-created Macedonian republic, Albania, and the Federated Yugoslav States, namely Serbia, Bosnia and Herzegovina, Dalmatia, Croatia, and Slovenia.

TURKEY'S PLACE UNCERTAIN

The place of Turkey in either of these confederations is, for the time being, unknown because Moscow has not yet decided where to put that country. Turkey will be invited to enter either the Pan-Islamic Confederation to which she belongs racially and religiously or the Pan-Slav Confederation to which she belongs geographically. So far as Rumania is concerned, the consensus of observers acquainted with the situation in that country is that she will likely become a Soviet republic by a plebiscite which may be held in the near future while the Russian Armies still occupy the country.

The Central European Confederation, it is believed in Washington, will comprise the following states: Hungary, Austria, Czecho-

slovakia, and Poland. The consent of the newly created and Moscow sponsored governments of Hungary and Poland is assured beforehand. Austria has not yet been liberated, but as soon as the Nazi forces are crushed it is expected that Austria also will be given a government hand picked by the Moscow Politbureau. President Edouard Benes' advocacy of a close alliance between Czechoslovakia and the U. S. S. R. are well known and he probably has already enthusiastically accepted whatever ideas Moscow may have for the reconstruction of his country in a federation closely linked with and dominated by the U. S. S. R.

Whether the peoples in the Balkans and in Central Europe want to lose their national individuality and place themselves under the protectorate of the Russians is now a matter of little consequence. Most of the governments which have been established in all the countries which are to form the Balkan and Central European Confederations have been hand picked by the Kremlin. They have at their disposal the police forces necessary to discourage opposition from any quarter. Execution squads and concentration camps have been established and those suspected of sentiments which do not dovetail with the views of the puppet governments are either being purged or given time to think the matter over behind barbed wire.

USE STRONG-HAND METHODS

The Russians, like the Germans, realize that dramatic changes are not likely to succeed with kid-glove methods or even with the bribery of a few top men. The most drastic treatment is considered necessary to bring people into submission. And the stories reported by reliable individuals as to what is happening today in Poland, Yugoslavia, Bulgaria, and Rumania proves that the strong-hand method already is being fully enforced.

The three great confederations, which are not likely to be even mentioned in any international agreements such as the Dumbarton Oaks Agreement will increase the power of Russia in the areas where she considers herself predestined to play an important historical role. From the military and economic point of view, these confederations are the key to Europe and eastern Asia. There has been a centuries old rivalry between Russia and Great Britain about the domination of some sections of this enormous expanse of territory. When, under Emperor Wilhelm II, Germany desired to become a world power, she began to expand in the direction of Turkey and Iraq. Hitler had dreams of implanting the swastika in Egypt and in the Middle East.

Mussolini some 8 years ago attempted to become the leader of the Moslem world when he appeared on a white charger before a gathering of Arab chieftains in Tripoli and promised them he would draw his sword for defense of Islam. These attempts of the Germans and the Italians were short-lived. Hitler and Mussolini lacked what it takes to bring the Arabs to their fold—real and unmistakable power. Stalin has it, and it is for this reason that he is likely to succeed where the others have failed.

The three confederations will give the Russian Premier more power and strength than any other ruler has ever possessed. At the end of the war close to 200,000,000 persons and territories boasting untold riches will be added, directly or indirectly, to 190,000,000 Russians who live between the Vistula and the Pacific. There is no question that when the resistance of our enemies in Europe and Asia ceases, Russia will be the greatest power the world has ever seen. She will control more men and raw materials than any other empire in modern or ancient history.

Wiregrass Award to Alabama's Tom Martin

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and well-written article published in the February 2 issue of the magazine Alabama concerning the recognition accorded to one of Alabama's most outstanding citizens, Thomas Wesley Martin, president of the Alabama Power Co., for his unselfish and untiring efforts on behalf of the people of his State:

WIREGRASS AWARD

The climax came as a complete surprise to powerman Thomas Wesley Martin. The smallish, sixtyish president of Alabama Power Co., longtime promoter of new Alabama industries (including Dothan's hosiery mill) and extender of rural electrification lines, thought he was in the Wiregrass merely to address the assembled chambers of commerce of several southeast Alabama municipalities.[1] When, his homily concluded, Dothan's (First National) banker Wallace D. Malone rose, produced a slim silver cup inscribed "Alabama's most useful citizen" and presented it with a strongly personal as well as public tribute, he was almost overcome. Said Wallace Malone:

"I have the honor of being selected to express to you the sentiment of the people of this section in respect to the useful work you have done for your State. We admire you, and what is more, we love you."

He noted the thousands of A. P. C. dollars spent to bring new industries to Alabama; cited Tom Martin's State chairmanship of the committee for economic development and its survey of post-war employment problems, his vision and original thinking [as] prime mover in the foundation of the Southern Research Institute—which will mean so much to the people of the South for generations. But these, boomed banker Malone, were not the reasons for the unprecedented Wiregrass honor.

INTEGRITY, UNDERSTANDING

He continued: "Mr. Martin, our motive here is not even the honor that you brought to the State of Alabama when you made your historical research relative to the French settlements in this State * * * recognized by the Government of France [which] made you an officer of the French Institute. It is not even because you, in your public relations and otherwise, have always put the interest of your State ahead of anything else, nor because, during that era—the callow 1920's—when most of the utility-baiting was done in States instead of at Washington, you did not then lose faith. * * *

"This cup—and indeed it is a loving cup—is presented to you, sir, to show you that we love you best for your high Christian character and for the example that you have shown to all generations of Alabamans, for integrity, understanding, and love for your fellow man, * * * and it is in this respect that you will longest be remembered by the people of this State."

NO MIRACLES

Tom Martin found the words to say nothing like that had happened to him before in all his thirty-odd A. P. C. years (general counsel since 1912, president since 1920). His address already had keynoted the faith which the Wiregrass tribute payers admired: "We know our assets, we know our liabilities; we can cure our shortcomings in education and health. We can extend a sound governmental welcome to business; we can create and manage industries in our own communities. We can be the authors of our own future progress. * * *

"We need not wait for miracles to happen, and expect large industries to be located in every Alabama community at once," he warned; but declared: "I have faith that all of us pulling together can do many things never done in the past."

He discussed three coordinating and pioneering agencies of prime importance now and post-war; C. E. D., S. R. I., and the State Planning Board. He revealed that C. E. D.'s post-war job survey will be completed within 2 months—noted that effectuating its findings will be largely the task of chambers of commerce. He said the planning board's work "rests upon the underlying philosophy of faith in the people of Alabama and the resources of Alabama."

SELLING STORY

Pointing out that sound planning should take place within the fourfold framework of national interest, Christianity, democracy, and private enterprise, he emphasized that no economic activity should be undertaken by Government if private enterprise can do the job well.

For the program of S. R. I., of which he is chairman, he bore down heavily, noting that economic progress is conditioned on scientific development of resources, and that 63 percent of the wage earners and 65 percent of the country's entire manufactured production is in the North where industrial research also has been centered.

Today, said powerman Martin, the entire South stands at the portals of opportunity. The people of Alabama must build a selling story like a staircase and carry that story to the industrial centers of the Nation. For only by such a crusade will the full potentialities of the South be realized.

Advancing to the speaker's table as Mr. Malone made the cup presentation were the Enterprise Chamber's secretary, Miss L. L. Farrish; R. C. Joiner representing the Ozark Chamber; Yank Dean, of the Eufaula Club. Next to toastmaster Harry Hall, business manager of the Dothan Eagle, sat the Dothan Chamber's retiring president, Charles Adams, who made a satisfying report on Dothan's business year 1944. New president is J. H. Bryson.

[1] The Dothan, Ozark, and Enterprise Chambers of Commerce, Eufaula's Commercial Club, at their annual dinner (205 present) at Dothan's Houston Hotel.

Development of the Arkansas River and Its Tributaries

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. CRAVENS. Mr. Speaker, under the permission granted me to extend my remarks in the RECORD, I am including

an article by Mr. C. F. Byrns, of Fort Smith, Ark., appearing under date of February 12, 1945, in the Fort Smith Times-Record and dealing with a question which is rapidly becoming a matter of increasing interest in many sections of the United States. The article is as follows:

A serious effort is being made in eastern Oklahoma to build support for an Arkansas Valley Authority to take over from the Corps of Engineers the development of the Arkansas River and its region. An organization has been formed at Muskogee, and doubtless others are planned.

Our people need to look this matter squarely in the face and decide what they want to do about it after considering carefully the full situation.

Readers of this column know that I am enthusiastic about the results the Tennessee Valley Authority has been able to achieve in its 11 years of existence in the 7-State area under its control. I have visited the valley, talked with officials of the T. V. A. and with people in the area, and seen at first-hand some of the excellent results that have been obtained.

I want to do with the problems and the possibilities of the Arkansas Valley all that has been done in the Tennessee Valley, and more. I believe we can do it. But I do not believe we should approach the job through creation of an Arkansas Valley Authority. Rather I believe the intelligent course for us is full and enthusiastic support of the plans of the Corps of Engineers, United States Army, for flood control, navigation, and power development on the Arkansas and its tributaries. I believe we should give equally full support to the newly created Arkansas Resources and Development Commission and the Oklahoma Planning and Resources Board for a unified development of the resources of these two States.

There is a basic difference in the two methods of developing the resources of an area.

The only authority the country has is T. V. A. It is the pattern on which the President wants to establish a number of others, including one in the Arkansas valley. T. V. A. has almost unlimited powers over the waters and the resources of its area. Those powers are exercised by a board of three appointed by the President. If they exercise those powers for the benefit of the folks, following approved democratic practices, that is fine. If they choose to exercise those powers in dictatorial fashion, imposing programs which people did not want, I know of nothing anybody could do about it. In its power development program, T. V. A. was pretty rough. Maybe it had to be. I don't know. But it was. Competition was eliminated and a public ownership system was established. In its varied program of conserving and developing the resources of its area, I think it has followed a wise course, stimulating demand from the people for needed reforms and then helping to carry out those reforms. But it could have been just as dictatorial in all these other fields as it was in the field of power. It all depends on the attitudes of the board of three.

The approach of the Corps of Engineers to a river problem is the opposite. The Corps of Engineers is one of the oldest governmental agencies, in existence for much more than a hundred years. It is strictly nonpolitical. It is realistic. It is concerned fundamentally with flood control and navigation, not with public power, while the authority is primarily concerned with power. Every project of the Corps of Engineers is first investigated on orders of Congress—certainly a democratic beginning—then carefully checked by its own engineering experts, subjected to public hearings to determine public sentiment, and carried out only when Congress, responding to public demand, approves the project and appropriates the money to build it.

The funds come from the same source—the Federal Treasury. The difference lies in the emphasis of authorities on power and the emphasis of the engineers on flood control and navigation, and upon the centralized power in a small board of appointive officials under the authority plan, as compared with the democratic expression of public opinion, under the Corps of Engineers plan, through actions of Congress at every step of the way.

For our river problems, here in the Arkansas Valley, it seems clear to me the engineers are far preferable to an authority. We are far advanced toward final river control under the engineers—20 reservoirs now approved, five of them built, four under construction, others waiting for the end of the war; a $12,175,000 levee program ready for construction when materials are available; a comprehensive program of navigation, added flood control and power in its final stages of approval by the engineers before going to Congress. I do not want to sacrifice that and start over, or turn the plans of the engineers over to a new agency whose political and economic philosophy is at best a vast uncertainty. We have almost made the grade after many years of effort. I do not want to turn back and start over along a different and questionable route.

Congressional Salaries

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. JONES. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following article on the subject of congressional salaries, which appeared in the February 12, 1945, issue of the publication entitled "What's Happening in Washington":

CONGRESSIONAL SALARIES

Congressmen, even more than the white-collar class generally, have suffered drastic cuts in income since pre-war years. In 1936 a Member of Congress paid $260 in taxes, leaving spendable income of $9,740 out of his $10,000 salary. Today he pays $1,915 in taxes, has only $8,085 with which to meet his expenses. (Assumptions: married, two children, $1,000 in deductions, no other income.)

A Member of Congress has to maintain two homes, one in his district, the other in the most expensive city in America, neither expense deductible for taxes. Constituents expect each to be appropriate to his position. Rent on his Washington home averaged about $75 in 1936, $100 in 1941, and $150 to $250 today—when he can find one.

Entertainment of congressional constituents—a large item—unlike entertainment of business customers, is not deductible.

Campaign expenses are not deductible. With increasing ideological warfare, he often has a bitter fight both in the primary and in the final election. Moreover, every district unmercifully and unfairly taps its Congressman for charities and benefits.

We may soon approach a condition where only a man of means can afford to run for Congress.

Food Shortage Imminent

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. VURSELL. Mr. Speaker, administration inefficiency, constant bungling of the farm problem, and stripping the farms of necessary labor has now brought the country to the first definite realization of a food shortage.

The American Meat Institute, in its report today, states that the American public will have to get along on 38 percent less meat during the first quarter of this year and predicts a further sharp drop in meat supplies for the second quarter. It states that the Government and the Government's weekly requirements for the Army, lend-lease, and the liberated countries will require one-half of the country's total meat production complying with Government specifications. It also hangs up the bad news that storage stocks of meat cannot be relied upon to furnish relief as they are lower than anytime in recent history.

Almost 2 years ago many Members of Congress interested in agriculture, warned Government officials that the withholding of farm machinery needed for production on the farms and the stripping of too much farm help from the farms, taking them into the military service and forcing them into war plants, would bring about a situation that might well produce a food shortage that would slow down the winning of the war. We hope it yet may not become that serious, but there can be no denying the fact that the disregard of these warnings is fast bringing about a very serious condition.

This morning I talked with a high official of the War Food Administration who said "the present run of hogs to the market was way down as compared with last year." He agreed that this was partly brought about by the lack of farm machinery and, particularly, through taking too many men out of agricultural production. When I asked him if he thought we were going to be able to divert much food and meat to the liberated countries as we drive the enemy out, in order to partially feed the people and prevent chaos behind our lines, he said, "I do not think we can give them very much. I do not know where we can get the food. There is a limit to how far we can safely restrict and ration the American people."

It appears that the Army and Navy and the administration, who, through General Hershey, has just recently attempted to lay such a heavy draft on farm manpower, further depleting the production of food, do not learn by the lessons of the past. They seem to see only a part of our entire national picture.

Their lack of such conception is emphasized by the fact that they now insist on passing the May bill, which would take another million men under

the threat of fines and jail penalties, largely out of farm production, and civilian distribution, and drive them into the war plants that the War Manpower Commission says, under its own signature, has approximately 800,000 men already in these plants, drawing high wages, who are not fully employed and whose labor is hoarded and wasted, and is not used in production.

The Chief Executive and the heads of the Army and Navy had better desist from the desire to further regiment the people, had better turn away from the May bill, and endorse the principles of the Barrett substitute which, by an investigation of war plants, will stop this labor hoarding and get 800,000 into production who are already being paid by the Government in these plants.

Apparently everyone in the Nation knows this condition exists except the President and our military leaders. It is time they consent to a house cleaning in these war plants which will increase production morale and save the taxpayers billions of dollars, instead of insisting on the passage of the May bill that will further deplete the farms and the thin line of distribution, bringing about a dangerous food famine which is absolutely unnecessary, if efficiency and sound business principles in government are substituted for bungling and regimentation.

Free Men Produce More Than Slaves

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. REED of New York. Mr. Speaker, those who would conscript men and women under the so-called work-or-fight bill on the specious plea of necessity might well pause and reflect that true statesmanship has long recognized that "necessity is the argument of tyrants; it is the creed of slaves.'" Under leave to extend heretofore granted, I am inserting a letter published in the Farm Journal of February 12, 1945:

FREE MEN PRODUCE MORE THAN SLAVES

FEBRUARY 12, 1945.

Mr. GRAHAM PATTERSON,
Farm Journal and Farmer's Wife,
Philadelphia, Pa.

DEAR GRAHAM: On this, the anniversary of the birth of Abraham Lincoln, you asked me for my thoughts on the manpower draft. I have never tried to influence your editorial policy against your judgment, and do not wish to do so now. You and your editorial staff have fought a magnificent battle for the freedoms of rural America, and I am very proud to be a stockholder in your publications.

All my life I have been a stanch Republican, and especially since the N. R. A. days have I done everything I could to promote the cause of a free people. I felt that this was best served through the Republican Party because I come from an abolitionist family with a deep and abiding faith in Abraham Lincoln and the things for which he stood. I have in my lifetime seen the productivity of our people in industry and agriculture grow to 3 times that of any other nation on earth, and 10 to 20 times that of Asia, where the great masses of population in this world live. I am deeply convinced that this added productivity is simply the manifestation of the resourcefulness of a free people which can continue to grow without limit if individual freedom is preserved.

The living standards of our people have fully kept pace with this increase of productivity, and even during the worst of the depression America was able to support its unemployed, the ill-clothed, the ill-housed, on a higher living standard than that enjoyed by skilled mechanics in the Old World.

This is the history of a free representative republic in a nutshell, and should not be lightly tampered with. We are in the midst of a great war, with 12,000,000 of our sons and brothers fighting for their country in all parts of the globe. The issues are deep and the tempers uncertain, and regardless of our magnificent victories in one spot or another it will necessarily be a great many years before complete peace can be restored on this earth. We must not resort to any expediency which sacrifices the principles of a free people under the illusion that it is only temporary. "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." This is just as true today as it was when Benjamin Franklin wrote it many years ago.

The manpower draft bill, which has already passed the House of Representatives and is before the Senate, is in no sense a partisan measure. Its proponents say that it is necessary in order to improve the morale of the soldiers and, more significantly, they testify that it is more important after V-day in Europe than it is today. And so they want to have the power to enslave 18,000,000 of their fellow men, including the soldiers as they return, for an indefinite period which may last for a generation in the twilight zone between war and peace.

Of course, we are all tremendously worried by the obvious lack of interest in the war effort on the part of many people, and disturbed by their unwillingness to take war jobs, but should we not look into the cause of these things and cure them at the source rather than put despair in the hearts of men by selling them down the river into bondage? We must remember that it is the invisible chains that clank the loudest in the hearts and souls of men.

Today one can travel from one end of America to the other and hardly see a flag flying from any home. In the last war, to the contrary, there were few homes that did not respectfully raise their flag in the morning and take it down reverently at night. This in turn was coupled with enthusiastic and patriotic cooperation in the conservation of wheat, gasless Sundays, meatless days, restrictions in the operation of saloons, and a hundred and one other helpful and cooperative activities. The oil industry and many others set up voluntary cooperative groups that did a magnificent job in supplying our war needs. So outstanding was this particular performance that Clemenceau remarked that we had floated to victory on the sea of oil. But in those days we were told the truth, the whole truth and nothing but the truth, and more than two million American soldiers were landed in France. True, they lacked training and in some cases arms, but one never heard of sagging morale.

What has made this difference? It seems to me that it is lack of candor and frankness to the people, the application of heat in the form of threats, intimidation and coercion, and sometimes downright falsehood regarding the progress of and conduct of the war, coupled with outrageously optimistic statements such as the pretense for over 3 years that the end of the war is just around the corner. This no informed person believed, but the veil of secrecy is so thick that few men can penetrate it.

I am chairman of the Sun Shipbuilding & Dry Dock Co., which has, I think, generally been conceded to be America's most efficient shipyard, and has been so for many years. Nevertheless, within the last 15 months the men there, working as freemen in a close spirit of cooperation, have increased their productivity per man 50 percent. They are allowed incentive pay which has increased their earnings about 30 percent, and the cost of the ships to the Government is considerably reduced. Among the men working with tools we find over 7,000 men whose earnings in the aggregate average over $400 a month, and they are earning every penny of it. They are producing ships with fewer man-hours than ever before in the world's history.

In the oil industry we find the same thing. With a slight decrease in employment the oil industry has increased its output of products nearly 40 percent, and the quality of the products is tremendously improved to meet the exacting war demands. This is true not only of one oil company but the entire cross-section of the industry. Some places we find the C. I. O., some places the A. F. of L., and some places independent unions, but all with cooperative urge of men working together as freemen for the common purpose.

Why then do we find the arguments for conscription of 18,000,000 men? America has not failed. It is absolutely futile for the Government to attempt to cover up its own shortcomings in leadership by piling threat upon threat, intimidation upon intimidation, and coercion upon coercion.

Freemen produce best, and we have a host of witnesses to this back through thousands of years. Four thousand years ago Homer wrote, "Whatever day makes man a slave takes half his worth away." But it wasn't until Abraham Lincoln came along that a whole Nation became free, with citizenship for all and involuntary servitude outlawed by the Constitution, we thought forever. It was Lincoln that first brought home that the chain which is fastened to the slave was also fastened to his master, and that all men had to be free before any man could be free. Civilization failed in the old world because the "master races" wanted to be free themselves, and still maintain colonial empires which were in truth nothing but vassal states. Lincoln in his second inaugural address brought out that in giving freedom to the slave you assure freedom to the free. Are we then going to "meanly lose the last best hope of earth?"

The farmers and agricultural leaders of America have solidly taken their stand against this bill. Industry is unanimously opposed to it, because management knows that slave labor is not only worthless labor, but poisons everything it touches and undermines the productivity of freemen.

The heads of our great labor unions have taken a strong stand against the bill, although we have heard nothing from Mr. Browder and Mr. Hillman, who apparently sit chuckling in their tent because they know full well that such legislation will reduce American productivity to that of the Old World, cut our standards of living, and make us ripe for their Old World philosophies.

No, we must recognize that our war effort must be divided into two distinct parts. The art of production and the art of destruction are as far apart as the poles. Let every man therefore stick to his trade. Give us honest, truthful and inspiring leadership on the home front, and American production will give to the armed forces everything they can conceivably use. The manpower draft bill takes us back to the antebellum days, and

it is just as true now as it was in Lincoln's time that this Nation cannot endure permanently half slave and half free. Let us hope and pray that our fathers did not die in vain at Antietam, in the Wilderness and at Gettysburg. I would not like to be in the shoes of any Member of Congress who succeeded in voting his fellow men into slavery for something which means nothing more or less than post-war controls of the bodies and souls of men.

Sincerely yours,

JOSEPH N. PEW, JR.

The 1945 Reclamation Outlook

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. MURDOCK. Mr. Speaker, I have had several requests for information regarding the national reclamation program. Commissioner Harry W. Bashore, of the Bureau of Reclamation, has provided me data which I now present for the information of the whole Congress under the heading of 1945 Reclamation Outlook.

All of those of us who are from the West are proud of the work that the United States has done through the Interior Department and the Bureau of Reclamation to roll back the deserts through irrigation and multiple-purpose projects. We are looking forward to even greater things, as the following statement will disclose:

1945 RECLAMATION OUTLOOK

With a record of 43 years of achievement behind it, including the construction of irrigation and multiple-purpose projects representing an investment of $922,000,000, the United States Bureau of Reclamation in 1945 faces a greatly increased construction program for the post-war years—a program for which it is now preparing.

This program can be summed up as follows:

1. Reclamation projects have been approved by Congress which, when completed, would cost approximately $2,200,000,000 at 1940 prices.

2. A post-war construction program has been proposed amounting to more than $3,000,000,000, which would give employment to about 250,000 workers on the site of construction when work was at its peak, and at least as many more making machinery, electrical equipment, and fabricating building materials in industrial plants throughout the country.

3. Publication in 1945 of reports calling for the unified and coordinated development under the reclamation program of the resources of 14 great river basins in the West is planned.

4. Post-war plans call for increasing present installed power capacity of 2,500,000 kilowatts to about 4,300,000 kilowatts in existing plants, and building new plants with about 1,765,000 kilowatts of firm capacity.

Last year the Bureau of Reclamation issued a report relating to the development of the Missouri River Basin. Together with flood-control works planned by the Corps of Engineers, United States Army, and approved by the passage of the Flood Control Act of 1944 (Public Law 538), this calls for construction of dams, power plants, and irrigation projects at an estimated cost of $1,327,000,000 at pre-war prices. Twenty-nine units and seven power plants with a potential installed capacity of 475,000 kilowatts constitute the Bureau's initial part of the program for which appropriations of $200,000,000 have been authorized.

Reports on the upper and lower Colorado River Basin, Central Valley Basin, California, and the Columbia River Basin are expected to follow in early months of 1945.

Following these will be reports on unified development of resources of the Nothern Pacific Basin, Central Pacific Basin, Southern Pacific Basin, Lahonta Basin, Bonneville Basin, Platte Basin, Arkansas, Kansas Basin, Red River Basin, Gulf Basin, and Rio Grande Basin.

These basin reports, including the Missouri River plan, already approved, will envisage the construction of more than 300 projects, which would bring irrigation water to about 10,000,000 acres of hitherto unirrigated land, and supplemental water to some 10,000,000 acres now inadequately irrigated.

Manpower Problem

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of February 10, 1945:

MANPOWER PROBLEM—1. LESSONS FROM CLEVELAND

(By Agnes E. Meyer)

Such manpower shortages as exist throughout the country are due to two things. First, by cutting orders sharply in 1944, the Army broke the terrific tempo of production, and the war workers left the factories in droves. Our complicated industrial machinery cannot be thrown back into high gear overnight, though it is all set to go except in a few big pockets. Secondly, the key shortages were created by the failure of various Federal agencies to coordinate their programs.

I chose Cleveland to dig into the manpower chaos because that city's numerous and diversified industries, its critical labor shortage and its reputation for cooperative action on all civic affairs, make it one of the country's best test tubes. The members of the labor-management committees of the local War Manpower Commission have never disagreed on a single controversial issue. Like all other cities, Cleveland has bad managements and bad labor leaders, but these elements are kept under control by a group of the ablest industrial and labor union executives to be found anywhere in the country. Therefore, the facts in the battle for production in this city may be considered a fair, though somewhat optimistic, picture of what is going on in general.

LACK OF COORDINATION

The manpower situation in Cleveland did not become critical until the drive started in France and a flood of new contracts suddenly changed the picture, demanding increased production from a majority of the factories that ranged from 65 percent to 200 percent. In January the War Manpower Commission stated that the area had a shortage of 8700 workers. The 38 plants that have a pricrity right to do gate-hiring are not seriously handicapped, but the city has some 4,800 firms ranging in size from seven or eight employees to seven or eight thousand. The smaller firms, most of them important subcontractors, feel the pinch. The only acute manpower bottleneck in Cleveland in the field of heavy industry is not a local but a nation-wide problem.

The development of this Nation-wide manpower crisis is a perfect example of the penalties we pay for lack of a coordinated war production program—specifically for the fact that the War Labor Board and the War Manpower Commission from top to bottom never know what the other is doing.

When the War Labor Board froze wages, there was an immediate country-wide exodus from the heavy industries making the forgings and castings that are the foundation of the whole war production program.

The foundries not only have the hardest, dirtiest work, but this industry has preserved the most antiquated methods and the most backward installations. For these disagreeable jobs an increased wage rate of 77½ cents per hour was established in Cleveland in 1944, whereas unskilled lighter labor can get 90 cents an hour sweeping the floor in clean, sunny factories. Steel and construction workers get well over a dollar an hour.

USE OF JAMAICANS

It is useless to make a patriotic appeal to workers to man these factories as long as they can be equally patriotic at a higher rate per hour under pleasanter working conditions. As a result, the industry has pressed down on the local war manpower committees to meet its needs, but the men go in one day and out the next. As the situation has become insoluble the Cleveland War Manpower Commision has resorted to the importation of Jamaicans. Some of them arrived in a blizzard and a near-zero temperature in white clothes and straw hats. It is comical to see how carefully these men are being housed and fed, in the hope that this desperate attempt to escape from our own national stupidity won't end in failure.

As the resort to a few Jamaicans for one of our most essential industries is a purely artificial solution that cannot solve this crucial problem, the War Labor Board will sooner or later be forced to revise its wage policies in relation to manpower needs for the foundries and forge shops.

If this is not done, what are the alternatives?

The only supply of labor still left in Cleveland is in nonessential industries. If we except a few brewery and trucking employees, these people cannot do the inordinately hard work in the foundries. Enough suitable workers are scattered about the war plants, notably the Negro workers who used to be a main source of supply for heavy industry before they had an opportunity to be upgraded in other war plants.

Can we force American citizens to accept this arduous and unpleasant work at a notoriously inequitable wage rate as long as lighter jobs are obtainable at a much higher rate of pay?

EXODUS OF WORKERS

Another result of the same lack of coordination between manpower and the W. L. B. directives has been the exodus of tool and die makers from Cleveland. This most skilled of all work has always been paid more highly in Detroit than Cleveland, the difference running as high as 50 cents an hour for gagemakers. No sooner were wages frozen than the Cleveland workers moved en masse to Detroit, and Cleveland industrialists were left to hold the bag, as it takes from 5 years upward to train people in these specialized skills.

This brings us to another fundamental weakness in the Federal controls of manpower: neither the United States Employment Service (under the War Manpower

Commission) nor the draft boards, as they are now constituted, could be trusted with the delicate and difficult task of transferring great masses of unskilled workers into the war plants.

So far the War Manpower Commission has gone from crisis to crisis and piled directives upon directives, all of which have failed of their objectives. It would be like sending an army across a bridge with defective supports to give it more power unless it is reconstituted.

The U. S. E. S. has never had a staff capable of handling the people who now make use of it. Blown up suddenly, it is full of ordinary folks who are trying hard to do an extremely difficult job as best they can. The clients, mostly unskilled people, after standing in line for hours, are shunted off to assignments for which they are frequently not suited, or to one that does not even exist. The records of the U. S. E. S. are swollen with statistics that mean nothing, as many of the placements are repeaters. But the most brilliant person would be lost in the U. S. E. S. and the Manpower offices because all of the employees are so harassed with endless reports, telephone messages, and a deluge of other chores that they have no time for the careful placement of workers. In both offices several officials said to me: "We don't know whether we are here to make out reports or further the war effort. We must have these useless reports taken off our necks."

ADMINISTRATIVE FAILURE

Yet, an intelligent War Manpower set-up and an efficient U. S. E. S. are essential not only to handle problems that now confront us but the much more difficult situation when the veterans come back in large numbers. It is a general conviction that the Federal office of the War Manpower Commission is hopelessly incompetent. It issues restrictive orders that cannot be enforced, tells of wonderful results, announces 2 months later that conditions are worse, and follows failure with worse failures.

It has just handed down another five-point program concerning which Washington consulted none of its local officials.

1. To bear down on ceilings. The 4,500 firms of widely varying size in Cleveland cannot possibly be checked as to ceilings unless the local War Manpower Commission have a huge staff of expert engineers.

2. To eliminate gate-hiring. Gate hiring is the only thing that keeps the big plants in Cleveland going. Without this priority for some 38 industries, the U. S. E. S. would be completely snowed under.

3. To clear all people through U. S. E. S. The U. S. E. S. is having a hard time—through no fault of its own—placing the comparatively few unskilled people it now handles.

4. To enforce transfer from less essential to critical industry. Nothing has been done about it so far by the W. M. C. for lack of methods and personnel.

5. To investigate violations or suspected violations of labor hoarding. The Cleveland War Manpower Commission has 10 to 12 pay-roll auditors. It would take a gestapo to cover the job plus technical knowledge which the W. M. C. auditors do not possess.

The local war manpower officials, under Stuart Smith, an able and respected chairman, could do a good cooperative job if they and other local boards had any freedom of judgment and more stuff to do the work. At present they are tied in bowknots with red tape. One humorist remarked "It's like Durante's gag: 'Everybody wants to get into the act.'" The result is chaos.

DRAFT BOARDS

But the results achieved by the draft boards are even worse. Having been empowered by Mr. Byrnes to transfer people from nonessential to essential work, they have tried their hands at it with disastrous results. They have no experience that fits them to distinguish between critical, essential, and nonessential work. Anything to do with metals seems to them critical. So they transfer the most skilled worker in a clothing factory making uniforms to a factory making airplane parts. Result: the Army uniforms are delayed, the man is useless in the new job, and he is mad as a hatter because his salary is cut in two. The two A's or war supporting industries, are "getting the devil," said one official, as the result of the draft board's activities. The police force and the depleted public school teaching corps are also being harassed. The country must be in a turmoil if all the draft boards are behaving like those in Cleveland.

These boards have drafted and still are drafting men with irreplaceable skills into the Army to fill their quotas, thus working against the Army's own interests. But even if they have, on the whole, done a good selective job of military recruitment, this is no preparation for the most technical responsibility of industrial recruitment.

NATIONAL CONFERENCE

Never has the Federal Government worked out clear-cut policies or an integrated program. Labor and management are not discouraged, but they want to eliminate unnecessary handicaps as a preliminary step to a more orderly war manpower control. As local leaders of management, labor and agriculture know the problem better than Washington, they insist that order can be established if representatives of these groups and the public are called together for a national conference to think through a sound national policy and find the tools for its implementation and simplification.

They maintain that an intelligent reorganization of the whole manpower muddle and the cooperative action in this field between labor, management, and government are essential not only to the war production program but to the handling of even more difficult situations during the conversion and post-war period.

Peacetime Conscription

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. WHITE. Mr. Speaker, there is food for thought in a letter that reached my desk from a constituent in Idaho this morning.

The letter follows:

WEISER, IDAHO, *February 14, 1945.*

Hon. COMPTON I. WHITE,
House Office Building,
Washington, D. C.

DEAR SIR: In the late 1800's my maternal great grandfather came to America from Germany just before his boys were old enough to be caught up by the hated universal compulsory military training of Germany. I predict thousands of families will flee America in the same manner if this thing becomes a part of American life.

It will be a paradox if, while our boys are fighting to destroy the effects of peacetime conscription in Europe, they come home and find the same thing was "put over" here during their absence.

In a democracy a worthy bill does not have to be put over during a period of national hysteria. Are our leaders afraid to have this idea receive the cool consideration of peacetime?

I pray you will use your vote and influence against peacetime conscription.

Yours sincerely,

RALPH TURNIDGE.

Our Political Immorality

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by Mr. R. H. Markham, which appeared in the January 31, 1945, issue of the Christian Century. This very informative article was forwarded to me by Dr. Carlton F. Wells, of the department of english, University of Michigan:

OUR POLITICAL IMMORALITY

(By R. H. Markham [1])

It seems to me that America is letting itself be carried away on a wave of immorality. I am not referring to Hollywood, juvenile delinquency, or sexual looseness, deplorable as these are, but to prevailing political attitudes.

I have spent most of my adult life in central and southeast Europe and have recently returned from a long sojourn in that vicinity as an employee of an American war agency. For many months I was in close contact with events in eastern Europe and could not fail to see that something ominous is taking place. Developments there may radically affect the future of America and of all other peoples. They may determine to what extent the nations of the world will retain freedom, self-government, and self-respect. Yet many Americans try to escape recognition of this unpleasant prospect and of responsibility for overcoming it, preferring to ride along on a current of euphonious self-deceit.

The most striking demonstration of this irresponsibility is a prevalent American attitude toward Poland. Here are some indisputable facts in the situation:

It was partially on the insistence of Great Britain that Poland took the stand which led to Hitler's attack on her. Poland faced the full power of the Nazi war machine alone and without military help. She fought well and since defeat has remained faithful to the Allies. She has an excellent record of loyalty and bravery.

POLAND AS A TEST

When Poland made her stand against Germany, Russia was siding with Germany and helping the Nazis. All Russia's admirers in all lands, including the United States, were then on the side of Germany. They were extremely active in working aganist Great Britain and its allies. Russia and Germany partitioned Poland, both for imperial reasons. Russia's spokesman callously said that

[1] R. H. Markham has for the past 2 years been employed by the Office of War Information, most of that time as Deputy Director, but has recently resigned. He spent most of 1944 in the Mediterranean area for the O. W. I. In addition to the Balkans—where he has lived over a period of many years—he has traveled in north Russia, Poland, the Middle East. In the United States he has been deeply concerned with reform measures for the southern sharecroppers. He is a native of Kansas, of pioneer American stock, a graduate of Columbia University.

Poland was liquidated and advised Great Britain against trying to help her.

We should keep in mind that there are 25,000,000 Poles in a fairly compact mass and only 48,000,000 Britishers. We should also recall that for the sake of the security and well-being of those 48,000,000 Britishers the British Government intends to preserve its whole empire intact, thus continuing domination, control, or ascendancy over 400,000,000 non-Britishers. This means that the security of 48,000,000 Britishers is considered of supreme importance, while the security of 25,000,000 Allies is treated as a bagatelle.

It should also be added that Russia partitioned Poland at about the time of our Revolutionary War and later seized most of the country, as Germany took the rest. The Poles were held in a terrible bondage until 1918. Perhaps it is not strange that the Poles cannot forget that a partitioning was the prelude to Poland's complete enslavement.

These are plain facts. It is also a fact that the Russians, after being attacked, have fought magnificently; along with the Americans, other United Nations, and Britain itself, they have saved Great Britain. Having done this, Russia again insists on partitioning Poland and on setting up its own Polish Government. The second policy is far more vital than the first, though both seem to be part of a single plan. Poland, after more than a century of complete subjugation, followed by barely 21 years of liberty, again finds itself on the point of being controlled by a puppet government.

REMEMBRANCE OF THE PAST

London backs Moscow in this plan and many Americans applaud. Russia and hard-pressed Britain are completely subordinating Poland's interests to their own. Thinking of this, one cannot but recall that Germany, for its security, threatened to take part of Poland, that Mussolini, as Mr. Churchill is now doing, urged Poland to accept, and that Japan applauded, as many Americans are now doing. And, recalling this, one cannot but ask: What did the heathen Axis do more than we freedom-loving nations? Do we not even the same?

The main issue is not boundaries. I think that at an international conference Poland's boundary might well be changed. The vital thing is that we rob an ally of independence and pretend that this is right, "liberal," and "progressive." Would it not be just as right for us Americans to impose a government on Canada that would give us all territory west of Winnipeg and would promise to do anything else Washington demanded? Would it not be just as right for us Americans to impose a government on Canberra that would take Australia out of the British Commonwealth of Nations and bring it into our sphere of control and security? Is it not interesting that Britain does not expect to relinquish one island or piece of the mainland in the Americas, but tries to impose upon Poland a government that would presto-change give away Lwow and other areas which Poles consider just as vital as Britain does North Ireland or Wales? And is it moral for Americans to applaud such an attempt in the name of "liberalism"?

AMERICAN NAME CALLING

Because 25,000,000 Poles refuse summarily to accept vassalage, many Americans call their government reactionary and fascistic. Many Americans call the Poles undemocratic because they hesitate to accept a government imposed upon them by a dictatorial neighbor. It is true that Poland needs land reform, even though a far larger proportion of our own American land is in great private holdings than that of Poland. It is also true that Poland has had reactionary ministers. But it is likewise reported that America has had some pretty bad ministers, or rather secretaries. I heard of one who accepted bribes in connection with oil lands; and it has been rumored that Chicago, Albany, and Philadelphia are not perfectly governed, that Mississippi is not quite a utopia, that Boston's school system has slight defects and that Texas' university is not utterly free from the control of slightly conservative men. However, I haven't heard responsible Americans seriously say that America should be made a vassal of a foreign dictator because of these "fascistic" practices.

A DISSERVICE TO THE WORLD

Many Americans in their attitude toward Poland are adding two insults to an injury. Not only are they giving up an ally to partitioning and subjugation but they are calling that act moral and are trying to salve their consciences by calling Poland immoral. It is as though Jezebel had called the little peasant immoral because he wouldn't give his field to King Ahab. When Americans call wrong right to salve their consciences and to bring peace to their souls they perform a disservice to America and to the world.

Let us look at another aspect of the political situation. Our press and broadcasters constantly praise the Balkan partisans as democrats and bearers of freedom. I have just spent months in direct contact with them and though I have the warmest admiration for their courage and energy I saw that they are by no means democratic.

They are among the world's most fanatical autocrats. We should praise them for being as brave as Nazis, as devoted to their cause as the Japanese to their Emperor, as firm in their faith as Moslems. Bravery, devotion, and faith are admirable qualities, but they do not constitute democracy. The partisans are terribly intolerant. They have divided humanity into Fascists and anti-Fascists and are determined to liquidate, dominate, or exploit the Fascists. Anyone whom they dislike they may call a Fascist and thus place him beyond the pale. This attitude makes democracy impossible. It cannot serve as the basis for a good new world.

The prevalent talk of a world revolution for little people is a sad delusion which we fondly nourish to make us feel good. We resemble desperate Christians who have given up the long, hard struggle for the Kingdom of God on earth and sit around, self-hypnotized, singing of the second coming. The people's world revolution is apocalyptic politics of the most regrettable sort.

REVOLUTION FOR LITTLE PEOPLE

Where is the world revolution of little men? What I have seen on the spot is that little men are furiously killing little men. Little Serbs kill little Serbs; little Croatians kill little Croatians; little Slovenes kill little Slovenes; little Greeks kill little Greeks; little Germans kill little Americans; little Hungarians kill little Russians. In Albania, young girls and boys are busy in the killing.

Of course, since the time of Amos little men and women have yearned for a better world. How beautifully and poignantly the Hebrew psalmists sang about it. What an inspiring Messiah they envisioned. The early Christians ardently expected a millennium. So did the French revolutionists and so did the Nazis. All of us little men have been longing for a better world for millenniums. But there are no indications that it will arrive through a second coming of any sort. When we stake all on an apocalypse, we destroy what has already been created. We go backward and not forward. We become defeatists.

So let us quit fooling ourselves about a good world revolution as little people butcher one another. Let us face facts, pray God for strength, consecrate ourselves to love and service, prepare to rebuild ruins and resolve to help the little men gradually get back as much freedom as they had 50 years ago.

And take the sad case of Greece. All good men deplore what is going on there. But it is easy for us to deceive ourselves about it. The liberals have cried for intervention every place. They have constantly agitated for us to interfere in order to make people do right—in Italy, Spain, the Balkans, everywhere. Well, here is intervention. American guns are killing Greeks. That's what intervention in other people's affairs means. Napoleon did it; Maria Theresa did it; Hitler did it; Mussolini did it. Now our allies are doing it.

It must be pointed out that this is a sample of Big Three cooperation. That is how the regional set-up works. Britishers shoot Greeks in the British region; Moscow kills Poles in the Russian region—and incidentally a hundred times more than the British. This is a foretaste of a world arranged by deals, with each empire getting its shooting preserves. Never in history has it been good for the common man when two or three conquerors divided the nations among themselves. We have no excuse for fooling ourselves about that.

STOP FOOLING OURSELVES

If we in America, who know what right and freedom are, approve of such a plan, instead of beginning of real collective security it will mean that we have allowed ourselves to be led into immorality. We live in a very tense time and are in danger of giving way to mass emotions. We tend to become political holy rollers. As we shout happily slogans about big power domination, democracy, one world, people's revolution, we deceive ourselves and debase truth. Let's leave such incantations and return to integrity, honesty, and intellectual decency.

We should not be foolish perfectionists, and we shall have to accept practical arrangements which we don't like, but let us quit humiliating ourselves by calling wrong right, slavery freedom, and the subjugation of an ally the basis of international justice. Let's get clear in mind. If we still have to keep some of our neighbors in slums, let us not call those slums beautiful architecture or a paradise for little people. Let's recognize them as slums, and with all our might keep on trying to clean them up.

Combined Sea-Air Service

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. WELCH. Mr. Speaker, under leave to extend and revise my remarks in the CONGRESSIONAL RECORD, I desire to call the attention of Members of Congress to a splendid editorial which recently appeared in the San Francisco Examiner with reference to the proposed hearings before the Committee on the Merchant Marine and Fisheries on the ship disposal bill and post-war international sea-air service.

The first consideration of Congress in this matter should be the future welfare of the American merchant marine as one of the four important arms of our national defense, along with the Army, the Navy, and the Air Corps. The American merchant marine is also of major importance to our post-war peacetime economic well-being due to the fact that it has always been a principal agency for finding foreign markets for American

products. Prior to the war we produced fully 10 percent more than we consumed. With the technological advances made in production under the stress of war the importance of this service will be much greater following the war.

Our American merchant marine has always had to meet a highly unfair but competitive field in foreign trade. That competition has not only been unduly increased, but the American merchant marine has been strait-jacketed by the action of the Civil Aeronautics Authority in interpreting the Civil Aeronautics Act of 1938 to prohibit American shipping companies from operating overseas air service even along routes paralleling their surface ship lines.

The estimated value of our American merchant marine at the present time is in excess of $16,000,000,000. On March 1 next the Committee on Merchant Marine and Fisheries will take up for consideration legislating proposing to sell these ships to American and foreign purchasers. Unless Congress takes steps to remove the straight jacket into which the Civil Aeronautics Authority has forced the American Merchant Marine, the sale of these ships to foreign purchasers will not only increase this unfair competitive advantage, but it will also be definitely reflected in the prices to be received from American buyers in the sale of these billions of dollars' worth of ships.

Information already available indicates that every other maritime Nation is following a policy diametrically opposite to that created by our Civil Aeronautics Authority and is encouraging its shipping companies to operate air service as an integral part of their overall activities. This editorial invites attention to the application of an Australian shipping company to our Civil Aeronautics Authority for permission to establish air service with the United States. The editorial follows:

COMBINED SEA-AIR SERVICE

The recent reports from Washington that Congress is moving promptly to prevent a repetition of the costly blunder that permitted an administrative agency after World War No. 1 to squander most of the American merchant fleet built during that conflict are encouraging.

The most substantial basis for these encouraging reports is probably in the fact that the House Committee on Merchant Marine and Fisheries has scheduled early hearings designed, as Representative WELCH, of California, ranking minority leader of the committee, says, 'to give full opportunity for west coast shipping interests to be heard."

If the west coast shipping interests are fully and sympathetically heard they will bring out some interesting and vital facts about the future of the American merchant marine, especially in the vast and rich Pacific.

These competent and resourceful American shipping interests have an opportunity to be and are ambitious and anxious to be most advantageous and beneficial to the entire Nation as a vigorous post-war enterprise.

But in order to do so they are going to have to meet some extremely vigorous competition.

An inkling of the nature of this competition comes from the recent announcement that the Oceanic Steamship Co. of Australia is seeking permission from the United States Civil Aeronautics Authority to establish air service between San Francisco and Sidney.

The company further proposes to establish air service between San Francisco and Los Angeles in the United States with Sydney in Australia, via Honolulu, Palmyra, Samoa, Fiji, and Auckland.

In disclosing these plans, representatives of the Oceanic Steamship Co. reveal that not they alone, but the Cunard, White Star, Bank, and Pando steamship lines as well, are preparing for combination air and sea service over their international routes.

The point in all this that American shipping interests will emphasize in the course of the forthcoming congressional hearings is that existing American maritime law does not permit them to meet this kind of competition, and that if they do not meet it they will be licked before they start.

American steamship lines are prohibited by law from supplementing their surface facilities with commercial aircraft.

If this prohibition continues to prevail, how can they successfully compete with the combination sea and air fleets of Oceanic, Cunard, White Star, Bank, and Pando?

It will not only be in the Pacific that this obstruction to the post-war American merchant marine will exist as long as present law prevails.

It will exist on all the international trade routes of the world, in which American facilities are adequate for successful and profitable operation, but from which they will be inexorably driven if they are not allowed to combine sea and air services on the same basis their foreign competitors will adopt.

The most important service Congress can perform to assure the future of the American merchant marine is to remedy the obvious and fatal defects of American maritime law.

If this service is not performed, the old blunders which destroyed the American merchant marine after the First World War will not only be repeated but pyramided.

The danger in this situation is not in the resourceful and vigorous and modern competition foreign competitors are capable of offering but in the indifference and stupidity of our own policy.

Congress is to be commended for a prompt hearing of these facts.

It can only earn further commendation with a prompt remedy of the obstructive and destructive maritime policy to which such facts bear abundant and trustworthy witness.

Alice in Blunderland

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I offer a brief bit of entertaining literature which appears to have been inspired by recent events that attracted national interest. The item comes from the editorial page of the Washington Evening Star for February 12, 1945:

ALICE IN BLUNDERLAND

"Now that a congressional investigation has shown that Colonel Roosevelt got the A priority for the dog Blaze, while a Senator can get only a C priority, they should promote him. Colonel Roosevelt, I mean," said Alice.

"Mixed up as usual," snarled the White Rabbit. "It was definitely established that Colonel Roosevelt had nothing whatsoever to do with getting the A priority. A Pentagon colonel got the A priority for Blaze. Yes; I suppose they will promote him."

"Promote the Pentagon colonel?" asked Alice.

"No, stupid," said the White Rabbit. "The Pentagon colonel is now in the doghouse for getting the A priority for Colonel Roosevelt's dog. As Colonel Roosevelt did not get the A priority for the dog, he will be made a brigadier general. Is that clear?"

"Almost," said Alice. "I know many nice colonels who also did not get an A priority for Blaze. Will they be promoted, too?"

"You are hopeless!" screamed the White Rabbit. "Now get this straight. Colonel Roosevelt brought two dogs back from England in a bomber——"

"Oh," cried Alice, "I think it is so kind of the Army to let the soldiers bring their dogs back in airplanes. If a colonel rates two big dogs, how many teensy-weensie little dogs does a private rate?"

"Now you've got me so confused with your eternal interruptions," growled the White Rabbit, "I forget where I was. Where was I? Oh, yes. There were two dogs. I don't know what happened to the other one."

"Didn't he go to Walter Reed Hospital?" asked Alice. "Or maybe that was some other dog. There are so many people at the White House always going places and so many dogs."

"Doggone," said the Queen, who at that moment entered the room on the arm of the Mad Hatter. "That's treason. Off with her head."

Farm Manpower Shortage

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the letter which follows tells exactly what is taking place in Nebraska. The men are being drafted from the farms in spite of the Tydings amendment. This is in direct violation of the law passed by Congress. It is not the fault of the local draft boards. The directives issued by Selective Service from Washington led them to believe that the Tydings amendment did not apply. The result has been a further stripping of manpower from the farms and the retirement of farms from the production of food. My only hope is that the people of this country will be so thoroughly disgusted with bureaucratic planning and interference they will have no more of it when this war is over.

BOELUS, NEBR., *February 13, 1945.*

Representative A. L. MILLER,

Washington, D. C.

MY DEAR SIR: Thank you so much for your recent letter in answer to my request that you do all in your power to help us farmers in our struggle with the present critical manpower shortage. Things are going from bad to worse. Farmers all around us are selling out and going into industry because they find it impossible to carry on farm operations.

I will give you an example of conditions by listing the farms in our school district. There are 12 farms in the district and only 5 farmers left and 1 of these farmers is disabled, 2 are between 65 and 70 years of age. That means less than one-third of the acreage in the district will be farmed. There are absolutely no replacements to be gotten as everyone who is physically able, both men and women, are

working in war plants where the wages are good and hours are shorter. Besides, farmers want experienced and skilled help and will let their land lie idle rather than hire someone who would ruin his machinery and neglect his livestock.

For the next 2½ weeks there is a farm sale scheduled for every day in our county. Our local board has no regard for the Tydings amendment as every young man between the ages of 18 and 26 is inducted if he passes the physical. One young farmer who was farming over 300 acres in this community, has a wife and baby, and who still has 20 acres of corn to pick, was given his induction notice for next week. He has been trying desperately to get someone to operate his farm but has been unsuccessful. Two young men, farmers, of this community who were the sole support of their widowed mothers are also called for next week and are getting ready to dispose of their livestock and machinery.

I could keep on and on relating conditions which will most certainly lead to a very serious situation in food production in a very short time. Farmers everywhere are getting so confused and desperate they don't know which way to turn and, as a solution, they sell out and leave their farms to the care of nature. Something radical should be done, and immediately, to bring the men at the head of the manpower situation to the realization of the terrible and far-reaching mistakes they are making by their ignorance of what it takes to produce food and not expect farmers to do the impossible. They are only human and cannot perform miracles.

Respectfully yours,

MRS. FRED WEISS.

Destroying the God They Worship

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Union, published at Smethport, Pa.:

DESTROYING THE GOD THEY WORSHIP

If the United States does not go Communist it won't be the fault of the editors of the New York Times. They are doing a much better job along that line than the editors of the Daily Worker.

Whenever the Times prints an editorial which had to do with the interests of the American workers, it isn't necessary for anyone to read it. It's safe to take it for granted that it is viciously opposed to anything the workers may desire.

For example: Everyone knows that the textile industry, particularly in the South, pays wretched wages. Recognizing this, a southern Senator, Black from Alabama, now a Justice of the Supreme Court, helped put over the Wages and Hours Act, which eventually set up a minimum of 40 cents an hour. During the war the War Labor Board has boosted the minimum to 50 cents.

Labor members of the Board contend the minimum should be 72 cents. Chairman Davis suggests a compromise of 55 cents an hour.

Even if we forget the tremendous increase in the cost of living and the urgent need for increased buying power to take care of our fabulous productive capacity, Davis' figure certainly seems small enough.

But not to the editorial writers of the Times. They fairly tear their hair over the proposition. They say it means "poorly paid workers would not only make no economic sacrifice but would be awarded by a considerable increase in their living standards." Horrors! These poor people might get more to eat!

Of course, we are not surprised. It's exactly what we would expect from the editors of the Times. In their innocence, they imagine they are safeguarding "free enterprise." As a matter of fact, they are opening the way for the destruction of the institution they worship.

GREAT RESPONSIBILITY ON LABOR

We of labor have an immense responsibility at this critical time. Our responsibility is the greater because compulsory manpower controls have been repudiated and the task of helping to supply workers to jobs by voluntary methods has been left squarely on our shoulders.

Our immediate duty is twofold: (1) For those of us who have essential war jobs our responsibility is to stay on the job and give our best work. Even if this means a sacrifice, the cost is small compared to what the boys are giving in battle. (2) For those of us whose skills are not being used to the utmost in war work, our duty is to get from our international unions and the Employment Service or Manpower offices information on where workers are needed in war work and move to these war-vital jobs if we possibly can. The union has a duty as well as individual workers.

Retroactive Choice of Settlements in National Service Life Insurance

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. CASE of South Dakota. Mr. Speaker, I have had several people ask me why certain benefits of the act of September 30, 1944, were not made retroactive for veterans or their dependents. The matter was presented concretely by a resolution of the Harold Mason Post, No. 15 of the American Legion, Sioux Falls, S. Dak., which, because of its general interest, I submitted to the Veterans' Administration for comment.

The question is one of national interest. For that reason, I have asked permission to place both the resolution and the reply in the RECORD. It will be noted:

First. That the Veterans' Administration makes a distinction between "optional settlements" on National Service Life Insurance and "other benefits."

Second. That the "other benefits" are held to be retroactive.

Third. That "optional settlements" are held to be retroactive so far as policies are concerned on which no settlement had begun prior to the date of the act, but not as to those policies on which a choice of settlement had been made and actual settlement commenced.

The question is of considerable importance to beneficiaries of policies where entitlement began prior to September 30, 1944, and a clear understanding of the situation should be had by every agency of veterans' aid. For this reason, under permission granted by the House, I offer the resolution and the reply for the RECORD at this time.

The resolution:

Whereas the Congress of the United States by the act of September 30, 1944, amended the National Service Life Insurance Act providing for more liberal and fairer settlement options and conditions with reference to waiver of premiums, but further providing that such liberalized options and conditions should not be available in any case in which payments of insurance installments have been commenced prior to the date of the amendatory act; and

Whereas such amendments to the National Service Life Insurance Act are unfair and result in unjust discrimination against service men and women and their beneficiaries in those cases where payments of insurance installments have been made prior to the date of such amendatory act: Be it therefore

Resolved by the Harold Mason Post, No. 15 of the American Legion of Sioux Falls, S. Dak., That we do hereby urge the Congress to further amend the National Service Life Insurance Act to provide that the option settlements and other benefits set out in the act of September 30, 1944, be made available to those cases in which payments of insurance installments have been commenced prior to the date of such amendatory act.

Dated this 30th day of December 1944.

HAROLD MASON POST NO. 15,
THE AMERICAN LEGION,
SIOUX FALLS, S. DAK.,
J. A. CLOUD, *Adjutant*.

The reply:

VETERANS' ADMINISTRATION,
Washington, February 7, 1945.

Hon. FRANCIS CASE,
House of Representatives,
Washington, D. C.

MY DEAR MR. CASE: Reference is made to your letter dated January 26, 1945, enclosing draft of a resolution passed by the Harold Mason Post, No. 15, of Sioux Falls, S. Dak., concerning National Service Life Insurance and requesting comment of the Veterans' Administration in regard thereto.

The purpose of the resolution is to procure further amendment of the act to the end "that the option settlements and other benefits set out in the act of September 30, 1944, be made available to those cases in which payments of insurance installments have been commenced prior to the date of such amendatory act."

It would appear that further amendment of the act insofar as other benefits are concerned is unnecessary because the provisions of Public Law 452, Seventy-eighth Congress, approved September 30, 1944, except as to optional settlements, are retroactively effective.

With reference to optional settlements, the amendment of September 30, 1944, in express terms, is restricted to those cases in which payment of insurance benefits commenced on or subsequent to the date of passage of such amendatory act.

The Veterans' Administration does not believe it would be sound or feasible to extend the right of election in those cases in which settlement had commenced prior to September 30, 1944. An amendment to that effect would not only cause many administrative complications but would also produce results contrary to insurance and actuarial principles.

In this connection it will be appreciated that many thousands of claims are being paid under settlement effected pursuant to the provisions of the original law. Some principal beneficiaries have died and settlements are now in process with contingent beneficiaries, or in the absence of such bene-

ficiaries, payment is being made to those entitled under the devolution clause. Even were such cases excluded from the operation of the proposed amendment, the resulting necessity of notifying all beneficiaries of the right of election and making necessary changes in the mode of payment would very likely seriously impair the service in respect of current claims.

Moreover, in every case wherein the beneficiary elects to have payment under a refund life income, as provided in the amendment of September 30, 1944, an overpayment would result, necessitating recovery probably from future installments. The situation would be most difficult of adjustment, and it is not unreasonable to expect that the process of adjustment would produce unwarranted ramifications and perhaps considerable dissatisfaction.

Moreover, other distortions and inequities in regard to basic insurance principles would also occur. Where optional settlements are available to a beneficiary it is assumed that the method of payment selected would govern throughout and would not be subject to change. Were changes allowed, it must be apparent that the factors governing the particular choice of the beneficiary in the first instance might indeed have undergone such a change as to indicate the desirability of varying the mode of payment. However, such a practice if too far extended would produce intolerable results. It would invite a species of adverse selection which would not only impair the equities of policyholders but might also affect the solvency of the insurance fund.

It is appreciated, of course, that the method of payment in the cases under consideration were fixed by law and that therefore a change in the mode of payment would not be a change of an election. However, since it would produce the same results, the same reasons which prohibit such changes would apply whether the original settlement was effected by operation of law or by selection.

Accordingly, the Veterans' Administration must advise that the proposal to allow changes in mode of settlement in the cases described would not accord with sound insurance principles.

Very truly yours,

HAROLD W. BREINING,
Assistant Administrator.

Lend-Lease Shipments of Butter and Lard

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the lack of judgment in economic matters shown by Government agencies is well illustrated by the facts brought out in an editorial appearing in the Omaha Daily Journal-Stockman, on February 13, 1945, which follows. Since fats can be furnished to our allies in the form of substitutes as well as it can in lard and butter, one would naturally think that it would be done in that way and thus interfere as little as possible with normal practices. That, unfortunately, is not the way bureaucracy thinks and works. The editorial reads:

GREAT TIME FOR THESE SUBSTITUTES

The practice of lend-lease buyers in taking lard in preference to lard substitutes, and butter in place of butter substitutes does not bode any lasting good for the man on the farm, because this buying now has reached a point where the housewife can find the substitutes for lard and butter in butcher shops, but she cannot find the butter or the lard. If she does find it, the points on the butter, at least, are so high she will still buy the substitutes.

The point is this: While lend-lease is sending large quantities of butter and lard to Europe, an outlet that can be only temporary, producers of the substitutes are capturing the only lard and butter customers to whom these products can be sold after the war, the American housewives.

During last year Lend-Lease bought 43 percent more butter than substitutes, and more than 100 times more lard than substitutes for this product. Lard, except the last couple of years, has been a major problem of packers and farmers for many years, and some progress was made "selling" this product to the public. The product was made more uniform. Some packers even developed a lard that backed all substitutes off the map in cooking tests. The appeal of the substitutes to consumers has always been that they are more uniform in quality than lard. The lard industry was well on its way to overcoming this obstacle.

If Europeans were going to be steady customers, all well and good, give them lard and butter. But if they are going to buy elsewhere when they have to pay cash, as they will, then American producers should be left enough of the original products to keep their customers.

Seven Brothers Serving Uncle Sam in United States Navy

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. HILL. Mr. Speaker, the Eastern Colorado Plainsman of February 16, 1945, carried a headline story of the Roy Berry family of Limon, Colo., having seven sons in the United States Navy. I include the article as part of the permanent record of the Seventy-ninth Congress. Every American appreciates deeply the patriotism of this family.

SEVEN BROTHERS SERVING UNCLE SAM IN UNITED STATES NAVY

Mr. and Mrs. Roy Berry of Limon have seven boys who have answered the call to the colors for World War II and all are in the United States Navy. We believe this record beats the previous record printed last week. These boys all joined the Navy from Denver.

Lt. Robert Berry is on an aircraft carrier somewhere in the Atlantic. He joined the Navy in 1930.

Ensign Oliver C. Berry is on the U. S. S. * * * somewhere in the Pacific. He joined the Navy in 1934.

Chief Petty Officer Claude L. Berry is in Hawaii. He and Robert were both there when the Japs attacked Pearl Harbor. He joined in 1939.

Chester Berry, baker (2d cl.), joined in February 1942. He is in Hawaii at the present.

Joseph S. Berry, radio technician (2d cl.), joined in 1943 and is somewhere in the Pacific.

Keith W. Berry, seaman (1st cl.), joined in 1944 and just left Shoemaker, Calif., for further training.

Edwin Berry was given an honorable discharge from the Navy and he is now working in the shipyards in Seattle, Wash.

Excellent Work Done by Army Surgeons in Amputation Cases

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. KILBURN. Mr. Speaker, the following is a letter from Capt. M. Marshall Kissane, United States Army Medical Corps, a close friend of mine from my home town, Malone, N. Y., who has performed hundreds of amputations at the Lawson General Hospital in Atlanta, Ga., and who is thoroughly familiar with this work of the Army Medical Corps. This letter is his reply to a recent column of Drew Pearson:

ARMY SERVICE FORCES,
LAWSON GENERAL HOSPITAL,
Atlanta, Ga., February 12, 1945.

Hon. CLARENCE E. KILBURN,
House of Representatives,
Washington, D. C.

DEAR MR. KILBURN: I was interested to get your clipping, Washington Merry-go-Round, by Drew Pearson. Needless to say, it has probably created in the minds of many people a false impression of what is being done for our amputation cases in the Army. I am writing this letter to you only because I know you so well and because I am merely a captain in the Army and have no authority or basis for any statements. Nevertheless, I am a physician, first and foremost, and for this reason I have decided to state my views in the present situation.

For the past 3 years I have been intimately associated with our amputation cases and have devoted my entire time to their care and well-being, which begins the moment they are admitted to the hospital and ceases only on their discharge. My interest in the particular cases goes beyond that point and I regularly hear from a large number of boys that I have taken care of. As you know, our Surgeon General started the program now in use in the Army to care for our amputation cases. It was not the brainchild of one man, but the sum total of the efforts of all the men who could contribute valuable information and time to a problem of such magnitude. Lawson General is but one of the centers selected to care for such cases, all centers being primarily the same in every manner. I naturally am prejudiced in feeling that Lawson General is the best of centers. However, if I were an amputation case myself, I believe there would be little choice as to which center I would select.

Our patients are seen immediately on admission, regardless of the time of day or night they arrive, and their treatment begins immediately. They are in the hands of surgeons who have been especially trained and who devote their entire time to the problem of the amputee. Much has been learned in the manner of surgery and the goal at which the Army surgeon aims is to discharge the soldier from the Army hospital with an amputation stump that is the best possible and one which will not give him further trouble, necessitating hospitalization after his discharge. This goal, I can honestly tell you, has been achieved and the type of surgery rendered these boys, as well as their care, has never been matched in medical history.

With this advancement, rather than discharging the patient to the veterans' facility to be later fitted with a limb, the Army decided to fit the patient while in an Army hospital and rehabilitate the man during the most important phase of his treatment.

After consultations and adequate trials with various types of limbs, a limb of a special fiber was made because it could be made to fit the soldier and it could be made in sufficient quantity to meet our needs. There has been no effort made to get a cheap or temporary limb; quite the contrary, every effort has been bent to making our soldier amputee the finest limb possible. For 3 years we have devoted every effort in our limb shop to improving the limb and in turning out better technicians for their fitting and maintenance. As soon as the man's stump is sufficiently conditioned a limb is made for him. This is a specialized process and a limb made for one man could never be used for another. It must be individually custom built from beginning to end. When this limb is completed, our patients have had a sufficient trial period before their discharge. I can honestly say that I don't think there is a limb on the market today made by any concern which is better, and if I were an amputation case myself I believe I would prefer to be fitted with the present type of Army limb such as made here at Lawson General Hospital than any I have ever seen. Fitting of the limb is not the last word in the care of the patient. His fitting is carefully supervised by his surgeon in cooperation with the limb makers and fitters and each patient is urged to call to our attention any defect, or any other fact about the limb which he does not like. We then make every effort to completely satisfy the patient. He is given a prolonged and carefully supervised course of instruction in the use and care of this new limb and only upon completion of such a course of instruction is he granted a furlough home, where we urge him to give his new limb every known test and hardship that he can so that any defect will become evident. Then upon his return, his limb is carefully checked at the limb shop for any sign of wear or breakage. He then has another complete examination with particular emphasis placed on the condition of his stump, the fit of his leg, the quality of workmanship in the leg itself, and the patient's ability to use his limb. Only when the surgeon, the limb makers, the instructors in physiotherapy, and most important, the patient himself, are completely satisfied with the results obtained is the patient ready for discharge. The same type of limb is made for all patients and the same care goes into its construction and fitting regardless of what the disposition of the patient will be.

I am perfectly satisfied in my own mind that there has never been as comprehensive or as complete a program designed entirely for the benefit of the patient as is our present method of care for our amputation cases. Undoubtedly, the primary credit for such a program must go to our Surgeon General, who, for many years, has been vitally interested in the care of the amputation case. I know that if you could get to Atlanta and visit our amputation patients that you would leave with no question in your mind that the program now under way is a tremendous success. I hear regularly from many of the boys that we have cared for, yet I have never received a complaint, or even a hint of a complaint concerning the limb which was constructed for them at Lawson General. I don't think there is anything more that I could say. It is too bad that such things as the recent article you sent me must be brought to the attention of the public. It is also a shame that the public itself cannot talk with our boys and learn the true facts of the care they are receiving. If, in the near future, you have any business in the vicinity of Atlanta, or if any of your associates who are from around this section could pay me a visit, I am sure that they could see for themselves the splendid work which has been done.

Sincerely,

M. M. KISSANE,
Captain, Medical Corps.

Future of the World Is Brought Into Focus

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial which appeared in the Toledo Times on February 16, 1945, by the great journalist, Harold Hartley:

FUTURE OF THE WORLD IS BROUGHT INTO FOCUS

The peace for which most of the world is fighting will survive only so long as international candor, frankness, and confidence prevail.

Until the architects of the "new world" met at Yalta there was a disturbing drift away from those preeminent virtues. Confidence had given way to distrust; first, because of developments in Italy and then successively in Greece and Poland.

A rush to establish spheres of influence in the old continent appeared to be gathering momentum. The British were concerned about their lifeline in the Mediterranean. Russia was concerned about establishing western frontiers from the warm waters of the south to the Arctic, along which only friendly neighbors would live in productive peace.

The United States was concerned only with the soothing of Europe's age-old rivalries in a fervent hope that it would never again be necessary to send American boys to war, let alone to die on foreign soil.

Thus, President Roosevelt, and his advisers at Yalta, coveted and asked nothing except peace, and demanded nothing except confidence—in each other and in a modern application of the Golden Rule as a guide to individual and community living.

A broad and promising step toward that goal was achieved at Yalta. There was a rebirth of confidence. Churchill, the imperialist, Stalin, the revolutionist, and Roosevelt, the democratist, achieved mutual understanding and respect for each others problems and out of their confidence came a new spirit of confidence that thrills the war-fatigued world.

Yalta was only a milestone toward the kind of a world we all want—just as Casablanca and Teheran were milestones. The pledge that Nazi Germany will be totally defeated and forever disarmed is a major premise upon which peace will be built, but in itself it is only a reaffirmation of previous commitments. More important, because defeat of Germany was a foregone conclusion, is the spirit of trust evident in the agreement for the post-war occupation of a crushed Reich.

Criticism of the preliminary steps taken toward solving Europe's tangled politics is not entirely fair at this early date. Conditions in Europe have been building up for thousands of years, and a solution cannot be pulled out of a silk hat like a magician's rabbit. Frankly, it is too early to judge right or wrong the decisions involving Poland, for instance, any more than it is right to criticize the Big Three for sitting without France.

There is no question but that the Big Three approached their problems realistically. It took stanchness for President Roosevelt to cast this Nation in the role of referee. He ended a beautiful and outmoded theory of American isolation and with definiteness committed the United States to a position of responsibility for world peace.

The Big Three agreement contains many generalities, but it is couched in less bewildering diplomatic language than previous conference reports. This in itself can be taken as evidence that the future is being brought into focus for all to see.

The architects of peace have erected signposts for all peoples to follow.

Tennessee's New Governor

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. GILLIE. Mr. Speaker, Members of the House, and particularly Members of the Committee on Agriculture, have keenly missed our former colleague Jim McCord, who left us to become Governor of Tennessee. Those of us who were privileged to work closely with him realize that the good State of Tennessee has put its future in the hands of a wise and capable chief executive, and we wish him well as he takes over his new assignment.

I know that Members will enjoy reading the following item about Jim McCord which appeared in the Breeder's Gazette:

LIVESTOCK AUCTIONEER TENNESSEE'S NEW GOVERNOR

From the sale ring to the executive mansion goes Jim Nance McCord, livestock auctioneer extraordinary in days gone by, and now to be inaugurated as the new Governor of Tennessee.

As an auctioneer Colonel McCord was unique, as you who have heard him cry a sale will testify. He went to a regular auctioneer's school and learned how to do it right, but he always added highly colorful personal touches of his own. Poetic phrases from Wordsworth, Keats, Shakespeare, Shelley, gleaned from his continual browsing in the bookstore he and his brother owned together, graced his chant over the heads of Jerseys put up for auction. It is said that on one occasion his moving and eloquent peroration on an aged dam, with sentimental bits of Shakespeare thrown in for good measure, was so heart-rending that the consignor of the old matron, with tears streaming down his careworn face, bought his own cow back for $95! And the story goes that the buyers, ringmen, and consignors oftentimes became so entranced with Jim McCord's exquisite word pictures that the animals going thrcugh the ring were only cursorily examined. So one time they sold among a lot of surplus bulls a Gold Medal sire for $40 to a butcher.

Governor McCord has a genius for salesmanship along other lines, too. His persuasiveness was responsible for a million-dollar milk plant locating in Lewisburg, Tenn., to say nothing of a stove factory and a shoe factory. Besides being a very successful livestock auctioneer, he organized and served as head of the Tennessee Walking Horse Association and the Jersey Cattle Club. He has published a weekly newspaper, the Marshall

Gazette, since 1910. He was mayor of Lewisburg for 26 years, and quit that office only when he was elected to Congress in 1942. He served 27 years as a member of the Marshall County Court. He has been a director of the chamber of commerce, the Marshall County Farm Bureau, and the First National Bank of Lewisburg.

As an after-dinner speaker, his reputation is unequaled. Such fervor, such eloquence, such sincerity, such pungent humor have perhaps not been heard since Zeb Taylor's day. The stockman Governor advocates an industrial development in his State that will balance its agricultural advancement, and he declares that agriculture and industry will cooperate to see that labor enjoys the fruits of its labor. Fair enough.

The Compulsory State

EXTENSION OF REMARKS

OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. ARNOLD. Mr. Speaker, for some time there has been a great deal of publicity given, through Government committees and bureaus, to ways and means of rendering aid to the small businessman.

Well, I happen to be one of them, and from my observation this talk is mostly "noise," and if you will read between the lines, these department heads who are so much concerned about the small businessman are more interested in their lucrative jobs. They never speak of economy or the reduction of wasteful spending of Government funds in nondefense projects, and are forever asking Congress to increase their appropriations so they can do something for the small businessman, when it seems that what they really do is to take away his initiative and independence, and get him to rely more and more on his Government. This situation is clearly set forth in the following article taken from the February 13 issue of the Wall Street Journal:

THE COMPULSORY STATE

THE MEN OF BUSINESS WHO BUILD BOOBY TRAPS FOR THEMSELVES

No people ever entered the compulsory state through a door on which the price of admission was plainly posted. Not even the Germans, who seem to like regimentation more than they value freedom, did that.

There are other entrances well camouflaged, sometimes with one pretty theory and sometimes with another. But underneath the glitter of slogan and economic scroll work they are the same. Those who pass through them have a sense of carefree well-being, of having deposited their burdens outside. They seem to be traveling a smooth and sunlit road and they proceed under a peculiar enchantment for, while they can see where the road has taken others, they are blind as to their own destination.

The road we look at now is paved with things labeled "subsidies," "Government guarantees," "floors under this," "ceilings over that," "Government patnership." Traveling the road are three caravans: Agriculture, labor, and business.

Agriculture has been on the way for a long time. Many of the caravan already see the smooth highway leading into the jagged rocks of compulsion. Some would like to turn back, but when they look the pleasant road seems to have closed in behind them.

In the labor caravan there are fewer misgivings. Mostly its members are bedazzled with some pretty new baubles of power. Perhaps, they think, there are more of these ahead and they want to push on.

The business caravan lectures its fellow travelers. It tells them about free enterprise and it warns them gravely that their yearnings for security will bring them to a bad end. But the other two look puzzled and say, "Then what are you doing here?"

Well, as a cold, practical matter, business has less reason to be there than either labor or agriculture. Those two constitute numerous and comparatively cohesive groups, which control votes and so have political power. At least in the compulsory state, they might be represented on the committee.

Business is not cohesive. By its very nature it is as diverse as the American landscape. Its political power is represented by no more than zero and it is probably a minus quantity.

So what is it doing there?

And the question becomes more puzzling when we recollect that business once before started down this road, but was turned back by wholly fortuitous circumstances.

That original excursion was the N. R. A., conceived and proposed by business groups. Under Government sponsorship business was to draw up codes, agreements to do or not to do certain things. Competition was not to be lessened, of course, but just the same there were provisions covering expansion, installation of new machinery, and like subjects. What we saw was a budding experiment in cartelization.

The experiment failed because it was put in charge of a sincere and honest man. Believing in what he was doing, failing to see the result, General Hugh Johnson went ahead at breakneck speed and he had not gone far before a pants presser was brought to court for working too cheap. Had General Johnson been a crafty man, able to bide his time, that grisly set-up that appeared in the early New Deal days might well have taken a hold that not even the Supreme Court would have broken. And if it had, the production machine that is winning this war would have been rusty and antiquated.

Now what is the evidence that a good many businessmen again want to crawl under the Government umbrella?

Here is a quotation from Charles P. Taft, son of an ex-President, brother of a leading Senator, and himself director of the Office of Wartime Economic Affairs in the State Department:

"It seems to me high time that private business got away from its liking, perhaps unadmitted, for the security of Government distribution of business under a quota system and begin to justify the descriptive term 'enterprise.' The only reason I mention that is that, within the past few months, we in the State Department who have been pushing with all our ability for the reduction of trade controls have been startled on at least two occasions to have delegations from the trade coming in to insist with us on the continuance of public purchase or other Government intervention, because they were not prepared to take the kind of chances which I have always assumed were part of normal business risks."

Within the past few days we have seen the head of the Federal Deposit Insurance Corporation, the president of the American Bankers Association, and the former president of that body battling against Government guaranties of loans. They know that many bankers want such guarantees and are so telling their Congressmen. Such men are afraid of risks. They don't want to be bankers. They want to handle Government funds on a commission basis. How long do they suppose the Government will pay them for such of parasitical performance?

It was not long ago that there was a drive on Congress to get a huge appropriation for Government advertising in newspapers, which fortunately was defeated. But in a country which should prize its free press, some of the custodians were looking for a Government subsidy.

There has recently been an unusual amount of literature setting forth the benefits of cartels—and those booklets don't just happen. Someone pays to print and distribute them. Now one simple fact about cartels is that there must be some power to enforce the agreements that bind them. Either directly or indirectly, that hand is a government. There probably never has been a cartel of any pretensions or prestige which did not involve government power openly or secretly.

Talk to some of our so-called bureaucrats about free enterprise and see the smug look. If they will unloosen their tongues, they can tell a great deal about how this business group thinks perhaps one government control is permanently good and how that group likes another. So there it is again, the flight from risk.

How much good do solemn lectures on the illusion of security do when the wage earners to whom they are addressed can read the financial pages and see how some executives are being given annuities and pensions on top of sizable salaries? Stockholders read of these and complain with just cause. Some propose action, but not always the action that lies within their power as stockholders and investors. Some suggest that this or that government agency take a hand. Could it be that they are under the delusion that government will manage their affairs and still allow them dividends?

The vast majority of those in business and finance in this country do not, we believe, desire the Government in their affairs. They want the situation which put the Government there ended as soon as possible. But there are far too many who want the Government to build them shelters from the risks without which free enterprise is not free.

A good many German industrialists and financiers thought that Adolf Hitler was not so bad. They gave him money. He came to power and for a time they had pleasant sailing with the Government the main partner in their cartels.

But there came a day when they went to Herr Hitler and he was no longer so agreeable. He is reputed to have remarked that he "hoped these gentlemen were under no delusion that he had built this structure for their benefit."

Those German businessmen must have left that conference with the sickly feeling of a man who is the victim of his own booby trap.

What a tragedy if history recorded that business in America was as stupid!

Will the Basketball Scandal Affect Sports?

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. WEISS. Mr. Speaker, I was shocked beyond words when the recent exposé of the bribery scandal involving several young basketball players at Brooklyn City College came to light, and I have attempted to analyze its effects on

collegiate sports generally. One of the finest approaches to this situation was made by Lt. Col. J. Howard Berry in his Nation-wide radio address delivered Saturday evening, February 17, 1945.

Lieutenant Colonel Berry, of the National Selective Service Headquarters, Washington, D. C., is one of the Nation's greatest all-around athletes. He has the distinction of being the only athlete in intercollegiate competition to win the decathlon championship in 1914, 1915, and 1916. While a student at the University of Pennsylvania, Philadelphia, Pa., he was selected as fullback on the All-American football teams of 1916 and 1917 by Walter Camp. Many sports writers in the Nation consider him one of the greatest all-around athletes of all-time, second only to the inimitable Jim Thorpe.

I am happy to include in my remarks the above-mentioned radio address by Colonel Berry:

The recent exposé of the bribery of several young athletes of an eastern college basketball team came as a profound shock to all who are interested in the development of American youth. It brought sharply to the front the entire question of the value of intercollegiate athletics as an educational force. It raised the problem of athletics as a business or as a part of the educational program. It raised the moral issue on outside interference, and even on the wider question of the effect on moral character of athletics and physical education. The immediate reaction is somewhat too violent but let us first understand how venal what happened is, and then let us look at the larger problem.

I do not concede that the incident of a few young and misguided athletes deduced by moral outcasts should be held to condemn, or even seriously retard, competitive sports as an aid to physical training in our schools. But it does bring to light, and emphasize, a too prevalent weakness in the manner or method of their conduct. It cries out to athletic instructors, coaches, trainers, of the fundamental need for stressing those benefits of physical education which far transcend the elation of victory in competition—its possibilities for the development of high morals and morale as well as for upbuilding of the body. And it cries most loudly to those who have charge of youthful sports, both in and out of school. It warns them that they have supervision over the competitive sports in which their charges engage and, therefore, the responsibility for their conduct.

The gambler we will always have with us, for it is human nature to wager. But there is no place for the so-called professional gambler in clean sports, for he represents nothing but temptation to dishonesty.

Even more abhorrent and menacing to the cause of physical training is the insidious encroachment of the swindler who poses as a gambler into the field of school sports. There is no language strong enough to describe his turpitude or reveal his rapacity. He does not gamble, because it is not in his vile psychology to take a chance. He wants a sure thing, and no means are too dastardly to insure it.

A bandit avows his deed, does it openly. A swindler sneaks to the same thievery. There is a frank way and a mean way of doing even the dirtiest deed. The swindling gambler takes the meanest way of doing the dirtiest deed. In competitive sports, his method is to suborn participants and he sees a fertile field in college sports because of the immaturity of his prospective victims. As far as possible he stays in the clear and works through his jackals—underlings in the underworld, petty criminals and moronic gangsters whose aborted lives compel them to take the chances of detection he thus avoids.

This is the type of gambler who recently tried to debauch the sport of basketball here in the East. He is the same type that, some years ago, ruined bicycle racing which then attracted hundreds of thousands of fans and which today is seen no more. He is the type of gambler who is cowardly, sleek, stealthy, mousing and mean. He is a blood-sucker and he will suck the lifeblood from any sport to which his tentacles become fastened.

His tools, the little gamblers, search out his victims that they may pick the bones he leaves for them. Inexperienced youth are their quarry. They flatter them, inflame their passions, pander to their appetites, debauch, cheat, and destroy them. Youth caught by their wiles, and firmly entangled in the swindling gamblers tentacles, revolve but briefly in his orbit of spurious affluence or in the arenas of sport—the brothel, the doctor's ship detection, disgrace, and disappearance from the realms of respectability and the field in which lasting fame might have been attained, is the usual course.

Following the exposé of bribe-taking by several basketball players of an eastern school, many well-intentioned men offered many hopeful suggestions. Most of these recommendations, however, were simply surface remedies—not cures.

Some saw in it a result of the stopping of horse racing that steered touts and professional gamblers toward basketball as a substitute field for their activities. Yet observers who know the facts have been worried about gambling in basketball for at least a decade. Increased wartime incomes undoubtedly have increased the desire to gamble and furnishes the means as well. The swindler's opportunities have been enlarged, but that is not the reason for his existence.

Others would take basketball away from the public arenas and put it back on the campus. That is going to be helpful but as a solution it is oversimplified. There was gambling on the game before it left the campus and college players were approached by fixers.

From all we can learn, these approaches failed. But the fact that they were made is proof enough that the campus is not absolutely safe territory.

Nor can you say that limiting attendance to alumni and other presumably safe spectators is the answer. It is a known fact that thousands of dollars are bet every week on college football games by men who never travel to the games—indeed they live hundreds of miles from the colleges involved. Barring gambling at the games simply clears the atmosphere around the court. The heavy betting isn't done at the games, just as the "fixing" in the Brooklyn case wasn't done on the campus.

If the games are taken back to the campus, as they probably will be after the war when colleges will build arenas adequate for playing and spectator accommodations, then obviously the colleges will have the sole responsibility for the honesty of their players. It will be an awesome responsibility. Definitely college sports, now in most cases are public sports since tickets are sold to any and all comers, have moved a long way from the old, casual days. And yet who can say that they haven't done a lot of good?

College sports crowds have come to sense college loyalties and college ideals. Boys who otherwise might not have gone to college are attracted by the glamor of sports. If, after this war, colleges refrain from subsidizing and pampering of athletes who can't keep up with their classes, a sad scandal that followed the last war, they will be off on the right foot.

A boy isn't easily fooled. If he knows he can lag in classwork and get fixed up by his coach, he won't study. And what is his attitude when he knows some wires have been pulled to get him into college with inadequate credits?

Laws against bribing athletes, professional or amateur, could help. But laws against murder and stealing have not eliminated those crimes. It all gets back to the integrity of the college, the integrity of the coach, and the integrity of the players. In peacetime, a coach has a chance to study his boys as freshmen and as up-coming varsity candidates. Today, youngsters whip into college and out again. They have no chance to learn college loyalty; many are going to war. Unfortunately, they see around them evidences of black markets and other home-front vice. They cannot help becoming somewhat cynical, even in their teens. Older Americans are not setting them any perfect example by any means.

The Brooklyn incident is pathological. It is exceptional. It was news, and the revulsion that the news brought shows that the body of public opinion is sound, and colleges want to do the right things. We must not forget the thousands upon thousands of young men who are giving their all in effort and spirit on athletic fields of all kinds, finding satisfaction in the game itself and in their loyalty to their alma mater.

Colleges and universities ought to clean their own houses. There ought to be no subsidies of athletics and no winking at their own violations of recruiting for athletes. On the educational side there ought to be a strict admission policy, no winking at lack of preparation by athletes, no soft courses nor soft curricula. All sports and athletics should be justified by their recreative and educational values. Too large an investment in a stadium, or an effort to make football or basketball help finance dormitories or help college finances, should not tempt colleges to wink at bad practices, for the promise of financial gain is for the overwhelming number of colleges illusory.

American sports are fundamentally sound. They have rich values for the morale of our community life. They have been factors in building up the young men who are winning the wars in Europe and in Asia. Let us be jealous of the reputation of our sports. Let the game be its own reward. Let us keep the spirit of play. Let us make them a factor in the training of the young. Let us keep them clean—as clean as a hound's tooth.

Nor let us forget that sports and athletics are primarily, if not solely, in the interest of the boys' welfare taking part in them. When the center of interest shifts we are on the wrong track and disaster and wrecks follow. Let us keep on the main track whose destination is the welfare of youth. That is the best interest of all, the sport, the community, and the Nation.

Mr. Ted Steele, of Pearl River, Rockland County, N. Y.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. BENNET of New York. Mr. Speaker, I would like to take this opportunity of inserting into the CONGRESSIONAL RECORD a story of a man who lives in my home district and who has, in my opinion, made an unusual contribution to the war effort. I am proud of the war record of the people of my

community and I cite the record of the home-front work accomplished by Mr. Ted Steele as but one instance.

A well-known orchestra leader, he is the owner and operator of a large fur-rabbitry farm in Pearl River, Rockland County, N. Y. Since 1940, he has been raising rabbits which are bought by Army and Navy agencies for medical purposes. The serum obtained from these animals has saved many lives in the service. Last week he was informed that there was an emergency shortage of Webster mice now urgently needed for the treatment of a most serious disease which has hit a number of boys overseas. At his own expense, he combed the country from coast to coast, discovered a source, had some breeders shipped by air express, and is now devoting himself, in addition, to this important project.

The following is from the pages of the next issue of a national magazine, This Month, of which I have seen the advance proofs:

There is a very personable, and popular orchestra leader in New York who is never seen by his musicians, or business associates or friends excepting when he is actually needed on the scene for rehearsal or performance.

His name is Ted Steele and he devotes the bulk of his time and has done so, since 1941, to the raising of rabbits. He is frequently late for his radio auditions because of his interest in rabbits and other laboratory animals such as guinea pigs and white mice.

He will tell you frankly that while he thinks the entertainment world is wonderful, he considers his real job in life the care and breeding of these animals and as a matter of statistical fact is one of the world's largest suppliers.

His farm at Pearl River, near Nyack, N. Y., produces some 12,000 rabbits a year as well as thousands of pigs, etc. All of the animals are utilized for medical experimental, preventive, or curative purposes. Serums extracted from rabbits, for example, are widely used in pneumonia cases. Among Steele's regular customers are 130 Government and civilian hospitals, the Army Medical Corps, the Chemical Warfare Division, and the Brooklyn Navy Hospital.

Without getting too technically involved, the value of rabbits to medical science lies in the fact that rabbit blood in composition and structure is nearer to that of the human being than any other animal with the exception of monkeys.

The other day Steele, who is heard on the N. B. C. Chesterfield supper-club program, was informed by Government officials that there was a terrible shortage of Webster mice which are a source of a serum used to treat a very serious disease affecting men in the armed forces stationed in tropical climes. He took time out from his rabbits and music and family for 2 days, getting on the long-distance phone and combing the country until he found a west coast source of breeders. He convinced the California farmer only after long discussion that he could help the situation, the critical shortage, by virtue of his experience in related fields, and a number of the mice were shipped air express to LaGuardia Field where Steele and his charming wife met same and drove up to his farm in the middle of the night so that they could get going on development by morning.

It isn't money which causes Steele to do all this and it is partly because he has loved working with animals of this type ever since his boyhood on a farm. But it is mostly his desire to help his country in time of great need. A point which emerges like a sore thumb from analysis of the facts is that civilians can very often help their Government's war effort in a private way because Government officials can't always find the right answer or have the time or opportunity to do so even if they could.

This Month magazine salutes Ted Steele.

An International Bill of Rights Will Prevent Another War

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. WEISS. Mr. Speaker, at a time like this it is hard to look upon events and say: "The human race is making progress." Within the short span of one generation we have seen two wars, conflicts of such dimensions that all the great battles of past history shrink by comparison. The death tolls of the great war were high enough to frighten us into a solemn resolve that we would never again permit such destruction of human lives. But here we are engaged by the millions in warfare, and this time on a scale so gigantic that the full realization of it is beyond the ability of the human mind to grasp.

Last time, as now, we knew what we were fighting against: Militarism and aggression and the world-domination complex of the German Nation. We knew, too, then as now, that we were fighting for certain principles: The right of nations to live in security and peace, the right of peoples to live in freedom. We fought a war for democracy. But, in 1918, when the guns were stilled, and the dead were buried, we dried our tears and promptly withdrew into our little corner. Like everyone else, we were tired; we thought we had done enough. Se we did not bother to finish the job and win the peace.

Well, we are finishing the job today.

Because, last time, we talked about international cooperation, but thought it might be safer to protect our own narrow interests; because we talked about the rights of man, but failed to see what had to be done to protect them; because we talked about the long view, but acted with fatal short-sightedness, our enemies, the enemies of freedom and mankind, were able to stage a come-back and make another lunge for conquest. And the battle today is more gruesome and more devastating than the most terrible nightmare.

Historically, therefore, it is correct to call this war a continuation of the great war. Yet because World War No. 2 differs so greatly from the first war in degree, it is also different in kind. Soldiers of this war are not always men and women in uniform; the battlefronts are directly connected, through production lines and bombing routes, with the folks back home. The people of Europe and Asia know this; our armed forces, serving in every far-flung theater of war, know it too. And so do we in America.

For purposes of war, the world has become one sphere of operations, one closely knit field of action. And there is not the slightest likelihood that the situation will change in peace. It will not. The interrelationship of the human race will grow stronger. Steps taken by one group will inevitably react to the welfare or the detriment of others. There is nothing original or new in this conclusion. I am only repeating what everyone has said in urging international organization for peace. Some far-sighted men had a dim inkling of this truth 30 years ago, in the early stages of our twentieth century war. But today it has been driven home to millions. There is a realization abroad, across the earth, reaching into every land, that international cooperation is a crying need. It is no longer a phrase for diplomats to play with.

The record of man's attempts to build a peaceful world is neither long nor impressive in comparison with the record of human warfare. But the people of the earth have seen enough of battle; they have felt the sting of bullets and borne the agony of death. They know, at last, why international cooperation must be made to work, and what is needed to make it work. And therein lies the difference between the first and second stages of twentieth century war.

For in this stage we have learned, beyond the possibility of doubt, that the suppression of one man's liberty can lead to the oppression of a nation—that the denial of human rights to one group spells the downfall of liberty for all. From the insecurity and homelessness of a few may spring the chaos which brings insecurity and homelessness to millions. This is the age-old lesson of religion, "I am my brother's keeper," but now we know that it is the only practical foundation on which to build a real, a lasting, a meaningful peace for ourselves and the world.

Humanity, which has always revered its religious prophets, has also been pretty consistent in ignoring them when it came to concrete application of their principles. We paid lip service to the God of our fathers, but we were careful to keep our dealings with men on what we chose to consider a much more practical, realistic plane. "Though the mills of God grind slowly, yet they grind exceedingly small." It has taken many long centuries, but the day has at least dawned when we, all of us, must take the word of God literally and let it speak in our transactions in the market place. We must do it, if we would survive as human beings. The peoples of the earth demand it; the American people demand it.

Evidence of this comes from many quarters, from every corner of our country. Long ago, civilized people in every nation recognized the Fascist aggressors as anti-Christian. Moreover, the war from its very inception was understood, and rightly so, as a war against the moral code of all countries—against the dignity of man. In the United States, where every religion finds its followers, this

awareness of the true issues behind the war has been given strong and frequent expression. The result is a demand, growing clearer by the hour, that the protection of basic human rights, as defined in all religious teachings, be made an integral part of the peace, in deed as in word.

In October of 1943 the Declaration on World Peace brought this demand forcibly before the American public. One hundred and forty-four individuals, prominent members of the Catholic, Protestant, and Jewish faiths, signed this seven-point declaration, of which the first sentence reads:

> The moral law must govern world order.

But it is in point 2 of the declaration that the principles of which I speak were most sharply outlined. I quote:

> The rights of the individual must be assured. The dignity of the human person as the image of God must be set forth in all its essential implications in an international declaration of rights, and be vindicated by the positive action of national governments and international organization. States as well as individuals must repudiate racial, religious, or other discrimination in violation of those rights.

This declaration shows the complete agreement reached by representative Americans on the fundamental issues confronting us today.

Several months earlier the Federal Council of the Churches of Christ in America, representing 25 Protestant and orthodox denominations, issued a program known as the Six Pillars of Peace, through the Commission to Study the Bases of a Just and Durable Peace. After dealing with the political and economic measures necessary, the program concludes:

> The peace must establish in principle, and seek to achieve in practice, the right of individuals everywhere to religious and intellectual liberty.

Part of the comment on this sixth pillar is worth quoting:

> Wars are not due only to economic causes. They have their origin also in false ideologies and in ignorance. Peace, furthermore, cannot be preserved merely by documentary acts that create political bodies and define their powers and duties. Such bodies can function effectively only as they can count upon a public opinion to understand and support them. It is, therefore, indispensable that there exist the opportunity to bring the people of all the world to a fuller knowledge of the facts and a greater acceptance of common moral standards.

In the spring of 1944, 1,250 leading Protestants who had subscribed to the Six Pillars of Peace appealed to President Roosevelt, Congress, and the people of the United States, to take practical steps immediately to form the nucleus of a general world organization. There can be no question, this time, of the people's determination to see their ideals made a living reality.

This same determination prompted the statement issued by the Catholic bishops of the United States last November. In unequivocal language, in clear and ringing tones, the statement voiced the convictions of our Catholic Americans, both on the ideologies involved in this war and on the realistic steps necessary to build a just and lasting peace. Here, as in the other statements, there was no evading of realities, but rather a sharp admonition of what facing them involves. Said this statement, signed by the 10 archbishops and bishops who compose the administrative board of the National Catholic Welfare Conference:

> If we are to have a just and lasting peace, it must be the creation of a sane realism, which has a clear vision of the moral law, a reverent acknowledgment of God its Author, and a recognition of the oneness of the human race underlying all national distinctions.

Furthermore, and I continue to quote:

> A nation which refuses to accord to its own people the full enjoyment of innate human rights cannot be relied upon to cooperate in the international community for the maintenance of a peace which is based on the recognition of national freedom.

Surely this is a far cry from the notion held not so long ago that as long as people mind their own business behind their own national frontiers the world will go merrily on, bringing peace and prosperity and security to all.

To emphasize the deepening conviction that this notion is all wrong, 1,325 leading Americans recently signed a declaration of human rights issued by the American Jewish Committee. The signatories are persons of every creed and color, of every shade of political opinion; people prominent in government, religion, business, the professions, the arts and sciences. The President, although he did not sign the document, gave it personal endorsement in a letter from his secretary, William D. Hassett. Among the signers are Supreme Court Justice Frank Murphy; the late Alfred E. Smith; Gov. Thomas E. Dewey of New York; former Postmaster General James A. Farley; Henry Wallace; Eric Johnston, president of the United States Chamber of Commerce; Sumner Welles, former Under Secretary of State; William Green, president of the American Federation of Labor; Philip Murray, president of the Congress of Industrial Organizations; Langston Hughes, Negro poet and author.

Like the Protestant and Catholic pronouncements, which it parallels, the declaration of human rights asks for a recognition, in the peace to come, of those fundamental moral claims which arise from the God-given attributes of every man, woman, and child. I quote from the preamble:

> With the inevitable end of Hitler, the struggle begins, not of tank and plane but of heart and soul and brain, to forge a world in which humanity may live in peace. This new world must be based on the recognition that the individual human being is the cornerstone of our culture and our civilization. All that we cherish must rest on the dignity and inviolability of the person, of his sacred right to live and to develop under God, in whose image he was created.

I could go on, quote further and say more, but I think you have heard enough to realize how wide and how deep is the longing of our fellow Americans for a world of peace, for a world that promises human beings some measure of security and happiness.

The Mexican Government is the first government formally to recognize this yearning of all peoples for these elementary principles. Only a few days ago it proposed that the Dumbarton Oaks proposals be supplemented with a provision for an international bill of rights which would guarantee the fundamental human rights. I am told that at the Inter-American Conference on Problems of War and Peace, which is to be held in Mexico City, beginning February 21, this proposal will be on the agenda.

Like the peoples of other nations, the American people want to be heard at the peace table. Is it so much that they ask? Is it so much we all ask? There is no one of us who has not given and is not giving to the fight against tyranny. There is no one of us who would not give more if he could. God knows, the millions who have spilled their blood have a right to be heard. The mothers and fathers, the widows and orphans of those who have died have a right to be heard.

We must act this time. We must look the monster of war in the face, and finish the job of finishing him. Else we shall inherit the curse of the dying and the dead; else we shall condemn future generations to die in more terrible wars to come. We must act, and now. Even at this moment, those who fought and sacrificed in the battles of this war are asking us, the lawmakers, what we are going to do about it. In the words of Edna St. Vincent Millay, they speak:

> This was a war for Freedom; so we thought it;
> And so we fought it.
> You knew this, all of you.
> You promised us a new
> World—a decent one this time, a world a man might live in without shame.
> How is it going forward, this great enterprise, this plot
> To outwit Evil?—Are the blueprints done?
> And may we see them?

A New Turn for America

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of February 18, 1945:

A NEW TURN FOR AMERICA

As is right and proper, the Crimea Charter proclaimed last week at Yalta is now being subjected to the analysis and criticism of world opinion. The charter covers a wide area and every detail is important. But taking the document as a whole, its principal significance lies not in its individual provisions but in the fact that it represents an earnest effort by the three most powerful nations in the world to find common ground for collaboration in war and peace, and by doing so to reverse the previous dangerous trend of events.

The charter represents an effort to replace the loose military understandings regarding

the scope and timing of actions on the various fronts—which did not always work out in practice—with closer coordination of efforts planned in detail and jointly by the three military staffs. It marks an agreement to replace the hitherto divergent policies toward Germany with a joint policy executed by the combined forces of the Allies under a central Allied control commission. It proposes a settlement of the most difficult remaining issues by the creation of an international organization for the maintenance of peace. It proclaims, finally, the mutual agreement of the three powers to concert their policies in assisting the liberated peoples of Europe not only to throw off the last vestiges of nazi-ism and fascism, but also to solve their pressing political and economic problems through democratic means. In all these points the charter represents a move to end the drift toward independent policies and unilateral actions, toward spheres of influence, exclusive alliances, and other expedients, and to replace these methods with broader international agreements and more universal organizations in which ultimately all peace-loving nations can join. If the charter can accomplish this, it will come to be regarded as a turning point in the world's history. Certainly, those who would reject it because of imperfections in detail will do well to contemplate the alternative.

But if the charter is a turning point for the world, it is also a turning point for the United States. For under this agreement the American Government, irrespective of any future peace treaty, has abandoned the hands-off policy which it pursued ever since the last war, and which found its most recent expression in Secretary Stettinius' hands-off declarations regarding Italy and Greece. The United States now joins in the control of a defeated Germany; it participates in the establishment of new borders of immense consequence to Europe; it undertakes to cooperate in the creation of free and independent governments in Poland and throughout liberated Europe; and it pledges itself to see to it, together with the other powers, that these governments are created by free elections under conditions of internal peace. We have thereby assumed grave duties and grave responsibilities, and it is not too much to say that the manner in which we discharge these duties and responsibilities will go far to determine the extent to which the charter will be carried out.

In these tasks the United States has an unusual opportunity. While every move of every European power is suspected of ulterior purposes, thereby producing countermoves, the United States—for one reason because of its geographical position—is above such suspicions. Its intervention in European affairs is therefore a new factor of immense importance and in striking contrast to the situation which prevailed after the last war. It was the absence of such intervention then that was as much responsible for the breakdown of the League of Nations as any of the League's own imperfections. This will be equally true if we fail to help carry out the provisions of the Crimea Charter and of the new international organization for which this charter prepares the ground. But because this is so, the ideals of the Atlantic Charter, proclaimed anew at Yalta, acquire a new significance. For the power of America's intervention will be in direct proportion to the popular support behind it, and that support will in turn be in direct proportion to the extent to which these ideals are realized.

Never before has America been more willing to abandon a foreign policy that had become a tradition with it, and to embark on a new policy looking toward active collaboration with all the world. Good faith on our part, and on the part of the European nations which will share responsibility with us, can make that collaboration a success.

Secretary of War Stimson Urges Action on Manpower Bill

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. ANGELL. Mr. Speaker, Secretary of War, Henry L. Stimson, delivered a radio address on a national hook-up yesterday on the manpower problem and the pending legislation in the Congress which is worthy of careful consideration by all of us, as well as the American public. The following is the text of the address:

We have reached a crisis in this war. At such a time I feel it is my duty to speak out to you. I shall not speak long, but my words will be blunt and plain. I speak to all Americans, but primarily to those who have sons or husbands or other dear ones at the front.

As Secretary of War my single purpose has been to strive for the quickest possible victory of American arms—a victory which will save every possible life which might be sacrificed in a needlessly prolonged war. Today we are in danger of a delay—an unnecessary delay—which may cost thousands of unnecessary casualties.

At this moment our armed forces are at the very peak of combat and the time of the conclusion of the war hangs in the balance. The great masses of our armies are deployed and locked in struggle with the enemy throughout the entire world; in cruel depths of snow and freezing rain along the German border, astride the ice-clad Apennines in Italy, in the broiling heat of Luzon, and swarming over the seas and through the vast reaches of the winter sky. The sun never sets upon their battle. The world has not seen such a fight before.

It is a desperate struggle against desperate enemies. Without exception and in every theater our men are rendering a notable account of American fortitude and American valor. But the cost is growing as the climax mounts; and as more and more troops become engaged our casualties rise higher week by week.

In every war, particularly in every desperate war like this, every month of the struggle brings out new problems in the race for victory—unforeseeable problems until the test of battle has produced them; problems of the production of new weapons, new types of planes and guns, of new appliances of science; problems of new types of ships and numbers of carriers; and finally problems of new types of soldiers and sailors, and the uses to which they must be put, and the numbers of them which will be necessary. Modern war is a great and grim evolution, and he who recognizes that and meets it is the one who wins the war. Prompt meeting of the new needs will save lives.

To wage such a war we cannot depend upon the old methods of peacetime industry. The enemy does not wait. We must have a ready, efficient means of putting workers into the new jobs immediately. Today in America there is no such means. While we have long since recognized that our Government must have the means of scientifically selecting and training our soldiers and putting them where they can best work and fight for the country's welfare, we have never given our Government the adequate machinery to produce the equipment and weapons for those soldiers to fight with.

While we have by law organized our young fighters and compelled them to sacrifice their lives if need be in that service, we have never by law organized our workers who are to equip those soldiers and have them ready and able to fight at the proper moment. In this we are alone among our allies. While we have no service law, Britain and Russia have been working under such laws since the very beginning of the war. And of course our enemies have all been so organized from the very beginning. We alone are depending upon voluntary, and therefore ineffective, methods of organization among the workers who are producing the arms and equipment of our soldiers and furnishing them with their ships and all the other necessities of war.

As a result, ever since the beginning of this war, there has been in America a constant and alarming turn-over of workers in industries which are essential to the conduct of the war. In some important war industries this turn-over has actually amounted to 90 percent per year. By every means of public exhortation the Nation's leaders have stressed the importance of having the workers stay on essential jobs. They have been only partially successful. Literally hundreds of thousands of workers, trained for jobs, work at them for a brief time and then quit for something else. Ask any plant manager if he can get efficient production when he must constantly slow down to train new workers for his idle machines. Every possible expedient has been suggested and tried by our patriotic industry and it has failed. There is only one remedy to this situation—that of adopting national service legislation to keep men at their war jobs.

The inevitable result of this failure of American democracy is now becoming apparent at this crisis of the war. Shortages, deadly shortages, are now looming up before us at a moment when every ounce of our power should be thrown into the combat. I mean both shortages of weapons and shortages of manpower caused by the misplacement of our men. Our infantry will run short of its necessary replacements if the places of young men of military age and fitness now working in essential war jobs cannot be promptly filled by available men who are older or not physically capable of fighting. There is now no legal means of effecting the necessary transportation.

On January 6 the President of the United States called the attention of the Congress to this situation and asked for the prompt enactment of a national service law. The Secretary of War, the Secretary of the Navy, the Chairman of the War Production Board, General Marshall, the Chief of Staff of the Army, and Admiral King, the Chief of Naval operations, have all united in pointing out the character of the approaching danger and the necessity for the remedy. They have pointed out that during the first 6 months of this year there will be 900,000 more men needed for the armed forces, and another 700,000 needed for war production now scheduled at its all-time peak. Every responsible leader of the military and naval forces of this country and those responsible for war production are thus united in asking for national action to meet these shortages which would delay our onward sweep to victory.

This call has been heeded by the House of Representatives. With much care a bill has been drafted which all of the military and naval leaders agree would put into effect principles of law and organization and be effective for meeting the coming danger. The House of Representatives in its finest tradition rose to the occasion. Its Speaker even descended from the rostrum and spoke in favor of the bill. After 4 days of searching debate the House passed the measure on February 1.

Since that date the bill has been pending in the Military Affairs Committee of the Senate for nearly 3 weeks. According to the press, the committee has been listening to

many voices—voices which object to placing upon our men at home the same compulsory responsibility for national duty that has rested upon our men in uniform since 1940; voices which call it "slavery" to serve one's country at a bench or turning a lathe; voices which, flying in the face of demonstrated experience, loudly assert that manpower shortages in industries can be met in this fourth year of the war by a mere invitation to work; voices which, ignoring the long struggle which lies ahead of us to reduce Japan, express pious hopes of the early fall of Berlin as the end of military and naval needs; so many voices speaking for special and, by comparison, trivial interests, that they seem to have stifled the voice of national interest and suffocated the bill. Enemies of the bill are beginning to boast today in the streets of Washington that they have killed it.

Amid this confusion of voices, what has become of the call of the President and the judgment and reasoned pleas of General Marshall and Admiral King? Will those who have trusted to these men the lives of 12,000,000 citizens in uniform, at the eleventh critical hour deny to them the strength they say they need to bring this conflict to a close, with the saving of as many lives as possible?

I have read that some are troubled lest, under the bill passed by the House, civilian workers may be sent too far from their homes to work in munition plants. Does this seem a very weighty objection to you fathers and mothers; you wives and sweethearts of our fighting men, whose loved ones have been bravely and willingly fighting in the torrid jungles of New Guinea or the frozen hillsides of the Rhine?

Your men are risking their lives at the direction of their country many thousands of miles from home, which some of them have not seen for 30 months. The word of their leaders has been enough for them to offer the full measure of their devotion. Prolonged consideration of comparatively trivial details of this legislation should not be allowed to jeopardize the giving to our fighting men of the full support of our own strength and power.

We dare not delay longer. The fighting on every front grows more savage as our brutal enemies are pressed back into their citadels. In millions of American homes there is anxiety for loved ones in the midst of battle while we debate whether workmen may not be sent too far from their homes in order to make the munitions which these men must have to save their lives and to win the war. I say to you, as the pledge of my official duty, that the passage of this measure by the Senate is needed by the Army and the Navy to supply critical shortages in our essential civilian plants and to help fill the places of young vigorous workers who may then be sent as replacements for battle-weary troops.

But even more than this, I believe that the passage of the bill will be a signal to the men on the battle front that there is to be no longer discrimination against them on the home front. It will be a sign to our soldiers and sailors that all of America is behind them. Action by the Congress will sustain and strengthen their spirit in the thick of battles—yes, and the spirit of their families waiting at home for the victory that will bring their men back, as well as the spirit of those good men and women of all ages who have been laboring at war jobs since the calls first went out and have stuck to those jobs through the long hard years of record production.

That is the crisis with which we are confronted. I say again to you fathers and mothers, wives and friends of the soldiers, for whose welfare I have a great responsibility that every day this war is prolonged is inexpressibly costly in precious lives. Let us stand together. Let us speed the victory by treating this crisis of the war in the true spirit of American democracy, with justice between man and man, between soldier and civilian. When the facts are understood, I believe that the voice of American conscience will be heard.

Returning War Veteran

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received from Mr. J. W. Winterbottom and Mr. Arthur Connor of Nashua, N. H., concerning the status of the returning war veteran and his possible acceptance as an apprentice in the various skilled trades.

NASHUA, N. H., *February 9, 1945.*

The Honorable CHESTER MERROW,
Washington, D. C.

DEAR CONGRESSMAN: At a recent meeting of the New Hampshire State apprenticeship council, at which Mr. James J. Doyle, manager of the Veterans' Administration, was made an advisory member, a discussion arose concerning the status of the returning war veteran and his possible acceptance as an apprentice in the various skilled trades.

The members of the Veterans' Administration who were present indicated that they were unable to place any returning veteran in an apprenticeship which required more than 4 years' training because of the present restrictions of the current G. I. bill.

As a result of this, the council voted to write to you, Congressman ADAMS, and the Senators from New Hampshire to express its opinion that the veteran's bill should be altered so that any veteran who has the proper qualifications may be allowed to enter an apprenticeship of more than 4 years' duration, if the standards of the particular skilled trade demand it.

The unfortunate situation created by the present bill limits the action of the Veterans' Administration in that it forces them to place the veteran wherever they may, in any sort of apprenticeship, for a duration of 4 years or less. It seems to the apprenticeship council that this is an unfair limitation to place upon the Veterans' Administration, and it is also a very undesirable practice which will do returning veterans great harm. In our opinion, it is very unwise to place a returning veteran in a 2- or 3-year apprenticeship for a skilled trade when the minimum acceptable standard for such trade may be 4 or 5, or even 6 years. Thus, a veteran who might finish a 3-year apprenticeship and apply for a job as a journeyman in a shop which is unionized will probably not be accepted by the union, because he has not met the proper standard qualifications necessary to become a journeyman.

While the apprenticeship council feels that the returning veteran should be given every possible opportunity to readjust himself to society and to make a living, it must insist that the standards of the apprenticeship courses for the various plants throughout the State be maintained at a level acceptable to both labor and management. In fairness to the veteran, we must be sure that he is qualified to become an apprentice in the trade which he desires, and also that he not be deceived relative to the years of service and standards required of him for its completion. We can appreciate the disillusionment that a returning veteran may experience after several years at an apprentice's pay only to find at the completion that he is still not a recognized journeyman, as he has been led to believe.

It is the council's sincere wish that you give this matter your immediate attention, so that the injustices which exist may be corrected before the situation gets too complicated. If the change can be made, it will give the Veterans' Bureau a sensible and practical method of placing returning veterans in apprenticeships and it will remove the Apprenticeship Council from the unpleasant task, a few years hence, of informing veterans, who believe that they have completed an acceptable apprenticeship course, that they have not met the standards required to become journeymen.

Very truly yours,

J. W. WINTERBOTTOM, *Chairman.*
ARTHUR CONNOR, *Vice chairman.*

Resolutions Relating to Future Aviation Policy of United States

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following resolutions relating to the future aviation policy of the United States, which were passed at a meeting of the Boston, Mass., Chamber of Commerce, and forwarded to me under date of February 15, 1945:

In order to provide for national defense, promote the general welfare and secure liberty for ourselves and our posterity, and in order to insure that the airplane which America created shall be used to maintain peace and secure the blessings of peace to mankind, the Boston Chamber of Commerce unanimously recommends the early formulation of a United States aviation policy based on the following principles:

1. An air force sufficiently powerful, in conjunction with forces of our allies, to win this war and also to keep the peace. Leagues and covenants without an adequate striking force have proven useless. The cost of maintenance of the most completely modern air force should be divided proportionally among the victorious nations and contribution of advanced war equipment designs to this striking force should be mandatory.

2. An adequate post-war air force of superior aircraft and competent personnel at such strength and in such state of readiness as to preclude a successful assault upon our country or its possessions. It should be emphasized in Congress that military aviation appropriations should not fluctuate with the prosperity of the country, but be based on a realistic appraisal of air strength elsewhere in the world.

3. Orderly and economic expansion of domestic and international air transportation and encouragement of private flying.

Domestic air expansion should be based on actual public convenience and necessity. Development of feeder local and paralleling air routes, on the one hand, should not result in unreasonable subsidies with the eventual weakening of the major air lines,

and on the other hand, should not be restricted to a point where the major air lines are strengthened and expanded at the expense of public convenience and necessity.

We recommend a policy of freedom of the air in international air transportation and look with disfavor on the chosen-instrument policy. We believe in freedom of transit and freedom of technical landing, but recommend the regular reciprocal landing and schedule agreements with foreign countries should be granted only in proportion to respective volume origination.

Private flying should be encouraged by simplifying, within the bounds of safety, the present ground and flight tests. Every assistance should be granted to the development of flight strips, ground markers, and radio aids.

4. A career in commercial aviation, both from the flying and engineering angle, should be kept so attractive that the youth of America will seek out this field of endeavor as a life work.

Training of youth to fly and service military airplanes should be first attempted on an attractive voluntary basis. Failing to get the required number of applicants, compulsory aviation training commencing at a suitable age is recommended.

5. Maintenance of a strong aircraft manufacturing industry with continuing world leadership in research and development is of paramount importance. Military orders for post-war production should now be allocated to the essential companies in sufficient volume to guarantee reasonable profits. Research should be stimulated by allowing both research cost and an amount identical with the research expenditures to be deducted from taxable earnings.

6. We recommend the establishment of separate Aeronautic Committees in both the National and State House and Senate.

Post-War Problems

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, while every ounce of our American resources and all of our American ingenuity is now engaged in the fighting of this great war, it will scarcely come to an end until we shall find ourselves involved with a problem almost as great—that in dealing with the post-war period. It is true that the tragedy of death will be removed, but it will call upon American ingenuity to measure up to a new test of strength. We will find ourselves confronted with the task of making America produce, of making America think and act in a capacity in peacetime comparable with that in war. This will be a new day in the lives of most Americans.

Not only will the profit motive be threatened, but more particularly, the general American system will be threatened. The test of accomplishment that will rest upon the shoulders of American citizens, and particularly American business, will be that of providing jobs for American workers in the post-war period, plus adequate prices for farm products. To provide these things will require the most superlative of American qualities because there will be no war stimulus. There will be no Government purchasing agency to keep production at a high point. We shall have to settle down to the job of serving the American people with the things they want at the price they have to pay.

Yes, Mr. Speaker; well may we think in terms of the post-war period as we go forward with our great war endeavor. We are being tried, and sorely tried, in the great contest for war, but the contest that will come to us in the peace to follow will call for hitherto undiscovered qualities of humanity.

Mr. Kenneth W. Simons, editor of the Bismarck Tribune, Bismarck, N. Dak., has written brilliantly on this important question, reflecting deep thought and an intellectual study. I ask unanimous consent to include with my remarks his excellent editorial dealing with the great question of the post-war period:

KENNETH W. SIMONS SPEAKS AT MEETING

America can provide a good, well-paying job for everyone if it will give its capitalistic system a chance to work as the capitalistic theory intends it to work. That doesn't mean monopoly, the protection of vested interests against the inroads of progress or business combinations in restraint of trade, which too many people think of as capitalism.

This was the opinion expressed to members of the Bismarck Business and Professional Women's Clubs Tuesday night at a dinner in the Prince Hotel by Kenneth W. Simons, editor of the Bismarck Tribune.

Many persons who claim to be supporting the capitalistic system of production, trade and commerce are, in reality, moving to destroy it by refusing to let it operate as it was intended to operate, the speaker said.

He explained that the capitalistic system stimulates progress by encouraging new ideas and new capital to destroy old ideas and old capital. When the old is forced out, it represents a loss, he said, but the new is more valuable than the old and so humanity scores a net gain. Anything which interferes with this system, he said, is a blow at capitalism.

For illustration the speaker pointed to the widespread use of bridges to replace ferries. When a bridge goes in, he said, the value of the ferry is destroyed, but humanity benefits because the bridge is better and more convenient and encourages trade and commerce.

Whether or not the American capitalistic system can be made to work to the satisfaction of the American people, he said, depends upon their interest and intelligence as citizens. He predicted that, unless it is made to work in a satisfactory manner, "the tendency of the last 50 years will be extended and intensified and we shall pass from the system of state capitalism [which he defined as investment by government] into a system which is clearly akin to socialism or communism."

This will develop, he said, because the Government stands ready to meet the demands of the people and will do so, regardless of the party in power, when the demand becomes strong enough.

The demand for a higher standard of living, with comforts and security for all, is certain to come as a result of our experience in this war, he said.

With only 40 percent of our productive facilities devoted to peace and 60 percent to the destruction through war, the Nation still has the highest average standard of living in its history, he pointed out. In view of this fact it will be impossible to tell the American peoples after the war that they cannot have the things they want and need merely because the established way of doing things will not permit it.

If this happens, he said, the people will demand and get a change, using their votes—the most powerful instrument in America today—to bring it about.

Simons said the principal hope that capitalism will function in the way it was intended to do and for the best interests of the country lies in adoption of the plans and principles now being advocated by the Committee for Economic Development, a group of businessmen who are acting intelligently to prevent the destruction of our present way of doing things.

In charge of the program were Miss Clara Lewis, chairman; Mrs. Florence Scott, and Mrs. John Delzer. Valentine favors were used. Happy Birthday was sung in honor of the birthday of Dr. Fannie Dunn Quain.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on January 13, 1945:

In general, it may be said that a system of universal military training should provide that every young man will receive military or naval training—this on the sound and democratic principle that every man owes it to his country to undergo training which will enable him to defend it in a major emergency. Normally the training should commence at age 18, although it might take place at any time between the ages of 17 and 21, depending upon educational status. The training period should be for 1 year and every youngster, regardless of antecedents, should take it. They should be mobilized in special training units and it should be understood that during the period of training they shall not be liable for military service in the accepted meaning of the term. In other words, they may not be employed in combat service or any other active service with the Army or Navy in the field or at sea, except in training vessels. While subject to military discipline, they shall be in the status of trainees, not the status of active soldiers or sailors. After completion of the training, they shall not be subject to active military service except in the event of a national emergency proclaimed by the Congress. Concurrently with such a proclamation, the Congress will determine the number of young men to be called to active duty and under what conditions. It is highly probable, almost certain, that in such a situation the Congress will, by appropriate enactment, set in motion the process of selection, closely paralleling our present wartime processes. In time of peace, graduates of the year of training will be encouraged to volunteer for refresher training or training along advanced lines; also, voluntary enrollment will be encouraged in the National Guard of the United States and the Naval Militia, to the end that those important reserve components may be maintained and strengthened in their present constitutional status. To sum up, all peacetime military service by graduate trainees should be on a voluntary basis. The ranks of the Army and Navy

should be maintained only through a system of voluntary enlistment as heretofore. Only in the event of a national emergency shall the element of compulsion appear.

The great military advantage gained under such a system will lie in the fact that whether as volunteers in time of peace or as selectees in time of war, every recruit for the Army or Navy will have had 1 year of training, an advantage we have never enjoyed in our history.

It is obvious that to meet the demands of a major emergency we must train in time of peace a large number of reserve officers, Army and Navy. Without well-trained officers any military effort, large or small, falls down lamentably. No one will deny this. How to get them? If we are to be faithful to our traditions we must open the door of opportunity to every ambitious youngster, no matter what his antecedents. He must be given a chance to prove his worth as to character and his qualifications, mental and physical. The commanding officers in the training camps must watch these youngsters as the training goes along and take note of their intelligence, their aptitudes, and their potential qualities of leadership. And it may be stated at this point that an overwhelming majority, perhaps 80 or 90 percent, of the officers in charge of the training will be reserve officers—trained citizen officers on active duty and especially competent to understand and evaluate the feelings and potentialities of the citizen soldier. If a youngster makes good in his training and shows himself possessed of those inherent qualities which a good officer must have, then the authorities in charge of the camp should certify to that effect and give to the young man, if he wants it, a certificate establishing his eligibility for officer training. If the young eligible goes on to college and desires to work for a reserve commission, then he should be admitted to the R. O. T. C., which organization, of course, should be maintained and perfected as a vitally important mechanism for producing reserve officers for the military services. If the young candidate makes good he will, upon graduation from the R. O. T. C. course, be commissioned as a reserve officer in an appropriate branch of the service. If a young trainee deemed eligible for officer training does not, for one reason or another, go on to college but is still ambitious for advancement, then, in my judgment, either the War Department or the Navy Department, as the case may be, should admit him to an appropriate officer candidate school, upon graduation from which he will get his commission. Thus every young man will have his chance. And, finally, it should be a part of our fundamental policy to keep open the door of opportunity to the young reserve officer to earn his way to higher rank without limitation. Only thus can we inculcate in our citizens a constant, energetic interest in the security of the country.

We are all hoping that the United States will take a leading part in the establishment and maintenance of an international organization designed to preserve the peace of the world. Our country can do this, perhaps, better than any other. We do not hunger for additional territory. We have no wish to subdue other peoples to our will. There is none of the aggressor in us. The whole world knows this and will have confidence in our motives. We want to lead the world along decent paths and we will appeal for decency and contribute everything we can toward its achievement. Unfortunately it does not suffice merely to be decent. We cannot achieve world peace simply by hanging a motto on the wall reading, "Let us have peace." If we are to be effective in the cause of peace we must at the same time be strong—strong in support of righteousness, if you please. Otherwise the greedy aggressor, nothing our weakness and despising our ideals, will be tempted to strike. This very thing has happened and accounts for both World War No. 1 and World War No. 2. And so I contend that a strong America will go far toward securing the peace of the world.

Universal military training is founded upon the sound democratic principle that every competent man owes it as a duty to his country to undergo training which will enable him to defend it. George Washington, our first President, recommended this very thing to our first Congress. Unfortunately, his advice was not followed. Had our forefathers listened to him we might well have saved many thousands of lives and billions of treasure. Universal military training will bring together young men from every walk of life and of all conceivable antecedents. The son of the rich man and the son of the laborer will be brought into intimate daily contact. All will be treated alike. They will come to understand each other, to recognize the things they have in common and to sympathize one with the other. They will emerge from the training better citizens and our democratic institutions will be strengthened.

The records of the Selective Service System now in operation show a deplorably large percentage of young men afflicted with physical disabilities. In time of war these men must be rejected for active service for the simple reason that we cannot afford to spend much time in correcting their defects. In time of peace, however, quite a number of these men (not all of them, by any means) could be admitted to the training and much could be accomplished in the way of improving their health. I am speaking now of those afflicted with what are called comparatively minor defects. By no means can it be contended that all the physical disabilities originating in childhood or early youth can be cured in a year of military training. It is conceded that those youngsters with serious defects would have to be rejected for the training. But here is a most important thing to remember. Every youngster in the land would be called up and put through a physical examination. As a result of that we would get an over-all, accurate census or inventory of the health of our youth. From this we would be able to identify the sore spots. Our public-health authorities, national and State, and the school systems of the various States would then be equipped with information which would enable them to take better care of children in the schools and instruct parents along the same lines. We possess no such inventory today. The establishment of military training would give it to us automatically.

It should be emphasized that a year of military training will not be a lost year in the educational process. An absolutely necessary element in military training is teaching a man how to use a large variety of instruments. Not only must he know how to use the weapons, but he must acquire considerable skill in maintaining and repairing them. He must know all about gasoline engines, as well as a large number of mechanical gadgets used in mechanical equipment. He may learn about the telegraph, the telephone, radio communication, photography, meteorology. In some instances he will be admitted to the mysteries of radar. In others he will learn about first aid to the injured, the importance of personal hygiene, sanitary measures to protect health. This is but a partial list. The point is that military training these days includes a very important element of vocational training which would be useful to the man after he had returned to civil life. So it will not be a year lost by any means.

Prisoner of War Farm Labor

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a copy of a letter which I have this date addressed to Col. Clifford S. Urwiller, Assistant Director, Prisoner of War Operations Division, Provost Marshal General's Office of the War Department, at Washington, D. C.

Mr. Speaker, the letter speaks for itself:

FEBRUARY 19, 1945.

Col. CLIFFORD S. URWILLER,
Assistant Director, Prisoner of War Operations Division, Provost Marshal General's Office, Washington, D. C.

DEAR COLONEL URWILLER: Hon. J. G. Lee, Jr., secretary of the Louisiana Farm Council of the College of Agriculture, Louisiana State University, and A. & M. College, at Baton Rouge, La., has forwarded to the writer a copy of his letter addressed to you, dated February 14, 1945, to which was attached also copies of letters dated January 29, 1945, addressed to Mr. R. D. Reeves, State director of the War Manpower Commission, Baton Rouge, La., and the copy of the reply of Mr. Reeves, dated February 7, 1945, all in protest of, and in connection with your announcement at Chicago that there was a probability that the prisoners of war would be moved out of the State of Louisiana into other sections, and I respectfully refer you to the correspondence above mentioned, and ask that you review all of the statements made therein, all of which I am in a position to substantiate.

Representing the largest and most important agricultural district in the State of Louisiana whose principal products are rice, cotton, cane, sweetpotatoes, soybeans, legumes, oil, cattle, lumber, and other industries contributing to the war effort, I desire to join the agricultural leaders of my State, and on behalf of my constituents, in protesting the proposal of withdrawing prisoners of war from Louisiana and the Seventh Congressional District (the largest rice and sweetpotato producing district in the United States. Sixty percent of our rice has been ceded to the Government, and more than 50 percent of all of the sweetpotatoes used by the armed forces throughout the world are furnished by my district.

Not only do I protest against the proposed withdrawal of the prisoners of war allocated to my district and the State of Louisiana, but I respectfully request that consideration be given to granting an increase over the number previously allocated to my district and the State of Louisiana.

My further reason for this request, in addition to the facts presented by those herein above named, and others is—that had it not been for unusual and extraordinarily favorable planting and harvesting weather in my district and in Louisiana, and if we had not been able to secure the prisoner-of-war labor during that time, we would not have been able to save and harvest our important food and other crops.

Much of our farm labor has migrated to the war industries, and in addition, I am advised that overzealous and pressured

draft boards have cleared many of the farms of experienced farm and dairy workers, and under recent directives from the Director of Selective Service, the boards are now in the process of inducting practically all of the balance of the farm labor, in defiance of, and in contravention of, the law and intent of the Congress as expressed in and under the terms of the Tydings amendment to the Selective Service Act.

I respectfully reiterate that this important matter be reviewed, and that favorable consideration be given to this, as well as other requests; otherwise there will be a tremendous and critical reduction in the production of important and necessary foodstuffs in my district and State, as well as a great financial loss to those who are striving so patriotically to produce the food and supplies for those in our armed forces.

Respectfully yours,

HENRY D. LARCADE, Jr.,
Member of Congress,
Seventh Louisiana District.

Allocation of Prisoners of War for Farm Labor

REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. McKENZIE. Mr. Speaker, what is the Provost Marshal General going to do about the allocation of prisoners of war for farm labor? It is plowing time in Louisiana. The farmers are trying to make their plans for the 1945 crop. They are short of labor, as you all know. The farms have been stripped of every available man of military age. Many thousands of acres of fine fertile land was not cultivated last year and many thousand more acres cannot be cultivated this year unless the farmer can get labor and machinery to replace the farm hands who have been drafted. Old men, many of them sick or physically incapacitated, cannot do the work of the younger men who have gone into the armed forces, but these older men do have the "know how" and can direct the work if a sufficient number of prisoners of war are made available to them.

For the past 2 weeks farmers from all over my district have been inquiring of me and of the Provost Marshal concerning the availability of prisoners of war. I have contacted the Provost Marshal's office here, the Provost Marshal of the Eighth Service Command at Dallas, Tex., and the commanding officer of the prisoner-of-war camp at Ruston, La., trying to get some definite data. They all advise me that no definite allocations have yet been made, but that it is expected—expected, mind you—that an ample number of prisoners will be made available. But I can get nothing definite. Neither can the farmers. Yet, the farmers have to make their plans now, right now. They have to plan ahead for the whole year, the entire crop from planting to harvest. To do this adequately and economically they must know, not guess, what labor they will have. Further they are required to build and have available camps for these prisoners. To prepare these camps they must have the approval of the Eighth Service Command. When they sought the approval of the Eighth Service Command they were told "The Eighth Service Command, Dallas, Tex., is unable to approve construction of the prisoner-of-war camps because the Provost Marshal General's office has not made allocation of prisoners of war to this command." Now what does all this mean? Obviously this is a case of the right hand not knowing what the left hand does. It is all up to the Provost Marshal.

The farmers are required to furnish the camps. They are told to be ready. To be ready they have to get the approval of the Provost Marshal to build the camps. The Provost Marshal who approves the camp says he can not because he, the same Provost Marshal, has not yet allocated the prisoners of war. The Provost Marshal is holding the deal up now, but when he does finally get around to making up his mind on the allocation of prisoners of war, which will probably be at the last minute they can be used, he will tell the farmers that they do not have their camps ready so they cannot have the prisoners. It is the same old merry-go-round of confusion, indecision, and incompetence with the farmer and the food-consuming public as the goats. What I want to know is why?

I want to know why the Provost Marshal General cannot make at least tentative allocations of prisoners of war based on the number now known to be available and the needs of the farmers now certified to by their applications for this type of labor. There may not be enough prisoners of war to meet the full requirements of all the farmers, but some prisoners of war are available and a reasonable pro rata allocation can be made now and the farmer can be so advised in order that he may prepare his camps. There is absolutely no sane or sensible reason why the Provost Marshal cannot make some estimate now. According to reports from the front the supply of prisoners of war can be expected to increase, not decrease, so there should be more shortly.

The military services are supposed to be the champion long range planners. To mount an attack or an invasion of some enemy position thousands of miles from our shores takes months and months, sometimes even a year or more, of minute planning and they have done, done it efficiently. Why then cannot the military plan ahead with the farmer on this 1945 crop? They can. Somebody is deliberately playing the part of a slacker, laying down on a most important job. I charge that the responsibility lies with the Provost Marshal General and his subordinates. He should be made to deliver or he should be removed. If this situation is not remedied I intend to make every effort to see that he is relieved of his command and a competent man put in. His incompetence or indecision, whichever it may be, can easily cause a food shortage in this country, with disastrous results to the war effort and to the peoples of the world, many of whom are looking to us for food this coming year. This martinet-like incompetence has already cost hard-working, hard-pressed farmers many millions of dollars in lost crops. It can cost many millions more. There must be immediate action.

I repeat, either the Provost Marshal must supply the prisoners of war that are now available and inform the farmers what to expect or he should be relieved of his command and a competent man put in his place.

I do not propose to let this matter drop here and I sincerely urge every Member of Congress from the farm areas to join me in smoking out this incompetent military bureaucracy.

Gulf and Merchant Marine

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. SIKES. Mr. Speaker, I call attention to an editorial on the subject of southern representation on the United States Maritime Commission. This is a matter of much interest and much importance to the South. The editorial is from the gifted pen of Ralph Nicholson, publisher of the New Orleans Item, and it appeared on February 16, 1945:

GULF AND MERCHANT MARINE

The term of one member of the United States Maritime Commission will expire next September, and another term will end next year. For obvious reasons the great maritime area of the Gulf coast should be represented on the Federal agency that makes policies and regulations for the Nation's deep-sea transportation. But Louisiana's paramount concern in this field has never but once been recognized—President Wilson named our talented friend, Theodore Brent, a member of the first United States Shipping Board.

Not one of the present Maritime Commission came from the Gulf coast, not one from the South. One is a Washingtonian; two hail from Pennsylvania; two are Navy career men, one coming originally from Ohio; the other, we believe, from Wyoming.

This Commission now directs the building, maintenance, and operation of the vastest fleet of cargo and passenger ships ever assembled in this world. Its duties for years after the war will be far more complicated than they are today because of vexatious difficulties and problems arising from the necessity of readjusting its enormous properties and operations to peacetime uses. This natural complex will be aggravated by countless conflicts of interest between our own maritime enterprises and those of all the other seafaring nations.

Thus will arise situation in which the Commission's judgment and action will most vitally concern every seaport in the United States. The ways in which any or all of them

may be affected are obviously beyond counting. Hence it is vitally important to all of us that at least one member of this agency should be a man especially familiar by personal contact with the relationship of this great maritime area, between and including Texas and Florida, to the deep-sea transportation of our country and the world at large. National welfare and good business in general require this, as well as fairness in the allocation of the Commission's responsibilities between the maritime regions most affected.

We should, of course, like to see some qualified Orleanian on this commission. But that preference is secondary to New Orleans' concern in seeing the Gulf area as a whole properly represented there. In this spirit, we suggest that the importers and exporters, the ship operators, and all other maritime interests of the Gulf pool their efforts and influence, with all the added southern influence that they can enlist, to bring that about.

This idea was incubating in "Ike" Thornton's head before he left the direction of our city's interests in traffic matters to return to Galveston. It was a good idea. We bring it forward for that reason. The five maritime States of the Gulf, putting aside rivalry between their ports, can wield a great influence at Washington, of themselves. If they organize intelligently and work energetically they can bring to their support not only other southern influences but certain northern interests as well.

There is plenty of time between now and fall to press the point—but none to waste. For the object to be sought will call for a real campaign.

We don't suggest this because we feel that the present commission has discriminated against our great port or the Gulf coast as a whole, or by reason of dissatisfaction arising from any other cause. We do so simply in the feeling that every port will be more concerned than ever before in the agency regulating the Nation's maritime affairs, and that the Gulf therefore needs, more than ever before, the proper degree of recognition therein which it has never received.

There Is Not Enough

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. HOFFMAN. Mr. Speaker, there just is not enough to do all of the things everyone wants done. Henry Wallace wants 60,000,000 post-war jobs, with higher wages for every worker. He and those who believe with him insist that every worker and some others should have comfortable homes, better clothing, an automobile, an education and recreation for the family, and, in addition, all the other good things of life.

With it, he insists, should go fewer hours of work and lower taxes; also higher prices for the farmers; rural electrification throughout the country, a telephone in every farm home, and every farm home equipped not only with lavatory and toilet, but with electrical refrigerator, washing machine, mangle and, incidentally, electric egg beaters, slicers, and perhaps dishwashers and driers.

Now, no one finds any fault with those objectives. Many will be attained, but not all immediately. In my judgment, they will come more quickly and in greater volume through free individual effort than through Federal control and regimentation.

Wallace also insists that, at the same time, we should furnish the people of Europe with the food, clothing, shelter, and fuel they may need to keep them in comfort, the money to rebuild their cities, factories, docks, wharves, warehouses and airfields. In short, that we should rehabilitate the war-torn countries and place and maintain their inhabitants on a standard of living equal to that enjoyed by ourselves.

All of the foregoing are very worthy objectives and there is no charitable Christian individual who does not hope that all can some day be accomplished.

Wallace's objectives were again brought to my attention this week when into the office came the president of a C. I. O. local from my district. He was a young man of good character, well educated, courteous, and persuasive in his talk. He was here to secure my aid in obtaining an increase in the wages of industrial workers in the Fourth Congressional District. His argument was that the wage scale in the district was lower than that in other districts for similar work, while the cost of living was as great as in those districts paying a much higher wage scale. His facts were accurate and his argument was sound and, if justice is done, the wage scale for that district will be revised. I shall do my part to assist.

But then came his argument that Wallace should be supported in his demands, placed in a position of power with billions to spend. To that I cannot and will not agree, for, in my judgment, Wallace is a spender and a wrecker, not a constructive builder. I fear that all the facts cited did not convince the young man that everyone cannot now have all he wants without someone assuming an excessive burden. The fact is that there is not in this country enough food, clothing, machinery, to properly supply and equip our own people, to say nothing of caring for the people of all the world.

This gentleman complained of the high cost of food, clothing, and fuel. He admitted that that was due in part to the scarcity of those items, which, in large volume, had been shipped abroad, but yet he seemed to feel there was some magic way out of the dilemma without in any way curtailing our expenditures, without imposing undue burdens upon our own people.

To date the war has cost our taxpayers two hundred fifty thousand million dollars. Recently, the Comptroller General, a lifelong Democrat, told the committee of which I am a member that, in war contracts alone, the administration had wasted $50,000,000. What is the answer? Harder work, more careful spending.

My theory is that, when this war is over, we should bring our boys home; that we should first care for our own—not only the returning veterans, but industrial workers, farmers, and white-collar workers; that we should—in fact, that we must—do it, not by attempting to lift ourselves by our own bootstraps through inflation and increased taxation, but by, for a while, doing without some of the things which we call necessities, but which are in fact luxuries; increasing, as we always have increased, our production by improving machinery, inventing new processes, making new products, creating new jobs.

We did it for 150 years and we can do it again, if we will repudiate men like Wallace, Government interference with management of business; return to free and fair competition; give individuals—and that includes workers—a fair share in the profits created by their own efforts.

Why trade our proven successful system of government for that of nations we have been forced, at almost overwhelming cost, to save from defeat and disaster?

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech which I delivered February 18, 1945, at St. Francis Roman Catholic Church, Bradford Street, Lawrence, Mass., in commemoration of Lithuanian Independence Day:

It seems fitting and proper that we gather here, in the Church of St. Francis, to observe the Independence Day of Lithuania. For years I have watched this small band of devoted Christians working patiently to build this church and parish. In a fine spirit of brotherhood you have achieved from small beginnings a religious center of which you have every reason to be proud. With your own hands and hearts and faith—asking little of others—you have done this. To me that is symbolic of the sturdy independence which you and your forebears have brought to this country from your native Lithuania.

Your fellow Americans have watched the sons and daughters of Lithuanian immigrants adjust themselves quickly and naturally to our way of life and make their contributions to it. Why? Because there must be elements in the Lithuanian character that are in harmony with the environment of America. The first generation among you did not come to this country for material opportunity alone. You did not come here to take—as some have done—paying only lip service to democracy as they went. Your people came to stay and work for home and family, so that you and your children would be proud to call yourselves Americans. For the little nation on the shores of the Baltic and this great democracy of the New World have this in common—the faith that only freemen, under Divine guidance, can have any self-respect and respect for others.

In reading the history of Lithuania, I was impressed by one act of Christian statesmanship that was so far ahead of its time that it should be held up as an example for the troubled world of today. As early as 1380, when the Jews were burned in Spain and tortured to death in Germany, Vytautas, king of Lithuania, attracted a number of perse-

cuted Jews to his country by promising them religious freedom and security. And he was as good as his word, enacting laws that punished by death anyone who attacked a Jew, injured, or murdered him. Such Christian justice was outstanding then. It deserves mentioning now. For nowhere did the Jews enjoy as much religious freedom as they did in Lithuania. As a result there were and there are many Jews active in the fight for Lithuanian independence.

At the third conference of nationalists which was held in Lausanne in June 1916, the Lithuanian delegate proposed and carried through resolutions guaranteeing to each individual his language, his religion, and political and civil equality. Free association and traditions were recognized as rights. Such was the fair and forthright spirit which animated the founders of the Lithuanian Republic. To them their religion was a living faith, kind and just to all men * * * in startling contrast to the dark and deadly intolerance that has swept other nations in our time.

Many people are apt to think of the Lithuanians as a new culture in world history, not knowing that their roots reach far back to the beginnings of time. They speak one of the oldest of languages, resembling the ancient Sanskrit. In richness, the Lithuanian is only equaled by the English language (75,000 words, according to the authorities). Scientists have found that agriculture was developed to a high degree more than a thousand years before the birth of Christ. Between 100 and 400 years before Christ Lithuanian culture was astonishing. Weapons were manufactured from metal; ornaments from amber and other substances. Already the spinning and weaving of clothes were in progress.

Through the centuries constant attacks by enemies forced the Lithuanians to form closer and closer ties among themselves. Through this unity in the face of common danger, the nation became strong. Finally, in 1386, the Lithuanians embraced Christianity.

At this critical point in world history it was the privilege of Lithuania to render one of the greatest services to western civilization. It was Vytautas the Great, who, in 1399, withstood the invasion of the Tartars into Europe and saved Christianity. Lithuania stood as an impassable barrier, holding back the Asiatic hordes. For this deed alone, Vytautas and his followers have earned the undying gratitude of all ages.

During his reign, Lithuania attained the summit of her power. Her frontiers extended from the Baltic to the Black Sea. This leader was as brave as he was clever. Historians have compared his genius with that of Charlemagne and Washington.

Then came the fatal union with Poland which led to the subsequent weakening of both countries. Towards the end of the eighteenth century, larger and more powerful neighbors joined forces to partition Lithuania and she lost her sovereignty. For more than a century, the Lithuanians plodded along under a foreign yoke, holding fast to their faith and national culture in spite of every form of persecution. The renaissance of their tenacious spirit began with the year 1904–5, coincident with the Russo-Japanese War and the first Russian Revolution. Freedom of the press was once more restored to the people and certain liberties were enjoyed again. The ecclesiastics, intelligentsia, and a large majority of the nobility returned to the Lithuanian language. The work of culture and the education of the people started anew with an energy and enthusiasm that was astonishing to witness.

Before this turn of events, however, a century of persecution had forced hundreds of thousands of Lithuanians to emigrate to other lands. Utter lack of political and economic freedom, exclusion from schools, everlastingly hindered in developing commercially, and barred from holding public office or industrial positions, or even from the ownership of land in their own country. These are the causes which left to Lithuanian youth no other choice but to seek more congenial conditions in foreign countries.

The largest emigration was to the United States. The first arrivals settled in the anthracite coal region of Pennsylvania. Many went to the larger cities, including Boston. In the cities the Lithuanians are chiefly progressive workers in factories of all sorts; many are skilled workers, tailoring claiming a great many. There is a large number of merchants and more recently, numerous professional men have made their appearance.

No one appreciates American freedom as much as the Lithuanian. Unwanted in the land of their birth, a land where they had been oppressed and constrained in every phase of the national and individual existence by a vengeful alien rule, they found a welcome haven in America. Here they enjoyed the benefits of education and culture freely and unhindered; they organized study classes and meetings; they attended lectures, theatricals, and concerts; they published, disseminated and read books and newspapers in their own tongue; they founded parishes and societies. How vastly different was everything in America from the drastic prohibitions and the crushing ukase back home. Moreover, books and newspapers published in America were smuggled into Lithuania and, like a religious token, passed from hand to hand; those who returned from America became the living apostles of freedom. Lithuanians soon began to argue that if freedom was possible elsewhere, why was it not possible in their native land.

By having, in addition to the parochial schools, access to the public schools, and to the night schools in particular, the immigrant was able to supplement and so broaden the training and education he received from daily experience in the workshop and from a study of publications in Lithuania.

The children of immigrants, born in this country, have inherited their parents' passion for liberty, and even at this moment are giving it generously in defense of our America. The honor roll on the Lawrence Common bears testimony to what I say. Their allegiance to our democracy is complete and uncompromising.

Today we observe the twenty-seventh anniversary of the signing of the declaration of Lithuania's independence. Those were tragic days in 1918 when the 20 heroes of Vilnius proclaimed that henceforth she would be free. The darkness gave way to light and she became her sovereign self again. For 22 years the citizens of Lithuania worked with a will to restore their ravaged land. Knowing that political democracy cannot exist without economic democracy they worked long and hard to provide opportunities for all. Agricultural reforms were instituted. Stock-breeding and dairying were increased. The peat bogs were tapped for fuel and power. Manufacturing was encouraged. The whole country was astir with the enterprise born of the new freedom. Religion and culture, unfettered by tyranny, stimulated the souls and minds of men again. It was good to be free. All that Lithuania asked was the opportunity to work out her own destiny in peace with her neighbors.

But the peace following the last war was an imperfect and uncertain one. The larger nations were faced with economic problems for which they had no immediate solution. Minorities, under the banner of false promises, captured power from the disillusioned majorities. Beggars on horseback rode into power in many countries and the problem of unemployment was temporarily solved by preparing for war—war in which to loot and pillage peace-loving neighbors. And the democracies, praying for peace at any price made concession after concession until there could be no more humiliation short of national suicide. Such was the cynicism, the expediency, the international spiritual bankruptcy of the 1920's and 1930's.

Then came the holocaust of 1939. In the years that followed, the armies of rival neighbors swept back and forth across the helpless countryside and paralyzed cities of Lithuania. Her cherished independence and individual culture were engulfed in the war among the powers. But Lithuania was not alone the victim of resurgent tyranny. In Europe, Africa, and Asia, many other nations went down before the onslaught of bombs and tanks. They went down but they did not die, for the decent aspirations of men are a spiritual truth which all the material force in the world cannot crush. As long as men and nations believe, they live. It is only when they abandon themselves, that they die.

Kosciusko was the first Lithuanian to come to America and advertise his country. This he did in a practical fashion, by rolling up his sleeves and helping the American colonists in their battle for independence. He was passionately interested in our cause for he had learned in his own country what misery and hardship an oppressed nation can suffer. Lithuania had long been the battle ground for major powers. Because of her geographical position she has suffered intolerably. Kosciusko, then, was a logical defender of the rights of small and weak peoples, and his championship of the American cause was the first tie that bound the interests of Americans and Lithuanians.

Since his day, however, immigration from Lithuania to America has been steady and consistent and the friendship between the two peoples has increased with the years. It is only natural that Lithuania should ask help of the same America that Kosciusko aided in 1777. She wants to be a free and independent nation, to take up her national life where she left off a few years ago and to establish herself once more as a national entity in reconstructed Europe.

There never was a more determined nation than Lithuania, and she is not so little either. It has a population of 3,500,000 of whom 87 percent embraced the Catholic faith.

Overrun by both German and Russian armies not only in World War No. 1, but also in the present war, Lithuania has been devastated to a degree that cannot be imagined by Americans whose homes have escaped the torch of invasion. In spite of the primitive conditions under which he is forced to live, the spirit of the Lithuanian carries on, making the best of hardships until the day when he can be himself again.

As leather became scarce during military occupation, the farmer turned back to his old way of making sandals of wooden soles with little straps of leather over the soles. Like the early pioneers of America, the enterprising character of the Lithuanians found ways and means of overcoming shortages through home industry. Petroleum disappeared from civilian use, as did candles. In this predicament, the people turned to sheep's lard. But lard, too, was requisitioned by the invaders for the fats essential to military needs, so down from the attic came the quaint old taper holders, and they made again the tall pinewood tapers as they had been taught by their grandparents.

The grain supplies and even the windmills were taken over by foreign armies. Then it was that the Lithuanian had recourse to his grinding millstones and began to make flour by hand in an effort to feed his family.

The farm implements that were taken from them could be replaced, in part by handmade ones. Small tools such as rakes and threshing devices they had long known how to make from wood.

As recently as 75 years ago the Lithuanian farmer was able to make everything he needed in the way of cloth, linen, leather, cloth and skin shoes, and on his land he grew what was necessary for the nourishment of his body when well, and the cure of it when ill. This knowledge of arts and crafts stood him in good stead and enabled him to survive, where others might perish. The farmer had even devised a kind of soap for personal use, and medicinal baths using herbs and roots came into vogue again.

One of the most charming of the old Lithuanian customs was the use of the resinous pine taper, which served not only for lighting purposes, but also as a timepiece. These tall tapers were cut to a definite length which provided the Lithuanian girls with a fairly accurate measure of time. They would invariably burn 15 minutes. When four long tapers had expired, the little spinner or weaver would know that she had worked an hour and would leave her loom and reset four other pine tapers in a special frame to mark the passage of another hour.

The Lithuanian farmer still relies on linen and wool with which to clothe himself. White linen in summer is everybody's Sunday best and in winter the hard woven wool is reinforced outdoors by sheepskin coats closely resembling aviator's jackets. With the nylon shortage, stockings are made of hand-knitted wool.

In a country where these simple and natural industries prevailed for so many centuries, song and legend grew up around the daily chores. Songs of harvest time, of growing grain, spinning songs, festival and wedding songs have survived the self-consciousness of the modern exhibitionist music craze, and are still part of the pleasure of life to them.

Lithuania has in her veins the same blood that gave to the world the works of the greatest Greek sculptors. This sister race of northeast Europe, whose democracy is older than the Greek, preserved not only her ancient flair for the plastic arts. She has kept alive through centuries of oppression the same inflexible aspiration for political freedom. It is this national hope and love of the soil of their motherland that has made modern Lithuanian sculpture what it is. The French have called Lithuanian sculpture the threshold of art and many of their own artists have gone to Lithuania for inspiration. Rimsa, perhaps the greatest of Lithuanian sculptors, gave to the world The Lithuanian School, a group which symbolizes the subject and cause of Lithuanian art. The old woman sitting by her spinning wheel, and teaching a child to spin, is a national symbol. For the suppressed language of the Lithuanians was preserved only in secret like the old woman at the spinning wheel, handing down the tradition of a culture that will not die.

Lithuanian girls are taught almost in babyhood to weave textiles which are made from thread spun and dyed by themselves. Their tiny fingers copy patterns their mothers made, the beautiful mosaic-like girdles, the linen tablecloths, the towels of satiny linen that last through years of use, and the exquisite tapestries that they never use but "keep in the families" for heirlooms. In the hand-woven carfs and the love bonds that encircle a Lithuanian girl's waist—this country shows her spiritual aloofness and the clear identity of her personality. These are the signs that demonstrate the continuity of her sturdy nationalism.

What the future holds for Lithuanian independence we cannot definitely predict. There are hopeful signs, however, the most recent of which was indicated in point 8 of the communique issued after the recent Crimea Conference. It reads: "It was agreed that the Big Three Powers should join in assisting any of the liberated or former Axis states of Europe in carrying out measures designed to guarantee the peoples' right to choose their own government. This is one of the most far-reaching decisions for it means that from now on the United States may have a direct hand in every European settlement pending the proposed creation role in world affairs."

This insistence on the right of people to vote regardless of political affiliation so long as it is not pro-Nazi was threaded through the communique and evidently represented the views of President Roosevelt, who was determined to seek agreement on the practical application of such Atlantic Charter principles.

As we meet in this church hall to observe the twenty-seventh anniversary of Lithuania's declaration of independence, we sincerely hope and pray that she may be reconstituted as a democratic republic, to assume her rightful place as a member of the family of nations.

The way to that goal may not be short, and it may not be easy. But from her past we nourish confidence for her future. No nation which has suffered so through the centuries without losing her will to freedom can ever fail in her mission.

The strength of her Christian faith which has supported her through every trial will not be denied. It is this moral and spiritual character which have outlived all oppression. Even now it shames the restless conscience of mankind.

Lithuania lives in the hearts of her people. With unyielding belief in the justice of her cause, they do honor to her this day and look forward to the better day when she achieves her freedom for the rest of human time.

I join with you on this occasion to salute the spirit of Lithuania. May its vindication, through freedom, be near at hand. May God bless Lithuania.

Sometimes We Drive Too Fast

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. HOFFMAN. Mr. Speaker, in the article printed herewith David Lawrence asks, "Is American public opinion fickle or is it that the people have short memories?"

The people are not fickle and their memories are far longer than some folks believe. Sometimes, those of us who assume to speak for the people do not know what we are talking about and sometimes those who have assumed to speak for the people forget what they have said.

All too many—and this includes editorial writers and columnists who, sitting in their offices, mistakenly think they know what the people want—instead of stating facts, think that what they think is true when, in truth, it is nothing but an opinion.

One from abroad, reading the papers, might get the opinion that all of America enthusiastically wanted war; that now the people not only are determined to win the war, but that after the victory has been won, they want their flesh and blood to stay in Europe, in Africa, in Asia, in all the South Sea islands, and forever aid first one nation, then another, in whatever wars may be instigated, and that, in addition, our people are just crying for the privilege of feeding and clothing the people of all the world, even though they themselves go sockless and shirtless; that our people are going to be bitterly disappointed if we are not given the so-called privilege of rebuilding and equipping, for future competition with us, the towns, cities, harbors, industries destroyed or damaged during the war.

If anyone wishes to know what the people are thinking and what they want, the way is not to listen to the statements of Senators, Congressmen, editors, columnists, paid propagandists, but to get out into the highways and the byways and talk with the folks who have calluses on their hands and feet.

Lawrence's article is as follows:

CRIMEAN SETTLEMENT REQUIRES REVISION—CONFERENCE AT SAN FRANCISCO MUST ACT, WRITER BELIEVES

(By David Lawrence)

Is American public opinion fickle, or is it that the people have short memories?

Five weeks ago—January 10, to be exact—Senator VANDENBERG, Republican, of Michigan, made a speech decrying the partition of Poland as it had been proposed by Prime Minister Churchill, and urging, instead, that Germany be demilitarized by Britain, the United States, and Russia, thus making unnecessary the buffer-state security idea of Moscow.

Republicans and Democrats in the Senate applauded. The Nation applauded.

This last week it was announced that President Roosevelt had agreed at the Yalta Conference in the Crimea to do the exact opposite of that which the Michigan Senator had urged. Again the Nation, through the majority of the press, applauded.

Now to cap the climax, President Roosevelt has asked Senator VANDENBERG to serve as a member of the delegation to the coming conference of the United Nations at San Francisco, where a peace organization is to be set up, presumably to underwrite the very kind of thing against which Mr. VANDENBERG inveighed in his speech.

MUST VANDENBERG SOMERSAULT?

Where does this leave the Michigan Senator? Must he turn a somersault, too, reversing himself within 5 weeks and submitting himself to the rubber-stamp process of approving something which he already has disapproved?

Can Mr. VANDENBERG accept, unless he is free to advocate at San Francisco, the correction of the mistaken course which was insisted on by Churchill and Stalin at Yalta?

After discussing the speech of Prime Minister Churchill on December 15, last, in which the Curzon line settlement was first revealed to have been made secretly by the Prime Minister and Marshal Stalin, Senator VANDENBERG told the Senate that the desire for a buffer state by Russia was really based on a fear of the resurgence of German aggression.

He argued that a tripartite treaty adopted now would overcome that difficulty. Then, significantly urging a revision of any interim agreements, he added:

"I think we have the duty and the right to demand that whatever immediate unilateral decisions have to be made in consequence of military need—and there will be such even in civil affairs—they shall all be temporary and subject to final revision in the objective light of the post-war world and the post-war peace league."

Mr. VANDENBERG thereupon quoted from President Roosevelt's state of the Union

message earlier this year in which he had said that "during the interim period, until conditions permit a genuine expression of the people's will, we and our allies have a duty, which we cannot ignore, to use our influence to the end that no temporary or provisional authorities in the liberated countries block the eventual exercise of the people's right to choose the government and institutions under which, as free men, they are to live."

Since the Atlantic Charter was supposedly reaffirmed at Yalta, there can therefore be no final settlement now of the Polish boundary question—eastern or western—by the Russian-created Lublin government or by the exiled government in London because the charter specifically says there shall be "no territorial changes which do not accord with the freely expressed wishes of the peoples concerned."

REVISION SEEN NECESSARY

It is obvious from the foregoing that the San Francisco conference must revise the so-called settlement at Yalta if the new charter of the United Nations is to be ratified by the American Senate.

Otherwise, as Mr. VANDENBERG himself said in his recent address, the American people would be asked to put a blank check warrant behind a future status quo which is unknown to us and which we might be unwilling to defend.

The Michigan Senator made two other statements which it is not likely he will abandon. He said:

"We are standing by our guns with epic heroism. I know of no reason why we should not stand by our ideals. • • •

"I am not prepared to guarantee permanently the spoils of an unjust peace. It will not work."

The Polish settlement has already been called the Alsace-Lorraine of World War No. 3. It can breed dissention and sow the seeds of another war not just because of the few miles of territory involved but because of the lack of principle in the whole procedure—the high-handed method by which the territory was arbitrarily taken from an ally in this war.

It was to protect the territorial integrity of Poland that Britain entered the war in 1939 and it was the defense of Britain which ultimately involved America. Wars grow out of seemingly unimportant bits of territorial aggrandizement and the indifference of peoples to issues, capable of becoming festering sores.

Full Surrender

EXTENSION OF REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. BALDWIN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter on full surrender from the New York Times of January 24, 1945:

FULL SURRENDER DEMANDED—BUT THIS, IT IS HELD, IS NOT FOR THE GERMAN CIVILIAN POPULATION

To the EDITOR OF THE NEW YORK TIMES:

Some radio commentators, a few publicists and some so-called statesmen, both here and abroad, are bombarding the people of the United Nations with what to me seems a false and altogether unwarranted barrage of propaganda.

The Observer of London and other publications in Great Britain and elsewhere, commentators on our radio, politicians in and out of Congress, in concert, are crying for an abandonment of the principle laid down by the United Nations of unconditional surrender by the Nazis and the Japanese.

Like Goebbels they assert that the demand for unconditional surrender means unconditional surrender by the German people as well as their armed forces. Indeed, they argue that to insist upon that demand bolsters the morale of the Nazis and Nazi-controlled Germans—if there are any Nazi-uncontrolled Germans. Goebbels, if he is wise—and he is wise, with the wisdom of the serpent—must use this propaganda to his own purpose. And the purpose of nazi-ism at this time is a negotiated peace. To abandon the agreed basis for the end of the war by the United Nations can only help the Nazis to bolster the rapidly sinking morale of the German people. For that would hold out hope of a negotiated peace.

ARMY MUST SURRENDER

It is axiomatic that in war surrender, conditional or otherwise, is surrender by the armed forces. The army surrenders. With such surrender the enemy government may acquiesce or fall. Surely our boys are not dying on the wide-flung battle fronts to destroy only the German Army or the Japanese armed forces. That, of course, is a prerequisite to the ultimate aim for which we are fighting. Beyond and above military victory our war is to erase from humankind the ideology for which the armed forces of our enemies are fighting—nazi-ism and shinto-ism.

In the natural course of events the German civilian population cannot surrender, nor would we accept a surrender from them. We would not treat with the present spokesman of the German civilian population, the Nazi Government. There can be no one to surrender the German people. It is their armed forces from which we demand and will exact unconditional surrender. That must be insisted upon if naziism is to be destroyed. Nazi-ism and junkerism are twin brothers.

On all sides I am asked, What does this propaganda mean; what is this business of abandoning the basis upon which the United Nations have agreed for ending the war?

And then I am asked, as territory occupied by the Nazis is liberated and the unspeakable and unimaginable bestiality practiced upon civilians by the Nazis is revealed. Does this propaganda mean a concerted effort to conclude a soft peace with the beasts responsible for the extinction of millions of lives in gas chambers? Yes; and I ask myself a question Why this propaganda? Does it mean that the criminals are to go scot-free? Does it mean that isolationists and concealed haters of democracy are preparing the ground for a soft peace?

NOT FOR GERMAN PEOPLE

Those who shout—and they do shout—against unconditional surrender know full well that it is the German Army, the Junkers, the SS., the Brownshirts, the Nazis, and their brute functionaries whom we will compel to surrender unconditionally—not the German people, if there is a German people that can be distinguished from the Nazis.

I am afraid of this propaganda. It is pregnant with danger to the morale of our boys and girls on the battle fronts and to our people on the home front. Our soldiers and the nurses who see their buddies when taken prisoners lined up and then mowed down by machine guns, and the uniform of the dead, the uniform of our country, desecrated when it clothes a Nazi, when they see the identification tags of our heroes used by Nazis to treacherously attack, they react with astonishment at this new type of propaganda.

Our people must bear in mind that unconditional surrender is surrender of the armed Nazi hordes, surrender of Nazi ideology, complete surrender of nazi-ism, for erasure and destruction. Moreover, we must all remember our dead, our wounded, our fighting men. Bear in mind what they are fighting for, and shun this vicious and specious propaganda.

JACOB PANKEN,
Justice, Domestic Relations Court of the City of New York.
BROOKLYN, *January 23, 1945.*

Manpower Problem

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of February 12, 1945:

MANPOWER PROBLEM—II. LESSONS FROM CLEVELAND

(By Agnes E. Meyer)

Both labor and management agree that the manpower problem is not wholly a question of numbers but also a question of proper utilitization of manpower already in the factories.

The most efficient, fixed-price factories in Cleveland, such as Warner & Swazey Co. and the Graphite Bronze Co., are getting a per capita production rate of 75 percent, whereas it ought to be 90 percent. The national average is supposed to be about 65 percent. These figures indicate a staggering wastage of production and capital. In other words, there is no all-out war effort, yet the worker is probably the least to blame for this poor showing.

The feeling generated among our troops against the home front as slackers is as dangerous as it is unjust. Now that this split in our national morale has taken place, we suddenly feel the need to mend it with such measures as the May "work or jail" bill. But the only real stimulus to morale lies in the recovery of our former magnificent production record. It is dangerous to confuse moral and material issues. Our prime objective must remain that of supplying our boys at the front with all the weapons they need. To do this we must first understand why the home-front army is not making its maximum effort.

Here are some of the cogent explanations:

In Cleveland the local bureaus of the Federal Government are a bad example. Everyone knows they are overstaffed. Army, Navy, Air Force, and W. P. B. A clerk in the W. P. B. said to me: "We have nothing to do in our department, but today they hired three more girls." In the military staffs, great numbers of young men in uniform are holding jobs that older men or women could do equally well.

An appalling waste of manpower is in the cost-plus-fixed-fee factories, where the Government pays the bill. The turn-over in these establishments is such that, as one labor union man said: "Putting manpower into these factories is just like throwing mud against the wall in the hope that some of it will stick." Of one notorious plant, the Cleveland people say that the workers play bridge on the assembly line.

RESPONSIBILITY FOR LOST PRODUCTION

Labor declares that inefficient management, poor labor relations, and bad working conditions are responsible for a part of the lost production. Management points out that labor union committeemen are deliberately restricting production in many of the best-run plants where the labor relations and working conditions are ideal. The union leaders do not deny this when talking off the record. They are thinking of the post-war situation when work will have to be spread out again. For that matter, the W. P. B. has made a goodly contribution to restriction of output through failure to release materials promptly.

The loss of highly skilled workers in vast numbers to the armed forces has also had its effect on production. The quota system of recruiting is partially to blame for this. There are 51 draft boards in Cleveland. Good mechanics were taken in one Cleveland area, when across the street in another area there were young men under 26 who had not been called up.

Governor Lausche is holding a conference soon to work out and submit to the Army a plan for a more proportionate distribution and a less rigid interpretation of Ohio's quotas because this whole question has such an immediate bearing on the manpower problem. We are reaching the bottom of the manpower barrel. It now takes three new people to replace any skilled worker taken into the Army, and much production is lost while the substitutes are being trained.

Nor has the constant migration of workers between cities and States been checked. A statement of availability entitling the worker to seek a new job can still be obtained from the W. M. C. by anybody who leaves a war plant and goes into unessential industry or just loafs for 60 days. This leaves the W. M. C.'s control system wide open and encourages floating from place to place or from factory to factory.

Management will tell you that strikes are always condoned by our labor government, whereas management has been humiliated to a point where it has no control over its workers. "Under the Wagner Act," said one of the best Cleveland managers, "no company has the right to enforce discipline. Political considerations have dominated the manpower field. There has been great emphasis on labor's rights but none on labor's duty to do a good day's work for a good day's pay."

Labor replies that in the cost-plus-a-fixed-fee plants there has likewise been no emphasis on the duties of management, since these contracts are an invitation to management not to concern itself with costs.

FEDERAL POLICIES TO BLAME

It is impossible for the most objective observer to measure whether bad labor policies or bad management have created the greater amount of restriction in production. But it is clear that both are an outgrowth of Federal policies, if they can be called policies. Moreover, uncertainty as to the Government's post-war plans, leads both management and labor to jockey for position in the post-war world.

This slant on the whole situation foments increasing friction, cuts production, and makes the worker a helpless pawn in the struggle for power. With any assurance of a sane post-war program, the best elements both in management and the unions would work harmoniously as both factions know and say that the survival of private industry depends on their mutual understanding and cooperation.

But the psychological battering which the workers have endured has had perhaps the most depleting influence upon production. The enthusiasm which I found everywhere in the war-production centers 2 years ago has disappeared. Campaigns to break down worker complacency cannot counteract the influence of stern facts. Uncertainty and lowered morale among workers began when in 1944 there was a sharp cut-back in orders and the headlines supported the conviction that the war was over. Thousands of men and women were dismissed. Workers without seniority streamed out of the factories and took nonessential jobs. Many went home, never to return.

As I talked to all types of workers, they complained that accurate information concerning the war's progress has been withheld; they get nervous now that orders in the factories have increased from 65 to 200 percent, because the war headlines are favorable to a speedy victory and they don't know what to think. The disrepute into which Washington has fallen with these intelligent people, through the bungling, contradictory orders to which they have been subjected, is a serious matter. Over and over again groups of them ended such discussions by saying: "The truth is, the home front has no leadership."

The effects upon the morale of the workers—the emotional confusion, cynicism, the widespread feeling that the Federal Government is inefficient and insincere—can be seen in the mounting number of people who break down from fatigue, strain, and war psychosis, not only physically but mentally.

Nor are the mental cases only women or new industrial recruits. Some of them are mature, capable, steady men with long employment records in the same factory. What the war worker needs to steady his morale is order on the home front and the feeling that the plans for post-war employment are being made by people whom he can trust. That would eliminate the fears that now beset many of them and boost production from 15 to 25 percent in a short space of time.

JACK & HEINTZ

There can be no complete picture of the manpower situation in Cleveland without reference to the firm of Jack & Heintz.

Bill Jack, at a time of Nation-wide shortages, still has more than 150 workers at his gate asking for jobs every day. He obtained permission to raise his ceiling by 1,500 employees to meet his new orders and found them at once. "The manpower shortage is rot" said Bill Jack. "My wages are no higher than other people's. I can get all the labor I need and, in spite of the hard winter, my turn-over and unauthorized absenteeism is zero."

His products are acknowledged to be tops, whereas his prices are the lowest in the field. "I am still reducing prices," he volunteered, "after refunding last year a $75,000,000 voluntary cash reduction."

Among these workers there is no fear, no strain nor restlessness. The Jack & Heintz workrooms had the same happy relaxed atmosphere that made such a deep impression on me 2 years ago when I first discovered and described this industrial phenomenon.

Since then his associates have built or purchased 728 charming little houses near the plant, and contractors put up 27 apartment houses especially for them. The associates have also invested fifteen millions in the business, to the dismay of the local A. F. of L. labor leader, Mathew De More, for unions are necessarily weakened when the worker has a stake in the company. They own 75 percent of the business—all in Class A stock—and they would have bought Bill out if he hadn't insisted on keeping a 25-percent interest for himself and his son. Last week the associates tossed $101,000 worth of dimes into the infantile paralysis drive, but they reserved half of it for Dr. Toomey of Western Reserve University Medical School to do general research work on childhood diseases.

Concerning the post-war world, Bill overflows with enthusiasm. He sees the country rebuilding houses, trucks, automobiles, tractors, and a thousand other restricted materials.

RECONVERSION PLANS

What will he do? Bill pointed to a beautiful transparent plastex clock on a handsome stand. In any jewelry store, it would look like $50 worth. Jack & Heintz will roll them off the assembly line for $6.

What else?

After a short hesitation, a mischievous grin lit up his features. "I've got some things that will knock their eyes out. And I'm going to tell you one of the secrets—just one. I have a vacuum cleaner that works on the gyroscope principle. Figure that out if you can. You don't have to plug it into a switch. It works under its own power and does as good a job as the best vacuum cleaner ever made, at half the price. I invent these new things with a few of my engineers as a side issue instead of groaning about the future.

"The Federal Government ought to stop scaring the daylights out of business. Of course they won't risk their capital if they can make more by just buying Government bonds. The Government must lower taxes enough to bring capital into the market and make it worth while for businessmen to take a risk.

"I am all set for reconversion and it won't be costly. We will give the 'associates' 2 weeks off, or maybe 30 days, with pay. During that time, 100 toolmakers and millwrights will take the machines we now have and make them over. When they are finished, these men will take their month off, the 'associates' will come back, rested, and we'll start rolling.

"As for labor, you can't overpay it. Our annual take-home per worker last year was $5,800 at going rates. That was for an 80-hour week. Now it is my job to find out how they can make as much in the future in a 40-hour week. That's the way to face the post-war problem. Keep wages high and raise 'em as fast as you can. Big wages make for prosperity."

Bill Jack, it seemed to me, has found the best solution of the manpower problem—security for his workers.

Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. MASON. Mr. Speaker, on February 12 President Roosevelt sent a message to the Congress asking for immediate passage of legislation to implement the agreements arrived at by the representatives of 44 nations at the Bretton Woods Monetary Conference held last July. Briefly, these agreements covered the establishment of an International Bank for World Reconstruction and Development, and an International Monetary Fund. These two institutions were to have a combined capital of $18,000,000,000, one-third of which the United States would be expected to furnish, but the United States would be expected to provide more than one-half of the gold or gold currency in the fund. In other words, our gold and sound currency would be put in to match the depreciated currencies of the busted nations. The gentleman from New York, Congressman REED, described the Bretton Woods agreement as follows:

Boiled down to the lowest common denominator the Bretton Woods agreements proposed the establishment of an international bank, Uncle Sam to furnish most of the money, but the borrowers to control the bank.

The guiding spirit of the Bretton Woods Conference was Lord Keynes, a British economist. The agreements arrived at were for the most part his proposals. This is the same Lord Keynes who persuaded President Roosevelt early in 1933 to discard his economy program and embark upon the spend and spend and spend program of the New Deal. The Bretton Woods agreements, if accepted by Congress and implemented by law, would start us off on a world-wide spending spree to rebuild a war-torn world in the face of our $300,000,000,000 debt. Why should Uncle Sam follow the lead of a discredited English economist, one whom the English themselves refuse to follow?

ADVICE FROM ANOTHER ENGLISHMAN

Sir Walter Citrine, a titled Englishman, in a speech at the recent London World Trade Union Conference, proposed an international T. V. A., which would include a Rhine Valley Authority and a Danube Valley Authority to develop electric power for European use. Sir Walter did not say so, but the inference was plain that this international T. V. A. should be set up, established, and paid for, by the taxpayers of the United States. If the Bretton Woods agreements are implemented by law they will provide convenient machinery for financing this international T. V. A.

The post-war monetary scheme of Lord Keynes and the international T. V. A. scheme of Sir Walter Citrine are very closely related. Significantly, the President's message to the Congress urging the passage of legislation to implement the Bretton Woods agreements came immediately after Sir Walter's speech at the London conference. Can it be possible that the proposals of these two titled Englishmen add up to the fact that John Bull again wants Uncle Sam to pull England's financial chestnuts out of the fire and once again get our fingers burned while doing it?

The following editorial from the Chicago Daily Tribune of Wednesday, February 14, 1945, pertaining to the President's message requesting the passage of legislation to implement the Bretton Woods agreements throws light upon the problem that is now before this Congress. It should be of interest to the membership of this House. I therefore include it as a part of my remarks:

BRETTON WOODS

The President in his message Monday called upon Congress to approve the proposals formulated at the international monetary and financial conference held last summer at Bretton Woods, N. H. He can hardly expect that his request will be granted.

The whole idea of the conference came from John Maynard Keynes, the world's most celebrated advocate of inflation. That the plans which were agreed upon did not disappoint Mr. Keynes was shown by his statement that if adopted they would oil the wheels of trade by a great addition to the world's stock of monetary reserves, distributed in a reasonable way.

Keynes has been trying to get his inflationary schemes adopted for years, but never made any progress in England, altho he made quite an impression on Mr. Roosevelt and was the one who got the President to embark on deficit spending to prime the pump early in the New Deal. Failure by Mr. Roosevelt's British adviser to get his own government to accept his theories was due to the fact that it was a creditor nation, and it would have been lunacy to let the other countries pay their British debts in depreciated money.

During this war Britain changed from a creditor to a debtor country. As Keynes put it in a speech in the House of Lords, "We have burdened ourselves with a weight of deferred indebtedness to other countries beneath which we shall stagger."

The debt would be nothing at all if world-wide inflation could be brought about. Keynes came here to put that idea over, and with the aid of his disciples high in the New Deal, was able to do so. There was advance agreement by Roosevelt with Keynes before a meeting was called.

To guard against any slip-up, the delegates to the conference had to be people who would not upset the apple cart. None of the Nation's celebrated experts went to Bretton Woods. Even so consistent a supporter of the Roosevelt administration, especially on international collaboration, as the New York Times was moved to say that the list of delegates, "in all candor is not encouraging."

After the conference made its report virtually every expert of standing denounced it. Repeated efforts were made to get delegates to engage in joint discussions of the proposals with men of broad experience in international money and financial matters. So far as we know the delegates always sidestepped. It was never possible to get Morgenthau, White, and the others cornered in full view of the public.

One leading banker after another told of his grave alarm about the Bretton Woods proposals. By the time that the bankers' association met in Chicago opposition to the plans had swept the country. It was only after the promise of the association officials that a committee would be appointed to study the subject and report upon it that the bankers were persuaded not to issue a strong statement denouncing the schemes.

The bankers' association committee completed its work recently and published a report urging Congress to refuse to approve the international currency stabilization fund. It approved the creation of a bank to make loans to foreign governments, but under an arrangement far different from that planned at Bretton Woods. The schemes the President calls upon Congress to approve have no support in any informed quarter.

Religious Tolerance of Washington Cited at Anniversary Rites

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

RELIGIOUS TOLERANCE OF WASHINGTON CITED AT ANNIVERSARY RITES

George Washington was described as "more of a Christian than a churchman" and "ahead of his day in his tolerance of the religious views of others" in an address yesterday featuring a joint celebration of the two hundred and thirteenth anniversary of his birth by four patriotic organizations.

Capt. William N. Thomas, Naval Academy chaplain, discussed The Religion of George Washington in the program held at Mount Vernon Place Methodist Church.

From the mass of material available, Capt. Thomas declared, George Washington's creed can be summarized broadly as follows: Belief in a wise and benevolent Supreme Being; a high moral standard, charity, and faith in the ultimate supremacy of the good.

"He was not so much interested in abstract religion as in its practical application," Capt. Thomas declared. "The results of this practical faith are too well known today to be disputed."

Three resolutions which Washington drew up at 13 for the conduct of his life were quoted by the speaker: "When you speak of God or His attributes, let it be seriously, in reverence. Labor to keep alive in your breast that little spark of fire called conscience. Honor and obey your parents, whatever may be their condition."

With this beginning, Captain Thomas continued, it is not surprising that Washington wrote as a mature man: "I shall always strive to be a faithful and impartial patron of genuine religion" and "it is impossible to reason without arriving at a Supreme Being."

Rear Admiral Frederick G. Fyne, United States Navy, retired, president of the District Society, Sons of the Revolution, was chairman of the joint committee on arrangements. Greetings were extended by the following representatives of participating organizat'ons: John B. Gordon, General Society, Sons of the Revolution; Mrs. Goeffrey Creyke, National Society, Daughters of the American Revolution; Mrs. Louise Mosely Heaton, National Society, Children of the American Revolution, and Frank B. Steele, National Society, Sons of the American Revolution.

The Reverend John W. Rustin, minister of Mt. Vernon Place Methodist Church, gave the invocation and the benediction was pronounced by the Reverend G. Freeland Peter, former canon and chancellor of Washington Cathedral.

Howard Hosmer, Jr., and Barbara A. Milburn of the C. A. R. led the pledge of allegiance to the flag and the American's Creed. Music was provided by the United States Marine Band Orchestra and the Arlington Male Chorus.

After the service a wreath was placed at the base of the Washington Monument.

Poland Betrayed

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilmington (Del.) Morning News of February 19, 1945:

POLAND BETRAYED, BISHOP DECLARES—MOST REV. E. J. FITZMAURICE HITS IMMORAL PHASE OF BIG THREE YALTA PARLEY

"We weep today for Poland betrayed by her own allies; forsaken by fair-weather friends; given over to an implacable enemy bent on Poland's destruction," declared the Most Reverend Dr. Edmond J. FitzMaurice, bishop of the Catholic Diocese of Wilmington, at a

memorial mass meeting honoring Washington, Lincoln, and Thaddeus Kosciusko attended by nearly 700 persons in Modjeska hall yesterday afternoon.

"Once again," continued Bishop FitzMaurice, "we saw might triumph over right. I am sorry our President and representative at the Yalta Conference apparently meekly acquiesced in this tragedy; this shameful and scurvy treatment accorded gallant Poland, first to resist Nazi tyranny with arms." Paying tribute to Poland's great sacrifices and sufferings in this war, Bishop FitzMaurice said "her reward and fate now appears to be the imposition of chains and a slavery worse than any she has known in the past."

Remarking that "as one American I believe we should protest; and until justice is done Poland that we should deem it an honor to share in the grief and sorrow of her distraught sons and daughters," Bishop FitzMaurice expressed the hope that Americans "will rise in their wrath against this immoral phase of the Yalta Conference which strips Poland of nearly half its land without it having even a voice in the proceedings; and would take by force the land of another country to recompense Poland. I hope the American people will protest. Even if they do, it may not avail, but if the protest is made we shall at least stand absolved before the bar of history as refusing to call wrong right." The bishop also scored the Yalta Conference decision on Poland as a "repudiation by cynical men of the Atlantic Charter principles. Hitler must have rejoiced as he saw approval and ratification of his doctrine of conquest by force," he said.

Bishop FitzMaurice said that over and above protest in this matter, "we can pray for Poland. I believe that God in His mercy and justice and in His good time will come to the aid of a great people, long an honored member of Christendom, a defender of Christendom's faith and culture through the ages."

Tributes were paid by the bishop to Washington as "a name which will ever stand as a challenge to tyranny and as a symbol of high character and noble purposes; the father of our Republic"; to Lincoln, "rugged, strong preserver of the Republic; devoid of malice and vindictiveness in victory," and to Kosciusko, "whose military genius and burning love of liberty contributed in no small measure to the victory of American arms. For them we utter the ancient Catholic prayer: 'Eternal rest grant unto them, O Lord, and let perpetual light shine upon them.' * * *"

The Rev. Joseph F. Delikat, an assistant rector of St. Hedwig's Catholic Church, presided. Register in Chancery Adam J. Rosiak, secretary of the Council of Polish Societies and Clubs of Delaware, which sponsored the memorial mass meeting, and Vincent J. Kowalewski, president of the council, both denounced the Yalta Conference decision concerning Poland's future.

Others on the platform were: the Rev. John S. Gulcz, rector of St. Hedwig's Church; the Rev. Stanley W. Delikat, an assistant rector; Anthony J. Emory, former register in chancery; and Charles L. Paruszewski, another local attorney.

A group of boys and girls of St. Hedwig's Parochial School and Boy Scouts of Troop 7, affiliated with the Pulaski Legion, presented a program of recitations and songs honoring Washington, Lincoln, and Kosciusko. Taps was played over a catafalque of Kosciusko on the stage. Felician Sisters of the school directed the program. The Pulaski Legion Junior Band, conducted by Carl T. Elmer, played selections including the national anthems of the United States and Poland.

Baseball and the War Effort

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting and pertinent statement issued by Mr. Sam Breadon, owner of the St. Louis National League Baseball Club.

There has been much discussion in recent weeks concerning the duration future of the major sports, and in particular baseball. In my opinion baseball plays an important part in the war effort. It not only lifts morale on the home front, providing relaxation for workers in our war industries, but it lifts morale of our men in the armed forces in all parts of the world.

Best testimony as to the importance of baseball on the home front comes from the endorsement given the game as a wartime morale builder by high executives of the steel industry, who have publicly expressed their fear that discontinuance of the sport would promptly be felt in decreased efficiency of workers. Workers must have their days of relaxation. It is best that they find it in clean sports.

Newspapermen who had the privilege of touring the battle fronts with the several groups of baseball stars this past winter have told me they were astounded at the uplift the presence of the ball players brought to the fighting men. It was apparent, the newsmen stated, that the men had continued their interest in baseball and that just through following daily scores of their favorite teams they had an interest that helped their morale.

Mr. Breadon's statement covers only his Cardinals' contribution to the war effort. Multiply this by 16 and you have an idea of the tremendous amount of good done by major-league baseball through our war years. Add to this the contribution from minor-league baseball and then who can say, in the face of such figures, that baseball has not helped in the war effort. What non-war industry can cite a better record?

Baseball may not be absolutely essential to winning the war—but it will help.

Mr. Breadon's statement follows:

I think it is about time that someone connected with baseball tell something about what baseball has done as its contribution to the war effort. I speak only for the St. Louis Cardinals. I know what we have done.

We are one of the few businesses that has made no money through the war, but we have cooperated with every request made by any Government agency.

The Cardinals have admitted free to Sportsmans Park during the past 3 years a total of 160,417 servicemen.

The Cardinals have played three games in St. Louis and three games on the road each year for the past 3 years, the total receipts of which went to Army and Navy relief. These averaged over $20,000 for each game in St. Louis. In addition, we played at least 5 games a year at service camps, foregoing the opportunity to play exhibition games which would have netted us a minimum of $2,000 a game.

The Cardinals were fortunate in being in the world series the last 3 years. And the amount deducted from the Cardinals' share of world series receipts and donated to the War Relief and Service Club amounted to over $225,000 for the 3 years.

In the last 3 years the Cardinals paid in dividends to its stockholders the total sum of $80,000.

I think these figures speak for themselves. The Cardinals are only one of 16 major league clubs. The other clubs have done as well, or possibly better, with the exception of the donation from the world series, the Cardinals being the only club that has been in three world series during the war.

I'm not saying anything about the three all-star games, the total of which went to war relief, nor about the money donated by the commissioner, the two leagues, and the other clubs in the world series. I'm only mentioning the Cardinals' share.

There were over 450 men joined the colors from the Cardinal organization during the war. A number of these men have been killed, wounded, and missing. And I know of no club official or ballplayer who asked for any favors from his draft board or his examining board.

I think when thought is given to what baseball has done, instead of criticism, we merit praise.

SAM BREADON.

The Infantry

EXTENSION OF REMARKS

OF

HON. ORVILLE ZIMMERMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. ZIMMERMAN. Mr. Speaker, on last Sunday, February 18, the press branch of the Bureau of Public Relations of the War Department issued a release entitled "The Infantry," which was prefaced by a note to the editor. The author of this letter, Maj. Flake L. McHaney, comes from my home town and from one of the leading families in my home county, Dunklin.

Major McHaney is a graduate of the University of Missouri and a product of the R. O. T. C. program at that institution. He volunteered for service at the outbreak of the war and has engaged in some of the major campaigns in Italy where he is now stationed. It would be well if our chronic grumblers, critics, and kickers who daily bemoan the hardships they are forced to endure under wartime conditions would read this letter and find out what our doughboys are going through for them.

Under leave granted, I insert this letter, which is as follows:

THE INFANTRY

(NOTE TO EDITOR.—The following appreciation of the American infantryman was written in a letter by Maj. Flake L. McHaney, of Kennett, Mo., a Field Artillery officer of

the Ninety-first Division, after watching an Infantry battalion file past his command post to the front in northern Italy.)

A mind burns on a subject until it cannot remain silent longer. In every man's life there is some injustice he feels and sometime he must voice that feeling—so it is with me.

Tonight I watched the American doughboy moving up a dirty mud trail in the heart of a mountainous section of Italy. These doughboys have been in reserve and are now going up to replace another battalion. To be in reserve has meant that they were several hundred yards behind the front lines; that they lived in a puptent rather than not having any shelter; that they had two blankets rather than one; that they did not have to march through the rain, just live in it; that they were not constantly subjected to small arms fire but just artillery and mortar.

It has been raining for many days. They have not been dry, not only their feet, but their entire bodies, during all of this time. The rain is not a warm tropical rain but that b—— cold type that is too warm to snow, which would bring comfort to aching bodies, but cold enough to keep the body numb, the nose running, the skin purple—not just today but for several days past. Despite their discomforts, they have been in reserve, in rest, compared to their fellow soldiers in the assault battalions.

I watch their faces as they pass. One catches my attention. He is a tall, thin man about 40—probably a father participating in a youth's game. He is walking in the hard rain with his weapon, ammunition, grenades, entrenching tool. He has one blanket rolled into a shelter-half. His feet are wet and have been wet for days; there is no possible way to keep them dry. Even though he has been in "rest" the expression on his face is one of a tired, fatigued, miserable man. Now he is going back into battle to relieve tired troops.

His life for the next few days will not be so glamorous. He will be shot at with everything from a pistol to a 280-mm. artillery piece. He will rush into foxholes in which everything but his head will be under water and sometimes his head will go under, too—but he will gladly seek the foxhole because the water makes no difference—he cannot be wetter than he is now. At night, while he is not on the outpost line, he will unroll his one blanket, dip the water out of a foxhole and prop his shelter-half above him to keep the water out, or part of it.

Of course, he is cold and wet and one small blanket is not sufficient to keep him warm or allow him to sleep but it will allow him to lie down and he appreciates that opportunity. He will get up early in the morning before daylight, still wet, colder than before and will have a nice cold C or K ration; however, to him it will be better than fried eggs are to some of the other arms this same morning.

Upon finishing his breakfast, he will prepare himself to "jump off" at the first crack of dawn. However, the term "jump off" is a little strenuous for his condition and "crawl out" would be more appropriate. As soon as daylight comes the same shells which kept him awake all night begin to fall in greater quantities, mortars crack all around him and "rat or burp" guns (a German automatic weapon) announce their nearness. He will again endure a million deaths.

Since first entering combat, I have learned much about the American soldier, particularly about the infantryman since we are light, direct support Artillery—that closest to the Infantry.

There are times when all infantrymen become mad; when something is done by the enemy which to them appears to be unfair or not humane. At that time they become cold, relentless killers but do not remain so for long. I believe that if the American soldier should remain mad he would be the most ruthless killer in the world.

The doughboy does not feel that he is underpaid, he feels that there are a lot of people overpaid. He envies the unjust glory and glamor that is heaped upon other arms while people look upon him as being an infantryman, that thing that people are because they can't do anything else. To him, the war does not represent parties in London, Paris, and Rome; the living in luxurious hotels, the seeing of traveling U. S. O. shows. To the doughboy the war represents mud, dirt, slime, cold, heat, hunger, blood.

The American people will never know what the doughboy experiences, regardless of the number of Ernie Pyles, because the average American has not experienced these things. If there were enough doughboys in the world, there would never be another war.

The Infantry always has been and always will be the queen of battles—the unsung heroes of the war.

Punishment of War Criminals

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a radio address which I delivered on the program Congressional Record on the Air, broadcast over Station WHN, New York City, Monday, February 19, 1945:

The cancer of Fascism—which feeds on and destroys the good cells of the body politic—can be cured only by an operation to eliminate the roots of this modern plague.

Those roots are the power-mad men who scorn all concepts of civilized conduct, who revert to the beast in order to rob, beat, and murder their fellow men and fellow nations.

It is barbarism in modern dress and using modern techniques and as such it has fooled many well-meaning men who do not yet see its calculated plan to destroy all who stand in its way.

This present war is not a contest between military forces alone. It is an assault on civilization by those who scientifically plan to destroy the mind and spirit of man. Our enemies war on unarmed civilians as surely as they fight our soldiers. The Jews and the Poles in particular have been singled out for slow but certain extermination. This is biological warfare, where the enemy, in another generation, hopes to turn defeat into victory. To the Nazis, this war is but one phase of a permanent plan for eventual conquest. Even though they lose on the field of battle, they plan to conquer in other ways. The deliberate undernourishment of children in the countries they have occupied; the separation of husbands from wives—these are methodical steps to weaken the people of neighboring countries so that they will be unable to resist future aggression.

This is the long-term policy. At times the Gestapo, impatient for results, staged carnivals of mass murder. The world knows of Lublin and Lidice. It does not know of the millions of people, not soldiers, who have been systematically slaughtered.

The American people, far removed from the scenes of these wholesale crimes, find it hard to believe them. Therein lies the danger that the easy-going American people may let these crimes go unpunished. It is upon this complacency that our enemies rely, hoping to escape the indictment by an outraged humanity—hoping for a breathing spell during which they may prepare to strike again.

You want evidence? Pay attention then to the statement made by Gen. Otto von Stuelpnagel, the military governor of Paris, as quoted in the New York Times, March 12, 1944:

"What does a provisional defeat matter to us if we have been able to destroy so much manpower and material in neighboring countries that we have obtained an economic and numerical superiority greater than before 1939? The conquest of the world will require numerous stages, but the essential is that the end of each stage brings us an economic and industrial potential greater than that of our enemies. With the war booty we have accumulated, the enfeebling of two generations of the manpower of our neighbors, and the destruction of their industry, we shall be better placed to conquer 25 years from now than we were in 1939."

Consider further the instructions issued to the War Academy in Berlin by Marshal von Rundstedt, currently commanding the German troops who are fighting our men in the Siegfried line;

"The destruction of neighboring peoples and their riches is indispensable to our victory. One of the great mistakes of 1918 was to spare the civil life of the enemy countries, for it is necessary for us Germans to be at least double the number of peoples in contiguous countries. We are therefore obliged to destroy at least a third of their inhabitants. The only means is organized underfeeding, which in this case is better than machine guns."

This is the enemy we must deal with; the implacable foe of every human decency who will continue in his crimes until we bring him to justice and make him realize once and for all that crime does not pay.

It is not that we charge the Axis war criminals with personal responsibility for the 20,000,000 casualties caused by their cruelty and greed. We cannot hope for restitution of the billions which they have stolen or expect them to rebuild the vast areas they have destroyed. As in past times these are apt to be charged off to the general crime of war in itself, for which mankind has found no solution.

We hold them responsible however for the millions of men, women, and children guilty of no offense except that they were not wanted, who have been deliberately murdered in death factories. We recoil in horror to think that fellowmen could be capable of such atrocities. We carry the heavy burden of shame until justice has been done. If we permit them to escape we shall become accessories after the fact. Our common dignity as men must be redeemed by the punishment of these evil-doers.

I could bring to your attention the well-documented evidence of the terrible persecution of the Polish Jews, but the record is too shocking to reveal over the radio. Never in the history of mankind, even in the days before religion and reason, has anything occurred to match the brutality that was inflicted on the Jewish population of Poland. Even with the evidence at hand, it is impossible for the human mind and spirit to realize and feel the full meaning of this crime. It is too vast, too cruel, for contemplation.

Even those men of good will who saw it happen cannot fully understand it. For they are alive, but the victims suffered and died.

All this happened to other people in other lands, but recently we saw it happen on a small scale to our own relatives and friends. The German armies on the western front, under the command of the same cynical Von Rundstedt, who counseled the scientific extermination of innocent civilians, tried a last, desperate counter-offensive. In the course of that drive some of our American soldiers were captured. One hundred and fifty of them, being herded back to the German rear, were stopped in an open field and told to raise their hands. German armored units ringed the defenseless prisoners and gleefully mowed them down with machine-gun fire.

Even war has a few rules, but the enemy could not even abide by them. He did not attempt to hide his crime or to minimize it. A few days later a German spokesman asserted boldly that they had a right to do anything and everything to gain their ends. To the perverted mentality of the enemy, a criminal can do no wrong. This is but a sample of the enemy we are fighting. This is the leadership that must answer for its crimes.

The hour of retribution is near. When the enemy is defeated in the field, the Allies will set up a temporary military government. One of the first steps must be the quick round-up, trial, and punishment of war criminals. Our Government has been compiling an atrocity list of gestapo men, SS troops, and other German agents charged with perpetrating crimes against the peoples of the conquered countries. Russia and Great Britain are compiling their own lists. Swift and pitiless action against the war criminals is necessary to convince the German people that their leaders can no longer escape the responsibility, not only for starting wars but for making murder of civilians an instrument of national policy. The German people have proved themselves incapable of assuming this responsibility. In fact, by their tacit consent to, and their active support of this criminal leadership, they too are morally responsible. There is no underground, no active minority in Germany which can be depended upon to clean house. The Allies must do the job without compromise or delay. Every German official responsible for the torture and slaughter of civilians, ranging from Hitler, Goebbels, Goering, Himmler, and all down the line of executioners, must be brought to immediate trial. Even German Army generals who permitted war crimes in occupied territories under their command must answer before the bar of world justice.

In our society, when one man unlawfully, and with malice aforethought, takes another human life, he is punished by death or long imprisonment. He pays a forfeit for the wrong he has done to another. He becomes an example, a warning to others who might be tempted to break the laws of God and violate the sacredness of human personality.

That same divine law applies to nations as well as individuals. That nation which, unlawfully, and with malice aforethought, takes the lives of its own or neighboring peoples, or tortures them, must be held responsible, through its leaders, for these crimes. The defendants, Nazi Germany, Fascist Italy, and Imperialist Japan are indicted by the community of nations not for one crime but for millions. The evidence already in is overwhelming, and there is much more to follow.

The peace and safety of this world cannot and will not endure the ravaging hands of outlaw nations. There is no place in modern society for the law of the jungle. Those spiritually bankrupt men and nations who revert to brutality must answer to their fellow men. The battered bodies and broken minds of the victims of Fascist terror—modern martyrs to the dignity of the human spirit—must ever remind us that we are their only hope of vindication. Through us, the wrong that has been done to them must be righted.

There is no forgiveness except through repentance. It is idle, however, to expect repentance from Fascist bullies who, in murdering so many millions of human beings, have brutalized their own minds and hearts beyond any possible redemption.

There is one law and only one law that they can possibly understand—that they shall pay, in person, for the outrages they have inflicted upon so many. Whatever price they pay will fall so far short of the fearful debt they owe to a shocked humanity. Inadequate though it is, the price must be paid. So that our own conscience may be satisfied, we must be unrelenting in the punishment of Axis war criminals. It is our solemn responsibility to write this page of justice for history so that generations to come, reading it, will be ever vigilant against the beast of tyranny that cloaks itself in the likeness of a man. And knowing it they will protect themselves from it before it can torture them, as it did to so many men, women, and children of our time.

As we read the lengthening casualty lists of the many young men on the threshold of life who are daily sacrificing their lives to beat down the Fascist menace, we must realize that it is up to us to finish the job they started.

The security of our American way of life must and will be preserved. With other men of good will we must work to establish a world system to preserve the peace. At the same time we cannot forget the lawless tyrants who brought mass misery to mankind in an outburst of sadism unequaled in history. Though defeated in war, these men and the vicious creed they foster will remain a constant source of infection unless we act soon, and swiftly, to eliminate it.

Plain justice sanctions the punishment of Axis war criminals. Our own safety and that of the whole civilized world demands it. Let not the ghost of appeasement rise up to mock the victims of Fascist brutality.

Together with our allies let us hold steadfast to our determination that: "He who lives by the sword shall die by the sword."

Radio Address of Lothrop Stoddard

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. REED of New York. Mr. Speaker, it has already been announced that the most powerful propaganda battery in the world will soon swing into action in support of every secret commitment made at the three-man conference at Yalta. This attempt to use such a propaganda agency at the expense of the taxpayer to blot from the minds of the citizens of this great Nation any attempt on their part to give careful and thoughtful consideration of the defective features of a new Crimean Charter surrounded by an emotional halo is to foster a most dangerous program of deception.

This so-called campaign of education to be financed by funds taken from the pockets of citizens through taxation is in and of itself a piece of totalitarian technique. It is not alone the use of the radio and moving picture that is to be used in an effort to magnify virtues in the so-called Crimean Charter, which do not exist, but these funds from lend-lease and other sources will be drawn upon to send a hoard of speakers to present only one side of the question at clubs and organizations throughout the country; prominent of course among those speakers will be those who have been indoctrinated with the philosophy, not of our country, but by all those countries which seek to drain from our resources and our taxpayers the last drop of blood and the pound of flesh before our own people can escape from the spell and delusion of this great propaganda drive.

There are some persons who are sufficiently objective and discriminating enough not to be caught in this whirlpool of foreign propaganda. I am glad to know that one commentator, Lothrop Stoddard, has had the courage to point out the dangers inherent in secret agreements, secretly arrived at by three men who have usurped the function of committing their people to things that must of necessity breed another war. Pursuant to a unanimous consent request obtained on Monday, February 19, 1945, I am extending a radio address delivered by Mr. Lothrop Stoddard on February 18, 1945:

The hectic tension which we have recently experienced, due to the sense of great events impending, has given place to keen realization of what has happened this week in the fields of both war and diplomacy. Last Monday a waiting world devoured the joint communiqué on the momentous conference at Yalta in the Crimea between Churchill, Roosevelt, and Stalin, while hardly had the text of that document been diligently scanned than our Navy announced the mass air bombing of Tokyo and coincident attacks on the island ladder leading to the very heart of Japan. I should greatly prefer to devote this broadcast to a discussion of those heartening events in the Pacific, with all that they may imply. However, I feel impelled to the less agreeable task of analyzing the Yalta communiqué, which strikes me much less favorably than it has most of my colleagues on the radio and in the press. I realize that I form part of a small dissenting minority to the chorus of praise which widely hails the Yalta pronouncement as the "Crimean Charter," the firm foundation for a new and better world. I sincerely wish I could see it that way, but the more I peruse the text, the more I am reminded of the biblical adage against expecting to gather grapes from thorns and figs from thistles. Since I realize that my attitude may disappoint many of my listeners, I will preface my own remarks by quoting the remarks of another dissenter who comes nearest to expressing my particular feelings on the subject. In his syndicated column in the Evening Star, David Lawrence has repeatedly discussed the Yalta Conference from several angles. His first reaction, published on Wednesday, the day after the announcement, reads: "Another 'Big Three' conference has been held and, again with a fanfare of publicity and with a new set of swashbuckling phrases, the same things that were said in Teheran are said over again. It remains to be seen if the members of the Big Three will again discard pledges and operate singly or whether this time a pledge of joint action means what it says."

In his column next day, Mr. Lawrence was still more forthright when he roundly stated: "American idealism has been defeated as conspicuously at the Crimea Conference as it was at Paris 26 years ago. The late President Wilson caught in a cycle of expedience,

made concession after concession to European statesmen who were grabbing territory and spoils of war, pinning his hopes on the League of Nations to correct the inequities of the Versailles Treaty. Then America refused to enter the League. Today all that President Roosevelt can hope for is that the United Nations organization may some day save something out of the wreckage of American ideals and hopes." And in his column on Thursday Mr. Lawrence enumerates a bill of particulars to which the American people are clearly entitled, reminding the President that the so-called "decisions" of the Big Three "are not decisions so far as the United States is concerned until the Senate approves. Certainly the official communiqué issued this week doesn't tell us much of the story or give us a hint as to the sequels that lie ahead for the United States."

The communiqué does, however, tell us enough to make it clear that the conference was effectively dominated by Joseph Stalin, who gets about everything he really wants in Europe, plus a veto right in the projected international organization which will render it impotent to oppose aggressive action of the major powers. So far as I can make out, the chief "concessions" made by the Russian dictator consist in the reiteration of certain slogans like "Atlantic Charter," "democracy," and "freedom," which may mean different things to different people—to be specific, whether you look up those terms in Webster's Unabridged or in a Russian dictionary.

Until more of the inside story of the Yalta Conference has been revealed we must remain uncertain as to its larger implications for America and the Orient. But we do have specific information as to what is meditated regarding Europe; and, on balance it is not reassuring. Yet, one thing stands out as of much more fundamental significance than specific items regarding Germany, Poland, or Yugoslavia. This is the striking fact that the post-war settlement of the European continent, in its historic sense of the region lying between the English Channel and the Rusisan border, is being shaped by three great powers none of which is European in the traditional meaning of the word. This is especially true of the United States and the Soviet Union, but it is likewise essentially true of Britain, the seat of a world-wide empire which, though situated within sight of the continent, has habitually held aloof from the continent, intervening chiefly as regulator and arbiter for its own particular ends.

Now this arrogation of extracontinental authority may be theoretically justified by the present condition of the Continent itself, which the Nazi madness has reduced to ruins and incipient chaos. Nevertheless, this virtual dictatorship of an alien triumvirate is already arousing resentment and apprehension in varying degrees among practically all the continental peoples who, it should be remembered, number in the aggregate more than 300,000,000. That is an immense human mass which, weakened and divided thought it momentarily is, cannot be long disregarded. Furthermore, its very sufferings and misfortunes tend to give it an almost abnormal sensitiveness to even fancied slights and affronts. Certainly, each item of a program of reconstruction decreed from without which does not square with strongly held principles and ideals is bound to produce deep repercussions, not only among the peoples immediately concerned, but also among continental Europeans as a whole. The upshot might well be the engendering of widespread revolutionary explosions even sooner than those which shattered the European settlement imposed by the concert of powers at the Congress of Vienna after the Napoleonic wars. And it should not be forgotten that we Americans will be pledged to uphold whatever European settlement we now endorse and partially guarantee by accepting the decisions of the Yalta Conference and becoming part of the international organization sketched out last summer at Dumbarton Oaks and slated for further elaboration shortly at San Francisco.

That is why we Americans should so closely scrutinize whatever has been agreed upon by the Big Three regarding Europe. The best publicized, though by no means the only item, is that of Poland. And the agreement on Poland is certainly an ominous portent, because it is a decision imposed against the passionate protest of those who undoubtedly represent the majority of the Polish people, to say nothing of the fact that it clearly violates the principles and ideals embodied in the Atlantic Charter. I am not going to discuss at this time the circumstances which may have impelled Roosevelt and Churchill to defer to Stalin's inflexible determination. It may well be that they were faced with the alternative either of acquiescence or splitting the camp of the United Nations wide open before the war against Germany has been won. This would constitute logical justification from the strictly American or British viewpoint. But that should not cause us to ignore the Polish viewpoint nor to minimize the ultimate price which may have to be paid in terms of international unrest and insecurity. Let us seek dispassionately to examine the Polish attitude and the logical consequences which flow therefrom.

First and foremost, we should understand that Poland's very existence depends upon the resolute upholding of certain ideals. Geographically, there is no reason for Poland. It occurs as an undifferentiated part of the vast plain which extends from the Urals to the North Sea, most of which is occupied by either the Russians or the Germans. To both those more numerous and powerful peoples the Poles are a standing irritant. Though christianized and civilized from the west, the Poles are refractory to Germanism by their widely different Slavic temperament and culture. But, though fellow Slavs, they are also refractory to Russianism with its Greek Orthodox background and its semi-Asiatic spirit and outlook. A century and a half ago, Germanism and Russianism combined to wipe Poland politically off the map, and did their best to destroy it as a nation. That effort was foiled by the indomitable obstinacy of the Poles, who rejected all compromise and insisted that historic Poland must be restored. At Versailles it was restored—by the western powers and in despite of both Germany and Russia. The Molotov-Ribbentrop agreement which immediately preceded the present war was designed to undo the Versailles restoration and to destroy Poland once more. Indeed, Mr. Molotov, who is still Stalin's Commisar for Foreign Affairs, frankly admitted this at the time.

Now what Stalin is aiming at, and what Churchill and Roosevelt tacitly agreed to at Yalta, is not merely the redrawing of the Russo-Polish boundary or even the setting up of a regime at Warsaw subservient to Moscow but, in the last analysis, a renunciation by the Poles themselves of the very principles on which the continued existence of their national life depends. As already indicated, the ultimate sanction for a nation without natural frontiers is the inviolability of its soil. If the Poles first consent to a lopping off of nearly half their territory and then cynically indemnify themselves by taking other territory to which they have no moral right, they logically reduce themselves to the status of a nomad folk which can be shoved hither and yon at the arbitrary desires of more powerful neighbors. As Mr. Mikolajczyk, himself, recently protested: "Poland is not a nation that can be trundled westward in a wheelbarrow."

Bearing all this in mind, we can understand why the leaders of the Polish Government-in-exile at London have refused to bow to the decision of the Yalta Conference. No matter how hopeless the present situation may be, and how grievous the personal consequences for themselves and their supporters, they are upholding the principle which has historically preserved their national life. If the Yalta formula is imposed, we may anticipate a resurgence of that irrepressible Polish question which, for 150 years before the Versailles restoration, gave European diplomacy a chronic headache. And that will not be the only migraine from which Europe may suffer. There is much in the Yugoslav decision announced at Yalta which suggests future trouble. Then there is the total silence concerning the Baltic States—Esthonia, Lithuania, and Latvia. That silence probably indicates that those little nations, to borrow the brutal German U-boat formula of the last war, are diplomatically spurlos versenkt—"sunk without trace." Yet the violation of principle involved in that sinking will haunt the peace settlement like a restless ghost and will tend to engender unrest and uncertainty in most unexpected quarters.

Those are only a few of the troublesome problems which should be weighed and studied by us Americans before we commit ourselves to the underwriting and perpetuation of a post-war European settlement wherein we must participate as an integral and major part of the new international order we have in mind.

U. S. O. Camp Shows Overseas

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks, I desire to include excerpts from a very informative address on the work of the U. S. O. Camp Shows, which was given by the vice president of that organization, Mr. Lawrence Phillips, in Chicago on February 5, 1945:

This is the story of a hundred million men; of your sons, your brothers, your husbands, your sweethearts; of men who have lost for a brief hour that deadly oppression of homesickness in the first strange weeks in a training camp; of men on the beaches of Normandy; under shell fire from Aachen; in the sandy wastes of Africa; in the hills of China; in the heat and pestilence of the islands in the Pacific; in the bitter cold of the tundra of Alaska; of men who have paused, for a brief time, to turn their thoughts backward to the things they have left behind and the things they hope to come back to. It is a story, ladies and gentlemen, of men made happy as they went into battle.

But it is a story, too, of those loyal Americans at home who have given their extra bit so that through their contributions the work of U. S. O.-Camp Shows might be carried to every corner of our far-flung battle fronts. And it is the story of the American actor, the little name and the big, from stage and screen and concert field. It is a story of which all may be proud, but let us remember with deep humility that whatever of time, of money, or of effort has been put forth to yield this record pales into insignificance beside the day-to-day sacrifice of the men who stand between us and the enemy across the world:

It is my purpose to lay before you three matters: first, what does U. S. O.-Camp Shows do overseas? secondly, what does it mean to the men overseas, in terms of what they have told us? and, third, brief comment on some of the problems which confront us.

As a background for what I am to say, you should know that since its organization on October 22, 1941, to December 31, 1944, USO-Camp Shows has given in the United States and overseas a grand total of 177,473 performances, to 99,748,843 men of the armed forces of the United States. The total today is more than 104,000,000. In the year that ended on December 31, last, it entertained a total of 53,166,000 servicemen—more than a million men a week—and of these 29,625,000 men were overseas and attended 57,250 performances given at every overseas base at which Americans were stationed.

In the United States, entertainment was given by means of four separate circuits: First, the Victory Circuit, visiting Army posts and camps and naval stations with a troop population of 1,500 or over at intervals of 4 weeks and by means of units numbering up to 20 players. This entertainment has consisted of vaudeville shows, concerts, legitimate plays, and band concerts. Second, the Blue Circuit, reaching activities numbering less than 1,500 men and consisting uniformly of small units of 5 people, playing at intervals of 3 weeks and capable of putting on a show indoors or out, on any kind of stage or none at all, before 15 men or 1,500. The Victory Circuit has been operated with 23 units, and the Blue Circuit from a high point of 47 units has been reduced, at the present time, to 32 units in line with the reduction in number of activities to be served.

The third circuit, the Hospital Circuit, appearing at Army and Navy general hospitals only during the year 1944, was serviced by 12 units of up to 18 people, which played at 79 general hospitals at intervals of 2 weeks. Instituted on March 13, the Hospital Circuit by the end of the year had given 5,444 performances in hospital auditoriums and wards to a total recorded number of 950,537 patients. In addition, Victory Circuit units have given 1,341 matinee performances in post or station hospitals to 351,000 patients. On January 15 of this year, the units on the Hospital Circuit were increased to 20 and the service extended to include regional hospitals, so that at the present time this circuit is reaching 164 Army and Navy hospitals throughout the country every 2 weeks.

The fourth circuit, namely, the Hospital Sketching Circuit, provides the service of skilled artists to sketch portraits of wounded servicemen in hospitals. The original of the portrait, with a negative and a positive photostat is sent, entirely without charge, to whomsoever the patient designates. Through the volunteer services of artists, who are paid only their actual living expenses while on tour, U. S. O. Camp Shows provided—between April 17 when the program was started and the end of the year—277 weeks of sketching service in Army and Navy general hospitals in this country. Eleven thousand nine hundred and fifty-three portrait sketches have been mailed to parents, friends, and relatives of wounded men during the period, and what this service has meant I can best convey to you by a letter which I will read to you later on in connection with the same service which was extended during the year to hospitals overseas.

In additional to these four circuits, delivering entertainment at regular intervals at designated points from coast to coast, 449 major screen, stage and radio personalities made personal appearances during the year in hospitals in the course of 192 independent tours under the sponsorship of the U. S. O. Camp Shows. These volunteer stars reached an audience in excess of 2,000,000 men.

Finally, 2,268 volunteer performances were provided at camps and stations, and on shipboard, by name bands, concert artists, and by special variety shows, to a recorded audience of 2,940,000 men. These volunteer shows are organized in the New York, Chicago, and Hollywood offices of U. S. O. Camp Shows, and I am glad of this opportunity to pay glowing tribute to what has been done by the Chicago committee of U. S. O. Camp Shows under the leadership of Mr. Hal Halperin. * * *

So effective has been the work carried on by the Chicago committee that it permits U. S. O. Camp Shows to eliminate visits by units of the hospital circuit to Chicago hospitals and to devote the days thus saved to further service to hospitals in remote areas * * *.

Let me turn, now, to what U. S. O. Camp Shows does overseas. * * *

Overseas, U. S. O. Camp Shows furnishes entertainment to the American soldier and sailor, wherever he may be, in accordance with the orders of the commanding general of the base to which its overseas units may be assigned. Overseas, U. S. O. Camp Shows performances have been given on air strips in China, on PT boats lashed together 10 miles off the shore of a Pacific Island, on a captured Japanese truck on Guadalcanal, in a Neissen hut in the Aleutians, in a ruined building within artillery fire of the German lines, and in the theaters of London, of Paris, of Rome, and of Naples.

In a directive issued from the Adjutant General's office under date of March 15, 1943, U. S. O. Camp Shows is designated, and I quote, "the sole agency for the procurement of professional theatrical talent in the United States for showing to troops overseas." Once the units have left the United States, the Army—and when the units are playing to men of the Navy, the Navy—exercises complete control over where the units will play and how often they will play. It is important to remember that U. S. O. Camp Shows does not, and cannot, designate where or how often its units play overseas.

During the year 1944, 1,390 entertainers, including stars of screen, stage, radio, and the concert stage, were sent overseas on 268 separate trips, lasting from 3 weeks to more than 6 months; 172 of these units, composed of 848 entertainers, were overseas at the close of the year. The Army has asked that we make available, during the year 1945, 1,500 entertainers to be at overseas bases at all times. Of the 268 units that were sent overseas during the period, 179 were variety or vaudeville units, 21 were concert units, 38 were legitimate play or musical-comedy units, 6 were all-Negro units, 11 were sports units, 2 were bands, and 11 were sketching artist units. * * *

No area in which American military or naval personnel is stationed was neglected.

I wish that I had the time to go over with you more of the letters we have received from enlisted men, from officers, and from chaplains overseas—from mothers and fathers, wives and sweethearts here at home. Like the letter from a father, who says, "I am writing in most grateful appreciation of the sketch of our son done on November 27 in England. Surely I can testify to the value of this project. The sketch was the last thing we ever received from our son. He died in a United States Army hospital in England on December 5, 1944. From the bottom of our hearts we thank the U. S. O. for the portrait—it will be a source of great comfort to us in the years that lie ahead." I would like to tell you more about the letter from the mother who heard from her son that he had seen a U. S. O. Camp Show and who asks us to help her in finding out what happened to him, writing, "If you cannot do this, at any rate I want to thank you for giving this boy a happy hour before he went to his post of duty on to his death." * * *

Here is a letter, written under a date line of October 31, 1944, in northern Burma to Dear Mom: "Last night for the first time in a long time the men here in northern Burma were satisfied. Satisfied to the extent that they 'hit the hay'—practically normal humans once more. * * * What caused this magic? The answer is found in just three letters—U. S. O.

"Through the medium of a traveling camp show—5 girls put laughter, memories, not to mention frustration, into the hearts of nearly 500 lonely G. I.'s—G. I.'s who haven't seen a beautiful American girl in 2 years, some cases longer. * * *

"The girls sang, danced, teased the boys—and made them like it. * * * It wasn't a Broadway musical; no famous names appeared on the marquee—and the orchestra was just a bunch of fellows who had gotten together for the occasion. But to these men who had suffered tortures from Mother Nature and the Japs—it was a miracle, a temporary Shangri La, where their cares and worries could be dispersed. No greater play or musical ever received such an ovation. A half hour after the performance the men were still sitting in the rain, still applauding. * * *"

From a far different part of the world, the Aleutian Islands, a letter dated January 5 of this year says: "Christmas Eve as we sat in church waiting for the services to begin the Chaplain stood before the congregation and said, 'Men we are waiting for a group of five girls from U. S. O. Unit, No. 368, and I'm sure that they will indeed add enjoyment to our services for this evening.'

"Indeed they did, too, for when the girls came on the stage and began to play, it seemed that a tenseness went out of the air and each man relaxed within himself, for here indeed was truly beautiful, smooth, restful music. As Miss MacNeill sang Ave Marie, accompanied by Miss Mitchell on the electric organ and Mrs. Chapman on the violin, every heart and mind was flooded with the warmth and tenderness of her soft, clear voice. * * *

"A personal word about the ladies. I had the opportunity to meet them myself and they were more than happy to talk to the enlisted men. Their friendly, wholesome personalities, their enthusiastic answers to questions, and their questions too, all added up to the typical American girl and, by gosh, Mister, that means a lot to us." * * *

And now, from Germany. Here is what a corporal in the infantry of the Ninety-fifth Division thought: "Your U. S. O. Troupe 23 put on a marvelous show under very adverse conditions in an ice-cold auditorium, and really came through with a bang-up job. Their show will not soon be forgotten here." * * *

Let there be no mistake about it, the men overseas want U. S. O. Camp Shows entertainment. Not every man likes every show, not every man wants vaudeville, or concert, or legitimate play; not every show that we send overseas is as good as we should like it to be, but every show that we send overseas is just as good as we can possibly make it, and in every show that goes overseas there is something that appeals to some men, and to the millions of men who we have served so far these shows, and I repeat, have brought with every hour of laughter and forgetfulness of hardships and danger and suffering, a memory of the things they have left behind and of the things they hope to come back to.

Now, let me turn to some of the problems that confront us, and that confront you * * * This is what I refer to—"We've been overseas for 6 months and we haven't seen a camp show yet." "Why aren't the shows bigger?" "Why aren't the shows better?" "Why don't U. S. O. Camp Shows entertainers act like soldiers, both the men and the girls?" "Your shows are indecent."

There are two reasons why the man may not have seen the show yet. The first is there are 6,000,000 Americans overseas and we have 840 American entertainers overseas. That's about one entertainer to every 7,000 men. * * * We hope shortly to have almost twice as many entertainers overseas as we have now, but it will never be possible to guarantee that any individual soldier will see U. S. O. Camp Shows' entertainment overseas at a given interval.

"Why aren't the shows bigger?" This is largely a matter of transportation but also one of money. Even if transportation for fighting units did not have to have priority over transportation for entertainment units, and even if large stages were everywhere available, the job even then of reaching as many men as possible would have to be done by small units both for financial reasons and because of a real lack of entertainers. * * *

"Why aren't the shows better?" U. S. O. Camp shows has in its employ at the present time approximately 1,400 entertainers. Within the limits of its budget it has employed the best entertainers available and willing to go overseas, or to work its one-night stands in this country. The problem is a difficult one, but carefully considered. That the quality of the shows is acceptable to the men overseas is attested by the fact that we are asked to double the number of entertainers now serving.

"Why don't U. S. O. Camp Shows' entertainers act like soldiers overseas? Well, let us keep in mind that no entertainer who has gone overseas has been drafted. Every one has chosen the hazards and the discomforts of overseas' service instead of security, the comfort and the greater pay here at home * * * They have done this without the physical training we give the soldier, and in all but one or two cases did it cheerfully, courageously, and well. Seven of them have died in this service to their country. The record of over 2,000 entertainers who have gone overseas since our overseas program began, is one of which the American actor may be proud.

Nevertheless, he is a civilian; not trained in Army discipline and by virtue of the qualities that make him an entertainer, an individualist. The record of the American girl of the theater who has gone overseas is second to none. We have every confidence that this group of over 1,000 young women has conducted itself as well as any other group of 1,000 American girls that might be chosen from any field of activity for overseas service. * * *

And now the question, which from time to time has been in the public press, of indecency. There have recently appeared articles implying that U. S. O. Camp Shows has knowingly and with intent produced and sent out indecent shows; that such has been done with the approval of a so-called Washington; and that the Army overseas cannot refuse to present these shows as delivered.

Ladies and gentlemen, in this there is no word of truth. * * *

Every entertainment unit of U. S. O. Camp Shows that moves overseas provides entertainment from a written script. This script is approved in the U. S. O. Camp Shows office and the entertainer to whom it applies is required to take an oath before a notary public that he or she will adhere to the script as written. We have in our files duplicate copies of the script of every overseas entertainer, which we will be glad to make available to anyone concerned for review as to the adequacy of our judgment in authorizing spoken material. * * *

Furthermore, every entertainer who goes overseas does so under Army orders and is at all times subject to the orders of the commanding general of the base to which he is assigned. The commanding general, either direct or through his deputies, is at all times in complete authority with respect to all or any part of the show as given within his jurisdiction. Entertainers have already been returned to the United States for violation of script without first reference to U. S. O. Camp Shows.

Perfection is not of this world, however, and we know that despite their oath entertainers have, from time to time, interpolated material or business not only unauthorized by directly contrary to their solemn undertaking. We know of no means of preventing an entertainer, in advance, from saying or doing something on the stage in violation of his oath. We do know that remedial action can be taken after he or she has done so, and this we have done and will do. * * *

A statistical analysis of complaints received shows that no complaints whatsoever had been received with respect to more than 98 percent of all the units sent on the road. U. S. O. Camp Shows has sponsored in excess of 177,000 performances during the past 3¼ years. The number of complaints in relation to number of performances is far less than one half of 1 percent . * * *

Many of our staff—Protestant, Catholic, and Jew, alike—have sons overseas and take pride in the high principles of service and moral conduct that are set forth in the Guide to the Foxhole Circuit which is used to instruct each of our entertainers. * * *

And that is the story, ladies and gentlemen—the story of 100,000,000 men—of the kid who laughed before he went into battle and to die; of the kid listening reverently to the songs of home; of the kid who smiled away the pain so that mom could have the sketch of him, cheerful forever; and of the entertainer to whom we say as he or she leaves:

"This is your duty and your heritage. For this work ask no plaudits—no eulogies. You are a soldier in grease paint, serving a free country and freedom-loving men. This service is the actors' imperishable memorial."

Win, Lose, or Draw

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Grantland Rice:

WIN, LOSE, OR DRAW

(By Grantland Rice)

FIGHTERS WONDER WHY STAR ATHLETES DON'T FIGHT

He had just got back from 18 months in the South Pacific, where he had been decorated by Admiral Nimitz and had more medals across his chest than John Philip Sousa ever wore. He was a young sailor with a keen, intelligent face, and seemed to know what it was all about. He had mixed with both the Army and the Marines and knew what they were thinking and talking about.

"I'll tell you our greatest kick," he said. "We understand about the IV-F's. That's all up to the Army and Navy medical boards—not up to those turned back. We like football and baseball especially and hope both games can be carried on. But what we don't like is the way they are using star athletes to win games or to give exhibitions. I can tell you that doesn't help our morale. I mean all these fighters, star football and baseball players held back from active war service. Understand, we know it isn't the players' fault.

"I'm talking about men who have been in the service for 2 years or longer, who still are playing on service football or service baseball teams or giving boxing exhibitions. We think that after they have finished their training they belong with us, carrying a rifle or using a machine gun. We need them with us when action starts.

"Most of these I hear about want to be with us. But they have to be where they are ordered to be."

NO INTEREST IN WHAT HAPPENS TO SERVICE TEAMS

"The fault goes higher up, and we all know it. We think this should be stopped. We haven't any interest in what happens to one of these service teams. They can win or lose and we don't care. We know it's all right for the various training centers to use the best talent available for their teams. But the time these star players remain on the team should be confined strictly to the length of their training period. But not beyond that spot. Maybe one season. We resent the discrimination they draw when they are held over just to win a few games. We know it isn't fair, either to them or to us. We need them with us, where it really counts.

"We also resent," the decorated sailor said, "such men as Joe Louis and Billy Conn and others being used for exhibitions back of the lines. We are not blaming Louis or Conn or anyone else. We are blaming those who take them away from the fighting front where they are needed.

"We get a big laugh in hearing about the morale on the home front. We can use a little morale, too, those who are fighting and dying. I'd like to have Joe Louis or Billy Conn alongside me in a tough fighting battle, where it's kill or get killed, live or die.

"Don't let anyone tell you Louis or Conn or the rest of them are helping the fighting man at the front in any way. I have an idea that Louis and Conn would like to be with us, doing their full share where it counts."

COULD USE TWO GOOD HEAVYWEIGHT FIGHTERS

"We sit around at times and talk about our two best heavyweight fighters, two men who would make great soldiers, giving exhibition boxing matches out of gunfire range. Why shouldn't they take the same chances we do, up in battle formation, up in the front lines, where it's live or die any second?

"Why should these and other fighting men and football stars be held in reserve month after month and even year after year, when clerks, country kids, filling station boys, young farmers and other non-athletes are up there with a gun, a grenade or a bayonet, or in an airplane giving their blood? We don't like this a bit and we know that after the war it will become a national scandal unless there is a quick change.

"A lot of us unathletic kids want these famous fighters and star athletes with us, not punching a bag or running for touchdowns 3,000 miles away. Or even 20 miles away. I'm just telling you how most of us feel about it. And we know it isn't the athletes' fault. It's the fault of their commanders or others higher up who apparently know nothing about true war morale, for many of these also haven't been shot at. Give these men rifles, machine guns and planes—and move them in with us. Up front where it counts."

This young decorated sailor happens to be one of the most intelligent combat men I've talked to. I agree with him 100 percent. I still feel that up to the last few weeks we have been fighting a 60 percent war against 100 percent for Germany and Japan. It has taken us over 2 years to wake up from a pleasant dream.

George Ephraim Sokolsky

EXTENSION OF REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. BALDWIN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on George Sokolsky from the National Catholic magazine the Sign for December 1944.

WHY I LIKE SOKOLSKY

(By James M. Gillis, C. S. P.)

I hope the editor will not accuse me of violating a confidence if I reveal the fact that he asked me to do an article for this series on a columnist whose pomps and works I renounced when I made my baptismal vows. Like the innocent maiden of old-fashioned melodrama, I cried, "Not that! Not that! Anything but that!" The editor being also a gentleman (rare combination but not unique) said, "Well then, take someone you like." So I said, "I'll take Sokolsky." Hence the title of this paper: "Why I Like Sokolsky.

I like him, first of all, because he seems to me so consistently and so remarkably right. Right and forthright. The two go together. Any newspaperman, competent enough to write for a national syndicate, has means of getting at the truth. The question is, Will he tell the truth when he has found it? He will, unless he has an ax to grind, a thesis to maintain at all costs, or an overlord to serve. As far as I can make out from some years of reading Sokolsky, he suffers no restraint from criticism and he is independent of external control.

In one of his columns he inveighs—vigorously as usual—against men who insult the intelligence of the American people by wantonly speaking what they do not know to be true, and, what is worse, what they do not believe; who say in public what they denounce in private; who mouth sentences with the object of gaining a following, who hurl phrases and speak slogans which upon analysis develop no greater thought than that contained in current popular songs. These tricks of the trade would obviously fail if the general public were shrewd and critical. But as Sokolsky says, "The people" [not all the people all the time, but too many people too much of the time], "prefer slogans to analysis of ideas, movements, and purposes. They will fight for a stereotyped phrase which defies definition. The moment one of these slogans meets a definition it collapses." What we should demand, therefore, he says, are "clear-cut statements, not headline material, captions, punch lines."

Such a demand for honesty in journalism and, I may add, in politics and diplomacy, is right down my alley. I have for years been crying aloud that the world might be saved by truth-telling. My favorite text of late, as far as national and international affairs are concerned is, "You shall know the truth, and the truth will make you free," or that of St. Ambrose, borrowed by Pope Leo XIII, "Tell the truth; God has no need of a lie." "We cannot build the Church upon the ruins of charity," said Pope Leo's successor, Pius X. Neither can we build the state—especially the world state—upon the ruins of honesty. Yet some politicians, high and low, try to do just that. Not that they have a grudge against the truth or a predelection for falsehood. They are broadminded enough to look with equal favor upon the one and the other. If truth will do the job better than a lie, they use the truth; if a lie will achieve the objective more quickly or more easily, they use the lie.

It is part of the job of a journalist to detect and to expose this pragmatism (some call it "realism"). Sokolsky seems to agree, because he devotes a fair proportion of his space to debunking and deflating. Such a job is not unworthy of any man. A supreme genius in the journalistic profession, Hilaire Belloc, did it consistently, explaining that in journalism as elsewhere we must tear down before we can begin to build. Belloc's running mate, G. K. Chesterton, also did a beautiful job of demolition, sometimes with delicate wit, sometimes with slashing humor and loud laughter. As a demolition and construction expert, Sokolsky is in the same category, if not in the same class, as the redoubtable Chester-belloc.

He works largely with two weapons—one Aristotelian, the other Socratic. Like the most rigorous Scholastic he demands definitions. Like Socrates, he punctures solemn pretense with pointed questions.

For example: He is discussing a phrase, "the middle way"—made familiar and popular by Marquis Childs' book on Sweden. "Middle," says Sokolsky, "implies two extremes." Before you can know the middle, you must know from what extremes the measurements are to be taken. If the extremes are indeterminate you might as well measure with a rubber band. So he asks, "Is it the middle between capitalism and communism? Shall capitalism go half way to meet communism? Is a reconciliation between the two possible, or advisable?" Karl Marx insisted that the world is not big enough to contain both capitalism and communism. Orthodox communism, except when it goes pragmatic, still holds that view. But since communism showed that it can fight (with arms, ammunition, food, and clothing provided by capitalism) it has become the fashion to say that capitalism and communism can arrange a modus vivendi together on this planet. Sokolsky has not fallen for that dangerous and treacherous notion. His intelligence will not let him, nor will his honesty.

If the middle way is not between communism and capitalism but between communism and the New Deal, Mr. Sokolsky asks, "Which New Deal?" He recalls the fact that Gen. Hugh Johnson always insisted that we specify New Deal 1, 2, or 3. "Were he alive today," says Sokolsky, "I wonder how many numbers he would have reached from Raymond Moley to Sidney Hillman." There is even a distinction, as Sokolsky reminds us, between the Hoover new deal and the Roosevelt new deal. "Hoover initiated the R. F. C. and the New Deal developed it." The Federal Reserve System, inaugurated by capitalists and originally operated by Wall Street bankers, has now become "a center of state power and its philosophy is clearly socialistic." So if one speaks of New Deal or R. F. C., Sokolsky asks, "Which New Deal? Which R. F. C.?"

I confess I like that sort of mental discipline. Unless we can persuade the people to analyze phrases and slogans, we shall perish of phrases and slogans. The continuance or the discontinuance of the essential character of the American Republic depends upon the answer to the questions: How far must democracy go to meet communism, and how far will communism come to meet democracy? Must we go most of the way, or all the way, while communism refuses to budge? Is it symbolic that Mr. Roosevelt and Mr. Churchill went to Moscow and to Teheran, while Stalin was too busy to come to Washington or to Quebec?

To take up another problem—winning the war. "Which war," Sokolsky asks, "have you in mind?" The war now in progress, or the war which will commence when this war is over? If we win this one and lose the other, shall we not lose this one? The big war still to come is between dictatorship and democracy. Fascism is gone. Nazi-ism is doomed. There will remain only one dictatorship. The war between democracy and that dictatorship may be ideological, or economic, or social, or military. But it will be tremendous. Those who don't see that fact, or who see it and don't say it, will in later years be known as appeasers or even as collaborators, when that occurs, Sokolsky will be in the clear.

This demand upon his part that the people give over their preference for phrases, slogans, catchwords, and other such tripe (he calls it cabbage) and develop a taste for precise thinking takes me back to my first year in the seminary when the professor of logic used to try to compel us to think. Sokolsky might be that professor with a larger class. The fact that millions of readers remain with him and welcome the logical discipline to which he submits them is reason for satisfaction and for hope. Sometimes when we are in a despondent mood, what with swooning and crooning in place of singing, jitterbugging in place of dancing, the "funnies" in place of the classics, peephole gents'-room journalism in place of Dana and Greeley, Godkin and Cobb, we are tempted to think that the people just don't want to think. But the fact that large numbers of them stand by Sokolsky helps to restore our confidence in the wisdom of the people and hence in the first principle of democracy.

Another reason I like Sokolsky is because I sympathize with him. As we have seen, he is fond of asking questions. But the painful fact is that he gets no answers. It reminds me of my own efforts. As far back as 25 years ago I made many attempts in public and in private to induce advocates and exponents of the League of Nations and the Covenant to answer just one question. I used to buttonhole them, poke my finger into their ribs—metaphorically at least—and say, "Tell me, what is the meaning of those words in article X: 'Undertake to guarantee as against external aggression the territorial integrity of members of the League'?" That phrase to me was a mass of words, a perfect example of the sort of thing of which Sokolsky habitually complains; long words in place of short, abstract terms in place of concrete examples, round-aboutness in place of forthrightness. Here in New York City and perhaps elsewhere, when the war started and the black-out ordered, a sign appeared in shop windows, "Illumination is required to be extinguished before occupants depart from these premises." Why didn't they say, "Put out the lights before you go home"? Similarly, why didn't the author of article X say simply, "If one member of the League invades the territory of another member, all other members shall make war upon the invader"?

As it turned out, uncertainty or dishonesty about the meaning of article X was responsible for our present tragic predicament in Asia. Now, in 1944 I find Mr. Sokolsky asking questions as we did in 1920, and with apparently no better luck in getting answers. So, as I say, I sympathize with him.

In the business of putting public men on the spot by asking questions, Mr. Sokolsky shows commendable impartiality. He was a Dewey man, yet he demanded of his candidate a definition of a phrase which Dewey had appropriated—"military alliance." Sokolsky could have excused himself from that unwelcome duty on the ground that the Democrats also favored a continuing military alliance after the war, and that the scales of popularity were before the election heavily tipped against Dewey and toward Roosevelt. But in his habitual demand for clarity of utterance, he played no favorites. "'A political agreement,' he explains, "may be good; its purpose is to prevent war. But

a military alliance is a design for making war and has always been a precursor of war. So, Mr. Dewey, why do you advocate a military alliance?" Of course, he got no answer. You never do. He concluded, therefore, that Mr. Dewey, like so many others who snap up a popular phrase, had not seen its implications and couldn't have meant what he said.

Neither can we get an answer to our question as to the meaning of "aggressor nation," or "international cooperation," or "policing Europe," or that weasel phrase in the Atlantic Charter, "The signatories seek no aggrandizement, territorial or other." "Do not seek"? Why not say "will not accept"? In this instance, however, loose thinking is not the explanation. That phrase, like the other, "with due respect for their existing obligations," was inserted with malice prepense, as Mr. Churchill admitted in the House of Commons. Since we have in our governmental system no such instrumentality for extracting answers to legitimate questions from reluctant authorities, it may seem foolish of Sokolsky to keep on asking. But to ask a question and get no answer is often a means of imparting knowledge. Socrates used that method. And so does Sokolsky.

While the common run of columnists were mouthing pious platitudes or composing minor rhapsodies about the Dumbarton Oaks Conference, Mr. Sokolsky, with characteristic frankness, called it "an amazing spectacle." He said: "Here is the amazing spectacle at Dumbarton Oaks of the powers organizing a League of Nations to maintain the status quo, but nobody knows what the status quo is or even what it is going to be. * * * After World War No. 1, when the American people knew what trickeries had been perpetrated, they threw the whole treaty out and would have nothing to do with the League of Nations. The high strategy of Dumbarton Oaks is to get the United States into the League of Nations before it is possible to tell the American people what their obligations will be. Then when the people cry out loud against the shameful new boundaries of Europe or the suppression of national aspirations in Asia, they will be placed in the position of breaching a covenant, of breaking a treaty." Furthermore, "the Russians have to move out before the Chinese can move in because never the twain may be under the same roof. The Chinese are to confer de novo about something that has already been settled. Only Lewis Carroll could describe this wonderland adequately, Yes, Lewis Carroll or Niccolo Macchiavelli.

One more reason I like Sokolsky is that he continues to demand fair play for Poland. In the midst of a world that has run out on Poland, he stands by his guns and keeps firing away: "The Poles believe that at Teheran they were sold down the river. They are convinced that their national existence is not to be liberated but stifled. There may be some kind of a show-window independent Poland, but it will be forced to become a vassal state of Russia. Most Poles believe there is no hope left—not after Teheran."

Mr. Sokolsky also refuses to be blinded or bamboozled about Russia's intentions and actions in regard to Poland. Many columnists and others go around about Robin Hood's barn in search of reasons for believing that "after all," "in the circumstances," "things being now as they are," "in view of the danger of attack from the west," and so on and so forth, Russia's attitude may be justified. Those who talk that way either deceive or are being deceived. In a hundred years, or it may be in 20, or even in 10 or 5, the cowardice and treachery of the big democracies toward their small brothers will be recognized as ruinous to permanent peace. But at the moment the pack of columnists and commentators are running and yelping with politicians and world planners who tell us we must be realistic. Because Sokolsky, in a dozen or a score of columns on Russia and Poland, expresses his disgust for that sort of realism, I admire him.

Finally, I like Sokolsky because he is on our side in the matter of domestic and personal morality. In answer to a woman correspondent who charges him with being harsh toward unmarried mothers, he says: "Not the least ugly social manifestation of this generation is the condoning of breaches of family ties. We seem to have grown accustomed to all sorts of social horrors and, what is more, even the clergy, whose business is faith and morals, say nothing these days in condemnation of the lack of family responsibility. Yet, the family is the prime social unit of our society. Destroy the family and our civilization sinks into a swinishness beyond the imagination of the most depraved."

With the exception of the reference to clergymen who are renegade to their duty, and with a little toning down of the phraseology, Sokolsky's little sermon might have been lifted from a papal encyclical.

Just one more matter of morality, this time civic as well as sexual. He has a column headed "Sodom." In it he refers to an abomination that has been tolerated—as what has not?—in the theater. He says: "One of the most successful plays on Broadway at this very moment has, as its most funny sequence, a homosexual theme designed to wow the audience until it rolls in the aisles, as the saying goes. * * * And the audience roars with laughter. There is no resentment, no disgust, no retching. It is all taken for granted."

And he continues: "Every ancient civilization decayed and collapsed because of this particular rot. It is always the end of the greatness of national existence. It is evidence that national masculinity is being replaced by the substitution of the vulgarities of the brothel in place of the pristine virtues of the family. Foul becomes fair in such a climate, not only in morals but also in politics and economics. The world becomes bisexual; madmen master the day. Caligula is emperor and Nero fiddles while Rome burns."

I should not care to close this paper on Sokolsky with that unpleasant note. So let's borrow by way of conclusion this sentence of his on religion: "No fanaticism of any sect at any time in history is as foully fearful as the paganism which has become the stench of Europe and even assails our nostrils here in this country. It is a struggle between the God of Love and the gods of hate. It is a struggle between the shrewd materialism that the confusions of science without philosophy, of knowledge without truth, of facts without thought, have employed in the corruption of our manhood and womanhood—it is a struggle between that and the essential need for men to walk again in the image of God unafraid and without shame. It is curious perhaps that I, a layman, hard in the intricacies of life, engaged in the dissection of politics and economics and the motives of men, should be speaking of this. * * * But the peril is that our western civilization, the civilization of torah and crucifix, will be shattered because men have forgotten and have lost faith."

Obviously, this man, George Sokolsky, born 51 years ago, Jewish by race and religion, and I know not of what upbringing in philosophy, has an instinct for truth and right. If there were others in sufficient numbers who would speak out as boldly as he and with as holy a recklessness of personal consequences, we might still save all worth saving in America and in the world.

International Monetary Conference at Bretton Woods

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I include a statement made jointly by the Honorable ROBERT F. WAGNER and myself reporting that we have received information that more than 200 leading United States economists had joined in endorsing the proposals of the International Monetary and Financial Conference at Bretton Woods:

Senator ROBERT F. WAGNER, chairman of the Senate Committee on Banking and Currency, and Representative BRENT SPENCE, chairman of the House Committee on Banking and Currency, reported they have received information that more than 200 leading United States economists had joined in endorsing the international financial agreements reached at the Bretton Woods Conference and in urging their ratification by the Congress.

Senator WAGNER and Congressman SPENCE, both of whom were members of the United States delegation to the conference, said that support for the proposed international monetary fund and International Bank for Reconstruction and Development is being mobilized by a voluntary committee of 33 prominent members of the American Economic Association. The legislators said that they had been informed that the committee has received widespread support from authorities on international trade and 3 related fields. Of the approximately 250 replies to the economists' statement on Bretton Woods, 90 percent approve the statement. A poll of former presidents of the American Economic Association shows that 16 favor the economists' statement in support of the Bretton Woods program and 2 oppose it.

In a statement of its position the committee says:

"If the present proposals are not ratified by the leading countries of the world, the outlook for genuine international collaboration in the economic field and even for world peace would be indeed gloomy. It is therefore a matter of urgent necessity that full support be given to the agreements by all United Nations."

The major arguments set forth by the economists in urging approval of the Bretton Woods agreements are:

Although the monetary fund and the international bank do not provide a complete solution to the international economic problems, they will contribute substantially toward solving the exchange and investment problems, which are necessary if expanding international trade is to make its much needed contribution to the prosperity of the United States and of the world.

The experience of the inter-war period has demonstrated that neither the operation of the international gold standard nor the independent action of national governments will achieve workable exchange arrangements.

Conditions of foreign lending must be substantially improved if international investment is again to make its indispensable contribution to the prosperity of the world

economy on which, to a large degree, our own welfare depends.

The proposed monetary fund provides a program for avoiding competitive currency depreciation and related forms of economic warfare.

The proposed Bank for Reconstruction and Development aims at increasing security of international lending, not only through the bank's guaranty, but also by making the government of the borrowing country directly responsible to the bank.

Under the monetary fund, barring outright repudiation of debts by some debtor government, the risk of financial loss is very small.

The good will acquired by accepting the agreements, supported by the influence which the United States can legitimately exert through its large voting power in the fund and the bank, will be of great advantage in the settlement of other international issues.

Bretton Woods represents the first attempt of the United Nations to reach agreement on vital economic issues, and in view of the fact that over 40 governments are involved, and in view of the complexity of the problem the extensive concessions made by others to the United States at Bretton Woods, and the ill will we would incur by insisting on reservations, it is very doubtful whether another agreement could be reached.

Members of the economists' committee sponsoring the movement to enlist support for ratification of the agreements, and the institutions with which they are connected, are as follows:

Prof. James W. Angell (Columbia), Prof. John D. Black (Harvard), Prof. J. M. Clark (Columbia), Prof. J. B. Condliffe (California), Prof. J. Anton de Haas (Harvard), Prof. Howard S. Ellis (California), Prof. Paul T. Ellsworth (Wisconsin), Dr. J. K. Galbraith (Fortune magazine), President Harry D. Gidenose (Brooklyn), Prof. Frank D. Graham (Princeton), Dean Clare E. Griffin (Michigan), Prof. William Haber (Michigan), Prof. G. Haberler (Harvard), Prof. Seymour E. Harris (Harvard), Dr. Albert G. Hart (Committee on Economic Development), Dean Calvin B. Hoover (Duke), Prof. Frank H. Knight (Chicago), Prof. Wassily Leontief (Harvard), Prof. Fritz Machlup (Buffalo), Prof. Edward S. Mason (Harvard), Prof. Wesley C. Mitchell (Columbia), Prof. Mabel Newcomer (Vassar), Prof. Paul M. O'Leary (Cornell), Dean Howard H. Preston (Washington), Prof. Winfield Reifler (Princeton), Prof. Henry C. Simons (Chicago), Prof. Arthur Smithies (Michigan), Prof. Tipton R. Snavely (Virginia), Prof. Oliver M. W. Sprague (Harvard), Prof. Jacob Viner (Chicago), Prof. Charles R. Whittlesey (Pennsylvania), Prof. Clair Wilcox (Swarthmore), and Prof. John B. Woosley (North Carolina).

The texts of the letters and the recommendations sent to Senator WAGNER and to Congressman SPENCE by the Economists' Committee are as follows:

ECONOMISTS' COMMITTEE ON
THE BRETTON WOODS PROGRAM,

Cambridge, Mass., February 12, 1945.

DEAR SIR: I submit herewith a statement of 224 economists in support of the Bretton Woods program. This statement is sponsored by 33 economists listed on the attached sheet and is signed by those whose names will be sent to you later. This statement was also submitted to all living ex-presidents of the American Economic Association, nearly all of whom replied. Of the 18 who replied, 16 approved the statement and only two disapproved.

It may interest you to know that substantially more than one-half of the economists who were polled—all economists listed by the American Association as primarily interested in international economic relations and three related fields—replied to this poll. Approximately 90 percent of those who replied approved and 10 percent disapproved.

This shows a remarkable degree of unanimity among economists. Economists of all kinds—liberal and conservative, Democrats and Republicans, new dealers and anti-new dealers, young and old—seem to agree that revival of world trade is imperative and that the Bretton Woods program is the road to take toward more trade and a higher standard of living.

Sincerely yours,

SEYMOUR E. HARRIS,
Chairman.

RECOMMENDATIONS OF ECONOMISTS FOR UNITED STATES APPROVAL OF THE BRETTON WOODS MONETARY AGREEMENTS

We, the undersigned economists, urge the Congress to accept the Bretton Woods agreements providing for an International Monetary Fund and International Bank for Reconstruction and Development. Our main reasons follow:

1. If expanding international trade is to make its much needed contribution to the prosperity of the United States and of the world, exchange relations between currencies must be established on a stable and orderly basis and there must be a steady flow of international investment to increase the productive efficiency of the countries of the world. Action is, of course, required in other no less important fields such as trade barriers and commodities in world surplus. Although the monetary fund and the international bank do not furnish a complete solution to the international economic problems, they will contribute substantially toward solving the exchange and investment problems.

2. The experience of the interwar period has demonstrated that neither the operation of the international gold standard nor the independent action of national governments will achieve workable exchange arrangements. The nineteenth century gold standard is too inflexible to allow countries the independence of domestic action which they now demand; and the policy, so widely followed in the thirties, of disregarding international considerations in order to achieve freedom of action in the domestic sphere only served to contract international trade and, in the end, to make every country poorer.

3. In the field of investment, the last 25 years have shown the need for international action. While international investment did reach a substantial volume during the twenties, the investment was in many cases ill-advised; rates of interest were high and many countries resorted to borrowing in order to balance their international accounts without increasing their productive capacity. The collapse of the thirties brought repudiation, deflation or depreciation; and many borrowers and lenders resolved to eschew the dubious benefits of international investment in the future. Conditions of foreign lending must be substantially improved if international investment is again to make its indispensable contribution to the prosperity of the world economy on which, to a large degree, our own welfare depends.

4. The proposed monetary fund provides a program for avoiding competitive currency depreciation, the arbitrary and discriminatory control of foreign exchange available to pay for current imports, the freezing of funds due for current transactions, and related forms of economic warfare. This is in line with the fundamental United States trade policy of free enterprise with a minimum of administrative interference, discrimination, bilateralism, and international barter. The Bretton Woods agreements are essential to keep the door open for later application of this fundamental policy through international negotiations dealing with tariff discriminations, administrative protection, import quotas, cartels, raw material controls, and so forth. The clauses in the Bretton Woods agreements which permit limited devaluation, continued control of capital movements, rationing in emergencies of particular currencies officially declared to be scarce, and a gradual removal rather than abrupt termination of wartime currency and exchange controls are necessary modifications for reaching the fundamental objectives.

5. The proposed Bank for Reconstruction and Development aims at increasing security of international lending, not merely through the bank's guaranty, but by making the government of the borrowing country directly responsible to the bank. Since the bank rather than any particular government is made the direct representative of creditors, the debtor country's government can be called upon to take responsibility without loss of dignity or risk of conflict.

6. Under the monetary fund, barring outright repudiation of debts by some debtor government, the risk of financial loss is very small. Under the bank agreement, loans are to be safeguarded not only by the scrutiny of the bank but by authorizing each government to prevent its currency from being lent if it thinks the transaction dangerous; and under the guaranty, all losses are to be shared among all member countries in proportion to their subscriptions. The advantages of the agreements far outweigh the financial risk incurred by the United States.

7. The good will acquired by accepting the agreements, supported by the influence which the United States can legitimately exert through its large voting power in the fund and the bank, will be of great advantage in the settlement of other international issues.

8. Bretton Woods represents the first attempt of the United Nations to reach agreement on vital economic issues. The present drafts could undoubtedly be improved as regards details. But in view of the fact that over 40 governments are involved, and in view of the complexity of the problem, the extensive concessions made by others to the United States at Bretton Woods, and the ill will we would incur by insisting on reservations, it is very doubtful whether another agreement could be reached at all, or, if reached, whether in the end it would be a better one. If the present proposals were not ratified by the leading countries of the world, the outlook for genuine international collaboration in the economic field, and even for world peace, would be indeed gloomy. It is, therefore, a matter of urgent necessity that full support be given to the agreements by all United Nations.

Lt. Dennis Chavez, Jr.

REMARKS
OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. ANDERSON of New Mexico. Mr. Speaker, in the press of legislative debate during the past few days, I have refrained from taking the time of the House to mention a matter in which all the people of New Mexico take pride and which should be of interest to the Members of this House. It is the award to First Lt. Dennis Chavez, Jr., of the United States Marine Corps Reserve, of the Bronze Star medal. The citation reads as follows:

By cool and capable direction and personal leadership, Lieutenant Chavez and his platoon completely annihilated an attacking

enemy force three times superior in manpower and weapons.

His conduct, leadership, and courage throughout were outstanding and in keeping with the highest traditions of the United States naval service.

Lieutenant Chavez is the son of the junior United States Senator from New Mexico, the Honorable DENNIS CHAVEZ. Senator CHAVEZ was himself a member of this House for two terms, retiring from it voluntarily to become a candidate for the United States Senate. The son, Lieutenant Chavez, was born in my home city of Albuquerque on December 8, 1912; was reared in Albuquerque and was graduated from Albuquerque High School; received his A. B. and his LL. B. degrees from Georgetown University; was secretary to his father from 1938 to 1941; practiced law in Washington from 1941 to October 1942, when he enlisted with the marines as a private. He was sent to officers' candidate school at Quantico, Va., where he received his commission as a second lieutenant in January 1943. He then received advanced training at Camp Lejeune, New River, N. C., and was sent to the Southwest Pacific in July 1943 where he has been ever since.

The story of the exploits of the marines on Guam in those days of July 1944 when that island was recaptured has been reprinted in the CONGRESSIONAL RECORD of Tuesday, August 8, 1944, in an extension of the remarks of the Honorable CARL A. HATCH, senior Senator from our State. It tells in thrilling terms the experiences of this New Mexico boy who had charge of a party of 25 marines that destroyed 68 Japanese soldiers who sought to attack their position. The story took on additional interest due to the fact that the group commanded by Lieutenant Chavez, while a part of the headquarters and supply company, not ordinarily trained for the rough-and-tumble fighting of the Pacific Islands, had been in the thick of combat for months.

Members of the Senate had called to their attention the honor of the award of the Bronze Star Medal to Lieutenant Chavez through the medium of a statement made by a distinguished Senator from Kentucky, Mr. CHANDLER. I feel that the matter should not only come to the attention of the Members of the Senate, where this young man's father is serving, but to the House as well, because it was in the House of Representatives that Senator CHAVEZ started his public service as a Representative of the State of New Mexico in the National Congress.

Those of us who have seen Dennis, Junior, grow into manhood are delighted by this continuing evidence of his devotion to his country and his desire to serve in whatever field of opportunity there may lie before him. In behalf of New Mexicans, we are pleased by his heroism, and I extend to him our congratulations, our good wishes, and our prayers that when the conflict is over and the conquest of Japan has been completed, he may return to his family circle in good health and with still greater achievements to his credit.

Cactus Ordnance Works

REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. WORLEY. Mr. Speaker, in the CONGRESSIONAL RECORD of January 30, on page 605, the gentleman from Missouri [Mr. SHORT] made the statement that "they built one plant at Amarillo, Tex., which cost more than $30,000,000 and it never produced one single thing; and other plants costing millions of dollars have even been dismantled." I fully realize that it is humanly impossible for any one Congressman to be fully informed of the multiplied billions of dollars invested in war plants all over the country producing the sinews of war, and in this instance Mr. SHORT was grossly misinformed.

In the first place, there is no such plant at Amarillo. He later stated he meant the Cactus Ordnance Works in Moore County, which is nearly a hundred miles from Amarillo.

The War Department officially advises me that the Cactus Ordnance plant was built when the ammunition program was very high and it was built to manufacture ammonia for high explosives. Just before it went into operation the demands for this particular product were not as pressing as were the requirements for a certain type of high octane gasoline needed by the Army Air Corps. This necessitated a change in the plant and after its operation for approximately 1 year the Air Corps indicated that it no longer needed this particular type of gasoline ingredient. Since that time the demand for heavy artillery ammunition and other high explosives has increased, therefore the plant is now being reconverted for the manufacture of ammonia.

I am also in receipt of a copy of a letter to the gentleman from Missouri [Mr. SHORT] from Mr. Rex B. Baxter, executive vice president and general manager of the Amarillo Chamber of Commerce which follows:

FEBRUARY 14, 1945.

Hon. DEWEY SHORT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SHORT: In the Congressional Record dated January 30, on page 605, I read a statement made by you which is most revealing to those of us who live in Amarillo. In a statement to Congressman ENGEL you said: "They built one plant at Amarillo, Tex., which cost more than $30,000,000, and it never produced one single thing, and other plants costing millions of dollars have even been dismantled."

In order to keep the records straight I would like to point out that there never has been a plant built at Amarillo that cost as much as $30,000,000, and there has never been a plant built at Amarillo nor anywhere in the Panhandle area that has not produced war materials in abundance. In order to give you a detailed picture of the war plants in this area, may I list them for you, together with what they produce.

1. Pantex ordnance plant is located at Amarillo and has the finest record in loading bombs of any ordnance plant in the United States. The actual dollar cost and man-hours required at this plant are less than at any plant in the Nation. Also, they have the lowest absentee record of any plant, and, finally, the plant has been cited for its safety record by the National Safety Council. I might add that this plant has received the Army-Navy E award.

2. The Cactus ordnance plant, located a few miles north of Amarillo, was originally constructed to manufacture ammonia nitrate. About the time the plant was to go into production it was decided that the ammonia nitrate was not needed at that time. Immediately the Shell Petroleum Co. negotiated a contract with the ordnance and the plant was converted to manufacture a gasoline additive. I might point out that this has been one of the most valuable of all war products.

3. The Goodrich Rubber Co. has a synthetic-rubber plant at Borger, Tex., which has been in full production since the day of its completion and is now producing synthetic rubber at the rate of 60,000 tons per year—a very splendid contribution to the war effort.

4. The Phillips Petroleum Co. located at Borger increased the capacity of its plant in order to produce high-octane gasoline—one of the finest plants in the Nation and possibly the first to produce 100-octane aviation gasoline. The output of this plant alone has kept many of the vital air bases of the Southwest supplied with gasoline.

5. The second helium plant was located at Amarillo, just north of the Canadian River, and has been in full operation since the day of its completion. This plant, along with the original one located just west of Amarillo, supplies a large percent of all the helium produced in the world.

6. In this area the air forces have built plants at Dalhart, Pampa, Childress, and Amarillo, all of which have operated at near capacity since they were completed in 1942.

7. Finally, we have two prisoner-of-war camps located in the Panhandle, one at Hereford, Tex., and one at McLean, Tex.; and, Congressman, I judge from what I have read in the papers that we have had less prisoners to escape from these camps than in any other section. I really think that this record is due to the fine weather here in the Panhandle, and these prisoners just refuse to leave.

I realize that you are a tremendously busy man and that possibly the statement made by you is no direct indictment against Amarillo, but we are rather proud of our record in this war, and I felt sure that you would appreciate receiving this correct information from the chamber of commerce.

Very truly yours,

REX B. BAXTER,
Executive Vice President
and General Manager.

While I know the gentleman from Missouri [Mr. SHORT] intended no harm, it is my hope that future criticisms will first be checked for accuracy because much damage can be done by remarks, even though made in good faith, which are not backed up by facts.

We Need More Democracy, Not Less

REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. MASON. Mr. Speaker, Uncle Sam is having family troubles. His

family has become so large, and the affairs of the family have become so complicated and messed up, that some of his children—the new dealers—believe the cure for his troubles is to centralize all power in the Government at Washington. Many of his children, however, still believe in private initiative, our democratic form of government, and our American way of life. The latter group believe that most of our troubles have been caused because too much power already has been centralized in Washington under the New Deal. These would have the Congress recapture most of the powers that have been delegated, temporarily, to the President. They even place a check upon the powers of the Congress, or at least place some restrictions upon those powers.

I have sought to accomplish these objectives by introducing the following bills:

(a) A bill (H. R. 2276) to require the names of all Cabinet officers and department heads, whose appointment must now be approved by the Senate, to be submitted to the Senate for re-approval every 2 years. This would give the Senate a definite check upon, or veto power over, the actions and attitudes of the various heads of the executive departments. Under present law, when once confirmed by the Senate, only the President can remove them. Madame Perkins is an example.

(b) House Joint Resolution 88, proposing a constitutional amendment that would limit the power of Congress to tax, during peacetimes, by placing a ceiling of 25 percent upon Federal tax rates levied upon incomes, inheritances, and gift transfers.

The question facing Congress today is, Do we need more democracy or less democracy as a cure for our troubles?

The following article by David Lawrence gives his answer to this question and suggests a practical method for placing a check upon the executive department of our Federal Government:

[From the United States News of February 16, 1945]

HOW TO MAKE THE CABINET RESPONSIBLE TO THE PEOPLE

(By David Lawrence)

The trend toward autocratic government in the last decade or more has become unmistakable.

The executive branch, with its billions of dollars to spend or lend, has been operating virtually without check by the legislative branch.

Executive agencies, commissions, and boards have been granted wide powers to be used at their discretion with only vague phrases to describe the limits of authority.

The judiciary has cautioned in vain that legislative standards must be clearly prescribed and adhered to when power is delegated.

President Roosevelt himself, in an address in 1937, conceded that the powers granted the executive agencies under his administration were unprecedented and far-reaching and confessed that in the hands of a people's government these powers were safe, but some day in the hands of a reactionary administration these same powers could become shackles and chains.

The problem is not partisan. It is not particularly new. There is talk of streamlining Congress to do away with so many of its committees. There is a greater and more acute need. It is to make our whole system of government responsive to the will of the people—to give us in this age of mechanical miracles and invention a means of maintaining an efficient system of representative government in the midst of economic circumstances that have changed materially since the Constitution was written. Commerce is now national by judgment of the Supreme Court. Government is centralized.

CHECK ON EXECUTIVE AGENCIES

In other democracies the principle of a constant—in fact, overnight—check on the behavior of the executive and his appointees is well-established and works effectively.

But to accomplish such a reform would require an amendment to the Constitution—an admittedly difficult process.

There is a simpler and yet just as lawful a way to approximate this particular end-result—making representative government in America effective and asserting once more the system of checks and balances as between the three branches of government that our forefathers ordained.

It would require only a brief act of Congress. This should provide for a fixed tenure for Cabinet officers and executives of all other agencies that have been or may be created by Congress.

The term could be 1 year or 2, as Congress might prescribe. But there is much to be said in favor of a 1-year term for all those executive appointees who must now be confirmed by the Senate.

LET THE PEOPLE RULE

Such a law would provide us with a check at least once a year. This is not likely to be as effective as the check which the people have in Britain, Canada, Ireland, South Africa, Australia, and New Zealand, where a whole cabinet can be removed from office overnight by a majority vote of the legislative body or a new election held. But it is at least a start in the direction of what has come to be characterized as responsible government because the responsibility for government action can be fixed where it belongs by the people.

The essence of democracy is that the people shall rule, that no instrument of government shall be the master of the people but its servant. There has been no more decisive slogan in all the history of politics in a democracy than "Let the people rule."

At present the people have no recourse against the arbitrary or wasteful action of a Cabinet officer or executive agency chairman except to vote every 4 years against the President or party seeking continuance in office. This is not adequate. In a Presidential campaign of 4 months, the issue of administrative efficiency can be lost in a maze of other issues. Other democracies which use the parliamentary form of government can make a single issue the basis for the ousting of a Cabinet or the holding of a general election. Under our system there is no way to get at single issues and separate them from each other.

But, it will be contended, the Congress still has the purse strings and can specify how its appropriations shall be used. It can repeal laws with their vague grants of authority and make such grants specific.

This is a good answer in theory, but in practice it is at best indirect and involves the withholding of funds for desirable purposes just to restrain an incompetent official. Actually the administrative side of government has become far more complex than ever before and will continue to grow even more complex in future years. It is impossible for a legislature of 531 Members to act as a board of operating executives. Delegated authority is an essential of modern government.

For a long while Congress thought to retain control of the new boards and commissions, because of their quasi-legislative and quasi-judicial character, by fixing the tenure and also by specifying the grounds of removal and by requiring representation from both political parties. These limitations proved futile.

Gradually our Presidents, Republican as well as Democratic, began to appoint men who were in sympathy with their policies irrespective of how they might have voted in previous elections. Party discipline has not been carried to such a point in America that the appointment of a Republican or Democrat to a bipartisan commission carries with it any subsequent responsibility to a political party or organization once the appointee is confirmed.

Nor is there any method today whereby the Senate which confirms an Executive appointee can be sure that after it holds hearings and obtains the views of the official, he will stick to such views in administering his post. Once he is confirmed, he is safe from a congressional check except through the doubtful process of impeachment, which involves malfeasance in office. There is no way for Congress to impeach an official for what it believes is stupidity, ineptitude, or inefficiency.

SENATE CANNOT REMOVE OFFICIALS

For while the Senate must advise and consent to a nomination, it has absolutely no powers of removal if the appointee fails to live up to the specifications given when confirmation was voted.

The only remedy now, therefore, is to specify a fixed tenure for every appointee and also to make that tenure brief so that the confirmation process will be frequent. Cabinet officers have served under President Roosevelt for 12 years and some will serve 16 years. Would each of these have won four terms if they had been required to submit their respective records to the people at the polls?

The last election showed that 22,000,000 voters did not approve of the Roosevelt administration. A majority of about 3,500,000 votes out of 49,000,000 kept the present administration in power. Actually it was a basic desire to maintain continuity in foreign policy and leadership in time of war that swung millions of Republican and Democratic votes to Mr. Roosevelt's side. But among those millions of Republicans, Democrats, and independents were many who did not approve of the domestic policies of Mr. Roosevelt and who today are disturbed by the platform Henry Wallace has proclaimed.

DOMESTIC POLICY PROTESTS

How can that protest on domestic issues be expressed by the people or their representatives? The Senate, by the power of confirmation, can reflect the will of the people. If Mr. Wallace is confirmed and does not continue to retain public confidence, he could be subjected to confirmation by the Senate a year hence and once a year thereafter. The people are asked to take a chance on Mr. Wallace. Why should not Mr. Wallace be asked to take a chance on the people's representatives in Congress? Being a liberal, he should welcome the opportunity, and he should also insist, as he has every logical reason to insist, that all other Cabinet officers and executive appointees who by law require the confirmation of the Senate, shall be treated likewise.

An amendment to any current appropriation bill or to the George bill can provide in less than 100 words that all Cabinet officers and heads of agencies created by Congress or the President shall be appointed to serve for 1 year only and be subject, if reappointed, to confirmation by the Senate.

This is a means of encouraging the people to exercise their constitutional prerogatives and a means also of insuring our democracy against the abuses of autocratic government which, if unchecked, can lead to misery for the people.

Henry A. Wallace

EXTENSION OF REMARKS
OF
HON. BENJAMIN J. RABIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. RABIN. Mr. Speaker, under leave to extend my remarks, I include a letter which I have written to the editor of the New York Times and the editorial to which it refers:

FEBRUARY 21, 1945.

EDITOR, NEW YORK TIMES,
New York City.

DEAR SIR: I read with a great deal of interest and pleasure your editorial entitled "Admiral Peary's Vision." With reference to his accomplishment—having been the first man to get to the North Pole—you say:

"He got there because he was at once a dreamer and a far-sighted planner."

At the end of the editorial you further properly say:

"In the peace to come the goals ahead must be explored by other men like Peary, dreamers who are also hard-headed planners, if we are to reach them with the least loss of time."

In the peace to come there will be many goals—goals we all seek to reach. We need men like Peary to lead the way so that we may reach those goals—men who are dreamers, who are hard-headed planners.

How appropriate this editorial is in the case of Henry A. Wallace. The chief objection to Mr. Wallace's appointment is that he is a dreamer. Isn't he the type of dreamer we need to lead us to those goals ahead? Yes; he may be a dreamer but also a far-sighted planner.

Let us not reject him because he is a dreamer. We need this kind of dreamer.

Very truly yours,

BENJAMIN J. RABIN.

[From the New York Times of February 20, 1945]

ADMIRAL PEARY'S VISION

Admiral Peary died 25 years ago today. Every schoolboy knows that he discovered the North Pole. But why he was the first man to get there is not so well remembered. He got there because he was at once a dreamer and a far-sighted planner.

In a sense the North Pole is only a geographical assumption, a combination of figures which add up to 90 degrees of latitude north. But for centuries men of imagination regarded it as the roof of the world, the end of the rainbow, the unattainable. All his life Robert Peary desired to stand on that spot. His plans developed only after years of self-training and exploratory testing. He finally reached his goal. When his team of dogs dragged his sled across the ice around the Pole it was the emptiest spot on earth. By the strange metamorphosis of the new world of international flight it may be among the busiest crossroads of traffic.

Admiral Peary lived to enter his new world and became one of its enthusiasts. Had the airplane been sufficiently perfected in 1909 he undoubtedly would have used it. He was one of the earliest leaders of the Aero Club and clearly foresaw the importance of aviation both in peace and war. During the First World War, as chairman of the Aerial Coast Patrol Commission, he worked out the basic plans of coast protection from the air which have been applied so effectively in the present conflict. In the peace to come the goals ahead must be explored by other men like Peary, dreamers who are also hard-headed planners, if we are to reach them with the least loss of time.

Secretary of War Henry L. Stimson's Statement on the Question of Shall War Equipment Be Abandoned in Europe

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. ENGEL of Michigan. Mr. Speaker, for some months past a report has been circulated that the War Department was considering or had adopted a policy that the bulk of the equipment of the American troops would be left in Europe at the conclusion of the European war and the European troops sent to the Pacific armed anew. On January 31, 1945, an Associated Press report appeared in the newspapers to the effect that the War Department had made such a decision. On February 15, 1945, I wrote the Secretary of War a letter asking him certain questions which concluded in part as follows:

I am frank to state that the extent to which I shall support the next War Department appropriation bill will depend in a large measure upon the question of whether or not you have adopted this policy and the adequacy of your reasons for adopting it, if you have.

I also stated in my letter that I expected to insert my letter to the Secretary of War in the CONGRESSIONAL RECORD and that I would be glad to insert his reply in the RECORD when received.

On February 16, 1945, I inserted in the Appendix of the RECORD the Associated Press article referred to together with my letter to Mr. Stimson.

On February 19, 1945, a representative of the War Department brought to my office a letter from Mr. Stimson denying that the War Department had adopted such a policy or had issued any release upon which it could have been based. His letter is self-explanatory and I am inserting it at the conclusion of my remarks.

In discussing this matter with the representative of the War Department, I asked him where the Associated Press reporter could have received a report such as that which was published and the facts upon which it was based. He replied, "He probably picked it up in some barbershop." Before I finished talking with him however, he stated that the language of the Associated Press report followed in part almost word for word the language contained in some secret statement or report that the War Department had, the description of which was rather indefinite. He stated, however, that this report taken in its entirety could in no way be construed to justify the statement made by the Associated Press reporter. All of which makes me wonder whether perchance the Associated Press reporter found that secret document in some barbershop among old copies of La Vie Parisienne, The Police Gazette or among other similar literature usually found in the country barbershops. I was, of course, not permitted to see the so-called secret statement or report. The important thing however is that the Secretary of War states in his letter that the War Department has adopted no such policy and that the War Department expects to transfer to the Pacific theater from Europe and from all inactive theaters the maximum equipment that can be utilized effectively in the war against Japan.

Mr. Speaker, under leave to extend my remarks, I include the following letter from Henry L. Stimson:

WAR DEPARTMENT,
Washington, D. C., February 19, 1945.

Hon. ALBERT J. ENGEL,
House of Representatives,
Washington, D. C.

DEAR MR. ENGEL: Your letter of February 15, 1945, is before me, and I can readily understand your concern over the press report to which you refer. However, investigation reveals no War Department release upon which it could have been based.

Further, I wish to assure you that the War Department contemplates making maximum use of all equipment which can be utilized effectively in the war against Japan, regardless of where the equipment is located. The expressed goal of present War Department policy is maximum transfer of equipment to the Pacific from Europe and from all inactive theaters. There is no War Department policy which contemplates a duplication of procurement.

The end of the European war will of course, find us with certain equipment and supplies on hand in Europe which, because of wear and tear or the very nature of the item, it would be ill-advised to ship to the Pacific and uneconomical to return to the United States. Such supplies must be disposed of as good judgment and common sense dictate.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

The Crimean Agreement

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Arizona Daily Star, Tucson, Ariz., February 14, 1945:

THE CRIMEAN AGREEMENT

The conference of Roosevelt, Stalin, and Churchill that has just been concluded in Crimea calls for a sharp distinction between the military and political plans. The agreement on military plans is reassuring and forecasts the early doom of German resistance. The agreement on certain political matters like the case of Poland comes as a shocking revelation whose effects are hidden by the emphasis on the war itself.

The Crimean agreement just negotiated by the Big Three calls for a repudiation of what has been the basic foreign policy of our country, a policy that has compelled us to go to war in both the Atlantic and the Pacific.

The repudiation of American foreign policy in the Crimean agreement is contained in the article that calls for the recognition

of the Curzon line as the eastern boundary of Poland. This line deprives Poland of a considerable area in the eastern part of her country and turns it over to Russia. Thus, against her will, Poland is called upon to sacrifice territory to a neighbor. It is in that act, not the mere amount of territory, where American foreign policy is torn to shreds before our eyes.

If the American people recognize that act, they recognize territorial seizure by force of arms. The very heart of American foreign policy has been its unrelenting opposition to seizure of territory by force of arms. We could have avoided war, for a while at least, in both the Atlantic and the Pacific by giving up that policy. Instead, we chose to stand by it and fight a great global war. Now on the verge of victory we welsh on it.

Worst of all, we do it in the case of the first country that dared to resist aggression from Hitler. And then to compound a felony, we agree to the mutilation of this country along a general line close to that set forth by Hitler in his agreement with Stalin in 1939.

Are we American people going to approve that act of President Roosevelt?

That question might be answered by asking ourselves if we are going to mark our entry into the area of world politics by committing a dishonorable act, by using American might and power to deny the very basis of the policy that has compelled us to go to war.

It is up to the Senate to let President Roosevelt know now, not a year later, that it will not permit the American name to be so dishonored.

Attack on Mikolajczyk

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of February 20, 1945:

ATTACK ON MIKOLAJCZYK

Pravda's attack on Stanislaw Mikolajczyk, former Premier in the Polish Government-in-exile, does nothing to reinforce the hope that the forthcoming political reorganization of Poland will follow truly democratic lines.

The Yalta declaration called for the recasting of the present Lublin regime on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad. This was taken as a hopeful indication that Poland, although forced to yield one-third of her territory to Russia, would retain a substantial measure of political independence. It is that assumption which suffers as a result of the Pravda article, assuming that the Communist publication was speaking in this instance for the Kremlin.

Of all the Poles abroad, Mikolajczyk, leader of the important Peasant Party, has been considered one of the most genuinely democratic. He accepted the decisions reached at Yalta as inevitable, but made what seems to have been the mistake of openly expressing his disappointment at the loss of Polish territory. For that Pravda blacklists him as an assumed adherent of Polish reactionaries who have placed themselves outside the ranks of the United States.

This seems to mean that Pravda at least will tolerate no one in the new Polish Government who is not wholly subservient to the Russian point of view. If that is also the position of the Soviet Government there is no reason to suppose that the new Poland will enjoy anything approaching political independence.

United States Rebuffed

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I submit a column by Mr. Ernest Lindley in this morning's Washington Post, which to my mind is a clear statement of present relations between France and the United States:

UNITED STATES REBUFFED—DE GAULLE'S GESTURE QUESTIONABLE

(By Ernest Lindley)

Several hundred thousand of America's best have died or been wounded in liberating France. Thousands more will be added to our casualty lists before France's enemy, Germany, has been finally beaten.

The United States is preparing to pledge itself to see that Germany is kept demilitarized. Such commitments already have been made by the President and, unless there is a sudden change in American opinion, they will be ratified overwhelmingly by Congress. This will mean that France will be rid of the German menace with which she is incapable of dealing alone. Within 70 years, Germany has defeated France once, nearly defeated her again in spite of the help given to her by Britain and Russia (and would have defeated her but for the United States) and, the third time, overran her and, without tremendous exertions by the United States, would have kept France permanently enslaved.

At present France is in serious economic straits. Her internal transport is in bad shape, her industries are grinding to a stop for lack of raw materials. France has sought and has been offered by the United States credits for internal reconstruction—credits in large amounts and on generous terms. The American proposals were handed to the French Government only 3 weeks ago. They involved $2,300,000 in credits. There could have been no more concrete manifestations of the desire of the United States Government to see France restored to full economic health—in fact, to attain a level of well-being beyond any in her previous history.

At Dumbarton Oaks, the United States joined with Britain, Russia, and China in providing that the Big Four should become the Big Five, by the inclusion of France as a permanent member of the proposed world security council.

At Yalta, the United States, Russia, and Britain made further specific arrangements for welcoming France as an equal partner. France cannot become an important power again without the aid of her more powerful friends. And, when fully restored, her strength will be, inevitably, less than that of the United States, of Russia, and probably of Britain.

The French Army is being rebuilt with American lend-lease weapons.

These are all proofs that France has friends and that, among them, the United States is second to none in the desire to see France restored.

Yet General De Gaulle rebuffs the President of the United States by declining an invitation to talk with him at Algiers. Various overlapping explanations appear in the reports from American correspondents in Paris: De Gaulle felt that France was slighted in not being asked to the Yalta Conference. He felt that if the President of the United States wished to see De Gaulle he should come to Paris. De Gaulle had not had time to digest the meaning of the provisions concerning the future role of France made at Yalta. He was tired of being "whistled up" on short notice. And with this appeared an astonishing intimation that the behavior of the United States toward De Gaulle was like Hitler's toward the governmental heads of Germany's small neighbors and satellites a few years ago.

This is what is described as a policy of prestige abroad. Within limits it may be useful in cementing De Gaulle's hold on the French people. But, significantly, his rebuff to the President of the United States was concealed from the French people and, at this writing, members of the provisional French Government were reported to be irritated and dismayed at the leak to the American press.

But whatever effect these tactics may have within France, someone should tell De Gaulle that they do not add to France's prestige abroad; that on the contrary, they are the surest way to throw away the good will which France needs and now has.

Violations of Money Provisions of the Constitution

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. LECOMPTE. Mr. Speaker, Page L. Hawthorne, of Creston, Iowa, a former State president of the Iowa Farmers Union, is a strong advocate of a sound money system and in a letter to the Iowa Union Farmer he contends that the violations of the money provisions of the Constitution are the cause of our economic distress. Under leave to extend my remarks in the CONGRESSIONAL RECORD, I include Mr. Hawthorne's letter, which was printed in the Union Farmer issue of February 10, 1945:

VIOLATIONS OF MONEY PROVISIONS OF CONSTITUTION CAUSE OF ECONOMIC DISTRESS

(By Page L. Hawthorne)

Honest sound money was provided for by the founders of this Nation. The Constitution is complete in placement of money-creating powers. The violations of the money provisions of the Constitution are the cause of our economic distress.

If this administration had set for the world a good example in the inauguration of a really sound money system, the people of the world would become so activated in constructive work as to abhor the interruptions of war. Many a war has been precipitated in order to divert the people's minds from the money question.

By taking the power and the unearned interest out of the money master's hands, the prime incentive to war is eliminated; we can then have peace on earth and the good will that springs from the cooperation toward a

common purpose, the ennoblement of the races.

Under the dishonest system we have today, we allow the Federal Reserve banks to issue their puny promise to pay for which the Government exchanges with them the taxpayers promise to pay and the people are charged interest on the bonds and also on the currency. Is it any wonder that the bankers who enjoy the power to create money spend millions of dollars upon false teaching and propaganda to prevent the American people from learning the gross dishonesty in the system now operated?

Under our present system, when the United States Government needs a million dollars, it issues bonds for that amount to the Federal Reserve bank. The Federal Reserve banks buy the million dollars in bonds. They can deposit these same bonds with the Government and receive a million dollars in new currency printed at a Bureau of Engraving and Printing owned and operated by the United States Government, while these banks use and loan this currency, they will also get interest on the bonds which they have deposited.

The interest on our national debt from 1932 to 1936 amounted to $3,615,600,000. This was paid to the international bankers for loaning the United States Government money to the United States Government; perhaps this is where Franklin D. Roosevelt and the New Dealers got the idea that we owe this to ourselves; someone is either dumb or dishonest—why don't they tell us the truth—that the United States Government owes this to the invisible United States Government?

It is an established fact that in 1934 Franklin D. Roosevelt and Morgenthau were given complete control of $2,000,000,000 in gold for 3 years and in 1937 a bill was rushed through Congress extending their authority 2 more years, there being no provision for any accounting; in fact the act stated "not subject to review by any officer of the United States."

Guess what became of this fund? It was called the stabilization fund at the request of our Executive; it was set aside to enable the Secretary of the Treasury to gamble in foreign securities, bonds, and money; we know that he flirted with the franc in France and the pound in England and got short-changed in both cases. Are entanglements of that kind likely to draw us into a foreign war?

Our Civil War was planned by bankers in London in 1857, one group of British bankers agreed to help finance the North and a bunch of Paris bankers agreed to finance the South. Their money paid for propaganda on both sides of the slavery question to inflame public opinion to a white heat. Their plan was to so weaken both North and South so they could plunder and exploit the whole country with a private central bank, patterned after the banks of Europe, and would have done so had it not been for the timely interference of Alexander II, of Russia, who knew and hated their ultimate objective.

London and Paris bankers had five European countries send troops into Mexico to worm into this country and assist the South. Alexander notified those five countries they could consider themselves at war with Russia the moment they landed troops on United States soil. His action enabled the North to win the war, and this became a united country again; this not only should be food for thought for every American citizen but should be an object lesson for every member of the Iowa Farmers Union, when a desperate effort is being made to divide and conquer or destroy their organization so they will become political puppets with a backbone like a banana.

This can't happen in Iowa if our State board will do the honorable thing and assist our State president in carrying out the mandate from the membership that was given at our State convention and the membership will awaken to their responsibility.

Let me quote the words of the Governor of the Federal Reserve Board, from page 399 of the hearing on Banking Act of 1935 of the Seventy-fourth Congress. "In purchasing offerings of Government bonds, the banking system as a whole creates new money or bank deposits. When the banks buy a billion dollars' worth of bonds as they are offered and you have to consider the banking system as a whole, as a unit the banks credit the deposit account of the Treasury with a billion dollars. They debit their Government bond account a billion dollars or they actually create by a bookkeeping entry a billion dollars."

This process can be repeated every time our bonded indebtedness increases. I wonder if anyone thinks that isn't inflation. Thank God there are some who are not content to be deceived with the hypodermic needle of doles and subsidies instead of removing the causes which create farm poverty. This system must be destroyed or a democratic form of government will give way to an autocracy ruled by a bureaucracy. Oh, if people could only realize that liberty, justice, and truth are the only things worth while, and if there be a reward beyond the grave only those who fight for this blessed trinity will be crowned with immortality.

Prior to our entering the foreign war the money changers were loading up on foreign stocks and bonds; one firm admitting it sold foreign securities in America amounting to $1,136,000,000; another firm sold $1,071,000,000, making a profit of $25,000,000 on the deal. Another sold $1,805,000,000, the total making over one-half of all the money in existence in the United States which had gone to foreign countries, mostly to Germany. One of the excuses made by one of the money changers before the Senate committee was that Germany should have it because of her inability to pay. If this policy is good for foreigners, why was it not good for farmers and American businessmen?

I wonder if it isn't time we were studying our lesson instead of depending on those at the top telling us what to do or think.

FEBRUARY 5, 1945.

But the President Cannot Do This Alone

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. DOYLE. Mr. Speaker, under leave heretofore granted me to extend my remarks in the RECORD, I submit a timely editorial recently appearing in the Long Beach Argus, Long Beach, Calif. Long Beach is the largest city in the great Eighteenth Congressional District of California, which I have the honor to represent in this distinguished legislative body. Mr. George Rochester, owner and publisher of this paper and the writer of this appropriate and powerful editorial, is also a member of the Long Beach Harbor Commission.

As this timely editorial speaks for itself in every word and phrase thereof, I only desire to call attention of this House to its general outline and import to wit:

First. It points to the probable fact of a definite victory for the Allies over Germany.

Second. It points to the conquering of Japan, as well as Germany.

Third. It stresses the fact that Franklin Delano Roosevelt as President of the United States has challenged great responsibilities on his shoulders, and that he, as President of this great democracy, will be confronted with great trials, duties, and obligations in representing this great Nation.

Fourth. The editorial reminds us that our President will have the challenge of standing out as a guiding light to bring about a cooperative understanding world for enduring world peace.

Fifth. Finally, Mr. Speaker, he urges this is no time for criticism or political bickering. How true this is.

This timely written editorial reminds us that the President cannot do this alone, that he must have the support, cooperation, and prayers of every American, in facing this tremendous job. The last paragraph is indicative of heartthrobs and humility of every thinking American, and Mr. Rochester, the editor, rightfully utters a prayer on bended knee for the homes and families of America, that God in his infinite way guide Mr. Roosevelt in this tremendous job.

Every conference of Messrs. Roosevelt, Stalin, and Churchill heretofore, fades into relative insignificance in the presence of the epochal, destiny-making conference of the Allied Nations now set for San Francisco, April 25. Mr. Speaker, certainly it will not be considered remiss for me, a native born of the great State of California and being a Member of the House from that great Eighteenth Congressional District of California, to remark that not only all people of California, but of the west coast, should be especially conscious and aware of the fact that this great conference of the Allied Nations on April 25 is being held on their shores and that there may come as a result of this conference an enduring peace for the world.

This fervent hope of every thinking heart and prayerful soul is expressed in Mr. Rochester's editorial when he reverently utters hope that God will guide our President:

A BIG JOB FOR OUR PRESIDENT

(By George Rochester)

Reports from every front these days seem to point to a victory for the Allies. That Germany will be conquered within a very short time now seems to be a fact agreed to by most all of us. That Japan is suffering tremendous losses would indicate that the war with that Nation will not last very many months.

But the winning of the war, the conquering of Japan and Germany, is not the big problem that confronts the world today. What after the war? What kind of a peace will we have? What kind of a settlement will we be able to make with those countries that will insure a permanent peace—a lasting peace? What will be done to give freedom to those countries which have lived all these years in almost what might be termed slavery? Will those countries continue to be governed by some larger and more powerful nation? Will they, too, be included when the settlement to make all peoples free is agreed upon? These are some of the questions that should be in the minds of every American today.

As President of these United States, it is going to fall upon the shoulders of Mr. Roosevelt to see to it that the terms of the four

freedoms are agreed to and made a part of this post-war settlement. Will he insist that these little countries are given their freedom—freedom to govern themselves as they desire? Will he insist that India be given her freedom? Will he insist that democracy in the true sense of the word—democracy as practiced in America—be a part of the settlement? We do not mean by this last statement that we should dictate the form of government or that these nations should adopt the same form of government as we have in America, but we do mean that these nations, so long under the dictatorship of some other country, be allowed to choose their own form of government, just so long as it is chosen by the majority of the people of these countries.

Immediately following World War No. 1 there appeared a statement by one Romani Rolland, addressed to the then President Woodrow Wilson, as follows:

"You alone, monsieur le president, among all those whose dreadful duty it is to guide the policy of the nations, you alone enjoy world-wide moral authority. You inspire universal confidence, answer the appeal of these passionate hopes. Take the hands which are stretched forth, help them to clasp one another. * * * Should this mediator fail to appear, the human masses, disarrayed and unbalanced, will almost inevitably break forth the excesses. The common people will welter in bloody chaos, while the parties of traditional order will fly to bloody reaction. * * * Heir of George Washington and Abraham Lincoln, take up the cause, not of a party, not of a single people, but of all! Summon the representatives of the peoples to the Congress of Mankind Preside over it with the full authority you hold in virtue of your lofty moral consciousness and in virtue of the great future of America. Speak, speak to all! The world hungers for a voice which will overleap the frontiers of nations and classes. Be the arbiter of the free peoples! Thus may the future hail you by the name of reconciler!"

Will President Roosevelt be able to carry out such a program as outlined above? Will he be able to cope with the diplomats and the rulers of the other nations? Will he be able to stand out as the guiding light to bring about such a program as is outlined above? Should he be able to bring about such a program and see to it that it is carried out, then he will go down in history as the greatest man of all times.

But the President cannot do this alone. He must have the support, the cooperation, the prayers of every American to make this dream of a perfect world come true. This is no time for criticism; this is no time for political bickering; this is no time for taking territorial rights from the weaker nations for the stronger ones.

May God in his infinite way guide Mr. Roosevelt in this tremendous job that he will face within a short time, is our wish.

To Wendell Willkie

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted I am including as an extension of my remarks a wonderfully well written sonnet dedicated to Wendell Willkie by Dr. Glen Levin Swiggett and never before printed or published.

As you know, Dr. Swiggett is one of the most able and distinguished men of the times in which we live. An eminent educator, Dr. Swiggett is widely known as a writer and lecturer in the field of comparative literature and on international topics.

His sonnet to Wendell Willkie follows:

TO WENDELL WILLKIE

(By Glen Levin Swiggett)

Brave rugged spirit! Marked by fate as old
As that of man! To have the vision, then
To die, alas, ere it comes true. But men
Like you have always sought to have and hold
A vision—Lincoln did; and of their mold,
Brave heart, all men shall recognize you when
You rightly are acclaimed first citizen
Of the one world whose coming you foretold.

Not yours, therefore, such death as in men's eyes
So often seems to close some futile life
Of vain presumptions, all so profitless;
But yours shall always serve to symbolize
The birth of a new world, with end to strife:
The vision you so bravely did profess.

About-Face on Polish Border

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Chicago Daily News of February 19, 1945:

ABOUT-FACE ON POLISH BORDER

(By David Lawrence)

WASHINGTON.—Is American public opinion fickle or is it that the people have short memories?

Five weeks ago—January 10 to be exact—Senator VANDENBERG, Republican, of Michigan, made a speech decrying the partition of Poland as it had been proposed by Prime Minister Churchill and urging instead that Germany be demilitarized by Britain, the United States and Russia, thus making unnecessary the buffer state security idea of Moscow.

Republicans and Democrats in the Senate applauded. The Nation applauded.

This past week it was announced that President Roosevelt had agreed at the Yalta conference to do the exact opposite of that which the Michigan Senator had urged. Again the Nation through the majority of the press applauded.

Now to cap the climax, President Roosevelt has asked Senator VANDENBERG to serve as a member of the delegation to the coming conference of the United Nations at San Francisco, where a peace organization is to be set up presumably to underwrite the very kind of thing against which Mr. VANDENBERG inveighed in his speech.

Where does this leave the Michigan Senator? Must he turn a somersault, too, reversing himself within 5 weeks and submitting himself to the rubber-stamp process of approving something which he already has disapproved?

Can Mr. VANDENBERG accept unless he is free to advocate at San Francisco the correction of the mistaken course which was insisted upon by Churchill and Stalin at Yalta?

Since the Atlantic Charter was supposed to have been reaffirmed at Yalta, there can therefore be no final settlement now of the Polish boundary question—eastern or western—by the Russian-created Lublin government or by the exiled government in London because the charter specifically says there shall be "no territorial changes which do not accord with the freely expressed wishes of the people concerned."

It is obvious from the foregoing that the San Francisco conference must revise the so-called settlement at Yalta if the new charter of the United Nations is to be ratified by the American Senate. Otherwise, as VANDENBERG himself said in his recent address, the American people would be asked "to put a blank check warrant behind a future status quo which is unknown to us and which we might be unwilling to defend."

The Michigan Senator made two other statements which it is not likely he will abandon. He said:

"We are standing by our guns with epic heroism. I know of no reason why we should not stand by our ideals * * *.

"I am not prepared to guarantee permanently the spoils of an unjust peace. It will not work."

It was to protect the territorial integrity of Poland that Britain entered the war in 1939 and it was the defense of Britain which ultimately involved America. Wars grow out of seemingly unimportant bits of territorial aggrandizement and the indifference of peoples to issues, capable of becoming festering sores.

Yalta Agreements Will Result in Third World War

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following English translation of a Polish language news release issued by me on February 19, 1945, to certain Polish language newspapers in the United States:

YALTA AGREEMENTS WILL RESULT IN THIRD WORLD WAR

The Crimea Conference certainly will not contribute to world peace—in fact, it will have the opposite effect. This present conflict was brought about by the invasion of the Republic of Poland on September 1, 1939, by Germany. At that time Hitler and Stalin were pals and Stalin came to Hitler's assistance to deliver the death blow on September 19, 1939. Stalin and Hitler celebrated the fall of Poland by dividing her territory in accordance with their respective spheres of influence. The Molotov-Ribbentrop boundary line of 1939 gave one-half of Poland and all of Lithuania, Latvia, and Estonia to Russia. Hitler, having received all the assistance he required of his puppet, Stalin, turned on him and invaded Russia. When the Germans were at the gates of Moscow and Stalin was making frantic pleas for help, he renounced his claims on all the territory he had seized as Hitler's partner. With the aid of American lend-lease Russia was able to push the Germans back, and just as soon as Stalin had firmly established himself on the offensive he reaffirmed the Molo-

tov-Ribbentrop boundary line and broke off relations with the London Polish Government.

The freedom-loving Poles have continued their resistance and have perfected an "underground" which has been the model for all smaller nations. Free people have never submitted to government by force, and the people of Poland and the other smaller nations of Europe are no exception. The "underground" of all these nations will continue to function as long as they are enslaved by governments by force. If the agreements of the Big Three at Teheran and Yalta are to be the yardstick by which we are to measure world peace, then I say there can be no peace because the enslavement of freedom-loving people will have its reaction and the world will suddenly awake to the fact that at Yalta the seeds were sown for a third world war, and the fathers and mothers of today will learn to their sorrow that the sacrifices of our valiant fighting men and women and the blood they have spilled on every battle front of the world has not brought us peace. Roosevelt and Churchill collaborated with Stalin in 1944 at Teheran and just recently at Yalta on the division of Poland as consummated by Stalin and Hitler in 1939. President Roosevelt has strayed a long ways from the American policy of nonrecognition of territorial aggrandizement by force and the four-nation declaration of November 1, 1943, which pledged our Government to liberation of all oppressed peoples and the establishment of international peace and security based on the sovereign equality of all peace-loving states.

We Need Henry Wallace

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1945

Mr. IZAC. Mr. Speaker, many of our constituents will have difficulty in understanding just what issues were involved in the passage last Friday of the bill S. 375, which had as its declared objective the withdrawal from the Commerce Department of all lending functions.

Under the Constitution the Senate of the United States must confirm appointments made by the President. Even in the choice of the members of his own Cabinet the President does not have a free hand. So when Mr. Wallace was named to the secretaryship of Commerce, it was necessary that the Senate either confirm the appointment or reject him. Apparently a counting of noses showed that a majority of the Members of the Senate would vote to confirm Mr. Wallace only if he were first shorn of the power to loan money; hence, the bill we disposed of Friday.

Now many of us voted for the bill because we know the worth of Henry Wallace, the good he has done, and we want him to continue to be identified with this administration. As long as men of honor and integrity such as Henry Wallace are associated together directing the energies of the New Deal for the good of the average man and woman, this Government is entitled to and will receive the support of its citizens. Mr. Wallace has endeared himself to the great rank and file of Americans not only because of his understanding of and sympathy with their aims, but because in his years of public service he has shown himself an able administrator whose chief characteristics are honesty and loyalty. And if I am any judge of human nature, the people love him because of the enemies he has made.

But I for one do not intend that my vote for this bill shall indicate that I am unwilling to have Henry Wallace handle the lending agencies of our Government. Far from it! It means simply that I am unwilling to have his energies lost to the people of our country. I feel he belongs in this administration and I feel safe in saying that the vast majority of the people of California feel as I do. Were it in our power, Henry Wallace would be given not only the Secretaryship of Commerce but the administration of the lending agencies as well. And our concern is not only for the success of the Roosevelt administration, but for the good of our country and the whole world. We recognize the critical period through which all nations are soon to pass in the transition from war to peace. And we want an honest man to deal with the problems affecting the men and women, the small businesses and the little enterprises on which the very stability of our country depends.

In a word, in voting for this bill we did so because it seemed to be the only way we could guarantee the continuance in public office of one of the great Americans of our day, Henry A. Wallace.

Is There a Fertilizer Trust?

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. LEMKE. Mr. Speaker, on January 29, 1945, I introduced H. R. 1823, a bill to regulate the registration, manufacture, labeling, and inspection of fertilizer and fertilizer materials shipped in interstate commerce.

The object of this bill is not to take away or interfere with State laws, but to assist in their enforcement. The purpose is to compel those who sell fertilizer in interstate commerce to let the public know just what they are selling.

It is not the object of this bill to interfere with legitimate interstate trade, but it is the object to protect the farmers of the various States from buying a pig in a poke.

That there has been abuse and that there is necessity for this legislation appears clearly in an article by William G. Holman, which reads:

When a Federal grand jury charges that collusion has existed between the fertilizer interests and State law-making and law-enforcement officials, the public will naturally be interested and want to know more about it.

Let the public know that the exploitation of the farmers has a direct bearing on the success of our war effort and on the rebuilding of a war-torn world, and the public will want to do something about it.

Prior to 1923, only one-third of the nitrogen in commercial fertilizers was derived from water-soluble sources and two-thirds from organic sources.

In 1924, the source tags on North Carolina fertilizer bags told the farmers that the methods of fertilizer manufacture had undergone a radical change. Two-thirds of the nitrogen was obtained from water-soluble sources, and only one-third from organic sources.

The bitter opposition of the farmers to this radical formula change inclined the manufacturers to put their heads together and secure the enactment of new fertilizer laws in the various States that would give the manufacturers greater latitude of choice, and the farmers less information as to the character, source, and proportions of the materials used in making the fertilizers.

A Federal grand jury in the District Court of the United States for the Middle District of North Carolina took note of this undue influence and indicted 102 fertilizer firms and individuals for having been in collusion with State legislatures and State law-enforcement officials. The defendants admitted their guilt and paid fines amounting to more than a quarter million dollars.

The new fertilizer laws enacted in several States give the farmers the following information:

1. The percentage of nitrate nitrogen and of water-insoluble nitrogen but not the source.

2. The source tags were removed from the fertilizer bags.

3. The nitrogen content of the fertilizer was increased 21 percent by law by cutting out the fractional units of nitrogen.

4. The manufacturers were not required to disclose the water-soluble nitrogen content of the fertilizer, an omission which permitted them to increase the water-soluble nitrogen content at will, without the knowledge of the farmers and to their great hurt and injury.

This radical formula change was profitable to the fertilizer manufacturers because one unit or 1 percent of water-soluble nitrogen costs them only one-third as much as they had to pay for 1 percent of organic nitrogen.

It lowered the cost of fertilizers to the manufacturers at least $3 per ton, but no reduction in price was made to the farmers; in other words, they had to pay $24,000,000 a year more for 8,000,000 tons of fertilizer than they should have paid.

The greatly reduced proportions of organic nitrogen forced the farmers to use at least 20 percent more fertilizer per acre in order to get the proper proportions of organic nitrogen to sustain and feed the crop to maturity.

Since the farmers' annual fertilizer bill amounts to not less than $200,000,000, this unnecessary 20-percent increase in the cost of fertilizers amounts to not less than $40,000,000 a year.

To prove the above statement, I quote from the Fertilizer Review (1944), published by the National Fertilizer Association. It says that during the period between 1930 and 1943, "The consumption of fertilizers increased 29 percent, and the farmers' fertilizer bill increased 19 percent, in spite of an acreage reduction of 8,500,000 acres."

The 21-percent increase in the nitrogen content of the fertilizer, and the disproportionate increase in the water-soluble nitrogen content, resulted in the growth of less profitable crops and in an extensive spread of destructive plant diseases: unheard of before this radical formula change was made.

Two eminent authorities have spoken of the harmful effects of too much nitrogen: particularly soluble nitrogen.

Lyon and Buckman, Cornell University, said that: "Of the three common fertilizer

elements, soluble nitrogen is the only one which, added in excess, will result in harmful effects on the crop." "It will," said they, "decrease resistance to disease."

Sir A. D. Hall, M. A., F. R. S., said that: "The association of high nitrogenous manuring with susceptibility to disease may be seen in all plants."

Thus we see the costly effects of this radical formula change. It forced the farmers to pay twenty-four plus forty or $64,000,000 a year more for fertilizer than was necessary. It resulted in the growth of less profitable crops, and in an extensive spread of destructive plant diseases—which caused the farmers to sustain losses far in excess of the $64,000,000 increase in the cost of crop production.

Another item of expense to the farmers is the unnecessary use of sand as a makeweight or filler. This costs them ten or twelve million dollars annually and should not be permitted.

The destruction of tobacco plants by blue mold and black shank is costing the farmers millions of dollars each year and is proving to be a serious threat to the tobacco growing industry.

My experiments with a special fertilizer mixture over a period of years have resulted in finding a way to give the tobacco plant such a healthy growth as to make it resistant to the attacks of plant diseases. Twenty-six of these experiments were successfully conducted in 1 year.

Dr. F. A. Wolf, Department of Botany, Duke University, said this in a recent letter to me: "Your idea that fertilizer is the key to the solution of the downy mildew (blue mold) problem is capable of resolution by experiment. Your evidence or proof indicates you are correct."

Dr. Earl H. Hall, Department of Biology, The Woman's College of the University of North Carolina, said that my theory "was physiologically as well as logically sound."

Dr. Ivey F. Lewis, Miller professor of biology, and dean of the University of Virginia, said this: "It is undoubtedly true that susceptibility to disease in plants is influenced by the physiological condition of the plants, and that this depends to a large extent on soil and fertilizer."

Fertilizer is the key to the solution of the downy mildew or blue mold problem which is costing the farmers millions of dollars annually, and Federal Government regulation of the manufacture and sale of commercial fertilizers is undoubtedly needed: (1) to protect the farmers from exploitation, (2) to reduce the cost of crop production $75,000,000 annually, and (3) to enable the farmers to grow better and more profitable crops.

Written reports sent to me by a Tennessee farmer, by Georgia's commissioner of agriculture, by North Carolina and Virginia county agents, and by Dr. F. A. Wolf, of Duke University, show that:

1. Blue mold destroyed tobacco plants at the rate of 50 percent in at least 200 beds entailing an estimated loss of $21,000 in this Greer's Chapel community. (Tennessee, July 3, 1943.)

2. Extreme cold and blue mold combined have destroyed most of the tobacco plants in the tobacco belt of Georgia. March 3, 1943.

3. "Blue mold is causing a shortage of plants in some sections and is delaying the planting of the crop in most cases from a week to 10 days." (Caswell County, N. C., May 26, 1943.)

4. "Blue mold has effected practically every plant bed in this section. It has delayed the planting of the crop 2 or 3 weeks." (Rockingham County, N. C., May 26, 1943.)

5. "Blue mold has done considerable damage and has delayed the planting of the crop around 10 days." (Halifax County, Va., May 27, 1943.)

6. "Downy mildew was quite destructive in North Carolina this season. Farmers in this area have just finished planting. The crop is at least 2 weeks late. How much reduction in yield this lateness will cause is a question, but it could easily amount to 50 to 100 dollars per acre." (Dr. F. A. Wolf, Duke University, July 5, 1944.)

Fifty dollars per acre reduction in yield would mean a loss to North Carolina farmers of approximately $25,000,000.

I have been informed that North Carolina planted 511,000 acres in tobacco in 1941. If the farmers prepared 25 square yards of plant beds for each acre of tobacco, which was the usual practice before blue mold put in its appearance, 12,775,000 square yards of plant beds were required for planting that crop. The cost of spraying this plant-bed yardage would have been $383,250, and the cost of fumigating it $766,500. These are the figures for only one State, and there are 12 or more of them that grow tobacco.

Federal court records show that collusion has existed between the fertilizer interests and State legislatures and State law-enforcement officials.

Does the evidence offered herein leave any room for doubt as to whether the fertilizer interests are exerting a sinister influence on the United States Department of Agriculture?

This is a matter that not only affects the welfare of millions of our citizens, it involves the honor and dignity of government itself.

It is, therefore, high time, in fact, long past time for a thorough investigation of a matter that means so much to so many of our citizens.

WILLIAM G. HOLMAN.

Summary of Our Present Economic Situation

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. WHITTINGTON. Mr. Speaker, my friend and neighbor, Mr. O. F. Bledsoe, of Greenwood, Miss., is one of the most successful cotton planters in the South and has devoted his time and talents not only to cotton production but to cotton marketing and to all other cotton problems. He is now and has been from its organization some 25 years ago president of the Staple Cotton Cooperative Association. This association is not only one of the oldest but is the most efficiently managed of all of the cotton cooperative associations.

Under leave to extend my remarks, I include the following address delivered by Mr. Bledsoe before the Lions Club of Greenwood, Miss., Friday, February 16, 1945, to wit:

The dictionary says that "economics is the science that treats of the development of material resources, or of the production, preservation, and distribution of wealth, and of the means and methods of living well, for the state, and of the family, and the individual." Therefore, you see that all of us are interested in the economic welfare of our country, whether we are producers of wealth, or processors, or transporters, or distributors, or render civic services.

Why are the Americas? Our forefathers came from the densely populated nations of the Old World. They were seeking land on which they could produce agricultural wealth. The Western Hemisphere provided the land, and it has always been and is still the greatest agricultural surplus producing area of this world. Its outlets for this agricultural surplus are the densely populated nations, and the process is the exchange of this surplus for manufactured goods.

When our Constitution was written, the United States was 90 percent agriculture and 10 percent industry, and now only 20 percent of our population is in agriculture, and we still are producing a great export surplus.

Domestic trade is the exchange of goods for the monetary units of the political subdivision, while export trade is the exchange of products both manufactured as well as raw materials. The cause of all wars is the disruption of this world trade as "armies move where trade ceases to flow."

What is the future of our surplus agricultural production? If our cotton crop is cut to domestic consumption would you prefer 5,000,000 bales at $100 per bale, or 10,000,000 bales at $50 per bale?

Competition in rayon is here to stay, based on whether rayon or cotton is best suited for the particular job. High grade rayon has proven that it is doing the best job in tires based on the mileage records. The equivalent of over 1,000,000 bales of wood rayons are now in production, and they have their place in our economy. Our domestic market for cotton has always been less than half of our production, notwithstanding that our per capita consumption is far the greatest in the world. The answer is foreign trade or cut our production of cotton to less than half. As to the cost of production of cotton, technological advancement will do the job by reducing the number of human labor-hours involved.

What will be the result if we cut our agricultural production to domestic consumption? An analysis of the economic system in the United States shows that our national income has continually been practically seven times what the farmers received for their crops. In the depression when our farm income went down to $5,000,000,000, our national income declined to $35,000,000,000, and last year when our farm income was $20,000,000,000 our national income went up to $140,000,000,000. Why is this? All of our wealth comes from the surface of the earth. Our inherent wealth in our mines, forests, and oil supply are being continually diminished. We obtain some wealth from our fisheries and a small amount comes from the mechanical fixation of nitrogen from the air. The great continuing supply of our wealth comes from agriculture. It is continuously used up and replaced. This great supply of agricultural wealth is practically two-thirds of all the natural wealth produced here in the United States. Therefore, it is the controlling factor in the amount of our national income. As our national income multiplies seven times the amount of natural wealth produced on the farm, it is interesting to note that in the case of cotton, our national income increases 14 times as the cotton farmer receives one-fourteenth for his share of the retail price.

With our war debt of over $300,000,000,000, it is necessary to have a large national income to service and retire this debt. Then I ask you the simple question, Should we reduce our agricultural production of wealth, or any other production of consumable wealth, if we hope to retire our national debt? With 52,000,000 workers now employed out of our population of about 137,000,000, can we hope to increase this employment to the proposed fifty-five to sixty million workers? Our Government has spent over $15,000,000,000 on new industrial plants for war production, and industry itself has

increased its plants by over $5,000,000,000. It would seem from this situation that both industry and agriculture are now geared up for surplus production. What is the answer to this surplus production when our domestic price structure is practically 100 percent above world prices and our tremendous war debt was contracted at this price level? If we cut our price structure in half, it will take twice as many units of wealth to service our war debt and twice as many to pay it off.

The only answer I can see is the Bankhead-Eastland bill, which provides for the rebate of import duties if the dollar exchange is used to purchase surplus agricultural products. Under this arrangement, all of our surplus agricultural products could be disposed of in foreign trade amounting to 1 to 2 percent of our national income, which is seven times our agricultural income. In this way we can maintain our agricultural production, on which our national income is dependent.

O. P. A. in the Territories

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio talk by Hon. Chester Bowles:

Mr. BOWLES. Hello everybody, many of you have received letters from men overseas. They often tell about the fantastic prices charged in some countries for the simplest food, the simplest articles of clothing. It's always kind of a shock to read about prices doubling, tripling, rising as much as 500 percent, as they have in some countries. Here at home where prices and rents are under control many of us tend to forget that everyone must constantly help keep them under control. Perhaps one of the reasons is that we never have had to cope with the grim problems of living close to the fighting fronts.

But there are about two and three-quarter million American civilians who have had to cope with those problems. They are the people of all United States Territories—Alaska, Hawaii, Puerto Rico, and the Virgin Islands. In those 4 Territories live 37 different races—all loyal Americans, living under the American flag.

So Congress asked O. P. A. to control prices and rents for the people in these United States Territories, as well as for Americans here.

In all the Territories O. P. A. encountered problems that were both unusual and unusually hard to solve. I've asked two guests to tell you about some of them. The first is our O. P. A. Administrator for the Territories, Mr. James P. Davis. He has to cover a lot of ground, and is about to leave again for Puerto Rico. The other is Miss Mary Gresham, who has charge of getting O. P. A. information on price and rent control and rationing to the people in the Territories. Mr. Davis, let's start with Alaska. What were O. P. A.'s big problems in controlling inflation up there?

Mr. DAVIS. Well, as you know, Mr. Bowles, Alaska was an actual war zone. When Japan started coming after us across the Aleutian Islands, Alaska was practically our front line. And it still is a vital war base. Even before Pearl Harbor things were booming.

Mr. BOWLES. The population jumped fast, didn't it?

Mr. DAVIS. It certainly did. Towns like Juneau, Anchorage, and Fairbanks doubled and tripled in population. Practically everything had to be shipped in from the States. Transportation costs were high. And the transportation problem in Alaska itself was even tougher. Some areas have to depend on plane or dog sled or river boat for their supplies.

Miss GRESHAM. Mr. Bowles, most people don't realize what huge areas there are in Alaska. Our O. P. A. office in Fairbanks alone covers an area the size of Texas. One of our men had to make an 800-mile trip by dog sled to check prices in isolated towns.

Mr. BOWLES. There must have been a lot of spending money around with all the defense workers and servicemen in military bases there. Did that make it hard to keep prices in line up in Alaska, Mr. Davis?

Mr. DAVIS. I'd say we've done pretty well, Mr. Bowles. Of course, prices in Alaska have always been high because of transportation difficulties. O. P. A. was esatblished there in May 1942. We have no comparative cost of living figures by which to measure our progress exactly. But we do know prices have been held down since we took over. Price control in Alaska now covers 2,000 items—practically everything except fresh vegetables, restaurants, recreation, and haircuts. It even includes reindeer steaks. Rent control is operating reasonably well for the protection of Alaskan tenants. Three hundred and sixty hotels and 6,037 houses are registered.

Mr. BOWLES. Miss Gresham, both you and Mr. Davis were up in Alaska recently. Do the people of Alaska support O. P. A.?

Miss GRESHAM. They certainly do. Everyone is anxious to do even more than his share. I think it's because they were so much closer to the actual fighting front. And many communities are so isolated they know that the whole success of price control depends almost entirely on themselves. And they pitch in to do a fine job of price and rent control. A Yukon River tribal chief said to one O. P. A. man. "Just tell us what Uncle Sam wants us to do for him." I'd say that's the attitude of practically everyone in Alaska.

Mr. BOWLES. Now how about price control out in our other Pacific Territory—Hawaii?

Mr. DAVIS. Well, out in Hawaii, Mr. Bowles, there was very much the same kind of inflationary situation as in Alaska—a huge military base, thousands of defense workers and military personnel crowding in—and a general shortage of supplies.

Mr. BOWLES. That's true. Skyrocketing prices at such a strategic base as Hawaii could mean real hardship and resentment for defense workers and service personnel as well as for the civilians.

Mr. DAVIS. As you know, Mr. Bowles, when the military government set up price control right after Pearl Harbor, O. P. A. advisers worked very closely with them. Then O. P. A. finally took over entirely just about 2 years ago. Rent control is in the hands of the local government, however. You know O. P. A. here in the United States has set quite a record of price and rent control for the Territories to live up to. We work hard to do as good a job.

Mr. BOWLES. In most respects we have done a good job here. Of course clothing prices did get away from us. The new clothing program O. P. A. has worked out with the War Production Board, however, is going to bring clothing prices down and get more low-priced clothing in the stores. But in spite of clothing price rises, reports from the Bureau of Labor show that the general level of all retail prices and rents has been held to a rise of little more than 1 percent in the past 19 months.

Our record of price control out in Hawaii has been about the same, hasn't it?

Mr. DAVIS. Yes, it has. Of course, most prices have always been relatively higher on Hawaii than in the United States. And they, like us here, experienced price rises in the early part of the war. In the past year and a half, however, the general level of all prices has held pretty stable under O. P. A. controls—just as it has here in the United States. Most prices on basic essentials out there have even gone down a little.

Mr. BOWLES. And that's in spite of really tough continuing pressures toward higher prices?

Mr. DAVIS. Yes. It's easy to see how stiff those pressures still are by looking at the prices of items not under O. P. A. controls. For example, recreation costs have shot up. Medical and personal care, like hair cuts and shaves, have also gone up quite a bit in this past year and a half.

Mr. GRESHAM. Some of the things on which we have had to set prices out in Hawaii would seem pretty strange to people here in the States. But they're things that are basic to the people out there.

Mr. BOWLES. What kind of things, for instances?

Mr. GRESHAM. Well, taro root is one of them. That is a potato-like root. They grind it into a paste called poi. Poi goes with almost every Hawaiian dish. We have ceiling prices on both the poi and the taro root itself.

Mr. DAVIS. You know, Mr. Bowles, on the last trip I made out there in Hawaii, what impressed me most was the tremendous enthusiasm and cooperation of local merchants and people in putting across O. P. A. price control. In Hawaii there is probably the biggest mixture of races and religions under the American flag. There are Chinese, Melanesians, Koreans, Filipinos, Portuguese, Japanese, as well as native Hawaiians. Many can't speak English. But they are some of the most active volunteers we have in O. P. A. Why, one O. P. A. price panel out in one of the islands has 35 volunteer price-panel assistants, who check prices in retail stores once every week. As a result, price compliance is extraordinarily good.

Miss GRESHAM. Just to bear that out, Mr. Bowles, the volunteers in the territories rank third of all the volunteers in any region in this country on the number of hours they give to working for price control and protecting their neighbors.

Mr. BOWLES. That's certainly a splendid record and a very real example of democracy in action!

Miss GRESHAM. You see the same kind of democratic action in Puerto Rico and the Virgin Islands, Mr. Bowles. I found it really inspiring. Many of the people of those islands are very low income farmers, with little opportunity for education. But in Puerto Rico alone there are some 5,600 O. P. A. volunteers, all local people. They give an enormous amount of time and enthusiasm to telling their own people what O. P. A. price control is and how it should be carried out.

Mr. BOWLES. What kind of problem with rising prices did you have down there in Puerto Rico and Virgin Islands?

Mr. DAVIS. Well, it was a pretty dangerous situation. Military bases were being built there. And the islands are almost totally dependent on foods shipped from the mainland here. A little over 2 years ago, when German submarines were sinking ship after ship in those Caribbean waters, even essential food supplies were threatened. Prices started to soar.

Miss GRESHAM. To make matters worse, the rural people down there spend almost 65 percent of their income for food. A price rise of a few cents often means the difference between starving and living.

Mr. DAVIS. We had to act pretty fast to hold down food prices. With the help of the War Food Administration and the Department of the Interior, we set fixed prices on rice, beans, codfish, lard, and so on. Those are the basic items in the diet of the people down there.

Miss GRESHAM. Here's just an example of what was happening. Rice had gone up in some black markets in Puerto Rico to 40 cents a pound. Now the O. P. A. has brought the price down to the ceiling of 8 cents.

Mr. BOWLES. What kind of record have we had in holding down all prices of living essentials in Puerto Rico and Virgin Islands?

Mr. DAVIS. Well, in the 2 years that O. P. A. controls have been in effect in Puerto Rico, the general level of prices has been held fairly steady. They've gone up less than 5 percent compared with a rise of 30 percent in the year and a half before O. P. A. came in.

Miss GRESHAM. Most of that increase has been due to higher costs of foods from here on the mainland, Mr. Bowles. Clothing and rent have actually dropped.

Mr. BOWLES. Do the stores and storekeepers down there comply with price ceilings pretty well?

Mr. DAVIS. Amazingly well. Price regulations are printed in Spanish as well as English so that everyone can understand. We don't have recent cost-of-living figures for the Virgin Islands. But the latest report showed prices have dropped under O. P. A. controls. And there has been almost 100 percent compliance there. In Puerto Rico, too, price compliance is generally good.

Miss GRESHAM. You see, Mr. Bowles, the people down there are just about 100 percent behind O. P. A. I've been to many of their outdoor O. P. A. meetings. Very few of the people there have radios, you know. So they come and bring benches and hurricane lamps to hear about O. P. A. in outdoor meetings. Once they even sat through a heavy tropical shower and made me sit through it, too, just to hear what the right O. P. A. ceiling prices are for the things they buy, and how they could help keep prices down.

Mr. BOWLES. There isn't any food rationing in any of the Territories, is there?

Mr. DAVIS. No. So little of our scarce foods is used that rationing hasn't been necessary. Occasionally in the Virgin Islands cornmeal is rationed. That's a very basic, important food down there, and when the boats don't come in we have to ration it temporarily until shipments arrive. We've been using the old war ration book No. 1.

Miss GRESHAM. There's rationing of gasoline, automobiles, and tires, of course, in most of the Territories. Bicycles, stoves, refrigerators, and even typewriters are rationed in Hawaii. Naturally all of the rationing is handled by the local O. P. A. boards, just as it is here.

Mr. BOWLES. I certainly want to thank you, Miss Gresham and Mr. Davis, for coming here.

I believe the story of what's been done by Americans in our outlying Territories is an outstanding example of how efficiently prices can be controlled when everybody pitches in.

Our country has been spared the suffering and the hardships of uncontrolled prices and uncontrolled scarcities. That has been true only because everyone here, too, regardless of race or religion, or color, or walk of life has pitched in to help the O. P. A. to do that big job.

But keeping prices and rents down is a constant battle for the O. P. A. and for all of us. Everyone must help all the time. I know that you will continue to help, to work together for your protection, for the protection of us all.

Good-bye to you all until next week.

How Free Is Our Press?

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article published in the St. Louis Globe-Democrat on Sunday, February 11, 1945:

HOW FREE IS OUR PRESS?

A frequent question is, Has the Federal Government in any way encroached on the constitutional guaranties of freedom of the press? Many things have been done by the New Deal to regiment and restrict the people and industry. Has Government control reached in any degree to the newspapers, upon which the people depend for information?

The membership of the American Society of Newspaper Editors was recently polled on this question. Replies were received from 154 members in 34 States. "No," answered 118; "Yes," answered 36.

An analysis of the vote, which came from editors representing various degrees of approval and disapproval of the New Deal, was interesting in that it disclosed a healthy fear that if actual encroachment has not yet been achieved by the administration, there is a dangerous trend in that direction. Many of those who voted an emphatic "No," appended the qualifying observation, "No, but—" or "Not yet."

The necessity for censorship during the war was admitted by all, and there has been unanimous compliance with its restrictions by the newspapers. Byron Price, chief of the censorship, bureau, has frequently complimented the fraternity on doing a good job under difficulties. The necessity for the successive cuts in newsprint is also taken for granted by the newspapers.

But many editors are not so certain that the administration does not look beyond this wartime structure, and wonder whether it has a program in mind for further restraints. The Government's monopoly suit against the Associated Press is generally regarded as an assault on freedom of the press. It is recalled that the N. R. A. in its early days sought to license the newspapers. It is also recalled that Attorney General Biddle once attempted to force a bill through Congress which would make it criminal to divulge anything on a departmental paper marked "confidential." The insidiousness of this bill was in the fact that it could have been possible for so much Government information to be marked "confidential" that there would be little left to publish.

Several editors described as a direct encroachment the ordering of union maintenance into contracts between publishers and the Newspaper Guild. This is enforced membership which, as stated by Frank R. Ahlgren, of the Memphis Commercial Appeal, had this result: "Freedom of the individual is restricted and stultified, managerial prerogatives usurped, and the median of performance driven to a common denominator which will be that of the least efficient."

Then, there is the growing practice of Government departments issuing their own hand-outs, slanted entirely for their benefit, and refusing other comment. This obviously stifles news at its source. A glaring instance of news stifling was in connection with the Pearl Harbor attack. Long after military needs required secrecy, newsmen were unable to obtain any factual information beyond the cryptic communiques issued by department heads who scrupulously said little. In fact, the full story of Pearl Harbor has never been told.

One editor made the pungent observation that although there is no visible encroachment on press freedom, the administration has consistently sought to undermine public confidence in the press. Freedom of expression has not been curtailed, but the President's persistent belittlement of the newspapers—except those which toady to him—has an erosive quality which cannot be ignored. At the same time the administration does not hesitate to use the press to advance its own programs. This it does by setting up its own public relations bureaus which are outright propaganda organizations. The war provides many excuses for the proselyting effort.

The questionnaire provokes another question. What is the constitutional guarantee of freedom of the press? Is the suppression of news for political or other reasons a violation of this guarantee? The war places limitations on publication which are technically a clear violation of press freedom but such restraints are willingly accepted by the editors as their patriotic duty. But there is a twilight area between what should be printed within the bounds of military secrecy and what is withheld from publication by department zealots who use the war as the excuse for withholding legitimate news, or color the news to fit their own interests.

It all adds up to a feeling among editors generally that although the Government has not yet encroached on sacred soil in an appreciable degree, there is no assurance that, given the opportunity, it will not do so. There are symptoms which cannot be ignored.

Vigilance must be the watchword, and the American Society of Newspaper Editors' poll indicates that the press is alerted to danger. The press is still free and must remain in that status. The hope of permanent peace rests in no small measure on a free press around the world.

Wanted: A United Nation

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a speech prepared for the fiftieth annual Lincoln Day dinner of the Republican Party of the State of Illinois at Chicago, Saturday, February 10, 1945:

It has long been our custom to assemble as Americans who follow the tradition of Abraham Lincoln, on the anniversary of the birth of that great leader. We do so to draw inspiration from his life and from his incalculable service to our Nation.

It is our custom further to extol his life, to review his beliefs, to rededicate ourselves to the theories of government which he expounded and exemplified.

It is our pleasure on these annual occasions to review and to admire the personal life of the man who met tragic death that a mighty Nation should go forward under one flag to a national and international glory unexcelled in the history of the world.

These tributes are the just due of a man who brought a sundered Nation to unity.

I do not believe we come here tonight as Republicans or partisans. I cannot believe that with the shadow which hangs over our Nation and the world we assemble here mere-

ly to make a verbal parade of the unique glories of Lincoln, and the subsequent services which we, under our party banner, have rendered to our Government.

I come to you tonight, therefore, not to talk party politics, but to discuss the more fundamental, the more enduring, the immensely more important problems of government.

Lincoln was plagued with political problems. He brushed them all aside to deal with the great and overpowering problem of the continuity of our constitutional government and the preservation of the unity of our people.

Now the time has come for us to brush aside the relatively minor political problem that confronts us—the problem which was set forth by one of our New Deal friends recently of who gets what and how and when.

We, as Americans, Republicans and Democrats alike, must get away, too, from that pervasive and insidious theory of political conduct which another New Dealer recently described as being to "spend and spend, tax and tax, elect and elect"; and another recent New Deal exposition of the theory of politics that of "keeping our friends in power."

These seem to be the political theories, schemes, and questions which are bothering many of our political minds today. They are the theories, schemes, and questions which Lincoln would not allow to distract him from the task of preserving the Government which our ancestors had built.

These are the political theories, schemes, and questions which have brought in their wake great distress in peacetime, which have compounded the inevitable suffering of wartime, and which threaten the total disruption of our American form of government when peace shall come again.

You will note that I have not mentioned the specific steps which our administration in recent years has taken to carry out the political practices which I have described in their own words. I shall do so, but first I want to place before you, so that it will run through your minds as I go on, the program of government set forth by Abraham Lincoln a few short weeks before his tragic death.

It was a program of government, not a program of politics. In every word, in every detail, both domestic and foreign, it is this program of government that the United States must follow.

Frequently heard in part, and ignored almost in toto, I give you the full paragraph of quotation:

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphans and do all which may achieve and cherish a just and a lasting peace among ourselves and with all nations."

This was the program of government laid down by Lincoln at his second inauguration. It is a program which encompasses a united Nation—a united people. It envisages those people carrying on their own affairs in a forthright and friendly fashion, with justice for all under the law. It is a program which foresees our Nation conducting itself with fairness and justice toward all other nations, and emerging afterward with those nations in a cooperative and peaceful spirit.

Here was a program of unity wrought out of the great disunity which had existed when Lincoln first took office. It must be remembered that secession had already taken place before Lincoln went from Illinois to Washington to take the oath of office. His task was to deal with a disunity already a fact—a disunity stirred up by radicals and crackpots and by those who sought war and who brought on war.

After that internecine war had been fought for years with bloodshed and terror, there were advanced proposals for a peace between the sections. Lincoln laid down in the conference at Hampton Roads only one overshadowing demand and that was a demand for a united Nation. With that denied, the war went on until its final conclusion which brought the unity which Lincoln knew was essential to our national existence.

Now we are engaged, and we have been engaged for years, and probably shall be for several more years, in a mighty war—the mightiest conflict of arms the world has ever witnessed.

Your sons and daughters, fighting on all the lands and on all the seas, and in the skies over the lands and seas will bring us victory in that war. I have been with them on the fighting fronts. I have seen the carnage of the slaughter through which they have fought. I have sought among them the means of improving their lot, a lot not subject to any great improvement until the would-be destroyers of government as Lincoln knew it and as we have know it, shall have been conquered.

Now that the light of victory burns ever more brightly upon our fighting sons in all parts of the world, now as we stand here in the lengthened shadow of the great apostle of a united people under a just government, let us examine what has for years been happening to our Government. Let us test the foundation upon which that Government will rest when our armies come home. Let us likewise test the application to the coming years of Lincoln's great urge "to do all which may achieve and cherish a just and lasting peace among ourselves and with all other nations."

Recently in Washington we reinaugurated a President who had already served three terms as the Chief Magistrate of our Nation. By his words and deeds over the last 12 years we must test the course of our Government. We must judge by those words and deeds the adherence of our present administration to the aims and objectives of Lincoln.

Shortly after his fourth inauguration President Roosevelt was asked what would be the course of his administration during the next 4 years. Not for him was the homey program of Abraham Lincoln on his second inauguration; no mention of binding the Nation's wounds; no mention of going forward together in a just and lasting peace among ourselves and with other nations.

No; Mr. Roosevelt declared that his program of government is to be "a little left of the center."

Our fourth-term President could not find in the American idiom the words which would describe his program to our people. He went into the parliamentary verbiage of the corrupt stewpot of Europe to find the words to tell us that the ideals of government laid down in our Constitution and preserved by Lincoln's determination for unity were off his course. He didn't want them. He doesn't want them.

We have always had a few leftists in our country. We have always had the "wobblies" with us. We have had the Molly Maguires. We have had a scattering of anarchists and a few bomb throwers, but never before have we had our Government headed by a man who declared that his aims were along with theirs—"to the left of the center." Never before have we had a Chief Executive who plainly and publicly declared his determination to accomplish those aims.

The leftists have their own idea of government. That idea is plain and it is simple. It is that they should be the government, and the next step in their thinking is equally simple. It is that government is all-powerful.

These were on the beliefs of those leftists in Russia when they set up the dictatorship of the proletariat, which has become the dictatorship of Stalin. These were the beliefs of the leftists Black Shirts in Italy when they set up the dictatorship of Mussolini. They were the beliefs of the leftist Brown Shirts in Germany when they set up Hitler.

They were the beliefs of those who were the controlling factors in France when outside forces toppled over the whole French Government on top of the leftists and everyone else. The leftists had eaten out the great heart of the French Republic for their own selfish purposes and when the Germans came there was nothing to withstand them.

The pattern of all of these leftists emerges as always the same.

Groups of malcontents meet up with the seekers for power. The seekers for power make the same promises in all cases. They promise to give to the malcontents something that someone else has, providing the malcontents will give power to the seekers for power. The basic cynicism of it all is that the malcontents are deserving of everything they want and if giving it to them necessitates taking it away from those who have earned it, that is a simple hurdle for the seeker for power to jump.

If an individual comes up to you in a dark alley and at the point of a gun relieves you of your purse, we refer to it as robbery.

If the political malcontents, under their power seekers, rob you of all you have earned throughout your life, including your purse, your liberty, your good name, your business, and split these virtues of yours among themselves, we refer to it politically as leftism and the time in which it occurs as the century of the common man.

So it is clear where we are going when our President tells us that our Government is to be "to the left of the center." He means that by changes in our Government, the malcontents are going to be satisfied; that by taxation and other measures those who have justly and honestly earned their little bit of security are to have it taken from them and, of course, those to whom that which is taken away shall be given, will, in turn, give more and more power to their benefactors.

It is the old story of robbing Peter to pay Paul. Taking from the haves and giving to the have-nots.

It is this philosophy which enables our ex-Vice President, and nominee for Secretary of Commerce, to tell the wife of the Soviet Ambassador that our sons are fighting and dying so that everyone will have a quart of milk a day—whether they want it or not. The concept of government which the leftists are trying to instill in the American mind—which they are successfully instilling in some minds—is that government can do all, can be all, and can know all.

We are told by those gentlemen—and their equally vocal ladies—that the Government will give everybody a job, that the Government will keep everybody healthy, that the Government will give everybody a home, that the Government will tell you how many children you should have, and that it will tell you how they should be educated. They tell you that the Government will, can, and must do all of these things.

The fact of the matter is that the Government cannot do them for you, and that if the Government could do them your lives would be ruined.

The Government cannot give anybody a job, yet your Government attacks those who can make jobs possible. Government can make you all slaves. That has been proven by the leftist governments of Europe.

We are told that Russia solved the unemployment problem a long time ago. It did, in a way, but it did not do it by creating honest jobs for freemen. Germany and Italy did the same thing.

Americans do not want the unemployment problem—if it recurs after the war—solved on the European plan. They want it solved on the American plan. That means that their Government must help, not hinder, in creating and making available sound jobs at

good wages for workers operating in a free labor market.

In recent weeks in Washington we have been treated to a disgusting spectacle of political fenagling in the most serious aspects of government. I refer to the nomination of Henry A. Wallace, repudiated Vice President, to be Secretary of Commerce because Mr. Roosevelt thought he should be paid for supporting the New Deal ticket. The hidden reason for Mr. Wallace's appointment was that he would control the entire tremendous lending agency which the New Dealers have set up. Mr. Wallace, in accordance with his announced plan, would lend this money to create jobs in a manner that he and other left-of-the-center philosophers feel they should be created.

The United States Senate, controlled by the New Deal though it is, was so horrified at the thought that it has had to rush in and put a padlock on the money before it would even consider Mr. Wallace's appointment.

Imagine the spectacle of appointing to the Cabinet post which has to do with all our commerce and business, a man whom the Congress immediately declared it could not trust with the Government's money. Not because Mr. Wallace might not be personally honest, but because his left-of-the-center control of funds would in itself endanger our whole governmental and economic structure.

This is the type of man who, during the last 12 years, has been infiltrated into high positions throughout the Government. All of them carrying out, or intent upon carrying out, the policy of a "little to the left of the center." And all of these men combined have made their attacks to carry out their philosophies.

Let us refresh our recollection on some of the specific instances. There was the scandal of the subversion of the United States Supreme Court. Back in 1937 the leftists found that the Supreme Court wanted to maintain our Government of laws and refused to accept government of men which was being foisted upon us.

So the most vicious proposal in our whole constitutional life was launched. The Court's robes were dragged in the mud. The Congress stood adamant against the court packing plan, but time has given to Mr. Roosevelt the changes he desired. The result is that the Court, with its new members voting their political and economic beliefs, has thrown our whole system of jurisprudence into chaos. They have created a condition in which no reputable lawyer will attempt to tell you today what tomorrow's law will be.

The leftists program calls for subduing any element that opposes them. They did that here in Illinois. And whether you think Montgomery Ward treats its employees properly or not, you have a right to be proud that here in Chicago is found one justice who would recite the law as he found it and not as some one in Washington demanded that he find it.

Consider the vicious and continuing attacks which the left-of-the-center program has brought on the freedom of the press. Because a pampered journalistic pet of the leftists could not obtain an Associated Press membership for his publication, Government agents were sent throughout the land in an effort to destroy the Associated Press.

Newspapers of honor and integrity have been attacked and smeared. Reporters, correspondents and columnists who report the truth have been ridiculed. Their news sources have been closed and their reputations assailed.

Literally thousands of men and women have been employed by the leftists in Government to spread the glories of the day when Government controls everything. Every Government agency, no matter how small—and not many of them remain small long—has its official feeder of pap and propaganda to the public.

The intelligence and courage of the American people are insulted daily by deception and lies of omission and commission, spewed out in an attempt to bolster the clique which has determined to lead us from the things which have made America the envy of the world.

This campaign of falsehood—subsidized by your own tax dollars—extends far beyond our domestic affairs. It goes into the battle fronts with your sons, and reverts back from your sons to you.

Last October, and up to the first few days of last November, we were told by the New Dealers and by the President himself that your sons on the firing line had everything they could possibly want to fight with. That they were being kept the healthiest Army in the world. That their supplies were inexhaustible and in the right spot at the right time. That American workingmen and workingwomen had done everything possible to produce the necessities of war. In fact, everything was hunky-dory.

Within a few days after election, which the leftists won with their admittedly appealing line of argument—appealing if true—I personally visited the battlefields of Europe and found conditions appalling. The drive through France was stopped because of the shortage of supplies. The Belgian front gave way because of the shortage of supplies. The health of our men was being jeopardized because of improper shoes and clothing.

And the basic supplies of war, guns and ammunition, were so short that the fighting units had to be rationed. Ammunition was rationed to units. When general after general had complained personally of the shortages that existed, I could not help but recall the economy of scarcity days of the New Deal when little pigs were slaughtered and crops were plowed under.

These were actual shortages that existed. They were revealed to us with a feeling of horror by the generals, who were in command; generals who admitted that the lives of your sons were being needlessly lost because of shortages. But that was after November 7.

Since then we are told that labor must be enslaved to produce the supplies now found necessary. We are told America fell down on the job of producing for its sons, and that now American workingmen and workingwomen must be whipped to the task with threats of jail.

Is this the conduct of the honest, honorable type of American Government as we have known it through the years?

Let us look at this same Government operating in the field of international affairs.

As near as it is possible to detect the foreign policy of our left-of-the-center operators, it is as follows:

That while our omniscient Government is making puppets of Americans it will spread such light and joy throughout the world by its gifts and beneficences that all peoples will turn to America as to a savior. They will forsake their own national allegiances and those who have gained control in America will then control the world.

Well, let me tell you about that. The people of the world will take what we give them—they will ask and even demand more—but they are going on being just the same people of just the same nations they have always been.

We have for years been fighting a war in coalition with the British Empire and the Union of Soviet Socialist Republics and the Republic of China. You would think that in the face of a life and death struggle some kind of unity would have been achieved among these nations.

We were led to believe, up until a few short months ago that that was the actual condition. But then came November and we awoke to find ourselves and our allies in total ignorance of each other's aims and objectives.

We found that the famous Atlantic Charter had dwindled from where it was placed by Mr. Roosevelt alongside the Ten Commandments and the Magna Carta to a mere press agent's handout distributed to cover up the meeting of a couple of boys somewhere in the Atlantic Ocean.

We found, and we still find, that the nations of Europe are going right on their merry way of dividing Europe among themselves just as they have always done after all of their wars. And the United States will be found to be holding the bag throughout the settlement.

Mr. Churchill announced that he did not become the King's first minister to preside over the liquidation of the British Empire. Mr. Stalin just goes on sawing wood and taking big gulps of territory as it comes under his saw. Mr. Roosevelt, still traveling a little left of the center, sends social workers abroad to sweeten up the boys with a little more of the lady bountiful act.

It seems to me that it is apparent that there will be no real peace in Europe for many years to come. The nations like France and Italy, which have been upset, cannot be stabilized for a long, long time.

Most of the nations which we, in the language of the left-of-the-center crowd, are liberating are developing an intense hatred for America. In France and in Italy this is especially true.

Our so-called good-neighbor policy in South America, despite the millions of dollars we have spent on it and the musicians we have sent to carry out our culture, the motion pictures we have made, and so on, has increased the always latent suspicion with which most of the Pan-American countries have always regarded the colossus of the north.

If we want to get our sons back after this war we had better get to work now establishing a definite and forthright agreement showing the unity of the nations which are on our side in this war.

And then if we want to bring our country to a speedy recovery from the war's disasters and disruptions, let us bring about a unity among our own people.

Let us bring to our Nation and among all other peoples a feeling of self-respect and a feeling of mutual self-respect. Let us free our people from the grasping tentacles of Government seeking totalitarianism of power and degradation of individuals.

Let us restore our Americanism.

Let us, in all walks and ranks of life, turn back and find the solid basis for our future in our history. Let us, in simplicity and in honor, say with Abraham Lincoln:

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphans; and do all which may achieve and cherish a just and a lasting peace among ourselves and with all nations."

The Motion Picture Theater Essential to the War Effort

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. McDONOUGH. Mr. Speaker, I represent the Hollywood district of Cali-

fornia, the motion-picture capital of the world. Contrary to the opinion of many, Hollywood is a substantial community made up of thousands of reliable and loyal citizens of this Nation.

Here is located the Hollywood Bowl, where the symphonies under the stars are directed by the great music masters of the world. Here is located Radio City, where the massive studios of the national broadcasting companies originate many of the great radio shows. Paramount studio, R. K. O., the original Warner Bros. studio, United Artists, and the original William Fox studio are located in Hollywood, employing thousands of men and women.

This vast store of artists, technicians, culture, and art has been sincerely devoted to helping win the war. All of the talents of these artists and technicians have been at the disposal of the Federal Government.

Although not recognized as an essential industry, the motion picture theater is the channel which carries the story of the war to 88,000,000 people in this Nation each week, thus keeping up the morale of the folks at home and the men at the front.

I urge the Members of the House to give more serious attention to the motion-picture theater as an essential industry in winning the war.

Its service to the public cannot be overlooked. Under unanimous consent, I include in my remarks the following editorial from Boxoffice, the national film weekly:

CONSIDERATION DUE

The news on the front pages of the Nation's newspapers on New Year's morning had a sobering effect on those who needed it. The announcement of the tightening of regulations on the manpower situation was enough. But the recall of reconversion orders to industries that had been given the green light several months ago added a touch that struck right down to the roots.

The upsetting war news of the last few weeks has now taken on a brighter hue. But that has not changed the planning, nor is it likely to, for some months to come. War Mobilization Director James F. Byrnes, whose plans are supported by the President, has made himself quite clear on that. The all-out war effort, that slackened when the prospects for an early conclusion of the European war seemed imminent, not only is to be resumed but it is to be accelerated to the very extreme. Paradoxically, as the pendulum swings backward, it is hoped that it will throw the machinery of war into high gear, pushing forward the arrival of VE-Day.

While the motion-picture industry has not slackened in its war role—in fact it increased its efforts even when the optimistic talk of war's early end was at the highest pitch—it will continue to do better than its best. But it must not be hampered in its efforts by deliberate or indiscriminate "raids" on its already heavily reduced manpower.

With the closing down of the race tracks and the imminent shuttering of night clubs (although we anticipate their well-organized strength will again be evidenced as it was in the tax case), there has come an unfortunate slurring inclusion of motion-picture theaters. Unfair charges that many motion-picture actors have been unwarrantedly discharged from military service have been hurled about carelessly in the lay press and in radio news reports.

It doesn't seem possible that there are so many "who have eyes, yet do not see" when the motion picture and its institutions are concerned. But, unfortunately, old-time prejudices still linger. And, despite the knowledge of Senators and Congressmen of the fine work this industry in its every branch has done toward and for the war effort, there are too many among them who include motion pictures in the general classification of "amusements" and thus fail to give this industry the recognition and consideration it properly deserves.

It is time, again, to remind that this industry has not asked special favors. But, with all of the many acknowledgments—from every quarter—as to the essentiality of morale maintenance and morale building, on the home front as well as on the battle fronts, and the very potent evidences of the extraordinary part motion pictures have played therein, it seems strange that there should ever be any question as to whether the motion-picture theater is essential.

Exhibitors have willingly and at great cost and sacrifice done their part in pushing every bond drive over the top. Is that essential? They have worked as never before to keep their theaters open, thus making their screens available for the showing of war information films—many made by the Government—for the dissemination of information that the Government deems vital to the public weal, for the future as well as for now. Is that essential? Motion-picture theaters are actively and constantly engaged in more war work than any other industry except those that actually produce weapons of war. And every branch of this business is likewise doing its part—and more.

Motion-picture exhibition does not expect and, perhaps, does not even want a special ruling as to its essentiality. But it is entitled to the proper consideration for those efforts that are deemed essential. It seeks no favors, but it deserves to be rated far above that general classification of "amusements," into which horse racing, dog running, and juke-box joints are lumped.

Poland, the First to Fight

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. WASIELEWSKI. Mr. Speaker, the reaction of many of my constituents to the Yalta Pact is well illustrated in the letter written to the editor of the Milwaukee Journal by Mr. J. A. Kapmarski, the editor of the Kuryer Polski, a Polish language newspaper published in Milwaukee for more than 50 years.

The agreement reached by the Big Three with respect to our war aims, military strategy, and ultimate treatment of the Nazis meets with unanimous approval. However, in respect to the disposition of the rights of the small nations of eastern Europe, keen disappointment is expressed because of its failure to have been carried out pursuant to the tenets of the Atlantic Charter and our old American philosophy regarding the self-determination of nations. There is still hope these wrongs my be righted.

Mr. Kapmarski's letter reads as follows:

POLAND THE FIRST TO FIGHT

To the Journal:

No sensible person will try to belittle Russia's contribution to the Allies' ultimate victory in Europe. The Journal's editorial, the Price That Russia Has Paid, was a well deserved tribute.

However, the fact remains that Russia gave the green light to Hitler in August 1939 to start this war and was Germany's silent partner against the Allies up to the time when Hitler betrayed Stalin, starting the invasion of Russia in June 1941.

Russia did not enter the war for any lofty ideals, democratic, humanitarian, altruistic, or what have you. Russia was simply forced to fight in self-defense.

The Journal says, "Let us never forget the millions of Russian dead who, by their contribution, made possible the victory we shall win over the Axis aggressor." Very true.

But shall we forget the contribution of Poland, the first nation to oppose Hitler in armed conflict, and her losses in dead, wounded, and deported inflicted upon her by Germany, the enemy, and Russia, the "ally"? Shall we forget the sacrifices of Poland which were proportionately greater than those of any other Allied Nation, Russia included?

Shall we forget that the Polish airmen constituted the only Allied fighting force in action on England's side in the Battle of Britain in 1940, helping to turn the tide in those dark days? What about the 5-year battle of the Polish underground, which has won the unstinted admiration of the world? What about the Polish Navy and Army which fought together with her Allies from the north to the Aegean Sea, from Narvik to Tobruk, from Cassino and Ancona to Breda and Arnhem?

Without saying it in so many words, the Journal obviously feels that irrespective of all human rights, international laws, treaties, the Atlantic Charter, the "four freedoms," and what not, regardless of Poland's contributions and sacrifices, Russia should have her own way, and the right to dispose of the Polish problem as Stalin sees fit.

Poland is meeting a worse fate than any of the former enemy nations, Italy and Rumania, for instance. One begins to wonder if Poland would not have been better off by yielding to Germany in the first place, instead of being the first to fight.

J. A. KAPMARSKI.

MILWAUKEE.

Pattern of the Fourth New Deal

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. PLOESER. Mr. Speaker, the St. Louis Globe-Democrat, on Sunday, February 4, 1945, published an important editorial entitled "Pattern of the Fourth New Deal." It follows:

PATTERN OF THE FOURTH NEW DEAL

When President Roosevelt made his famed pledge of 60,000,000 post-war jobs, it looked like just another pre-election rabbit pulled out of the political hat—a rabbit of doubtful legitimacy, but nonetheless impressive to most voters. It aroused little comment that he failed to analyze the need or quote authority for the figure.

In view of subsequent events, that avowed goal, however, now takes on the appearance of a vital part of the Fourth New Deal.

By his pledge the President arbitrarily set a goal which he indicated the Nation's business structure must meet—apparently without consulting business or any other experienced source on either its need or its feasibility. Yet his prestige gave the figure wide

acceptance at face value. For this reason if private enterprise fails to attain that level of employment, it will be private enterprise which is blamed, even though it had no part in the pledge.

So let's examine the validity of that figure and the possibility of meeting it.

The Census Bureau estimates our post-war population (1946–47) will be about 140,000,000 persons. In order to arrive at the size of the actual post-war labor force, we must subtract certain classes, including those individuals who have taken jobs only under pressure of the war emergency.

These classes are the 33,300,000 youngsters under 14 years of age, the 11,200,000 others who will be in school, the 30,400,000 housewives and former women workers who will have no desire to work after the war, the planned standing army of 2,380,000 troops, the 8,800,000 persons 65 years of age or over, the 2,500,000 undesirable characters on the economic border line, such as racketeers, confidence men, and plain bums, the 1,800,000 (between ages 14 and 65) inmates of penal institutions and hospitals for the mentally defective and the permanently disabled or chronically ill, the 800,000 who may be expected to take up residence abroad, and the 80,000 who will voluntarily retire at age 60. With these deductions we arrive at a probable post-war labor force of 48,740,000, or nearly 5,000,000 more persons than were employed in 1940.

It follows that if 48,740,000 post-war jobs are provided, there will be one for everyone in the United States who wants to work. Hence, if the President's 60,000,000 jobs are to be filled, it will mean taking 11,260,000 youngsters out of school or women out of homes by almost as drastic a labor recruiting campaign as was necessary to achieve our war production record. The alternative is to persuade the over-age, the bums, the ill, the mentally defective to take the balance of the jobs Mr. Roosevelt says business must provide.

It is ridiculous to suggest President Roosevelt didn't and doesn't know this. Clearly then the goal was set for one purpose: To provide the New Deal with a club with which it can drive private business into the post-war dog house, however creditable its performance.

With this device assured to induce at any time a public clamor for government pump-priming, the next step was to get the Reconstruction Finance Corporation out of the conservative hands of Jesse Jones and into more liberal ones. Obviously the R. F. C., a $32,000,000,000 structure of lending and operating agencies, with its loans and ownership of competitive plants giving it the power to coerce or even destroy virtually any segment of the Nation's industry, would be an invaluable blackjack toward a socialized economy.

Jones had made an excellent and profitable showing as head of both the R. F. C. and Commerce Department, but there was no chance he would tolerate the desired lavish scale of handouts. Mr. Roosevelt also had Mr. Wallace and Mr. Hillman to take care of.

Hence the brazen "Dear Jesse" ouster letter and Wallace nomination, which presumably simultaneously cleared Roosevelt with both Sidney and Henry. There were hints the notorious missive was not intended for publication, but the ensuing silence of the White House indicated the President had been aware a congressional explosion would follow and was indifferent whether Wallace was confirmed to either or neither post. If the starry-eyed Iowan was not allowed to take control of the R. F. C., there were plenty more moonbeam boys Mr. Roosevelt could nominate until one was finally confirmed.

Thus the major parts of post-war fiscal fantasy were in readiness—the "proof" that business could not supply all the jobs needed and a free-handed gentleman in charge of the agency which could ladle out funds in a volume to make New Deal I benevolence look miserly.

As Jones himself testified, the R. F. C. "can make loans in any amount, for any length of time, at any rate of interest, to anybody." And the probable application of that power was revealed by Wallace's statement supplementing the President's earlier liberal views, that "an adequate program must provide America with 60,000,000 productive jobs," with the Government starting the pump priming when the level drops below 57,000,000. This plan, meantime, was implemented by Senator JAMES E. MURRAY'S resolution providing that full-scale Federal spending shall begin any time national employment goes under an arbitrary figure, probably Mr. Wallace's 57,000,000.

All of which adds up to a Government guaranty that more persons shall have post-war jobs than want them.

However, even the cosmic planners admit this will cost money. If New Deal IV is to police our social and economic lives, the Government must underwrite the expense, even though it has a public debt costing $4,500,000,000 a year in interest alone.

To plug this loophole a new term is dragged out—the horrendous evil of "oversaving"—a word by which individual thrift for a rainy day is branded as antisocial if not downright economic sabotage. To discourage this reprehensible hangover from Benjamin Franklin's tenets, the Government must tax these savings into the Treasury, from which they will be shoveled into a sort of state socialism to provide the jobs the omniscient state thinks are needed.

Naturally, it would be unthinkable for business to be so encouraged and freed from restraints that these same savings would be attracted directly into it as investment funds, with better employment results.

The Senate has just passed the George bill which divorces the R. F. C. and its subsidiaries from the Department of Commerce, with prospects rather bright for Wallace's confirmation for the secretaryship. However, the George bill relates merely to the R. F. C. and its allied agencies. There are some 34 other lending-spending bureaus which the President, if he chooses, could transfer to Wallace and their authority extends to funds almost as large as those commanded by the R. F. C.

Congress' duty, then, is only part done with the R. F. C. divorcement. It must make certain that the new Director of the R. F. C. and its subsidiaries is not just another Wallace, and it should apply the same scalpel to the Government borrowing agencies which are still within the President's gift to the Secretary of Commerce. House debate on the George bill indicates something of the kind may be done.

Whether Congress will have the courage to act under pressure of inspired public fears of widespread unemployment, will determine if all of us are to have an uncontrolled joyride to complete management by government.

Report on Ship Construction Contracts

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, on September 13, 1944, I addressed a letter to the Honorable Lindsay C. Warren, Comptroller General of the United States, in which I asked that he furnish me a report on ship-construction contracts entered into with each of the companies with which Henry Kaiser is associated. I referred to such contracts as had been renegotiated as of July 1, 1944.

I received a very comprehensive report on this matter from the Comptroller General covering such cases as had been renegotiated up to that time and which is as complete, I believe, as could be furnished under the circumstances. However, Mr. Speaker, I hope to have later reports on the companies not covered in this report.

Mr. Kaiser, without a doubt, has done a magnificent job in contributing to the success of our armed forces. He has displayed a capacity for organization and production that amazes everyone familiar with his record. However, his efforts have not gone entirely unrewarded. As is shown by this report, it will be noted that the original investment of the Kaiser group was $100,000. It is shown also that the Government has spent the sum of $216,647,734 in providing facilities for the companies included in this report. The stockholders in the Kaiser companies are limited in number and appear to be a closed corporation.

The net profits, after renegotiation on the two companies reported upon in detail, were $27,374,487.24. It seems, Mr. Speaker, that when the reports on the other companies are finally in, it will be found that the original $100,000 investment was a decidedly profitable one.

SEPTEMBER 13, 1944.

Hon. LINDSAY C. WARREN,
Comptroller General, Washington, D. C.

DEAR SIR: I will greatly appreciate it if you will furnish me a report on ship construction contracts, entered into with each of the companies with which Henry Kaiser is associated. I refer to such contracts as have been renegotiated as of July 1, 1944.

In compiling this report please indicate—

(1) The name of the company and the principal stockholders therein.

(2) The amount of the initial capital investment (a) in cash: (b) other than cash, when the first contract was awarded.

(3) The subsequent cash investment of private funds. Also, if other than cash, the amount and the form of such investment.

(4) The amount of government funds invested in such plants. Please indicate the amount of further funds, if any, advanced to such plants by Governmental agencies. Also indicate amounts advanced by each agency if more than one has participated in such loans.

(5) The value of such Government investment, in the interest received, and whether such interest paid has been added to the cost of operating such plants.

(6) The actual profit, prior to the payment of taxes, and, prior to renegotiation of each of these companies, and, the period covered. Also, the percentage of profit to each company on the actual stockholder cash investment for the period covered.

(7) The profit to each company, after payment of taxes, for the period covered. Also, the percentage of profit retained, after the payment of taxes, on the actual cash investment.

(8) The profit to each company, after payment of taxes, and, after renegotiation for the period covered. Also, the percentage of profit retained on the actual stockholder cash investment of each company.

(9) Were the profits of these companies approved by your office, and, the Maritime

Commission after your staff had made a detailed and final audit of such companies?

(10) Did your staff have complete data and, were all of the items covered in section 405 of the Sixth Supplemental National Defense Appropriation Act of 1942, as amended by Public Law 235 of the Seventy-eighth Congress, considered in determining the profits retained by each of these companies?

(11) Has your staff reported to your office any evidence of fraud or willful misrepresentation of material facts in connection with the renegotiation of these contracts, or, other ship-construction contracts?

I am assuming that some of this information, herein requested, is at present available, and some of it will have to be obtained from the auditors of the Maritime Commission and other agencies which your office is privileged to obtain without unnecessary delay and without much additional cost.

Trusting that this request will receive prompt consideration, I am,

Very truly yours.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, September 20, 1944.

Hon. ROY O. WOODRUFF,
House of Representatives.

MY DEAR MR. WOODRUFF: I have your letter of September 13, 1944, requesting a report on certain matters pertaining to the renegotiation of ship-construction contracts entered into with companies with which Henry Kaiser is associated.

Your letter will be given prompt attention, and you will be advised further with reference thereto as soon as possible.

Sincerely yours,

LINDSAY C. WARREN,
Comptroller General of the United States.

COMPTROLLER GENERAL OF
THE UNITED STATES,
Washington, October 16, 1944.

Hon. ROY O. WOODRUFF,
House of Representatives,

MY DEAR MR. WOODRUFF: Further reference is made to your letter of September 13, 1944, acknowledged September 20, requesting a report on ship-construction contracts entered into with companies with which Henry Kaiser is associated. There is transmitted herewith a report containing much of the data requested. However, I should like to comment briefly on certain phases of the matter and to explain such deficiencies as there may be in the factual information contained in the report.

In general, the data which you have requested pertains to matters involving the renegotiation of ship-construction contracts. Under section 403 of the Sixth Supplemental National Defense Appropriation Act, 1942, as amended by the Revenue Act of 1942 (56 Stat. 982), it was made the duty and responsibility of certain administrative agencies of the Government to renegotiate contracts entered into by such agencies where it appeared that excessive profits had been made thereunder. By section 701 of the Revenue Act of 1943, effective February 25, 1944, Public Law No. 235, said section 403 was further amended and there was established a War Contracts Price Adjustment Board consisting of six members—an officer or employee appointed from each of six different departments or establishments designated therein—which Board now has the function of determining whether excessive profits have been paid or have accrued under war contracts. It is provided that an agreement made by such Board with a contractor or subcontractor for the elimination of excessive profits and for the discharge of liability for excessive profits shall be conclusive according to its terms and that, in the absence of fraud, malfeasance, or a willful misrepresentation of a material fact, any such agreement shall not be modified by any officer, employee, or agent of the United States.

From the provisions of law above referred to you will note that it is not a function of this office either to approve or disapprove the amount of profit made by the companies here involved in the construction of vessels for the account of the United States Maritime Commission. As indicated in the report herewith, no evidence of fraud, malfeasance, or a willful misrepresentation of a material fact has been reported by representatives of this office as a result of investigations made of these companies.

Moreover, such inspections and audits as are made prior to renegotiation and upon which the determination that excessive profits are involved are not performed by the General Accounting Office. While it is the function of this office to determine that payments under such war contracts have been made in accordance with the terms thereof and do not contravene any law, and while, in the performance of such functions, this office does audit the accounts of the disbursing officers who make the payments under such contracts, such audit necessarily is undertaken along different lines than an audit made solely with a view to a determination of excessive profits. For example, in the audit of a cost-plus-a-fixed-fee contract, a determination of the contractor's costs for the purpose of ascertaining the amount of profit realized or to be realized under the contract would not necessarily coincide with the determination of this office as to whether various items of cost properly were reimbursable by the Government to the contractor. Accordingly, since the action taken by this office in the audit of ship-construction contracts is entirely independent of the audit made of such contracts for renegotiation purposes, some of the information requested by you is not available here.

Such of the information requested as is not contained in the enclosed report probably could be obtained by you from the Maritime Commission or the Bureau of Internal Revenue.

Sincerely yours,

LINDSAY C. WARREN,
Comptroller General of the United States.

SPECIAL REPORT ON KAISER SHIPBUILDING COMPANIES, CALIFORNIA SHIPBUILDING CORPORATION

(Incorporated under laws of Delaware Jan. 6, 1941)

Capital structure (items 2, 3, 4, 5)

Capital stock authorized 10,000 shares:	
Capital stock issued, 1,000 shares	$100,000
Capital stock increased Feb. 19, 1942, to 6,000 shares by stock dividend	600,000
Capital employed by corporation Nov. 30, 1943:	
Capital stock	600,000
Loans from stockholders	2,700,000
Bank loans	3,750,000
Government funds invested as of Oct. 1, 1944:	
Payments by Government for facilities	24,334,247
Government allotment for cafeteria	104,000

No information relative to any return to Government representing interest on facilities investment.

Profits (items 6, 7, and 8)

Renegotiation contract No. MCc-29119 indicates renegotiation of ship contracts Nos. MCc-7785 Mar. 14, 1941, 7786 May 1, 1941, 2128 Jan. 17, 1942, and 7834 June 16, 1942, and indicates profits before Federal income and excess-profits taxes on total contract sales of $255,878,346.57 of—	
Before renegotiation	$27,257,524.00
Deemed excessive	10,706,199.76
Profits allowed	16,551,324.24
The corporation's Nov. 30, 1943 statement of earned surplus indicates balance as of Nov. 30, 1942 (adjusted)	459,076.18
Net income before Federal Income taxes and contingencies (year ended Nov. 30, 1943)	19,704,127.35
Provision for Federal income taxes and contingencies	15,447,000.00
Net income	4,256,527.35
Less dividend paid [1]	2,000,000.00
	2,256,527.35
Balance Nov. 30, 1943	2,715,603.53

[1] $1,000,000 of dividends was loaned company by stockholders to increase loans to $2,700,000.

Approval of profits by the General Accounting Office (items 9, 10, and 11)

This Office has not approved any profits or settlement and is not authorized to question any settlement under the renegotiation statute in the absence of a showing of fraud or malfeasance or a willful misrepresentation of a material fact. A report of field investigation by representatives of this Office was made under date of March 4, 1944, covering the operations of the corporation for the period ending November 30, 1943. The report did not indicate any evidence of fraud, and so forth.

KAISER CARGO, INC.

Capital structure (items 2, 3, 4, and 5)

(Incorporated under laws of California, November 17, 1942)

Capital stock authorized, 1,000 shares.
Capital stock issued, 500 shares, $50,000.

Profits (items 6, 7, and 8)

There is no information available relative to any contract of renegotiation of excessive profits, nor has there been received any data on profits of this corporation.

Approval by General Accounting Office (items 9, 10, and 11)

This office has not approved any profits or settlements of contracts with this corporation.

There has been received no report of field investigation of this company by representatives of this Office.

KAISER CO., INC.

(Incorporated under laws of Nevada, December 1, 1941)

Capital structure (items 2, 3, 4, and 5)

Capital stock authorized, 25,000 shares.
Capital stock issued, 1,000 shares, par value $100, $100,000.

All other working funds are borrowings from banks on assignments of contracts.

Government funds invested as of September 1, 1944: Payments by Government for facilities (for all 3 yards), $103,473,665.

No information relative to any return to Government representing interest on facilities investment.

Copy of corporation's June 30, 1942, balance sheet indicates:	
Notes payable, banks	$9,500,000
Notes payable, Reconstruction Finance Corporation	6,071,000
Capital stock	100,000

Profits (items 6, 7, and 8)

There is no information available relative to any contract of renegotiation of excessive profits for this corporation, nor has there been received any data on profits of the corporation.

Approval by General Accounting Office (items 9, 10, and 11)

This Office has not approved any profits or settlements on contracts with this corporation. A report of field investigation by representatives of this Office, made under date of September 2, 1942, covering the operations of the Richmond, Calif., yard for the period December 1941 to November 1942, did not indicate any evidences of fraud, etc.

MARINSHIP CORPORATION

Capital structure (items 2, 3, 4, and 5)

(Incorporated under laws of Nevada, September 2, 1942)

Capital stock authorized, 5,000 shares.
Capital stock issued, 3,750 shares, $375,000.
Capital employed by corporation, November 30, 1942:

Capital stock sales	$375,000
Capital loans	125,000
Capital contributions by joint venture	100,000
Bank loans	1,500,000

Bank loans secured by assignment of contracts and interest thereon considered as allowable cost.
Government funds invested as of September 1, 1944:

Payments by Government facilities	$16,157,134
Other Government allotments:	
Cafeteria	49,178
Ferry	110,000

No information relative to any return to Government representing interest on facilities investment.

Profits (items 6, 7, and 8)

There is no information available relative to any contract of renegotiation of excessive profits, nor has there been received any data on profits of the Corporation.

Approval by General Accounting Office (items 9, 10, and 11)

This office has not approved any profits or settlements on contracts with this Corporation.

A report of field investigation by representatives of this office, made under date of February 13, 1943, covering the operations of the Corporation for the period ending November 30, 1942, did not indicate any evidence of fraud, etc.

OREGON SHIPBUILDING CORPORATION

Capital structure (items 2, 3, 4, and 5)

(Incorporated under laws of Delaware, January 6, 1941)

Capital stock authorized, 10,000 shares.
Capital stock issued, 5,500 shares, $550,000.
Government funds invested as of September 1, 1944:

Payment by Government for facilities	$21,196,171
Other Government allotments:	
Cafeteria	$103,650
Housing	1,961,178

No information relative to any return to Government representing interest on facilities investment.

Profits (items 6, 7, and 8)

Renegotiation contract No. 26699-331W indicates renegotiation of ship contracts Nos. MCc-ESP-11, 595 and 596 and MCc 7950, and indicates profits before Federal income and excess-profits taxes on total contract sales of $177,461,650 of—

Before renegotiation	$17,631,650
Deemed excessive	6,908,487
Profits allowed	10,723,163

Approval of profits by General Accounting Office (items 9, 10, and 11)

This office has not approved any profits or settlement and is not authorized to question any settlement under the renegotiation statute in the absence of a showing of fraud, etc.

There has been no report by representatives of this office of field investigation of this Corporation.

PERMANENTE METALS CORPORATION

Capital structure (items 2, 3, 4, and 5)

(Incorporated under laws of Delaware, December 9, 1940)

Capital stock authorized, 4,600 shares.
Capital stock issued, 4,600 shares, $460,000; includes 3,600 shares exchanged for stock of Richmond Shipbuilding Corporation.
Bank loans as of December 31, 1942, $4,000,000.
Government funds invested as of Sept. 1, 1944:

Payment by Government for facilities	$34,455,401
Other Government allotments:	
Cafeteria	65,147
Housing	35,000

No information relative to any return to Government representing interest on facilities investment.

Profits (items 6, 7, and 8)

There is no information available relative to any contract of renegotiation of excessive profits, nor has there been received any accurate data on profits of the corporation.

Approval by General Accounting Office (items 9, 10, and 11)

This Office has not approved any profits or settlements on contracts with this corporation.

A report of field investigation by representatives of this Office, made under date of April 14, 1943, covering the operations of the corporation for the period ending November 30, 1942, did not indicate any evidence of fraud, etc.

RICHMOND SHIPBUILDING CORPORATION

Capital structure (items 2, 3, 4, and 5)

(Incorporated under laws of Delaware, April 1, 1941)

Capital stock authorized, 3,600 shares.
Capital stock issued, 3,600 shares, $360,000.
Bank loans at June 30, 1942, $1,750,000.
Government funds invested as of June 30, 1942: Payment for facilities, $14,279,561.76.
This yard was consolidated with the Permanente Metals Corporation and the completion of contracts in force along with others were completed by that corporation.

Profits (items 6, 7, and 8)

There is no information available relative to any contract of renegotiation of excessive profits nor has there been received any data on profits of this corporation of the Permanente Metals Corporation.

The profit and loss statement as of June 30, 1942, prior to consolidation indicated profit before taxes of $2,879,946.18 and distributed as follows:

Federal income tax and surtax	$414,252.78
Federal excess profits tax	1,571,693.62
Earned surplus	893,996.78

Approval by General Accounting Office (items 9, 10, and 11)

This office has not approved any profits or settlements of contracts with this corporation. A report of field investigations by representatives of this Office, made under date of November 28, 1942, covering the operations of the corporations for the period ending June 30, 1942—which was prior to consolidation—did not indicate any evidence of fraud, etc.

WALSH-KAISER CO., INC.

Capital structure (items 2, 3, 4, and 5)

(Incorporated under laws of Delaware February 19, 1943)

Capital stock authorized, 3,000 shares.
Capital stock issued, 3,000 shares, $300,000.
Government funds invested: Payment by Government for facilities, $24,761,649.
No information relative to any return to Government representing interest on facilities investment.

Profits (items 6, 7, and 8)

There is no information available relative to any contract of renegotiation of excessive profits, nor has there been received any data on profits of this corporation.

Approval by General Accounting Office (items 9, 10, and 11)

This office has not approved any profits or settlements of contracts with this corporation. There has been no field investigation by representatives of this office of this corporation.

Importance of Development of Power Resources of St. Lawrence River

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

VALUE OF RIVER POWER IS CITED

MASSENA, February 16.—The effect of the critical coal shortage on steam-developed electric power should make clearly apparent the value and importance of the development of the St. Lawrence seaway and power project with its great resource of hydroelectric power, pointed out Mayor R. A. Newton, Massena, president of the Northern Federation of Chambers of Commerce, today.

The mayor's statement follows:

"The critical coal shortage which has confronted not only all of northern New York but central New York, including Syracuse, Utica, Albany, even New York City, should bring home to all the people of the State the importance of the St. Lawrence seaway development. I have been reliably informed that the power generated by steam at the Oswego plant of the Niagara Hudson costs approximately 4½ mills per kilowatt-hour in comparison with the power developed by the St. Lawrence which is estimated to cost from one-half to 1 mill per kilowatt-hour.

"The recurrent threats of the coal miners to strike at various intervals has resulted in keeping people worried about fuel for our northern winters.

"The following information in regard to the amount of coal which would be required to reproduce the electric energy which would be produced by the St. Lawrence power development is very interesting, especially at this time when we cannot get sufficient coal to burn in our homes. Long lines of cars are hauling coal from the mines to plants where our electricity is manufactured by its use.

"It is estimated that in order to produce 2,200,000 horsepower which the St. Lawrence at Massena is capable of producing, it will require, each year, 5,280,000 tons of coal to produce the same amount at a cost of more than $22,000,000. To transport such coal would require more than 165,000 cars yearly.

"It is rather an appalling thought to realize the enormous economic loss which is suffered yearly on account of our failure both to open and harness the International Rapids section of the St. Lawrence River."

Foreign Economic Administration Makes Public Its Version of Statement by Senators Tunnell and Burton, With Regard to Lend-Lease Activities and Records

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. MUNDT. Mr. Speaker, Senators TUNNELL and BURTON are rendering a great public service in bringing to the attention of the Congress and the country

a report of their investigations and studies in connection with the handling of the money and materials of American taxpayers by the Army, Navy, and lend-lease officials in the European theater of war operations. Eternal vigilance is the price of solvency as well as of liberty in this Republic.

On February 16, Senator TUNNELL made public some of the findings made by Senator BURTON and him on their recent trip overseas. Some of these conclusions were critical of lend-lease operations, and since our Committee on Foreign Affairs is presently engaged in studying lend-lease records preparatory to considering a resolution to extend the act another 12 months, I brought these statements to the attention of the committee at our hearings last Friday.

Following our hearings, I addressed a letter to Mr. Oscar Cox, of the Foreign Economics Administration, inquiring into the accuracy and cogency of some of the printed criticisms of lend-lease, and my letter was inserted in the Appendix of the RECORD, on page A630. I made my letter public because it is my sustained conviction that lend-lease expenditures can render the maximum good only when the public is fully informed concerning all of their details and implications. Facts can effectively supplant rumors only when complete facts are available to all who crave the truth.

At this point in the RECORD I am inserting the reply which I have just received from Mr. Cox to my letter of February 19. I am gratified that the Foreign Economic Administration has granted permission to make public this reply, and that in so doing it indicates a continuing desire to supply the Congress and the country with a factual report of what is being done with that portion of the peoples' money which is being appropriated for the use of lend-lease operations.

No comment at this time is required on the following communication. A study of the Tunnell-Burton report, a reading of my letter of inquiry, and an analysis of the reply printed herewith will supply information from which Members and others interested can draw their own conclusions.

Reply to my letter of February 16, 1945:

FOREIGN ECONOMIC ADMINISTRATION,
February 19, 1945.

Hon. KARL E. MUNDT,
House of Representatives,
Washington, D. C.

MY DEAR MR. MUNDT: Receipt is acknowledged of your letter of February 16 in which you ask certain questions raised by the report filed by Senator JAMES M. TUNNELL and Senator HAROLD H. BURTON. I shall try to answer those questions in the order in which they were presented.

1. None of the airports referred to in the report in question were, according to the best of our knowledge and according to the Senators' report, constructed with lend-lease funds; they were constructed with War and Navy Department funds as a part of the military operations of the armed forces. Those Departments are therefore the best ones to advise you with respect to any agreements for the present and future use of those fields.

Lend-lease funds have, however, been used in the construction and expansion of some airfields located outside of the United States, its territories, and possessions. Prior to Pearl Harbor, the Army had no funds which it could use for such purposes, and the President therefore allocated approximately $175,000,000 of lend-lease funds to the War Department for use in establishing the Air Transport Command and for constructing certain airfields. A major portion of these funds has been used to expand airfields on the trans-African ferry route and to construct airfield installations in Canada and Labrador on the North Atlantic ferry route, but these latter amounts have been repaid. Since Pearl Harbor, however, the War and Navy Departments have had funds appropriated directly to them for such purposes and for the construction of other air bases for military operations.

These airfields have been built on sites chosen for reasons of military strategy. Many will therefore be of no post-war commercial or strategic value to us. An interdepartmental committee under the leadership of the State Department has for some time been studying the much broader problem of American interests with respect to the use of airfields outside the United States. As a result of their recommendations, a United States position with respect to post-war commercial use has evolved and was made public last November at the Chicago Air Conference. The question of post-war landing rights for United States military aircraft is one for the consideration of the United States military authorities.

2. You have asked whether it is true that it is the policy of the British to charge 42 percent of their cost for transportation, insurance, and handling charges on material and equipment turned over to us under reverse lend-lease in the Middle East, whereas the charges of the American forces for such items have been 25 percent.

We do not presently have information in Washington with respect to the amount entered in the reverse lend-lease account to cover transportation, insurance, and handling charges on articles furnished to United States forces in the Middle East. The information is, however, being gathered and will be furnished to you shortly. In the meantime, I can state that the charges for such services will vary, depending on whether the goods are procured in the Middle East or in Britain. For in the case of this and all other reverse lend-lease charges, the British report their actual or estimated out-of-pocket expenditures which in the case of transportation necessarily vary with the place of procurement. Moreover, as I have indicated in my testimony, the present entry in the British reverse lend-lease account for transportation, insurance, and handling charges, as well as all other entries, has not been accepted by the United States as the proper value to be entered in that account or used in any final settlement.

3. You also ask whether it is true that the British have consistently refused to price reverse lend-lease invoices.

Shortly after the British began to furnish us with reverse lend-lease, the United States armed forces were asked to keep quantity records only and to refrain from making a dollar evaluation of these quantities. At the same time, the British Government was advised by the United States that detailed records showing the amount of money they expended for reverse lend-lease aid need not be furnished to the United States. About a year later the British were asked by the United States to modify this procedure to the extent of furnishing quarterly reports showing their best estimate of their expenditures for reverse lend-lease aid by major categories. This the British have done for every quarter beginning on or after July 1, 1943, and in addition the British have prepared an estimate by major category of the value of reverse lend-lease aid furnished prior to July 1, 1943.

Late in 1944 a mission of representatives from the War Department, the Navy Department and the Foreign Economic Administration went to London to reconsider the whole matter with the British and the United States Ambassador. At that time the British were asked to provide even more detailed data and to supply us with as much information concerning unit prices of reverse lend-lease as could be furnished without increasing the number of persons performing reverse lend-lease accounting functions. This the British have agreed to do. The types of information that will be made available differ with various types of issue. In many cases both the United States Army and the United States Navy will receive a priced invoice with each article and each service they receive as reverse lend-lease. In other cases, where the issuing officer does not know the cost of the article he is furnishing as reverse lend-lease, the United States Army and the United States Navy will each receive unpriced invoices at the time they receive the article, but each will receive subsequently a price invoice or a price list from which the invoice originally received may be priced.

In addition the United States Army and the United States Navy may each station in the various British Ministries furnishing reverse lend-lease liaison officers who may examine all original reverse lend-lease invoices, vouchers, and records, and observe the manner in which the reverse lend-lease account is prepared. With this information both the United States Army and the United States Navy will be able to maintain records showing the unit cost to the British of each article and service that has been or will be furnished to them as reverse lend-lease. Both the State Department and the Foreign Economic Administration consider that the amount of information now available on the cost to the British of the reverse lend-lease program is adequate.

The report in question further states that the British presented in their official documents a report of some $175,000,000 of materials transferred to us on reverse lend-lease which was appraised by our Navy at a value of only $10,000,000. I do not know the specific transaction to which this statement refers, but I can state that the value of reverse lend-lease rendered to the United States Navy by the British Admiralty, up to September 30, 1944, as officially reported to the United States Government by the British, totaled only $28,250,030. It is possible, however, that this reference involves a report of transfers subsequent to September 30, 1944. In this event the discrepancy may be explained by the fact that in the past the Navy, for lack of information, did not know the cost to the British of certain goods and services received as reverse lend-lease and that those whose cost they did know, totaled only $10,000,000. In view of the fact that the Navy will now have complete pricing information, they can no doubt eliminate this discrepancy between theirs and the British records.

4. With reference to your question concerning the airport at Salé, north Africa, I am advised that no lend-lease funds have been used in its construction. I therefore believe that you should address your inquiry on this matter to the War Department.

In conclusion, I should like to state that it has always been a basic lend-lease policy to make as full and as frank a disclosure of all information concerning lend-lease operation as can be made without endangering our military security. Therefore, while I understand from subsequent conversations with you that a public hearing on these problems is no longer necessary, it is agreeable to the Foreign Economic Administration to have this letter published in the CONGRESSIONAL RECORD where your letter appeared.

Sincerely yours,

OSCAR COX,
Deputy Administrator.

Elimination of the Pauper Oath

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks I desire to have inserted in the RECORD an article that appeared in PM newspaper concerning the pauper's oath required of veterans before they are granted hospitalization.

On February 1, 1945, I introduced H. R. 1923 which asks for the elimination of this objectionable oath.

This article clearly presents the issues involved, in a fair and comprehensive manner, and I am pleased to call it to the attention of my colleagues for further study and consideration:

VETS RESENT "PAUPER'S OATH" REQUIRED BY VETERANS' ADMINISTRATION HOSPITALS

(By Albert Deutsch)

Among the welter of congressional bills dealing with veterans are three which seek to eliminate the degrading "pauper's oath" or "needs clause" that many sick and disabled vets must sign in applying for admission to a Veterans' Administration hospital. This clause has been a constant source of justified griping by vets in need of hospital care.

As noted in a previous article, two types of patients are eligible for treatment in Veterans' Administration hospitals:

Veterans with service-connected disease or disability incurred in the line of military duty.

Veterans with non-service-connected disease or disability. According to law, these are eligible for Veterans' Administration hospital admission only if they can't afford private medical care and if beds are available—service-connected cases always being given priority.

Service-connected cases are treated regardless of financial status. But the others, who comprise about two-thirds the total patient population in Veterans' Administration hospitals, must sign the so-called pauper's oath before admission. Then, too, vets who have service-connected disabilities but seek treatment for non-service-connected ailments must also attest to financial need.

EXHAUSTIVE DETAIL

Until last Saturday the application blank for admission to Veterans' Administration hospitals, officially known as Form P10, was an exhaustive four-page document going into minute details of the applicant's medical, military, social, and economic record. The new blank, just introduced, is a streamlined affair of one and one-half pages, drafted in response to repeated complaints of vets bewildered by the numerous questions they had to answer, some of a very personal nature. One of the two offending questions pertaining to the applicant's financial status has been eliminated. But the pauper's oath—the clause in which the vet has to swear he can't afford private hospital care—remains intact.

Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, says he can't eliminate the needs clause without a special act of Congress. Representative RAYMOND S. SPRINGER (Republican, Indiana) and Representative JAMES H. MORRISON (Democrat, Louisiana) have introduced bills in the House calling for its deletion. Senator WILLIAM L. LANGER (Republican, North Dakota) has introduced a similar measure in the United States Senate.

MANY WON'T SIGN

The mainspring of the present movement to abolish the pauper's oath is Joseph Lieb, a 33-year-old veteran of World War No. 2 and a vice commander of the Vincent B. Costello Post, American Legion, in the District of Columbia. Lieb is a free-lance ghost writer, professionally, who concentrates on writing speeches for Congressmen.

"I got interested in this cause," he says, "because many members of my post, and others that I know, told me they had refused Veterans' Administration hospital care because they didn't want to sign the degrading pauper's oath.

"Every war veteran deserves hospital care when he falls ill or is disabled. He deserves it as a right, not as a privilege. How can the Government pretend that it gives veterans special benefits when it compels a poverty-stricken statement sworn under oath and flanked by penal provisions before granting them medical attention?

"A veteran can go to a private or charitable hospital and obtain needed care if he says he cannot afford to pay for it and if beds are available, in the same manner as he gets care in a Veterans' Administration hospital. There have been many occasions where vets have secured medical benefits from charitable or local public institutions in a more gracious and humane spirit than has been accorded many former soldiers at veterans' hospitals. What's more, they are not obliged to swear to a pauper's oath."

WHAT IT SAYS

The pauper's oath in form P10 reads:

"Are you financially able to pay the necessary expenses of hospital or domiciliary care?"

There has never been a clear-cut definition of what constitutes ability to pay and the Veterans' Administration does interpret this clause liberally, but the bewildered veteran who applies often must virtually declare himself a medical pauper or make a deliberate liar of himself.

The Vincent B. Costello Post, American Legion, recently adopted a resolution branding the pauper's oath as humiliating, "and in addition clothed with the dubious but legal power of subjecting a veteran of world wars to the possibility of prosecution by arrogant or antagonistic Government bureaucrats."

BLAME ORGANIZED MEDICINE

Representative GEORGE W. GILLIE (Republican, Indiana), citing an exchange of heated correspondence with Dr. Olin West, secretary of the American Medical Association, backed up charges made by Vice Commander Lieb that organized medicine was blocking efforts to abolish the pauper's oath.

"One of the basic reasons for this oath," GILLIE stated in the CONGRESSIONAL RECORD, "is to discourage veterans from applying for veterans' hospitalization and to encourage them to give their business to private hospitals and civilian doctors. When a veteran reaches a point where he must go to a hospital, there should be no conditional admission.

"To force a veteran to swear under oath that he is poverty-stricken is degrading and un-American."

I would like to see the pauper's oath abolished. Such a step need not result in an expansion of Veterans' Administration hospitals. Non-service-connected cases could be treated in civilian hospitals with the Veterans' Administration footing the bill. A far better solution of the over-all medical problem would be a national health insurance bill, guaranteeing good hospital and medical care for all the people, vets and nonvets, without distinctions that divide.

Discard Pauper's Oath

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. DOYLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I introduce this letter from the Vincent B. Costello Post, No. 15, the American Legion, Department of District of Columbia, Washington, D. C., at the request of Joseph Leib, third vice commander of that post:

VETERANS' ADMINISTRATION REVISES HOSPITAL APPLICATION—BUT ONLY CONGRESS CAN REMOVE THE PAUPER'S OATH

(By Joseph Leib)

On September 5, 1944, the Costello Post of the American Legion, Washington, D. C., passed a resolution recommending the deletion of questions Nos. 5 and 9 of the Veterans' Administration, Form P10, application for hospital treatment or domiciliary care, otherwise known as the "pauper's oath. In various letters to General Hines we have suggested a number of additional changes.

Costello Post has contended that the existing form or interrogation for admission to veteran hospitalization was un-American and degrading.

During this controversy the writer has been critical of the Veterans' Administration both in the public press and in the CONGRESSIONAL RECORD.

However, I am delighted to call attention to the fact that General Hines in a letter dated February 14, 1945, furnished me with a copy of the new veteran hospital application form. This document is a revolutionary change over the old form.

For instance, two pages have been entirely eliminated. Whereas the old form was 4 pages long, it is now only 1½ pages short.

General Hines has revised the form to include what he considers to be a minimum of information necessary to comply with present statutes.

Now, it is up to Congress to eliminate the one question—No. 6—on the new form which asks:

"Are you financially able to pay the necessary expenses of hospital or domiciliary care?"

No veteran would answer that question in the affirmative if he was seeking hospitalization, for if he did he would not be admitted to a bed. This question is asked under penal threat and must be certified by a notary public.

The Stars and Stripes, National Tribune, the voice of all veteran organizations, stated editorially on September 28, 1944:

"To be admitted for treatment he (veteran) must be stigmatized in official records by an act of pauperism and an act of bureaucracy of the rankest sort. * * * A man to be admitted to a bed must declare himself a pauper or make of himself a deliberate liar. * * * To humiliate people who come to the country's aid in time of great need is indeed un-American. To force the Nation's warriors to swear they are poverty-stricken is degrading."

In a second editorial on February 8, 1945, the Stars and Stripes added:

"To insist upon their subscribing their hands to an oath that they are not able financially to pay for service that they should expect by virtue of fighting for their country in time of war is to humble and embarrass them and make of them unwitting paupers. This practice is positively indecent. It must be discontinued."

Those who are opposed to the elimination of this oath fear that an overload of applications for veteran treatment will prevail if the bars are let down and the pauper oath is removed.

Deep mystery beclouds this issue.

What is the unvarnished truth behind this refusal to remove the pauper oath? Thousands of veterans would like to know the real facts behind the retention of this oath.

In 1933 during the Economy Act debate the American Medical Association went on record as opposed to the construction of additional veteran hospital beds. In no uncertain terms, the A. M. A. vocied its fear of losing veteran business if the Government built more hospital beds.

Today these same forces appear active again in an attempt to prevent needy veterans from securing hospital or medical treatment unless they submit to a pauper's oath.

If this statement is not true, then what are the facts? What other conclusion can be drawn from the insistence to retain this obnoxious pauper's oath?

If the scheme to retain the pauper oath is not intended to scare and humiliate veterans in the hope that they will take their business to private doctors, then why in the name of logic does this humiliating question appear on the form?

If there is a logical reason for this oath, other than it represents the wish of selfish pressure groups, then I would like to hear what it is. I have searched for another answer in vain. This is the only conclusion that comes to the surface when all facts are carefully considered.

Since Pearl Harbor there have been added merely 8,404 beds to existing veterans hospitals throughout the United States. More than 1,167,000 servicemen of this war alone have been discharged as disability cases, and out of that total over 300,000 of them are drawing service-connected pensions. All of these men are potential hospital cases.

No sane person wants to see a hospital bed made available for every discharged soldier, but certainly there should be a reasonable number of facilities for worthy and needy veterans.

I hope and believe that General Hines is attempting to correct this unfortunate situation, but I have heard all kinds of conflicting alibis for this deplorable condition. I don't know the answer to this riddle. I submit that the American people have a right to know what is behind this unfortunate misunderstanding.

Costello Post members also objected to the fact that the penalty clause appeared at the top of the old hospital application blank in bold black letters.

It has been contended that this clause is as black in conception as it is in print, and must be eliminated. It hits veterans smack in the eye and labels them paupers seeking something as mendicants that they have earned as a right. They are entitled to maintain their self-respect.

Therefore, it was shocking to note that the Veterans Administration removed the penal provisions from the front of the hospital form and placed it at the rear.

Certainly, the Veterans Administration wasn't so sure of the justification of this clause when it lifted it from the front of the application form and had it inserted in the rear. Otherwise it would not have taken this unusual step.

The letter and all of its contents and facts therein set forth were prepared and handed me by this officer of this post.

Every American home has reason to be vitally concerned for the permanent health welfare of the veterans of every war. Proper, prompt, and thorough hospitalization means health for the individual and national health; it means the saving of human life in many cases, and as the millions and millions of American soldiers return from this global holocaust, it will mean more millions of American veterans will be concerned with methods and procedures of obtaining hospitalization and health care and assistance than ever before in our Nation's history. No one ever dreams that the Nation does not owe the maximum of such hospitalization and care to every veteran, regardless of race, creed, or color. Therefore, whatever these veterans have to sign, whatever procedure they have to take to obtain prompt, thorough-going hospitalization, is of vital concern to every home. Not only for one occasion; not only for 1 year, but throughout the entire lifetime of the veterans that are now home and of the more than 12,000,000 veterans who will come home.

The American Legion post objects to question 6 in the application for hospital treatment or domiciliary care as released in December 6, 1944. It appears manifest that this one-page revised Form P–10, application for hospital treatment or domiciliary care, is a marked improvement over the four-page application as issued August 1943. In that application, question 9 therein was exactly the same as question 6 in the revision of December 1944.

It reads as follows: "Are you financially able to pay the necessary expenses of hospital or domiciliary care? (Yes or no)."

Question 9 had to be answered under oath and before a notary public in the old form, with penal provisions applicable thereto staring the veteran in large type as he signed it. As question 6 in the revised form, the answer also has to be sworn to under oath, even though the penal provisions applicable thereto in which the veteran is reminded that he shall be punished by a fine of not more than $1,000 or imprisonment for not more than a year or both is on the reverse side. The content of this question is a relic of an era to which we will never return. It is the horrible pauper's oath. The history of it is that it not only breeds deceit, but it destroys dignity, confidence, and morale. If the time ever was that it was the fault of any individual veteran that he could not pay for necessary hospitalization, then the social and economic evolutions of this generation have eradicated such conceptions of a Nation's obligation and responsibility to a veteran, who has offered his life and who needs hospitalization largely or partly as a result of such service to his Nation.

Furthermore, the very form and content of this pauper's oath as question 6 calls for a matter by way of answer, of opinion and interpretation of the veteran's ability. It asks for his opinion of whether or not he is financially able to pay. Now, then, if he honestly answers that question as "No," he may be giving a frank, honest opinion of his financial ability and for which honest, frank answer he later may be fined under the penalty clause, section 15, to have knowingly made a false statement or affidavit in order to get the relief. If he answers "yes" to question 6, he, of course, will not receive the hospital treatment. So, what is the veteran to do? What constructive and governmental need is furnished by this pauper's oath requirement. After a veteran signs "no" to this pauper's oath, is there going to be an investigation of the veteran's veracity as to whether or not he speaks the truth before he is furnished the hospital treatment or care? And who is finally to be judge as to whether or not his answer "no" shall forfeit him all rights, claims, and benefits as provided in the claim under section 15?

Let Congress give the Veterans' Administration, if they do not already have it, authority to delete this pauper's oath, question 6, which read as follows: "Are you financially able to pay the necessary expenses of hospital or domiciliary care? (yes or no)." Let us authorize the Veterans' Administration, if they do not already have that authority, to see to it that every veteran needing hospital treatment or domiciliary care receives it with the maximum of dispatch and promptness and with a minimum of form and procedure which causes delay and heartaches and increasing physical or mental sickness or fears, or unnecessary family stresses or strains. And let us always leave the Veterans' Administration, if it is not now there, in a position where it can administer the gratitude and appreciation of a grateful Nation to every veteran in these matters, so that the veteran has cause and ability to retain his dignity and a sense of worthwhileness, and of need and use and of value to the community. Let us eradicate the need of any veteran declaring he is a pauper in order to receive hospital treatment or domiciliary care.

Reds' Berlin Drive in Land Once Peopled by the Slav

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. FLOOD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre (Pa.) Sunday Independent of February 18, 1945:

RED'S BERLIN DRIVE IN LAND ONCE PEOPLED BY THE SLAV—NAMES FOUND ALONG ODER CAME FROM THEIR OLD HOLDINGS

(By Attorney Peter P. Jurchak)

The Russian overrunning eastern Germany, including the capital of Berlin, are merely returning to territory once peopled by Slav ancestors. The historical fact is that even considerable additional territory west and northwest of Berlin once belonged to the Slavs. This forms an interesting chapter in the history of the Germans and the Slavs in this region.

If you will take a map of eastern Germany, any of the maps currently seen in the newspapers will do, you will see towns and cities other than Berlin which once were peopled by Slavs. Run your eye down the Oder River from its mouth on the Baltic Sea to its source in Czechoslovakia. All the territory

along its 560 miles was for hundreds of years peopled by Slavs who were later driven out by the Germans. In fact, the Oder gets its name from its former Slavonic name of Djodr.

The territory east and west of the mouth of the Oder was part of the original Pomerania, which extended along the Baltic Sea to East Prussia. This land was called by its original name, the Pomorze, meaning the land along the sea. Originally it denoted the coast district between the Oder and the Vistula Rivers. Afterward it extended much farther west, while it was shortened on its eastern end. Modern Pomerania was then known as Slavinia and the then province of Pomerania late became West Prussia, which was under Polish rule until 1309, when it was divided between the German province of Brandenburg and the Teutonic Order, which played so large a part in the conquest of the eastern portion of Germany from the Slavs.

ONCE PEOPLED BY CELTS

This region was primitively peopled by Celts, but about the fourth or fifth century A. D. Slavonic tribes settled there, built towns and occupied all of this country to the exclusion of any other race for roughly a thousand years. It was not until the twelfth century that the Germans, under Albert the Bear, finally drove the indigenous Slavs out of Berlin and the surrounding country, which became the Saxon "North Mark."

If you will look at your map again, you see near the mouth of the Oder, in the Baltic Sea, the island of Rugen. Prussia acquired it in 1815, but it was for centuries occupied by Slavs. Most of its place names are of Slavonic origin, and the island was, until the spread of Christianity, the abode of the principal Slav pagan deity. In fact, only recently has the important temple built by the pagan Slavs to this deity been discovered. Of course, the name of the Baltic is of Slav origin, the Teutonic name being Ostsee.

ORIGINAL HOME OF SLAVS

To the south of the original Pomerania, the territory between Leipzig westward to the present border of Poland, was all at one time part of the original home of the Slavs. The Slav name for Leipzig was Lipski, meaning "the city of the lipa (lime) tree." It was not until about A. D. 1000 that it was first occupied by the Germans. Dresden was Dresga, meaning "the town of the forest"; it remained Slav until A. D. 1260. Breslau is a corruption of Vratislava, which belonged to the Czechs as late as 1526, when it was finally given to the Hapsburgs. The story of this region presents an intensely interesting tale in the German "drang nach osten" (drive to the east).

Before the Slavs were driven out of these territories they had spread westward as far as the North Sea. The River Elbe likewise rises in Czechoslovakia and empties into the North Sea. Fifteen hundred years ago the valley of the Elbe was peopled by Slavs, who named this river the Laba (from which the present name is derived) and became known as the Polabians, meaning "the people living along the Laba."

NAMED THE COUNTRIES

It should be noted that all of the Slavs originally spoke somewhat the same basic language and were not divided into nations or nationalities. In fact, in most instances, the names of the Slav countries of today were named after some particular Slav tribe. Poland was named after the Polans, a large but definitely not the only tribe inhabiting Poland. The Czechs were one of the tribes inhabiting Bohemia. Russia was populated by many Slav peoples corresponding somewhat to the present western republics of the Soviet Union. It was named after the Russ tribe.

The first federation of these Russian Slav tribes appeared in the third or fourth century and were referred to by the Roman writers as the Antae, living between the Dnieper and Dniester. Prior to this time is the accepted belief that no Slavs lived south of the Carpathian Mountains, leastwise in the Balkan Peninsula. About this time, in the great migration of nations, the Slavs, probably because of the natural increase in population, moved over the mountain range which fringes roughly northern Czechoslovakia. Later they moved south into the Danube Valley and into what is now Yugoslavia and Greece. The province of Macedonia became populated by Slavs in the fifth and sixth centuries, with the exception of a few Greek spots.

NEVER UNITED

But the Slav tribes, or later the various Slav nations, never united like the Germans. And thereby hangs an historical tale. The former were individualists and attached to their own separate cultures, languages, and traditions. Taking advantage of the differences among the various Slav nations in central Europe the Germans, as they grew stronger militarily and nationally, pushed eastward and took from the Slavs all of what is now eastern Germany and east Prussia. So that at the beginning of World War No. 1 there remained but Bulgaria and Russia as Slav nations in all the vast territory of central and eastern Europe that still remained Slav. The Germans, either by direct conquest, as in Pomerania, or indirectly as in the establishment of Austria-Hungary, governed Slav territories and populations which far exceeded the original Germany or the original German people.

World Peace Conference

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. PRICE of Illinois. Mr. Speaker, I have this day introduced a resolution asking the House of Representatives, the Senate of the United States concurring to empower the President of the United States to appoint from each of our 48 States and Territories a wounded or disabled war veteran of World War No. 2 to be a delegate from the United States to the coming World Peace Conference. The resolution also urges the President of the United States to ask all the nations who will have representation at the World Peace Conference to appoint from their respective nations an equal number of wounded or disabled war veterans of World War No. 2 to represent their respective countries.

Mr. Speaker, this war has cost the lives of over 8,000,000 youth of the world, young men who had every right to live in peace and security except for the madness of certain political and military leaders.

Capital and labor undoubtedly will be present at the forthcoming peace conference. Is it too much to ask that those who bear the scars of battle and who have sacrificed their all for a better world take part in the deliberation for a just and lasting peace? The presence of wounded and disabled war veterans at the peace conference would, in my opinion, be a salutory influence and do more to destroy the insanity of war as a settlement of international disputes than any other factor. I respectfully ask support of this resolution.

Punishment of War Criminals

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. HOLIFIELD. Mr. Speaker, we all rejoice in the accomplishments of the Big Three at the Crimean Conference. The hopes of the common people throughout the world seem brighter. However, all the problems facing the United Nations were not solved, nor will they be solved by many future conferences. It is not amiss to point out one failure somewhat accentuated, because of its platitudinous mention. I speak of the punishment of war criminals.

Prime Minister Churchill, President Roosevelt, and Marshal Stalin did declare it "their inflexible purpose to—bring all war criminals to just and swift punishment and exact reparation in kind for the destruction wrought by the Germans." The irony of this declaration of a joint purpose, namely, punishment of war criminals and reparation for property damage is that a definite step was taken to implement the reparation part of the declaration. An Allied Commission on Reparations was authorized to sit in Moscow and determine the "damage (property) caused by Germany to the Allied countries."

No such implementing commission was established to pursue the equally, if not more important first part of the declaration, namely punishment of war criminals. Why the timidity in approaching this subject fraught with so much importance to the future peace of the world? Does not the blood of slaughtered millions, Jews, Poles, resistance heroes of every minor group cry out for punishment against their murderers? Are the Nazi and Fascist murderers to go unpunished? Are they to be allowed the asylum of neutral countries, to which they are already fleeing? After World War No. 1 the Kaiser escaped by taking refuge in Holland where he lived in immunity from his accusers. His henchmen by farcial trials were freed to build another war machine for World War No. 2.

This failure to implement a United Nations commission to deal with this problem casts grave doubt on the "inflexible purpose" of the conferees. The United Nations War Crimes Commission in London should have been strengthened. Russia should have joined with the United States and Britain in making effective this or a similar organization.

The resignation recently of Sir Cecil Hurst in London and the dropping of Herbert Pell—our representative—by the State Department in Washington from

this Commission, casts a grave doubt on the desire and capacity of Britain and America to take effective action in the field of war crimes. A recent article in the New York Post of February 2, inserted by the American League for a Free Palestine, challenges our attention on this vital subject:

OF COURSE YOU ARE FOR MR. PELL—THEN ASK YOUR GOVERNMENT TO TAKE AN UNEQUIVOCAL STAND ON WAR CRIMINALS NOW—DON'T LET LEGAL QUIBBLING SAVE THE MURDERERS FROM THE GALLOWS

In our confused times we have become used to many strange and inexplicable occurrences. Yet, what is happening now in the councils of the United Nations War Crimes Commission is something so amazing that it surpasses the imagination of even the greatest of skeptics and cynics. The situation may be summarized as follows: Two decent, courageous, farsighted and outstanding statesmen of the United Nations—Sir Cecil Hurst of Britain, and Herbert C. Pell, an American—were squeezed out of the War Crimes Commission because they demanded three things:

1. That all war criminals of the Axis powers, regardless of rank and position, be brought to trial for the unspeakable atrocities that were committed against human beings.

2. That these war criminals should be tried and punished even if they committed crimes against Jews of their own countries.

3. That in order to translate the Moscow declaration on atrocities into concrete action, an international conference be convoked for the purpose of setting up a United Nations War Crimes Court.

These two courageous champions of humanity were pressing their governments for a solution for almost a year, but the British Foreign Office did not even offer a reply to the courtesy of the presentations of Sir Cecil Hurst. In disgust and embitterment he resigned, making his protest universally known. Some weeks later, Mr. Herbert C. Pell found himself dismissed as the American representative on the Commission. The official reasons for the "purge" of these two champion statesmen—Sir Cecil Hurst for "ill health" and Mr. Pell for the lack of an appropriation of $30,000 for himself and his staff—as well as the legalistic hair splitting brought forward against bringing to trial Axis criminals for having tortured and killed Jews, are senseless and inhuman.

There is no use indulging in any legalistic discussions. It is enough to say two things:

By virtue of the Nuremberg laws, the Jews in Axis countries have long ceased to be nationals of those countries. They have been excommunicated, denationalized, and transformed into stateless people; in fact, a new ethno-political entity which the Hebrew Committee of National Liberation so rightly designates as the renascent Hebrew nation.

Should international law fail to acknowledge this fact, to justify the crimes committed against those people, then there is only one conclusion to be drawn; something is wrong with international law and therefore it must be changed or abandoned in the interest of historic justice. The world must not permit the establishment of an axiom that red tape supersedes justice.

If legalistic excuses will remain the basis of the United Nations attitude to the worst crimes history has ever witnessed, there is no hope for humanity and civilization to survive. Leaving crimes of this kind unpunished on the pretext that they were committed only against Hebrews, would mean to allow the continued existence of a lawless zone for crime and extermination. Within this zone the philosophy of barbarism would continue to feed on its own cruelty and make the coming peace less than an armistice, a situation that would lead to another war, just as surely as the present war followed the last because of an incomplete peace.

Mr. Pell, in his recent statements, expressed this certitude in the most convincing and prophetic, though dispassionate manner:

"The conviction and punishment of those responsible for the suffering of this war is not a matter of revenge, but of justice. The persecution of minorities is an easy and, from ancient times, regularly used means of establishing tyrannical governments which inevitably become belligerent sooner or later. Every such government must canalize discontent and transmute the hostility provoked by its own methods at home into hatred of foreign countries.

"The persecution of a minority will tend at first to consolidate the gang and will cow the opposition of all citizens, even those not belonging to the persecuted minority. Let us suppose a shopkeeper in Berlin sees a Jewish shop next to him raided and wrecked. It is manifest that such a man will hesitate before opposing the Nazi organization.

"I am thinking of our unborn children and I see myself damned, in the most literal and theological sense of the word, before I will leave a stone unturned that might save them from a third world war."

But it is not only a question of the future. What makes this a very grave and urgent problem is that most of the estimated million or more Hebrews still alive in German-occupied Europe are former Axis citizens, and while being in constant danger of death, which hundreds of them meet daily, the Germans are being informed that crimes committed against Hebrews are not considered war crimes. In their criminal way of thinking the German murderers might very well look upon the present policy of the War Crimes Commission as tacit consent to their incessant mass murder of Hebrew men, women, and children.

But Mr. Pell and Sir Cecil Hurst are not dreamers. They are realists who foresee what is going to happen tomorrow. To uphold them, public opinion in this country, as well as in England, must stand up and join their voices to those of Mr. Pell and Sir Cecil.

The Hebrew Committee of National Liberation made the following requests of the governments of the United Nations:

1. That they issue a joint declaration proclaiming that crimes committed against Hebrews in Europe, irrespective of the territory on which the crime was committed or the citizenship or lack of citizenship of the victim at the time of death, be considered as a war crime and punished as such.

2. That the governments of the United Nations concerned instruct their representatives on the War Crimes Commission to see to it that the above-mentioned declaration is put into effect.

3. That representatives of the Hebrew people be given membership on the War Crimes Commission and that temporarily, until such time as a Hebrew national sovereignty be reestablished, the Hebrew Committee of National Liberation be authorized to constitute the Hebrew representation on the War Crimes Commission.

In backing these requests, we appeal to every man and woman in this country to demand that Mr. Pell be immediately restored to his function on the United Nations War Crimes Commission and given authority to act on behalf of the United States Government for the punishment of war criminals.

The American people, heirs to a glorious tradition, keepers of a sacred flame of justice, must take a firm stand on these demands. We must not nullify the ideals for which our sons and brothers are dying in Italy, on the borders of the Reich, in the Pacific islands, and on the seven seas.

Preference for Veterans on Government-Insured Housing Projects

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by me yesterday:

As part of the Government's program for returning servicemen to normal life as expeditiously as possible, provision should be made whereby veterans would be given preference in public housing projects, Representative FRANK E. HOOK said today in introducing a House bill calling for such preference.

"The homes of very many of the men and women in the armed services have been disestablished as a consequence of their service to the country. By placing all returned members of the armed forces and their dependents at the head of all lists for Government housing projects, I believe we will be taking a concrete step toward establishing normal home life for our veterans."

The text of the bill introduced by Representative HOOK follows:

"A bill to give World War No. 2 veterans preference on lists on Government housing and Government-insured housing projects

"*Be it enacted, etc.*, That veterans of World War No. 2 and dependents of such deceased veterans be given preference on all lists for Government housing and Government-insured housing projects."

A National Problem of the First Magnitude

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. WHITE. Mr. Speaker, many thoughtful people in this country are turning their attention to the national debt and wondering how it will be paid.

I hope some of our eminent economists can give an answer to the problem submitted by Mr. Smelser as stated in his letter printed herewith:

OKEANA, OHIO, *January 15, 1945.*

Mr. COMPTON I. WHITE,
Member of Congress, Washington, D. C.

DEAR MR. WHITE: I get the CONGRESSIONAL RECORD regularly and read all your articles, both in the debates and the Appendix. I like your views on most subjects discussed. I am very much interested in how this national debt can be paid. About the smallest estimate is three hundred billion. That is three hundred thousand million and there are about 30,000,000 families in America. At 3 percent, the carrying charges will be nine billion a year, nine thousand million, an average of $300 a year per family. Totally impossible at present incomes. As we are under private enterprise, it means that private enterprise will have to pay out that much before the

Government can collect it. Private enterprise pays out money only for production and has to recapture that money by the sale of goods. If a billion dollars is paid out for production, the goods must carry that amount as part of production costs. If the Government takes my $300 for tax (which they are, and more) that is $300 of goods unsold or in the warehouse. If the nine billion was paid out as interest on bonds held by workers, it would still be active purchasing power, but the workers' bonds are of the 10-year variety, not due for sometime and during that 10 years the interest goes to banks and other big holders who are very small buyers of consumer goods.

What is going to become of the surplus which we in this country cannot buy? Production costs carrying this heavy interest charge cannot compete in foreign markets. Or is it the lend-lease or give-away plan to be followed as at present? If that is the idea, why cannot we lend-lease it to our own people, or perhaps put a lot of it into decent homes and home furnishings for our citizens. Or is it to be sent abroad on 30 years time, Bretton Woods or Export-Import Bank style, mostly a bookkeeping operation. Why not just cancel the whole national debt in all nations and not make the workers fight the war and then go into world-wide slaving to pay the bill?

R. L. SMELSER.

Urge Legislation Protecting Farm Labor

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1945

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a resolution passed by the Michigan State Legislature urging the enactment by Congress of legislation protecting farm labor as critical in the war effort. The resolution follows:

House Concurrent Resolution 8

Concurrent resolution memorializing the Congress of the United States to enact legislation protecting farm labor as critical in the war effort

Whereas farm labor has not been placed on the critical list in the war effort; and

Whereas local draft boards apparently do not have sufficient power to classify physically fit producing farmers between the ages of 18 and 26 as critical in the war effort, and to defer the drafting of men critically essential to the production of the food supply of the Nation and armed forces, but are obliged to meet their draft quotas; and

Whereas with rationing and shortage of food supplies, it is vitally important that farm production be kept at the maximum, and it is short-sighted to imperil production of crops and livestock: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Congress of the United States is urged by the Michigan Legislature to enact legislation protecting farm labor as critical in the war effort, which action should be taken immediately to forestall a possible emergency, due to the recent ruling of Selective Service; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the President of the Senate and Speaker of the House of Representatives of Congress, and to the Michigan Members in the Senate and House of Representatives of Congress.

Adopted by the house January 25, 1945.
Adopted by the senate January 31, 1945.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLEO,
Clerk of the House of Representatives.

The District of Columbia-Virginia Boundary Line

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. STEFAN. Mr. Speaker, within a stone's throw of this Capitol lies the beautiful Potomac River, granted by the King of England to Maryland in 1632 and to Virginia in 1687. Out of those original grants there existed a conflict between Virginia and Maryland until the compact between the States in 1785.

Six years later by proclamation of President George Washington the site of the District of Columbia was finally located, partly in Prince Georges and Montgomery Counties in the State of Maryland and partly in Fairfax County, Va., which then extended to the high-water line of the Potomac River. This was an area 10 miles square.

Nine years later Congress held its first session in the city of Washington when the total population of the District of Columbia, including Alexandria City, was 14,093. Pursuant to an act of Congress July 9, 1846, when the population had arisen to nearly 50,000 individuals, and with the assent of the people of the town of Alexandria—then total population approximately 8,500—at an election on the 1st of September 1846 by a viva voce vote of 763 for retrocession and 222 against it, President Polk, by proclamation of September 7, 1846, gave notice that the portion derived from the State of Virginia was receded to that State. Including water and land, there remains out of the 10 miles square area originally ceded approximately 69¼ square miles. It has been estimated that the present land area, excluding the Anacostia and Potomac Rivers, is approximately 61 square miles. Thus was consummated a tragic error. Almost one-third of the District of Columbia so carefully planned and created by the fathers under the magnetic influence of Washington by an assent vote of 763 was receded to Virginia. The lost area constitutes what is now known as Arlington County, including a part of Alexandria City.

The committee reporting on H. R. 259, House Report No. 325, Twenty-ninth Congress, first session, in part, said:

Within the portion of the District on the north side of the Potomac River there is much more than space enough for all the public groups and buildings ever likely to be necessary for the seat of government. Beyond this quantity every addition of territory to be embraced within the exclusive legislation of the Congress is not only unnecessary but makes a useless diversion of its time and attention from the great objects of general legislation to the discharge of the duties of a petty local legislation, for which it is unfitted. In the District itself this union of the counties of Washington and Alexandria has been the source of much mischief.

Even in those early days all was not quiet along the Potomac. There was an abundance of land and a very limited but very vocal population. However, as the population grew and land value increased, the beautiful Potomac became more and more the source of agitation and controversy.

Where was the exact line between the Federal city and the sovereign State of Virginia and what about the constitutionality of the retrocession? In 1875 it was claimed that the act of 1846 was unconstitutional and void—*Philip* v. *Payne* (92 U. S. 133).

Throughout the years there have been distinguished jurists and others learned in the law who consistently maintained that the act of retrocession was unconstitutional upon the following grounds:

After the power to select the seat of Government had been once exercised by Congress, after the cessions had been made for that purpose by particular States, after the area so ceded had been accepted by Congress under the act of July 16, 1790, declaring "the same is hereby accepted for the permanent seat of the Government of the United States," the power of Congress over the subject matter was exhausted. Or, if it was not exhausted, it could not again be exercised, because no power remained to transfer the District as originally created and accepted or any portion of it to any state.

Year in and year out the controversy has raged. The White House, the Capitol, the Department of Justice, the Governor's Mansion and the District Building have all joined in the chorus.

Then one day there came a sad awakening. It was generally conceded that the Maryland charter authoritatively and conclusively bounded the State of Maryland by the high water line on the Virginia shore. The Supreme Court of the United States in several decisions had held that to be a fact so firmly established as to be no longer the subject of discussion.

Where was the line? No human being could be produced as a witness to testify as to the location of the 1791 line. Its location was to be established as a question of fact from highly controversial evidence. By the use of old maps the District of Columbia government and some Federal agencies have attempted from time to time to establish the relationship of the high watermarks of 1791 and the high watermark at the time the studies and investigations were made. It is important to accurately determine this line. It has been discussed for years and years. At our doorstep there is a "No Man's Land" which has given rise to bitter controversy and interminable lawsuits. It's time for action.

AN INTOLERABLE SITUATION

Why should a condition as intolerable as this continue to exist at the very doors of the Capitol? So far as I am advised there is no existing controversy between

the Commonwealth of Virginia and the United States as to the boundary between the District of Columbia and the Commonwealth. I am not aware that the Commonwealth of Virginia has ever claimed that the boundary is other than that as determined by the Supreme Court of the United States. So far as I know the only parties setting up any dispute with respect to the boundary are certain private individuals and corporations asserting ownership of lands made out of the Potomac River below the high water line as it existed at the creation of the District of Columbia. The uncertainty arose because of the long-lost line.

What could the authorities of Arlington County be expected to do in view of the uncertainties of the situation?. What could the local municipal authorities be expected to do? Apparently nothing was expected, for we actually had and have had for a great number of years a "no man's land" on the other side of the river.

In years past this "no man's land" was the zone of safety for criminals of all types. Bootleggers infested the riverfront and the gambler conducted his establishment unafraid and unmolested. Many little houseboats lay just off shore and there the shooting cases and other felonies occurred bringing disgrace to the administration of justice in the section. Virginia could take no action and neither could the District by reason of the uncertainty of the jurisdictional line. To give you an idea of the extent of this lawlessness, let me quote from a witness appearing before a House committee in 1932:

> I own some land along there, and may I say that during recent times the question has been brought up by bootleggers and other lawless individuals, particularly in houseboats, and there were a lot of shacks that they had built upon this area and the sheriff of Arlington County said their jurisdiction was doubtful, so that we resorted to lawless methods ourselves on our land bordering the Potomac River, between Alexandria and Washington. The only way we could get those people off was for the sheriff of Arlington County to go down there and hold the gun while we burned up the houses and set fire to them in this disputed area between the high and low water mark where these shacks were all built opposite the Mount Vernon Boulevard.

It is interesting to observe that there seemed to be no doubt in the minds of Virginians when it came to collecting taxes. The record shows that since the birth of the county, taxes, license fees, and so forth, have been collected by the State and county down to the low-water line. The question of jurisdiction did not worry our friends when it came to collecting taxes.

It is regarded as important by some individuals that license taxes and other forms of taxes in this disputed territory have been paid in Virginia. It is likewise regarded as important that the District of Columbia has not policed or attempted to police the territory, or to tax the property in question. I do not feel that the public rights in and to this area should be lost merely because years of unassertion of right have elapsed. It looks like the time has arrived for an accounting.

The Federal Government and the local municipal government have a very vital interest in this area.

The Department of Justice, with full knowledge of all the facts, has not been aggressive enough in the protection of the public interest.

The District government with knowledge of the fact that much of this territory was within the boundary of the District has not been aggressive enough in protecting its rights. The fact that revenues derived from taxation across the river would not be sufficient to pay for police and fire protection is absolutely no justification for failure to assess and tax.

THE FEDERAL INTEREST

For 150 years the question of jurisdiction has been discussed. Suit after suit has been filed to clear titles and the end is not in sight.

The Federal Government is becoming more and more interested in this small country. Here is located Fort Myer Military Reservation, the Arlington Cemetery, great housing projects, the Pentagon, the Navy Annex, Public Roads Administration Buildings, the Naval Radio Station, and the Washington National Airport. Virginia wants to have the boundary line and titles definitely established, yet in doing so Virginia does not want to give away an inch of property or any jurisdiction. Perhaps it is not so much Virginia as it is the local interests which have interfered with the solution of this problem throughout the years.

COST OF NATIONAL AIRPORT

The Washington National Airport is property of the United States almost wholly created out of the Potomac River covering 729 acres of land. This is a National Airport which should be part of the Nation's Capital solely under the control of the Congress.

The cost of construction of the Washington National Airport including hydraulic fill, excavation and grading, drainage, paving of runways, taxiways and aprons, terminal building, six hangars, access roads and structures, utilities, landscaping and park areas, and other appurtenances was $16,954,417. Additional improvements currently being made under the development of landing areas program, will cost approximately $571,000 additional. These amounts do not take into consideration the buildings and grounds of the Public Roads Administration, which buildings were at the site prior to the construction of the airport. It is understood that the Public Roads Administration was allowed by the Public Works Administration the sum of approximately $2,000,000 as reimbursement for the land and buildings which the former relinquished. Since the beginning of the war additional buildings have been constructed on the airport from funds appropriated to the War Department. Their costs approximate $4,000,000.

The following shows cost of operation of the National Airport for 1944, and estimated costs for 1945 and 1946:

	1944	1945	1946
Cost of Civil Aeronautics Administration	$540,746	$559,000	$611,321
Cost of other Government operations reimbursable to Civil Aeronautics Administration and not included in revenues	39,718	40,000	40,000
Total	580,464	599,000	651,321

Annual receipts from operation of the National Airport approximate $516,470.

The exclusive jurisdiction of Congress is lost unless this airport becomes in its entirety a part of the District of Columbia. If transferred to Virginia, the Federal Government will only have concurrent jurisdiction. The entire operation may in all probability be subject to the license laws of the State. This is a serious question now and will become increasingly more serious in the days which lie ahead.

THE PENTAGON

On a lovely site with a commanding vista stands the Pentagon, housing some 40,000 employees.

As the name implies, it is a five-sided structure. The building, including a 6-acre court in the center, covers 42 acres. Each of its five sides is 986 feet long, and the building is approximately a mile in circumference. I am advised that there are 143 acres of gross office space in the building of which 83 acres is net office space. The other 60 acres are devoted to the following purposes: 5 acres for storage; 1.8 acres for garage; 1.9 acres for bus terminal; 2 acres for concourse; 6 acres for kitchen, cafeteria, and beverage bars; 20 acres for corridors, ramps, entrances, and stairs; 10 acres to furnish housing for mechanical equipment; 8 acres for walls; 3 acres for toilets and janitor's closets.

Observe the great new highways, the wonderful overpasses and underpasses serving the Pentagon, the Arlington Cemetery, Fort Myer, Navy Office Building No. 2, the Army Signal Corps Station at Arlington Hall, the Naval Radio Station at Arlington, the women's dormitories, and the people of Arlington County, Fairfax County, and all of Virginia. Count the investment, and you will run over $150,000,000.

The census reports show increases in Arlington of 30,000 and in Fairfax of 15,000 between 1930 and 1940; think how that population has increased since the start of this war. I am advised that in 1940 the total privately owned real-estate assessment for the entire county of Arlington amounted to $39,348,740, plus $2,729,181 for Public Utility Service's holdings, which includes personal property as well as real estate. Its full value could hardly have exceeded $100,000,000. Arlington County and the State are now reaping a rich harvest, but the county and the State must play fair with the Federal Government and the city of Washington.

The National Capital Airport lies almost entirely riverward of the line of 1791 and a good portion of the Pentagon

Building lies riverward of the line of 1791.

Since 1846 Virginia has been collecting taxes and fees which rightfully belong to the District of Columbia.

Even at this very hour Virginians have a way of getting into the local charitable hospital. For the first 10 months of 1944, 94 individuals from across the Potomac were admitted to Gallinger Municipal Hospital. Surely you do not expect the taxpayers of this city to continue to assume your burdens now that you are becoming so prosperous.

Many of your citizens earn their livelihood in Washington but contribute little or nothing toward its maintenance and upkeep. Perhaps you know that 645 of your sons and daughters are receiving free education in Washington.

When Washington signed his proclamation of 1791 he must have felt great pride in his beloved State, which solemnly offered to turn over for the Nation's Capital the entire 10-mile-square area. He would have no pride, I am confident, in the act of retrocession and in the controversy which has raged since then on a simple question of boundary. How can we hope to engage in the settlement of vital boundary disputes between the great nations of the world when we are unable to settle one so simple as this between the National Government, Virginia, and the local municipality?

Our War Aims

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech I delivered in New York on February 17 entitled "Our War Aims."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

No sacrifice is too great for freedom; but any sacrifice is too great if we wage this war merely to perpetuate the injustices and inequalities which would make another war inevitable. While our energies are expended these days in increasing our scale of production and in putting the tools which we produce to the best possible use on the various battle fronts of liberty, we must give some thought and contemplation to the ends for which we fight. We must make certain that these tools of war and the victory they are bringing will not be wasted. We must redeem the sacrifices our fighting forces are called upon to make by striving to perfect in the world communities, a procedure that will prevent the inevitability of war.

Naturally, our primary aim is to defeat our enemies. While we are not out to eradicate entire peoples, even those who have succumbed to the wiles of the dictators, we are determined to free them from their oppressors, and to make sure that they will not again be brutalized or cajoled in desperation into accepting tyranny. Our first objective, therefore, is to win the war and then to crush out aggression wherever it is to be found.

That is not all, however, for we cannot stop at that. Need I remind you of the mistakes of the last war? Is it sufficient to remind you that, while we won the military decision in that great struggle, we lost the peace that followed. We were not willing to assume the obligations of that peace. We turned our backs upon our rightful responsibility of seeing to it that a just, equitable, and lasting peace resulted from the deliberations at the peace table. Some believed that the horror of the war would prove an object lesson strong enough to prevent any new uprising of tyranny. It was not enough. The seeds of conflict had not been destroyed, and as a result another and more horrible conflict resulted.

This time, let us hope, we shall have the spiritual ideals, the moral strength, and the political wisdom to see the thing through; to win the war and then to win the peace as well. We know that as a nation we cannot live apart from the rest of the world. If, as individuals, we were merely to follow our own inclinations, good or bad, and completely ignore our neighbors, the result would be a lawless community with nothing accomplished, because no one would work with anyone else. That is why we have laws; that is why we have community planning in government, in the factory, on the farm, in the school, and the home. The world, just like the local community, needs an orderly system, a system in which the several nations may work together in an orderly manner. No nation, any more than any individual, should be permitted to go haywire and injure the others. This is one of the basic fundamentals of democracy. We in America have always held to such a policy in our own affairs. Today we know that it is just as vital on a world-wide scale as it is at home.

So let us clear our minds and set about wholeheartedly to help build a more cooperative world. Lack of international cooperation, while not the only cause of the world's ills today, has certainly given the Hitlers a chance to seize power. Preying upon self-interest, upon greed, and upon inertia, Hitler encouraged our disunity and lulled us to sleep. The French were doubtful; the British were unprepared; we ourselves were unconcerned. We were blinded to the plain fact that unless we all banded together, we would eventually all be attacked, one by one. The strategy of dividing in order to conquer was employed in every democratic country in the world. It is still employed, but, fortunately, the world understands its use and its effectiveness, for the time being, is at a very low degree.

Today the United Nations are united and determined upon complete victory over the forces of fascism. They are determined to build an international order that will make impossible the recurrence of war. They are determined that when this war is over we shall declare another war—a war against unjustice, a war against poverty, a war against exploitation, a war against prejudice, a war against inequality. They are determined that we shall win that war just as we are winning this war.

We fight for a world in which freedom may live everywhere. We fight for the chance to work together, to plan together, and to live together in peace and in security. We fight to prevent a world in which honest people go hungry in one country and grow fat in another; where prosperity abounds in one area and famine and poverty destroys life in another. Call it what you will, unless we retain a common bond with our fellow human beings, in peace as well as in war, we shall have lost the battle. We fight for the freedom embodied in the Declaration of Independence. We fight for a world order which recognizes the natural law and which subscribes to the inalienable rights of man.

These are vast jobs ahead of us—staggering jobs. We must finish the war; speedily we must build an enduring alliance of nations to keep the peace. We mus bring our millions of fighting men back and make real for them the hopes they have cherished. We must give to all of our people the just rewards, the rising standards of living, security, and the culture obtainable in our Nation. We must make the fullest use of all of our resources and energies for the enrichment of all our people.

Our mission thus becomes clear; to abolish aggression and replace it with a well-planned peace that will unite the nations of the world and grant to their peoples the "four freedoms" essential to life. This time we must shoulder our part of the task. America will gain, rather than lose, glory in the eyes of the world, if we stand in the forefront of this fight for a better future.

To attain our objectives we must give to the peoples of the world the example of leadership they need so earnestly. This, then, is the supreme test of our generation.

We shall not fail this time. The future of mankind—the future of our children—lies with us. Ours is a precious opportunity to will a legacy of justice, freedom, and peace to the future. For this, our sons are in action on all the flaming battle fronts around the world.

Tribute to Yugoslavia by Hon. James E. Murray, of Montana

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Tribute to Yugoslavia" by the junior Senator from Montana [Mr. MURRAY] delivered at the Yugoslavia dinner in New York, February 7, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Montana is thousands of miles from Yugoslavia, yet we, in that far Western State, have deep feelings of friendship and admiration for the people of Yugoslavia in their great fight for freedom. Montana is no different in this respect than other parts of the country. In nearly every section of America we have welcomed to citizenship thousands of sturdy immigrants from Yugoslavia. They have come here in search of new homes and new opportunities of life. They have brought to our shores the ideals and traditions of a virile, industrious, and peace-loving people. We have learned to admire and respect them. We like their clear-cut traits of character, their untiring industry and, above all, their devotion to our ideals of liberty and democracy.

We have come here tonight to pay a tribute of respect and admiration to this little nation whose hardy, fearless men and women are making such an outstanding contribution to victory in the war. The stirring fight of Yugoslavia will be recorded as one of the

great epics of this period. Many of the tragic details are still to be revealed, but we who are gathered here tonight and are privileged to know of the great suffering they have endured and the sacrifices they have made, are moved by deep feelings of pride in our association with the courageous Serbs, Croats, and Slovenes, collectively known as Yugoslavs.

Tonight, let us for a moment try to recapture some of the atmosphere of 4 years ago. The conquering Axis armies were thundering across Europe in the full flush of their initial success. Years of extensive planning and preparation had rendered them the most powerful and destructive armed forces ever organized in history. Country after country, unprepared to meet the treacherous onslaught of the German hordes, quickly fell before their onward rush. The British evacuation at Dunkerque had occurred some 10 months earlier, and a death-like chill of apprehension shivered through most of the non-Axis world. Russia was soon to be attacked. Its defeat and enslavement was an essential step in the Nazi plans. The future and freedom of the whole world hung in the balance.

Suddenly, in Yugoslavia, an undeveloped peasant country of 16,000,000, a great leader appeared. In fact, a whole host of fearless men and women stood forth to arouse the people of Yugoslavia to make a stand against an enemy threatening to enslave the world. They possessed no armaments, they had no air forces, they were equipped literally with slingshots and clubs, but they had the courage to stand forth against the most powerfully equipped military organization the earth had ever seen. Soon the dramatic reports of Yugoslavia's resistance inspired the outside world. The news ran like a blaze of light through the dark clouds of despair hanging over Europe. It stirred the hopes of liberty-loving people everywhere. Can anyone wonder that we in America have such strong feelings of respect and admiration for the Yugoslavs. The courage and daring of these people, their complete disregard for personal safety, their fierce determination to defy and ultimately defeat the enemy or die in the effort gave the world renewed hope and rekindled faith in the cause of democracy and human freedom.

It was a tremendous inspiration, revolutionizing the thoughts and hopes of men everywhere like an invigorating current of pure air. Here was a people who absolutely refused to accept defeat either through vastly superior armed forces of a brutal enemy or the deadly drain of hunger and frost. They set aside all doubts and fears. No matter what might be in store for them, they determined that they would never give up. Almost from the very day of invasion by the enemy on April 6, 1941, the Yugoslavs have been tossing a series of monkey wrenches into the Axis plans to conquer the world. Their unexpected and unorthodox resistance was one of the factors which upset Hitler's timetable and delayed his invasion of Russia, a delay that is recognized as a decisive factor in the approaching wreck of the German military machine. For over 2 years the Yugoslavs engaged some 20 Axis divisions, keeping them away from other fronts, away from Russia, Italy, and Tunisia. Nobody can tell how many American soldiers fighting in Africa, and later in Italy, owe their lives to the Yugoslav guerrillas, who have since been welded into a national army. Marshal Tito built up his forces from scratch, arming his men by killing the enemy and taking his arms away. Someone would kill a German or Italian and seize his gun; then a few more of the enemy would be disposed of in like manner and more arms would be collected. Thus, step by step, Tito's forces grew.

During the fall of 1943 and early in 1944 the Yugoslavs were fighting more enemy troops than the combined British-American-French forces in Italy, and this without a war industry or a supply system, as we understand those terms. By their great courage and sacrifice they, themselves, have freed well over half of their country. The heroic resistance of that little nation was the forerunner of the great crusade which the people of Russia were soon to undertake to rid the world of German militarism. The Yugoslavs have effected a junction with the Russian armies, and thus constitute a vital element in the military strategy which is soon to crush Hitler forever. How much the undefeatable Yugoslavs have contributed to the final victory over the Axis armies cannot yet be measured, but I am certain it will be found to be conspicuous and considerable, and that they will be given the full credit they deserve for their part in the ultimate destruction of Hitler's so-called invincible armies.

These outstanding achievements are still more incredible when we look at another element in the picture. Yugoslavia's fight against the Axis is a people's fight. It was the people of Yugoslavia who rose against the invaders in the face of their government's official capitulation. They had the vision and the courage to stand out against the enemy even when their own government deserted them. It was the people of Yugoslavia who stood together. It was the people who suffered and fought and died together so that their land might be free. We Americans can understand that. We cherish memories of our own Valley Forge, of bitter winter and near-starvation, and of rag-wrapped, frozen bleeding feet of our own early armies fighting for our freedom and independence. Let us always remember that this is a people's war. As President Roosevelt has said: "Ours is an association not of governments but of peoples." The Yugoslav people have built up a national liberation army of 300,000 men and women, led by one of this war's great heroes, an army that has already liberated more than half of the country, and will undoubtedly soon free the rest.

Surely the debt we owe Marshal Tito and the Yugoslav Liberation Movement in this war is vast. They have given us food for the spirit. They have given us critically important military aid. They promptly carried out sabotage operations requested by the allied commanders, and, in carrying them out, they destroyed their bridges, railways, and other installations. It is estimated that the destruction caused to their transportation system alone represented a loss of hundreds of millions of dollars.

These people have proven their ability to run their own affairs. I am reliably informed that the Yugoslavs have definite post-war plans, as well as dreams, for transforming their country into a truly successful democracy. They wish to see their country's resources developed for the benefit of their people. They wish to raise their standards of living. They wish to improve and expand their educational opportunities. They wish to see their country grow and their people prosper under democratic principles. They want to make the land of the Serbs, Croats, Slovenes, Montenegrins and Macedonians a place where a free people, regardless of religion or historic background may be united under a democratic government—where the people rule and where all men may have a fair and equal opportunity for life, liberty and happiness.

It is indeed a privilege for us to honor such a people. They must have our sincere cooperation and encouragement. It must not be by words only. We must help them heal their wounds by rushing to them food, clothing, medicines and surgical instruments. We must assist them in reestablishing their economy. Their human rights and fundamental freedoms must be respected in the readjustment of Europe. The shackles of outside power must be broken and they must have the right to be masters of their own destiny.

Let us hope that America, subscribing to the principles of the Atlantic Charter, will so act in the ordering of the new world of peace as to retain the confidence and friendship of the brave people of Yugoslavia.

The Yalta Agreement

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. MURDOCK. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an editorial entitled "The Crimean Agreement One of Mankind's Great Documents," which was published in the Salt Lake Tribune, of Salt Lake City, Utah, on February 14, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CRIMEAN AGREEMENT ONE OF MANKIND'S GREAT DOCUMENTS

The Crimean agreement reached after 8 days of deliberation and discussion, a momentous period of give and take in which the three military powers that have liberated France, Greece, Hungary, and Poland from the clutches of the Nazi monster joined hands for victory and peace, will be regarded henceforth as one of the most important historical documents ever formulated and signed in an era of war.

It has been acclaimed already by a former President of this Republic as "a strong foundation upon which to rebuild the world." It has found favor in Great Britain, although many of Churchill's expectations may have been ignored. It has been unanimously approved in the Soviet Union, notwithstanding Stalin's acceptance of the terms of the Atlantic Charter with reference to the formation of governments by popular consent of the Poles and other liberated nationalities.

It will be criticized by isolationists and uncompromising nationalists in this country, where agitators and obstructionists may be counted upon to oppose measures they do not originate. Some eloquent and aggressive politicians in all party organizations would have criticized the Lord's Prayer, had it been uttered first by a member of the opposition.

The Crimean charter, as it may become known to future generations, pledges the Allies force the foe to an unconditional surrender; to destroy militarism in Germany and regulate internal affairs of that unhappy land so that another frenzied fuehrer will not be tempted to organize and equip for wholesale murder and vandalism; to apprehend and punish the arch criminals who have covered continents with corpses and ruins; to perfect a permanent organization to promote and enforce peaceful settlements of all international disputes; to stand upon the principles set forth in the Atlantic Charter.

It is a document of such importance to present and future generations of mankind in every part of the world that only the diehards and habitual howlers may be expected to find fault with its terms.

It will be remembered that this covenant is an agreement between leading powers of two hemispheres—between three governments that have different systems, backgrounds, and traditions—different ideals, objectives, and boundary problems—yet they

have indorsed the Atlantic Charter and accepted American proposals for the free and untrammeled expression of rehabilitated people in selecting the form of administration and the kind of administrators thereof which the majorities may prefer.

Palestine and the "Four Freedoms"

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Palestine and the "Four Freedoms," delivered by me at the annual dinner of the Zionist Organization of Philadelphia, Pa., in that city on February 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege to appear before you tonight to discuss a subject which is dear not only to the hearts of each of you, but upon which I have the deepest convictions. Your views concerning Palestine, like mine, must have been forged out of the bitter experience of our fellow men, suffered in this age, when many of us had come to believe that perhaps the world had achieved some measure of civilization.

As we sit here tonight our sons, our brothers, and the husbands of some here present are fighting through the muck and mire of bloody Europe and Asia and the distant waters of the Pacific to make possible a world in which we will have a chance to gain a true civilization.

Victory alone will not release us from our bondage. Victory will merely make possible the greater fight for freedom.

Freedom is no lightly won gift. It is not something to be inherited painlessly from hardier generations. Each age must rewin its birthright. Some indeed are destined to fight and die for it. But it is the duty of freemen in all places and at all times to strive for the freedom of all human beings. To borrow the words of a great American educator, Horace Mann: "We want no more of those patriots who exhaust their patriotism in lauding the past; but we want patriots who will do for the future what the past has done for us."

Today no one can doubt the ideals for which we are fighting. The revelations of the war-torn world from Lidice to Lublin from Pearl Harbor to Bataan clearly paint the true picture of the forces of destruction which have been loosed upon our generation.

We now know the true intentions of Hitler's Europa. We now have seen the systematic program of destruction, slavery, and mass murder, upon which was to be built a baser system than ever defied the Dark Ages.

To defeat this sinister purpose there arose almost spontaneously out of the hearts of a freedom-loving people the United Nations. Founded in justice, dedicated to liberty and nurtured in battle, the United Nations will fight to give back to each liberty-loving people their birthright.

First, there is much to be done. The war is by no means yet won. We have learned through sad experience and over many generations that a love of liberty alone will not prevail over brute force.

Our great Nation has been able to gird itself for this fight with less pain and sacrifice than any nation in the world. Our strong economy, our vast resources, our energetic people, our far-sighted leadership, all have made it possible for us to build and arm the greatest military force in the entire world—indeed in the history of the entire world—without giving up the basic elements of our American way of life which has made this production possible. We alone have been able to have guns and butter. But even we, now that the battle is becoming tenser, must draw in our belts, work harder, fight harder, and devote our every waking moment to victory.

The liberty we want to buy is costly. Its cost to some cannot be told. They will never return to tell us. The cost to others will be scarred on them as long as they live when they return from the battlefields. Its cost to those of us at home will be merely temporary. We are merely called upon to get into war work and to apply ourselves to it efficiently.

We must buy bonds, visit the blood bank, respond generously to war drives, shun the black market, and otherwise assume our individual responsibilities as citizens of this great Nation in its hour of need. But most important—we must give up our peacetime pursuits, where they do not contribute to victory. We must devote ourselves to producing the weapons which will beat the Axis. Victory is within our grasp, but we must reach out for it.

Even this is not enough. We must all, each of us, look beyond victory and work for that which must be our ultimate goal. Our leaders have set up the United Nations, looking forward to the problem of the postwar world and fully aware of the necessity for ministering to the material needs of innocent victims of greed and of lust for power. The United Nations have already embarked upon a systematic program of providing at least the very minimum of shelter, food, and clothing.

Under the able leadership of Gov. Herbert Lehman, this program is already proceeding.

But just as concerted governmental activity alone will not win the war, neither can mere governmental plans assure us the peace we desire. Such complete victory requires the pulsating throb that can only come with flesh and blood. The individual personalized and willing participation of each of us in the common effort will achieve the common goal. The officers and the active workers in your organization are especially to be congratulated for their share in the furtherance of this noble undertaking. You are doing your part and each of you must and will continue to do so.

When this war is over there will be three or four million Jews left alive in war-torn Europe. They will desperately require even the basic necessities for sustenance. They will urgently require food and clothing and medical care and shelter. Plans have been made to provide these, but more important, they will require new homes, new opportunities, new hopes. Most of them, we fear, will never breathe deeply of freedom or of happiness in the land where they have suffered. For them there will be no rebuilding. Too much has been torn down. Their souls have been too deeply scarred. They cannot be expected to look forward to a life among those who persecuted them and permitted others to persecute them.

Most of them, we hope, will be able to go to Palestine, there to build a new life for themselves and a homeland for their fellow Jews. And the United Nations, in decency and in justice must spare no effort to make that possible.

Great portions of Hitler's victims will have no alternative but to remain on the soil of Europe. There they will be dispersed in many lands, uprooted from their homes, full of the fear and uncertainty of the ghettos and concentration camps from which they have newly been released.

They may have been freed from the yoke of Nazi barbarism, but they will still stand on the soil which symbolizes their slavery. They will still be ground under the crushing tyranny of poverty, of disease, of homelessness, and of hopelessness. To these Jews, the United Nations shall have to bring immediate and extensive assistance.

But there has been too much of a tendency, I believe, to think of rehabilitation in too narrow terms. When we speak of rehabilitation, we generally think only of food and shelter, of clothing and medical supplies. Certainly, those items are of fundamental and overwhelming importance. But they by no means exhaust our tasks—and we shall forget that fact only at grave peril.

Rehabilitation, if it is to be effective, must include a major offensive against the legacy of hatred and prejudice that years of intensive anti-Semitic propaganda are certain to leave throughout Europe. And rehabilitation must include as well as a program to restore, to those who have been ground into the dust, the self-respect and the human dignity of which they have been so cruelly robbed. Failing these things, our efforts may serve for a time to relieve hunger. But they will not achieve success. When this war is over the idealism and the sense of justice of the United States must find opportunity for expression in world unity of nations.

What are the prospects for success in this vast undertaking? Are there any straws in the wind by which we can foretell the future?

One need only to turn to the only wartime monument to reconstruction which now exists in the entire world to see the answer to the question. I challenge anyone to deny the progress which I saw in Palestine just 1 year ago. During the past few years, the world saw painfully a few examples of creative statesmanship, but I doubt if many examples of constructive effort in all history exceed that of the Jewish people in Palestine. There I saw a blossoming land of milk and honey. There I saw Tel-Aviv, a sparkling tribute to modern engineering and creative energy.

While aggressor nations were ravishing whole countries, there I saw the Jews transforming a wasteland. Where others brought death, the Jewish national homeland brought life. Where others allowed deserts to creep upon fertile soil, Jewish pioneers rehabilitated arid land.

One need but set foot in Palestine to feel the depths of its dedication to the democratic ideal, to social progress, to economic opportunity and to human freedom.

Then why do we of the United Nations persist in our tendency to liquidate the Jewish homeland? Why do we continue to thwart one of history's noblest and most inspiring adventures? Why do we make Palestine the scene of one of the most tragic injustices of this generation?

The Jewish peoples of Europe were the first victims of the monstrous Nazi machine that has devastated and destroyed a greater part of Europe. It was they who first bore the demands of Hitler in Germany. It was they who first felt the pangs of Nazi torture. It was they who paid in blood their full share of the Nazis sad blow to civilization.

The Jewish people throughout the world have cried for arms to share in the fight for democracy. The Jewish people of this country have contributed their full share and more to the Army and Navy which are now forging ahead to victory wherever the enemy can be found. The Jewish people in this war as in each of our Nation's great struggles for democracy have been in the forefront of our fighting ranks. The Jewish people have paid the price in blood, in tears, in sweat, and in toil.

It is but right that the Jewish people of the world shall enjoy the benefits all of us are determined to forge out of victory. To those Jews now trapped in Central Europe, to those whom even victory will not mean relief from suffering and oppression, to all those, we must give words of encouragement. They are to be once more equals in a world of equals.

To the Jewish people of Europe, therefore, we must say: "The 'four freedoms' are meant for you as well as for all other peoples. We are determined that you shall, as individuals, wherever you are, enjoy equal rights with all other individuals."

We shall stand united in support of our great President in his historic message to the Congress on January 6, 1941, proclaiming the ideals of the "four freedoms," not for a privileged few, not for any particular country, but for everyone, everywhere, in these immortal words:

"In the future days, which we seek to make secure, we look forward to a world founded upon four essential human freedoms.

"The first is freedom of speech and expression everywhere in the world.

"The second is freedom of every person to worship God in his own way everywhere in the world.

"The third is freedom from want, which translated into world terms, means economic understandings which will secure to every nation a healthy peacetime life for its inhabitants everywhere in the world.

"The fourth is freedom from fear—which, translated into world terms means a worldwide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any neighbor—anywhere in the world."

These are our ideals. We shall back them with the full strength of our moral and political force to open the gates of Palestine to the homeless and stateless Jews of Europe.

At the termination of the last war, under the Balfour Declaration and the League of Nations Mandate for Palestine, it was the intent and underliying purpose, based on the historical association of the Jewish people with Palestine to reconstitute Palestine as the Jewish Commonwealth. This action was wholeheartedly approved by a majority of our people as indicated by the unanimous approval of Congress in 1922.

The program held a great promise, as an international covenant with the Jewish people, founded as it was in justice and in charity. The continuing labor and sacrifices of the Jewish people in rebuilding their homeland fully justified the dreams of the sponsors of this democratic ideal. In the short space of 20 years the community flourished from a tiny settlement of some tens of thousands so that a year ago when I visited there it was a thriving and modern community of more than half a million. While other nations were bent on destruction, the citizens of the Jewish homeland made the waste lands fertile and brought to that hitherto backward territory the miracles of modern civilization. They provided a place where over 500,000 Jews enjoyed the "four freedoms." Palestine became a haven of safety for all Jews deprived of any of the freedoms in their native lands. They knew that they could find sympathy, shelter and understanding in this historic center from which sprang our modern civilization.

The gates of immigration to Palestine are now closing against the millions of Jews throughout Europe; Jews who have been driven from their homes and uprooted from their occupations; Jews who will have to be resettled. Palestine, alone, will have the will, the capacity, and the eagerness to absorb many of them. These people have a moral, a historical, and a legal claim to the lands now being denied them.

In building the peace, it is a major concern of ours that the "four freedoms" and the principles of democracy be applied everywhere, to all peoples. Over 20 years ago we expressed our support of the Jewish National Homeland as an act of justice and as an act of faith. Today that support must be renewed as an act of national honor; as an act of common decency.

This war of ideals will be won by nations of idealists. Such a Nation is the United States of America. Founded by men of lofty motives and great moral force, it has ever stood as the defender of liberty. Such a nation also is Palestine and it, too, shall endure. When we have disarmed the last oppressor, when we have freed the last slave, when we have regained the peace which is so dear to our hearts; even then, we will not stop. We shall go on to build for the United Nations an enduring peace, a fuller life; a better world than man has ever known. For these things, we are willing to fight. When our sons and brothers have won their war, we shall fight ours. We will make United Nations succeed. We will cooperate with other peace-loving nations. We will support each other in the never-ending fight against oppression. We will leave a legacy of peace for future generations to enjoy.

Curfew on Entertainment Places

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered by William L. Shirer over the Columbia Broadcasting System on Monday night last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last month, 8,000 of our finest youth were slaughtered on the battlefields of western Germany. Today, 2 of our finest American marine divisions landed on Iwo Jima, just 750 miles from Tokyo. Their going was not easy. The war correspondents on the spot said the Japanese on the island were putting up a terrific fight. All of them made it plain that our losses in American lives would be considerable. We know what that means. And, yet, from the Atlantic to the Pacific coast of this great land, whose sons were dying on the distant battlefields, there was a considerable hullabaloo tonight. Why? Not because either coast was attacked by the enemy. No, because War Mobilizer Byrnes clamped a midnight curfew on the Nation's entertainment spots—the night clubs and bars—that meant, will have to close early. I'm no expert on such matters but let us see how some of our citizens took this terrible hardship on the homestretch of this deperate war, say, in New York and Hollywood.

The Associated Press said that Broadway reacted to the request of War Mobilizer Byrnes as if a blockbuster had landed on Manhattan. The A. P. must have been exaggerating, you would think, because to those of us who have fairly recently experienced the real blockbuster, blowing up whole blocks in London, certainly nothing that has hit Broadway, just because people have to finish their drinking by midnight. (Sic.) There really is a difference.

As for movieland, the United Press tells us that indignant owners of swanky Hollywood night clubs tonight grumbled right out loud against Mr. Byrnes' midnight curfew on night spots. One can hope that the words of one night-club operator will not be cabled to our men inching ahead against deadly Japanese fire on Iwo Jima tonight. He said: "Golly, when I think of the dough we will lose." The G. I.'s I recently spent a little time with at the front were not particularly pleased at the dough the fellows back home were making while they were hourly risking their lives and certainly not making any dough. It's only fair to say, of course, that the majority of the night-club operators seem to react to the alleged blockbuster as patriotic citizens. Their feeling was summed up by one who said: "If it will end the war 1 hour sooner, I'm for it 100 percent."

This correspondent can clear up one error made by a Congressman tonight. He said: "No such curfew has sounded in London and Paris and I don't think it's necessary here." Unless London has changed its regulations since I was there some 2 months ago, the night clubs in London close at midnight. As for Paris, all night clubs have been closed for several weeks. And what is more, civilian life in this blessed land of America can scarcely be compared to that of the other countries in the war. The difference resembles, so far as my experience goes, the difference between night and day.

Take France, where I happened to spend a couple of months this past fall and winter. There, the people are continually hungry, to begin with. There's just not enough to eat. How many Americans at home have known hunger during this war, or cold? Perhaps in the next few weeks a few of us will know cold because of the coal shortage, but few of us, if any, will ever experience what the people of Paris have gone through this freezing winter. They had no coal at all, no heat at all in their homes or shops or offices or factories, or even in their hospitals, and when you have a half-empty stomach the cold seems doubly cold somehow.

Probably a safe prediction that one can make tonight is that the American people fighting this war at home will survive the ordeal of the midnight closing of their night clubs and bars.

Liberation of Prisoners on Luzon

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. MURDOCK. Mr. President, I ask unanimous consent to have printed in the RECORD a letter appearing in a recent issue of the Parowan Times, of Parowan, Utah, written by Sgt. Milo Mortensen, describing the delivery of prisoners on the Island of Luzon.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MORTENSEN HELPS LIBERATE JAP-HELD UNITED STATES PRISONERS

In a letter received by Mr. and Mrs. S. C. Mortensen from their son Sgt. Milo Mortensen he tells them that he was in the Ranger outfit that liberated the more than 500 American prisoners on Luzon just after the invasion of that Island began. Mr. and Mrs. Mortensen have let us have the letter for publication and as it is very interesting we are taking the liberty to publish it in its entirety, which is as follows:

Dear Mother and all:

I wrote you a short V-mail a couple of days ago, I couldn't say much at that time, but

now I can tell you that I participated in the rescue of the American prisoners of war. I was very much in hopes that Austin would be among them. Unfortunately he was not. However, I found one man who had known him, but the information I received from him was vague. I think it better that his folks keep hopes he will yet be rescued.

I never have seen such a happy, or more grateful group of men as they were upon their release. Some could hardly believe they were free. They were treated badly in the prison and told many tales of Jap brutality.

The Philippine Guerillas were of great value and assistance. They fed us, hid us, spied for us and fought for us.

It was a sight to see the procession of caribou-drawn carts loaded 4 and 5 each with prisoners who were unable to walk. The number of carts eventually reached 50 before we were safely within our lines. Yet it was amazing the number who reached safety under their own power even though some were without shoes and few had more than just underwear for clothes.

As we proceeded along, it seemed each barrio among the never-ending rice paddies knew of our approach and greeted us silently with baskets of rice fresh from the ovens, along with eggs, cane, or anything else they might possess. They would walk alongside the caravan as it passed and whisper to each individual with their offerings lest they should betray our presence by their voices. They were masters of the art of keeping our route back in strict secrecy.

The night before we released the prisoners we entered a village and were greeted warmly. The girls presented us with leis as a token of welcome. They asked permission to sing. We gathered around and eight young girls sang softly and beautifully the Star-Spanged Banner, God Bless America, and God Bless the Philippines. It was quite touching.

Well, mother, guess I had better talk about something else; anyway, from what I hear the papers back there will carry the full account. Give my sincere regards to the Halterman family and tell Butella how sorry I was to find that Austin was not among those rescued.

I hope this finds everyone well there. Personally I am fine. I am taking it easy at present. I received a package tonight from Pearl. It was quite the worse for wear, but the fruit cake was delicious. Well, guess I'd better ring off for tonight. Will try to write Pearl and those at home soon.

With lots of love,

MIKE.

Burial Caskets

REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. KEEFE. Mr. Speaker, some months ago I called the attention of the Members of the House to an order issued by the War Production Board limiting the size of caskets. That order, due to the situation which developed in the House at that time, was subsequently revised so as to permit the construction of caskets that would accommodate men of the size of the gentleman who is now speaking to you.

A new critical situation has now developed in the casket industry. This situation arises because of the failure of the Office of Civilian Requirements to allocate fabrics to the casket manufacturers of this country. I am advised by two of the large casket manufacturers of this country who are located in the congressional district I have the honor to represent, that within 60 days the cheaper grades of caskets will largely be off the market. These manufacturers have been denied an allocation of fabric which is used to cover the cheaper grades of lumber that are used in the construction of the cheaper grades of caskets. As a result, unless some action is taken by the Office of Civilian Requirements and the W. P. B., there will be a complete shut-down of the production of the grades of burial receptacles that have been used by those of modest means in the United States.

I think this is a matter that ought to challenge the attention not only of this Congress but of the War Production Board and the Office of Civilian Requirements, so that this custom in America of burying the dead in caskets will not be stopped.

Mr. Speaker, under leave to extend my remarks, I include the following letter:

THE BUCKSTAFF CO.,
Oshkosh, Wis., February 13, 1945.

DR. WILLIAM Y. ELLIOTT,
Vice Chairman, Office of Civilian Requirements, Social Security Building, Washington, D. C.

DEAR SIR: On behalf of my own firm and the casket industry as a whole I want to take exception to treatment the casket manufacturer is receiving in not being able to obtain sufficient cloth for casket manufacture from the material being set aside for civilian use. On a number of occasions the war service committee of the funeral supply industry has been in contact with the War Production Board and the O. C. R. and have placed before them the actual requirements and very definite needs of this industry. It appears that the elimination of the casket industry from the list of essential users of fabrics is a direct discrimination. This industry is not asking for material that is needed by the armed forces of this country but is simply asking for their proportionate share of the amount for civilian purposes.

Cloth-covered caskets are naturally made of cheaper grades of lumber and this quality of lumber will not lend itself to painted or varnished finishes. The lumber requirements for war purposes will not permit the use of better grades to enable cloth-covered caskets to be furnished in a painted or varnished finish. At the present time those casket manufacturers making hardwood caskets are faced with a serious difficulty in continued production because of present Government restrictions on the better grades of lumber. We are informed that applications for grades suitable for hardwood-casket construction have been denied.

We know in our own case that our application has not yet been acted upon. Cloth-covered caskets represent approximately 60 percent of the caskets produced for public use at the present time, and it is imperative, therefore, that this industry be allotted sufficient material to enable further production. Cloth caskets are in the lower-priced end of casket production and any change necessitated as a result of insufficient materials being allotted will add to the cost burden and become inflationary.

The bulk of all casket factories would be compelled to install new equipment to make varnished or painted burial cases, but this they will be unable to do because of War Production Board restrictions.

Most casket factories are local and serve the nearby localities. There are no abnormal inventories of finished caskets on hand either in the possession of manufacturers or funeral directors. If other factories have been experiencing the same situation as we have they find themselves with unfilled orders, which are immediate replacements of sold merchandise from the funeral directors stock. Inventories of cloth coverings at the present time will allow most factories to run not more than 5 weeks. Our position is like other factories in this respect. Thus the supply of caskets for the proper care and burial of the dead is in jeopardy as a result of your failure to recognize the needs of this industry. We do not believe the people of this country would want to bury their dead without caskets, and we doubt that the health laws of the States would permit it. We doubt also that religious customs and sentiments would tolerate a condition like this.

The present quarter in each year usually creates the greatest need for burial caskets and so it is imperative that the necessary material to continue to furnish the public with a suitable burial casket be allotted. This industry should be allowed at least 9,800,000 yards of domets and muslins for counterlining and interior backings for the year 1945. It also requires 14,816,000 yards of covering material for the outside of caskets.

We certainly feel that regardless of conditions the casket industry is most important and should be given sufficient materials from those allotted to civilian use to properly carry on. We honestly feel that if an abnormal increase of the number of deaths occurred in this country that a very definte shortage of burial caskets would occur almost overnight. We feel it is sufficiently important for you to give your consideration and we earnestly request your immediate action.

Sincerely yours,

THE BUCKSTAFF CO.,
By R. N. BUCKSTAFF,
President.

Law and Peace

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the RECORD a poem entitled "Law and Peace," written by Mr. James P. McGovern. The poem as presented is a reprint from the Journal of the Bar Association of the District of Columbia.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

LAW AND PEACE

(By James P. McGovern)

What is the brotherhood of him who knows
no brother?
What is the faith of him whose creed respects
no other?
What is the kin of him who wrongs dust, all
men's mother?
What is the peace of him who sets it for
another?

Solon made laws for Greece, Aurelius for
Rome;
Moses wrote rules for Hebrews, Christ taught
all Christendom;
Hammurabi's code graced a Babylonian
dome;
All Europe has justice stored in many an
ancient tome.

The law is always dead in parchment, marble, stone,
Unless each generation relives it as its own;
"A scrap of paper," adorned with names, tempts power on its throne
As fuel for worldwide flames by all the four winds blown.

When the spirit transcends the law, men see beyond the letter,
When justice frames the law, revenge has no abettor,
When mercy guides the law, virtue holds vice its debtor,
When hearts enshrine the law, peace stands free from fetter.

The Murray Dictatorship Bill

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Council Bluffs (Iowa) Nonpareil, written by A. M. Piper, editor:

THE MURRAY DICTATORSHIP BILL

Senator MURRAY, of Montana, has introduced a new Missouri Valley Authority bill. He calls it an improved version of the measure he offered last session, but which Congress never acted upon. Here are some of the so-called improvements.

1. The new legislation would create an advisory committee consisting of the heads of eight leading Federal agencies and nine members from the Missouri Valley, three each representing agriculture, commerce and labor. The committee would act in a consultative capacity on matters of broad policy referred to it by the board, and also would receive the annual report from the authority and transmit it to the President.

2. Family-type farms served by the M. V. A.'s irrigation system would be limited to 160 acres of irrigable land. Farmers owning more would receive needed irrigation only on the condition that they sell the excess land in 5 years.

The advisory committee would be just so much window dressing. Its 17 members couldn't possibly get together very often or exert much influence when they did meet. Practically all power would reside in the commission, appointed by the President.

Every business firm, every farmer in the Missouri Valley would be at the mercy of the President's appointees, some, of course, to a greater degree than others. The Commission might be only mildly despotic but the hand of steel would be there, even though concealed in a silken glove.

The second change the proposed limitation of all irrigated farms to 160 acres, is one of the most brazen New Deal moves in the direction of dictatorship that has ever come to our attention. It not only limits purchases of Government-owned lands to a quarter section, but where irrigation water is made available to privately owned land, the owner must agree to sell all irrigable land in excess of 160 acres before he can get any water. Moreover he must sell it at a price fixed by Government appraisers.

If this isn't confiscation of private property, it comes mighty close to it. In explanation of this amazing provision of his bill, Senator MURRAY said:

"It is my firm conviction that just as we must avoid concentration of industrial and financial control in a few hands, we must likewise safeguard against the concentration of land in the hands of a few landowners. Monopolistic control of either is bound to bring about disaster to our citizens and undermine the very foundations of our democracy."

To avert such a disaster (?) MURRAY proposes what amounts to a Government monopoly. It resembles the Russian system which permits residents of collective farms to have an acre or two of their own to raise a few vegetables and keep a cow.

Other features of Senator MURRAY's bill lean in the direction of socialism. States, counties, municipalities, and cooperatives would be given preference in the sale of electric power generated at M. V. A. hydroelectric plants. The authority would also be empowered to extend credit to States, municipalities, and nonprofit organizations desiring to acquire or construct distribution facilities and interconnecting lines.

The Murray bill defines the area to be included in the proposed M. V. A. as "the entire Missouri River, its tributaries and watershed, and such adjoining territory as may be related to or materially affected by the development." This could easily be interpreted to include all of western Iowa and possibly the whole State.

Iowa will surely be under the thumb of the Federal Government if the Murray bill passes.

Mr. Farley on Politicians

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Worcester (Mass.) Telegram of February 16, 1945:

MR. FARLEY ON POLITICIANS

In a thoughtful Lincoln Day speech to the Catholic Club of Norwalk, James A. Farley, on the theme of Lincoln as a politician, brought forward a concept of politics well worthy of consideration.

He believed it possible that if Lincoln had taken office immediately upon his election he might, by his political genius, have averted the Civil War. Basing his supposition on Lincoln's tendency to compromise, which so frequently caused him to be charged with indecision, Mr. Farley sees the possibility that Lincoln might have brought the moderates of the North and the South together, and overcome the insistence of the extremists of both sides who were trying to force the situation to an irreconcilable point.

From there, after pointing out that extremists on both sides hated Lincoln, those of the South looking on him as some sort of a monster and those of the North looking on him as a failure, Mr. Farley develops the theory of politics as the art of reasonableness, the overcoming of ill-will, and of compromise. For that reason he utterly condemns the political activity that bases itself on personalities, on group interests, and, thus, upon irreconcilable hatreds. Speaking of his own experience in politics, he continued:

"Consequently, I know that if issues are not discussed on their merits, but on personality; if any political group tries to stir up hatred, and of course thereby provokes hatred on the other side; or if resort is had to the tactics of abuse; it becomes extremely difficult for these groups ever to agree again.

"Men tend to repay hatred with hatred, or insult with insult; and if that progress is allowed to go on, it becomes impossible for them finally to cooperate in carrying out any course of action. And yet, in a democracy like ours, our entire national life is a vast cooperative scheme. To the technical politician, extremism is not only a crime; it is a blunder."

Unfortunately, politics has come to stand for a great deal other than the able men of all parties getting together to resolve and reconcile the differences of opinion through a common course of action for the benefit of all. Indeed, it has come to mean all kinds of maneuverings which too often completely submerge that objective. It has come to mean—more insistently than any idea of the common good—patronage, favoritism without regard to competence, and the juggling of minority groups by trading here and there to make an artificial majority by ignoring fundamental problems and putting localized and passionate ones into the foreground.

Mr. Farley found that the seemingly harmless system of patronage, of which he himself was one of the most expert wielders, was made a key to these other evils, and a hindrance to those ideals of cooperation which he so eloquently asserts to be the foundation of democracy. Divided between two loyalties—his principles and party regularity—he chose to separate himself from politics, avoiding allegiance to both. Yet his Lincoln Day speech shows that one of those loyalties is fundamental, and cannot, in good conscience, be avoided.

Fortunately, we still find active examples of these political ideals of cooperation for the good of all. Senator BALL, misguided though his emphasis may have been, must be credited with that sincere ideal. Senator VANDENBERG's brilliant act of lifting foreign policy and world peace above party issues is another instance. We can find many such examples, in State and National politics.

Mr. Farley has clarified the ideal, and there is good hope that throughout our Nation, in spite of present confusions, the ideal is a living and vigorous impulse. As it becomes increasingly articulate politics moves more and more toward its true function of service.

Political Parade

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Rothwell Brown, from the Washington Times-Herald of February 21, 1945:

POLITICAL PARADE

(By George Rothwell Brown)

Never has there been a time since the New Deal first rolled up its sleeves to make us over into a better but poorer America, when the gentlemen of Congress were so worried about money as they are now.

The thing is piling up on them, until they feel overwhelmed. At the same time, it must be admitted that the administration has plenty of nerve to be putting all this emphasis upon the state of the national finances at one crack.

The signs of the times are disquieting. The bill to increase the debt limit to $300,000,000,000 has been introduced.

The Export-Import Bank is about to ask for an increase in its capital stock of $1,300,000,000.

The Senate has given the Commodity Credit Corporation an additional $1,500,000,000, while the House has raised the ante, and proposes a general boost to $2,000,000,000, which is a more even number.

On top of all these things the President fires Jesse Jones from the Secretaryship of Commerce, which carries with it the fabulous Reconstruction Finance Corporation, and nominates as his successor one of the greatest and most freehanded spenders of all time, Henry A. Wallace.

Scarcely had the Senate decided that this was going too far, and had separated Henry from the money bags of the Houston pooh bah—a decision now concurred in by the House—when along came the Treasury's Bretton Woods bill to set up an international monetary fund and an international bank.

The identic bills offered in Senate and House, as bills, and not as a treaty, and therefore requiring only a majority vote in the two Houses, instead of a two-thirds vote in the Senate, propose to finance the fund and the bank by a species of financial legerdermain that has left the gentlemen on Capitol Hill goggle-eyed.

Some years ago a vacancy occurred in the office of the Comptroller General of the United States, through the expiration of the term of the incumbent, which is 15 years without the right of reappointment.

It is one of the most vitally important posts in the Government. The Comptroller General is in reality the watchdog of the United States Treasury.

The Democrats of the House were able to obtain this position for one of their own number, Representative Lindsay C. Warren, of North Carolina.

The appointment was universally approved and applauded, nor has there been any regret. Warren has been an eagle-eyed, tight-fisted guardian of the public purse. He has stopped rannygazoo spending right and left. He has been popular on Capitol Hill, less so in the spending branches of the far-flung bureaucracy.

Now comes the disquieting report that Lindsay Warren is to be appointed to the Federal bench in North Carolina.

It is disquieting, for there was never a time when a man of his high standing, and so completely enjoying the confidence of Congress, was more needed than right now. Are they trying to get rid of him? That is what's being asked.

The Bretton Woods bill should be completely rewritten by the House Banking and Currency Committee.

It should be changed to require, if enacted at all, that not a dollar of Government money may be used to finance the fund or the bank, until it has been appropriated by the Congress of the United States.

As it stands, this bill would permit the administration to become an international banker by the simple process of juggling money from the pants pocket, into the vest pocket, and thence into the hip pocket.

The Export-Import Bank, and the Commodity Credit Corporation, both in need of more funds, should be given a thorough dusting off. They have cobwebs on them. Their control has completely passed from Congress.

That control should be taken back, now that America appears to be poised on the brink of a spending spree, in which the sky is to be the limit, conducted by a theoretical banker from an invisible office.

Tribute to Finnish People of the Upper Peninsula of Michigan

REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. HOOK. Mr. Speaker, in the part of the country I come from, the Upper Peninsula of Michigan, there are what I believe to be some of the unsung heroes of American war industry. In this lovely but rugged country, in weather now well below zero, men are engaged in four most hazardous occupations essential to our successful conduct of the war: Logging, copper and iron mining, and fishing on the bleak and dangerous waters of the Great Lakes.

These people have done an outstanding job during the war period, have made a great contribution to our war production and war food programs. Largely their work has gone unrecognized, both in terms of public knowledge of the job they are doing and in terms of monetary return for their labors.

Recently, I came across an article in a national weekly magazine—Colliers—paying splendid tribute to one of the groups of war workers in my district, the Finnish fishermen who are supplying thousands of tons of fish for both civilian and armed forces. These rugged fishermen do a heroic job, rivaling very often in danger the job being done by our merchant marine and Navy. Because I was so pleased to see this tribute to them, I ask leave to have the article inserted in the CONGRESSIONAL RECORD.

One comment I would like to make on the article, and it is no reflection on the author. I have lived among the Finnish people of the Upper Peninsula all my life. I know them as a proud, resourceful, and intelligent people. They are very proud of their language. It is not an easy language, and that, I suppose, is why in printing the article, a slight error in spelling was made so that the Finnish word "paivaa" came out "paava," which means nothing in Finnish or any language that I am aware of.

The article is mostly concerned with the herring fishermen of Keweenaw Peninsula on Lake Superior. The tales told of their adventures and of their production records could be duplicated in every one of the lake counties in the area.

HERRING ARE SILLI

(By Clay Perry)

When America thinks of commercial food fishing, it thinks of its seacoasts. Yet freshwater commercial fishing in the United States, under the impetus of war, has become big business. It has grown up swiftly from haphazard operations out of Great Lakes ports to a coordinated industry that furnishes thousands of tons of fine food for both armed forces and civilians.

Most important of the inland fishing States is Michigan, with 1,600 miles of shore line (more than any seaboard State) on three vast Great Lakes. An investment of $3,000,000 in more than 1,100 boats and gear keeps 3,000 fishermen at work gathering an annual harvest of herring, lake trout, and whitefish, that averages 30,000,000 pounds a year and nets the hard-working fishermen more than $4,000,000.

Prize food fish of the Great Lakes is the Lake Superior herring, the firm, succulent variety that commands a premium price anywhere in the world. Even in normal times, Lake Superior herring, along with whitefish and the huge lake trout, command a wide market, even in the seacoast States.

Ideal fishing grounds for herring are in the lee of northern Michigan's Keweenaw Peninsula, which juts its rugged 45-mile length straight out into the cold blue waters of Superior, the world's biggest—and roughest—lake. This peninsula shelters a large bay from the fierce nor'westers—although not from the equally severe nor'easters. Here, within sight of a land of lakes, forests, and mountains that is a vacation paradise in summer and a fishermen's hell in winter, is one of the most important scurces of food fish for the Army.

While lake trout and whitefish are year-round staples for Upper Peninsula fishermen, herring provide the most hectic and hazardous action. The midwinter season is short and severe—three or four hard-bitten weeks of lashing gales, blizzards, bitter cold, and sometimes sudden death and disaster, as hardy fishermen gather millions of herring from the huge schools that gather to spawn on the reefs and shoals off Keweenaw's southeastern shores.

Keweenaw fishermen are a tough and colorful lot. They are mostly second and third generation Finns who have managed to retain their nationalistic identity, customs, and language since their ancestors came to this land years ago, to fish, farm, and work in the forests and the deep copper mines.

They need to be hardy and brave.

The 1943 herring season got off to a heartbreaking start with the worst storm in 30 years, just as the run was beginning. A 3-day howler, sweeping across 200 miles of icy lake, washed so much sand into harbors and ports that huge dredges had to be hired in a hurry to clear the way for the boats, while docks and other equipment were badly damaged and some ports were made useless.

When the run was at its height, a lashing 55-mile gale stopped it almost entirely, forcing most of the fishermen to pull their nets and run for their lives.

BIGGER AND BETTER HERRING IN SEASON'S FIRST CATCH

The 1944 season on herring opened a week late due to the warmer weather. However, the fishermen were pleased when their first netting showed that the herring were running larger in size. The Michigan Conservation Department's figures for the total catch of herring in all three lakes—Huron, Michigan, and Superior—are 7,249,190 pounds.

But the price went even below the 1943 ceiling of 3 cents per pound, despite the fact that O. P. A. regulations were lifted, and no ceiling price was imposed for "herring in the round." The reason for this is believed to be the fact that big city packers, a month before the 1944 run started, had a carry-over of 2,500,000 pounds of lake herring. Nevertheless packing went on full blast, with the Army taking about the same amount as the year before, and three filleting plants operating to provide frozen fillets.

A midwinter trip to the Big Lake with Capt. Henry Tormala, out of Portage Entry, is an unforgettable experience. His boat, the *Superior*, is a 35-footer, with broad beam, enclosed against the weather from stem to stern, metal-sheathed to combat ice. It is owned by Captain Henry and his brother, Aldrick, manned by a Finnish crew of five.

The *Superior* leaves port before dawn in the teeth of a knifing gale, with snow driving before it. The boat carries several gangs of

40 nets, each 250 feet long, 35 to 40 inches wide, fitted with buoys and anchors. Thrust out from a hatch near the bow is the bristle-toothed lifter—motor-powered—that drags up the loaded nets. A barrel of water has been heated, it will be thrown on the lifter to keep it from freezing. Amidships is a roaring fire in a tiny stove, on which always simmers a pot of kaffii, the superb Finnish coffee.

Captain Tormala heads into the hammering, pounding waves and screaming wind which toss the boat badly, holding his course for his chosen reef. Inside, the crew hug the stove and hang on. An hour or more of this, and a rear hatch is opened—and the icy blast roars in.

Out go the buoys, as tall as a man, anchors, and then the nets, unfolding from their trough. Down they go, 10 fathoms, the legal limit of depth. Nets are of Sea Island cotton and cost $500 to $600 per gang for materials alone. The fishermen weave them and they handle them with great care.

"Paava!" growls a veteran crewman, which is a Finnish "hello" to the cold and tumultuous winds. "We got plenty silli (herring) maybe. Plenty raha (money)—maybe."

It takes several hours to set the 4 long miles of gangs—some big boats set twice as many—and we head back to port for a big meal of fresh herring—or as a special treat, lake trout baked in a pit of hot stones, or whitefish, fresh or smoked.

Next morning, we head out for our reef again. There is a heavy swell from the previous blow, and the wind is rising with the sun. Sharp snow pellets hammer at the hatches and glass windows as we plow out to see how many tons will be lifted that day.

Over the nets, a hatch is opened, and the first net is hooked to the curved teeth on the lifter cylinder. The motor is started, and the net begins to rise with its load of herring caught by the gills—a flopping, squirming, shimmering bouquet of fish. They roll in over the cylinder, and the crewmen grab them hand over hand and "choke" them free, tossing them into wooden boxes. They work at mad speed, barehanded in the icy gale.

These Finns, among the best fishermen in the world, will handle 20,000 to 30,000 fish, one by one, in a day's haula (haul).

On this particular day our 5-man crew took in 4 tons of herring. One day last winter, 32 tons were delivered at the Great Lakes Fisheries packing plant. We also karistaa—that is, set the nets for tomorrow—and paying out these miles of web from a pitching boat in a blizzard, near dark, is something to give a Gloucesterman pause.

At the home dock, trucks are waiting, and the catch is hurried off to the packing plant at Houghton or Hancock or one of the smaller ports, to be cleaned, boned, filleted, day or night, and then quick-frozen for shipment to the Army Quartermaster Department. A byproduct of packing is delicious herring roe—as good as Russian caviar.

Michigan's big lake trout are taken in nets, by trolling, and by bobbing through holes in the ice. The ice angler is a human polar bear, scorning the huts and stoves used elsewhere. His only shelter—if any—is a tiny triangle of canvas set up to the wind.

Many an ice angler—sometimes whole squads of them—is carried out on drifting floes. Some drown and thrilling rescues are common, the fishing boats crashing through the ice to get to the marooned men, with the Coast Guard racing to help.

Lake trout caught through the ice run up to 25 or 30 pounds, but the biggest are taken by deep trolling in summer. Many 50-pounders have been taken by sports fishermen, and a commercial fisherman once brought in a 56-pounder.

Deep lake trolling for trout has become a national sport, and Keweenaw held the first national trout derby in 1941, with 1,200 entries, a colorful 2-week fiesta that will be resumed after the war.

Lake Superior leads all the lakes in big trout. It yielded the first 7 of 10 prize winners in the Field and Stream contest for 1941 and 1942. The biggest lake trout entered in the 1944 contest, 53 pounds, came from Lake Superior, and an even larger one, 54½ pounds, was caught but not entered. Commercial catches of trout in Keweenaw waters have jumped from 45,323 pounds in 1940 to over half a million pounds annually in the past 4 years.

"All very fine," says the Finnish fisherman. "I'll take herring."

Order of the President Creating the Jackson Hole National Monument Upheld by the District Court of the United States for the District of Wyoming

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. JOHNSON of California. Mr. Speaker, on February 10, 1945, Judge Kennedy of the United States District Court of Wyoming rendered an opinion sustaining the order of President Roosevelt whereby he created the Jackson Hole National Monument.

While the case which resulted in this ruling was pending, the House and the Senate, by substantial majorities, voted to rescind the President's order. I was one of those who voted against the bill to set aside this order. At the time I stated my views briefly, and I also ventured the conviction that the order was legal.

I was sorry to see so many of my Republican colleagues vote to set aside the order creating this monument. To me this act by the President was a step in favor of conservation. The Republican Party contributed that policy to our national life. President Theodore Roosevelt dramatized the need for conservation of natural resources and places of exceptional or unique scenic attraction. Through his initiative in setting aside the Grand Canyon of the Colorado as a national monument, we later got the Grand Canyon National Park. I am one of those who hope that some day the Jackson Hole Monument will be Jackson Hole National Park. It provides the setting for the most gorgeous group of mountains in this country.

For the information of the members I am including herewith the opinion of Judge Kennedy, which is as follows:

[In the District Court of the United States for the District of Wyoming. The State of Wyoming, plaintiff, vs. Paul R. Franke, defendant. No. 2875 Civil]

JUDGE'S MEMORANDUM

Dated: February 10, 1945.

Kennedy, Judge.

This case involves the Jackson Hole National Monument, located in Teton County, Wyo. The suit is brought by the State of Wyoming in part under the Federal Declaratory Judgment Act, seeking a construction of the Antiquities Act of June 8, 1906, and the proclamation of the President made thereunder by which it prays a judicial declaration voiding the effects of such proclamation and also in equity for an injunction restraining the defendant, as an appointed official of the Interior Department, from asserting management and control of the area embraced in the proclamation. The cause purports to be under 28 U. S. C. A. 41 (1), covering suits arising under the Constitution and laws of the United States where the matter in controversy, exclusive of interest and costs exceeds the sum or value of $3,000. In its complaint the plaintiff asserts that the proclamation of the President is not authorized under the provisions of law upon which it purports to be based and is without legal authority; that the defendant, as an appointed official of the Interior Department, has asserted a right to the control and jurisdiction over the area involved to the exclusion of the State and has threatened to exclude officials of the State from the boundaries of such designated area; that such asserted control, if carried into effect, will interfere with the rights of the plaintiff in its jurisdiction over fish and wild game, from which it receives a large and lucrative revenue; that such asserted control will interfere with the rights of the State in operating and maintaining many miles of highway constructed by the State within the area, in that it is threatened that gates and guards will be placed at such boundaries in such a way as to interfere with the rights of the plaintiff; that such asserted management and control by the defendant will interfere with a large income from grazing fees, from which a substantial revenue is derived by the State; that the Secretary of the Interior, with the assistance of the defendant, threatens to acquire by donation, purchase, or condemnation privately owned lands within the area, thereby depriving the plaintiff of the benefits of taxation and the right of jurisdiction over the same; that the segregated area, by virtue of the proclamation over which the defendant threatens management and control, is outside the scope and purpose of the Antiquities Act under which the proclamation was issued, in that such area contains no objects of an historic or scientific interest required by the act; that the proclamation is void and of no effect, in that it is not confined to the smallest area compatible with the proper care and management of a national monument; that by said proclamation an attempt has been made to substitute through the Antiquities Act a national monument for a national park, the creation of which is within the sole province of the Congress, thereby becoming an evasion of the law governing the segregation of such areas; and that the plaintiff has no adequate remedy at law and will suffer irreparable damage unless accorded the relief prayed for in the complaint. The court has attempted merely to summarize the more important claims of the plaintiff.

The defendant in its answer disputes the jurisdiction of the court upon various grounds and alleges that the action of the President in issuing the proclamation is not open to judicial review and in effect that the proclamation is in fact well within the scope and purpose of the National Monument Act.

Some time after the action was commenced, the Interior Department made a change in officials in charge of the monument area by which the defendant, Franke, was substituted for the former defendant, Charles J. Smith, and the plaintiff thereupon sought a substitution in defendants to conform to the facts, which was made upon stipulation of the parties. Prior to the trial a hearing was had by the court upon the various legal defenses set forth in the amended answer in the nature of a motion to dismiss, and upon motion by defendant for summary judgment, upon which argument was heard and said defenses and motions were overruled without prejudice to the defendant to assert

them upon the trial or final argument in the case. Trial was had and trial briefs have been submitted.

The defendant now asserts that the plaintiff has not brought itself within the scope of the act giving the court jurisdiction of controveries arising under the Constitution or laws of the United States where the matter in controversy exceeds the value of $3,000. A decision on this point in the first instance is necessary for the court to determine its jurisdiction. The evidence in the case, in the opinion of the court, leads to the conclusion that the statutory value as required is satisfied. The alleged interference with the use, maintenance, and control of the State highways, together with the loss in taxation which would occur to the State, and the loss of revenue from game and fish licenses in the event the defendant should exercise the control and management threatened would far exceed the statutory limitation.

It also seems to this court the suit arises under the laws of the United States in that it substantially involves a controversy respecting the validity or construction of an act of Congress. Here the question presented is as to whether or not the proclamation is valid under the Antiquities Act, the answer to which question requires a construction of that act. In *First National Bank* v. *Williams* (252 U. S. 504), at page 512, the Court says:

"What constitutes a cause arising 'under' the laws of the United States has been often pointed out by this court. One does so arise where an appropriate statement by the plaintiff, unaided by any anticipation or avoidance of defenses, discloses that it really and substantially involves a dispute or controversy respecting the validity, construction, or effect of an act of Congress. If the plaintiff thus asserts a right which will be sustained by one construction of the law, or defeated by another, the case is one arising under that law. (Citing cases.)"

In *Gully* v. *First National Bank* (299 U. S. 109), at page 112, the expression of the Court is as follows:

"How and when a case arises 'under the Constitution or laws of the United States' has been much considered in the books. Some tests are well established. To bring a case within the statute, a right or immunity created by the Constitution or laws of the United States must be an element, and an essential one, of the plaintiff's cause of action. (Citing cases.) The right or immunity must be such that it will be supported if the Constitution or laws of the United States are given one construction or effect, and defeated if they receive another."

Clearly in the case at bar, the right of the plaintiff may be sustained or defeated in a construction by the court of the law under which the proclamation was issued.

Again, it is contended by the defendant that the proofs do not support the allegations of the complaint in that the threats of the management and control of the area on the part of the defendant do not encroach upon the rights of the plaintiff. The proofs tend to show that under regulations by the Interior Department, the original defendant was directed to take charge of the management and control of the segregated area and the present defendant is only on account of a rescission by the Secretary of the Interior of that direction partially refraining from exercising such management and control on account of Congress having failed to provide an appropriation to cover such services, but the defendant reasserts that he will again, upon receiving similar direction from the Secretary of the Interior, proceed to carry said direction into effect. It appears to this Court that such previous action, coupled with the continuing threatened action on the part of this defendant, is sufficient to justify the plaintiff in seeking to invoke the jurisdiction of the court for the restraint of a threatened act alleged to be illegal.

As to the assertion by defendant that the suit is not legally laid against the defendant as an officer acting in excess of his authority, we think that in view of the allegations of the complaint and the proofs offered by the plaintiff, this suit is one in which it is claimed that the authority exercised and threatened to be exercised by him is not validly conferred by statute. In *Yearsley* v. *Ross Construction Co.* (309 U. S. 18, pp. 20 and 21), the Court says:

"In that view, it is clear that if this authority to carry out the project was validly conferred, that is, if what was done was within the constitutional power of Congress, there is no liability on the part of the contractor for executing its will. (Citing cases.) Where an agent or officer of the Government purporting to act on its behalf has been held to be liable for his conduct causing injury to another, the ground of liability has been found to be either that he exceeded his authority or that it was not validly conferred. (Citing cases.)"

In the circumstances of the present case, the suit is not one against the United States. In *Philadelphia Co.* v. *Stimson* (223 U. S. 605) at peges 619–620, it is said:

"If the conduct of the defendant constitutes an unwarrantable interference with property of the complainant, its resort to equity for protection is not to be defeated upon the ground that the suit is one against the United States. The exemption of the United States from suit does not protect its officers from personal liability to persons whose rights of property they have wrongfully invaded. (Citing cases.) And in case of an injury threatened by his illegal action, the officer cannot claim immunity from injunction process. The principle has frequently been applied with respect to State officers seeking to enforce unconstitutional enactments. (Citing cases.) And it is equally applicable to a Federal officer acting in excess of his authority or under an authority not validly conferred. (Citing cases.)

"The complainant did not ask the court to interfere with the official discretion of the Secretary of War, but challenged his authority to do the things of which complaint was made. The suit rests upon the charge of abuse of power, and its merits must be determined accordingly; it is not a suit against the United States."

Neither is it necessary to join the defendant's superior officers. In *Colorado* v. *Toll* (268 U. S. 228) at page 230, the language of the court is as follows:

"The object of the bill is to restrain an individual from doing acts that it is alleged that he has no authority to do and that derogate from the quasi-sovereign authority of the State. There is no question that a bill in equity is a proper remedy and that it may be pursued against the defendant without joining either his superior officers or the United States. (Citing cases.)"

The foregoing discussion would seem to dispose of the more vital of defendant's objections that the Court is without jurisdiction to determine the issues presented by the pleadings upon the merits. In this respect, this Court feels that it has a limited jurisdiction to investigate and determine whether or not the proclamation is an arbitrary and capricious exercise of power under the Antiquities Act so as to be outside of the scope and purpose of that act by which the President in the exercise of its provisions has exceeded or violated a discretion thereby conferred.

In this connection, it will be pertinent to set out the Antiquities Act (16 U. S. C. A. 431):

"The President of the United States is authorized, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Government of the United States to be national monuments, and may reserve as a part thereof parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and management of the objects to be protected. When such objects are situated upon a tract covered by a bona fide unperfected claim or held in private ownership, the tract, or so much thereof as may be necessary for the proper care and management of the object, may be relinquished to the Government, and the Secretary of the Interior is hereby authorized to accept the relinquishment of such tracts in behalf of the Government of the United States."

The proclamation, known as No. 2578, dated March 15, 1943, omitting the metes and bounds description, which admittedly includes 221,610 acres, is as follows:

"Whereas the area in the State of Wyoming known as the Jackson Hole country, including that portion thereof which is located in the Teton National Forest, contains historic landmarks and other objects of historic and scientific interest that are situated upon lands owned or controlled by the United States; and

"Whereas it appears that the public interest would be promoted by establishing the aforesaid area as a national monument to be known as the Jackson Hole National Monument: Now, therefore,

"I, Franklin D. Roosevelt, President of the United States of America, under and by virtue of the authority vested in me by the act of June 4, 1897 (30 Stat. 11, 36; U. S. C., title 16, sec. 473), and the act of June 8, 1906 (34 Stat. 225; U. S. C., title 16, sec. 431), do proclaim that the Teton National Forest lands within the aforesaid area are hereby excluded from the said national forest and that, subject to all valid existing rights, the lands excluded from the said national forest together with all other lands within the following described area are reserved from all forms of appropriation under the public land laws and set apart as a national monument, which shall hereafter be known as the Jackson Hole National Monument:

* * * * *

"The reservation made by this proclamation supersedes, as to any of the above-described lands affected thereby, the withdrawals made for classification and other purposes by Executive Order No. 3394 of January 28, 1921; No. 4685 of July 7, 1927; No. 4857 of April 16, 1928; No. 5040 of February 4, 1929; No. 5436 of September 2, 1930; No. 5480 of November 13, 1930; and No. 7680 of July 30, 1937.

"Warning is hereby expressly given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any of the lands thereof.

"The Director of the National Park Service, under the direction of the Secretary of the Interior, shall have the supervision, management, and control of the monument as provided in the act of Congress entitled 'An act to establish a National Park Service, and for other purposes', approved August 25, 1916 (39 Stat. 535, U. S. C., title 16, secs. 1 and 2), and acts supplementary thereto or amendatory thereof, except that the administration of the monument shall be subject to the reclamation withdrawal heretofore made under the authority of the act of June 17, 1902, 32 Stat. 388."

The Antiquities Act, it will be seen, provides that the President may in his discretion declare by proclamation, historic landmarks, historic or prehistoric structures, and other objects of historic or scientific interest. It is the plaintiff's contention that the area included within the monument is barren of any of these features while the defendant contends to the contrary. Upon these divergent contentions an issue of fact was presented and evidence offered at the trial. The plaintiff's evidence was of a negative

character that there were no historic landmarks, historic or prehistoric structures or objects of historic or scientific interest included in the area established by the proclamation. While this line of evidence was quite elaborate, in the view the court takes of the matter, nothing could be accomplished by a detailed discussion of it in this memorandum. On the other hand, the defendant's evidence was to the effect that there were trails and historic spots in connection with the early trapping and hunting of animals formulating the early fur industry of the West, structures of glacial formation and peculiar mineral deposits and plant life indigenous to the particular area, a biological field for research of wildlife in its particular habitat within the area, involving a study of the origin, life, habits, and perpetuation of the different species of wild animals, all of which it is claimed constitute matters of scientific interest within the scope and contemplation of the Antiquities Act. It would likewise serve no useful purpose to elaborate upon the defendant's testimony in detail as the foregoing outline as to the trends of evidence illustrate the sharp conflict in regard to the facts. By this analysis in an ordinary suit the court would be confronted with the task of determining where the preponderance of evidence rests and render a decision based thereon. This, in substance, amounts to no more in the end than the court's opinion of what the evidence in the case purports to show and itself implies an exercise of the court's discretion. If there be evidence in the case of a substantial character upon which the President may have acted in declaring that there were objects of historic or scientific interest included within the area, it is sufficient upon which he may have based a discretion. For example, if a monument were to be created on a bare stretch of sagebrush prairie in regard to which there was no substantial evidence that it contained objects of historic or scientific interest, the action in attempting to establish it by proclamation as a monument, would undoubtedly be arbitrary and capricious and clearly outside the scope and purpose of the Monument Act. In the proofs in this case we have evidence of experts and others as to what the area contains in regard to objects of historic and scientific interest and by that testimony this court is bound although it may not agree that the testimony of the witnesses by the preponderance rule sufficiently supports the claim of the defendant. This is the limited scope which it seemed to the court were issues in the case within its jurisdiction to determine.

The law governing such a situation has been expressed in regard to the President exercising a power through proclamation based upon a resolution of Congress in *Dakota Central Telephone Co.* v. *South Dakota* (250 U. S. 163, at p. 184) in the following language:

"The proposition that the President in exercising the power exceeded the authority given him is based upon two considerations. First, because there was nothing in the conditions at the time the power was exercised which justified the calling into play of the authority; indeed, the contention goes further and assails the motives which it is asserted induced the exercise of the power. But as the contention at best concerns not a want of power, but a mere excess or abuse of discretion in exerting a power given, it is clear that it involves considerations which are beyond the reach of judicial power. This must be since, as this court has often pointed out, the judicial may not invade the legislative or executive departments so as to correct alleged mistakes or wrongs arising from asserted abuse of discretion."

A more recent expression is found in *U. S.* v. *Bush & Co.* (310 U. S. 371), where at page 380 it is said:

"It has long been held that where Congress has authorized a public officer to take some specified legislative action when in his judgment that action is necessary or appropriate to carry out the policy of Congress, the judgment of the officer as to the existence of the facts calling for that action is not subject to review. (Citing cases.) As stated by Mr. Justice Story in *Martin* v. *Mott*, supra, pages 31-32: 'Whenever a statute gives a discretionary power to any person, to be exercised by him upon his own opinion of certain facts, it is a sound rule of construction, that the statute constitutes him the sole and exclusive judge of the existence of those facts.'

"For the judiciary to probe the reasoning which underlies this proclamation would amount to a clear invasion of the legislative and executive domains. Under the Constitution it is exclusively for Congress, or those to whom it delegates authority, to determine what tariffs shall be imposed. Here the President acted in full conformity with the statute. No question of law is raised when the exercise of his discretion is challenged."

In short, this seems to be a controversy between the legislative and executive branches of the Government in which, under the evidence presented here, the court cannot interfere. Undoubtedly great hardship and a substantial amount of injustice will be done to the State and her citizens if the executive department carries out its threatened program, but if the Congress presumes to delegate its inherent authority to executive departments which exercise acquisitive proclivities not actually intended, the burden is on the Congress to pass such remedial legislation as may obviate any injustice brought about as the power and control over and disposition of Government lands inherently rests in its legislative branch. What has been said with reference to the objects of historic and scientific interest applies equally to the discretion of the executive in defining the area compatible with the proper care and management of the objects to be protected.

The court is not impressed with the technical argument of counsel for plaintiff that the designated area is not consistent with the preface to the proclamation in referring to the Jackson Hole country. The area over which control is threatened is in any event limited to that defined in the proclamation. Neither can the court take any judicial interest in the motives which may have inspired the proclamation described as an attempt to circumvent the congressional intent and authority in connection with such lands. The argument and propaganda which have been circulated in forums and through the press of the Nation, and even volunteered for the use of the court, largely concern a policy of segregating the area for its natural scenery and inherent beauty as a national playground or in the alternative, a policy representing in effect an encroachment upon the State's sovereignty over lands within its boundaries by adding to the already large acreage of public lands over which the Federal Government exercises authority, more lands and more restrictive measures, thereby retarding the State's growth and development. Such discussions are of public interest but are only applicable as an appeal for congressional action.

The case has been considered primarily under the prayer for injunctive relief, but if considered under the Declaratory Judgment Act the result must be the same. Where an injunction will not lie a declaratory judgment cannot be substituted for it. *Great Lakes Company* v. *Huffman* (319 U. S. 393).

It follows that the court will find generally for the defendant and counsel for defendant will prepare and submit findings of fact and conclusions of law in harmony with this memorandum but including such basic facts as are fundamental, together with an appropriate judgment dismissing plaintiff's cause of action, all in collaboration with counsel for plaintiff, on or before March 10, 1945. The findings and conclusions may carry such exceptions to be allowed as counsel elect.

Resolution of St. Anthony's Parish, Toledo, Ohio

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

TOLEDO, OHIO, *February 18, 1945.*

Hon. HOMER A. RAMEY,
House Office Building,
Washington, D. C.

DEAR JUDGE: I am forwarding to you this protest which was unanimously approved by the members of St. Anthony's Parish, Toledo, Ohio, February 16, 1945.

St. Anthony's Parish was established over 60 years ago. It comprises about 5,000 souls. We have over 630 boys in the uniform of the United States Army. Many of them have died upon all the far-flung battlefields of this war.

I need not tell you of the quality of our citizenship. You know there is none more ardently patriotic in the State of Ohio. We ask you to make our sentiments and beliefs known to the entire Nation.

Most respectfully yours,

F. S. LEGOWSKI, *Pastor.*

This war was entered into by the United Nations for two primary purposes. The first, destruction of totalitarianism, and the second, the preservation of the territorial integrity of Poland.

Totalitarianism became a menace to the freedom of the democratic governments and the peoples of the world. Its avowed purpose was to dominate the world and subjugate all peoples to its rule. Hitler chose the slogan of security of his eastern borders as the reason for unleashing a world war by striking at Poland. England and France recognized this security slogan as a specious pretext to attain world domination. They declared war on Hitler, proclaiming that no nation's alleged security outweighs the existence of a free people.

Britain and France recognized the validity of this truth and went to war to guarantee the territorial integrity of Poland against the totalitarian aggression of Hitler.

Recognizing the menace to world freedom, even before we entered the war, we promulgated the Atlantic Charter. Every nation, large or small, has a right to freedom and self-determination.

When Stalin wantonly attacked Finland, we condemned him as an unjust aggressor. We extended to Finland our sympathy and credit. Stalin was then a tyrant and dictator, devouring an innocent people. We stood upon the principles of democracy and morality. We were true to our heritage.

When Hitler sent his sadistic murderers into Poland, we took the side of freedom and democracy. Short of war, we aided with credits and munitions the Allies; we stood by while we witnessed the great totalitarians, Hitler and Stalin, join hands in the commission of an international murder. "One swift blow to Poland, first by the German Army and then by the Red Army, and nothing was left of this ugly offspring of the Versailles Treaty."—Molotov, 1939. Stalin stabbed Poland in the back while she was preoccupied in fighting Hitler and his hoardes. Being buddies under the skin, they united in annihilating the only democracy between their boundaries.

After Pearl Harbor, with the United Nations, we repromulgated the principles of the Atlantic Charter. We assumed the role of

the champion of morality, human dignity, and freedom.

We called upon millions of our boys to fight to the death for these high-minded and lofty principles of moral right.

But, in the meanwhile, our President looked into the eyes of the totalitarian Stalin and became fascinated and hypnotized. He abandons our ideals, our principles, and the blood of our youth and pays worship to the monster of international immorality and evil. It can only be because the idolators of power pay worship to the evil one. It is simply not human.

Bad company corrupts good morals is an old adage. Personal contact and face-to-face talks may be conducive to understanding only when the righteous are firm and steadfast in the right. But it is unfortunate when one rotten apple in the barrel corrupts the whole mess.

Now, the buddy of Hitler raises the question of security of his western boundaries, exactly as Hitler raised the question of his eastern boundaries. Stalin's security to the west demands the death of the Polish nation, and sows the seeds of a third world war. He demands the fifth partition of Poland. Churchill and Roosevelt agree to treat Poland, not as the first of the United Nations, but as an enemy. Poland is treated even worse than Rumania, which was an enemy country.

When Catherine the Great of Russia perpetrated the same evil deed we officially named it as "the greatest international crime in history." Today Stalin, not the Russian people, hacks off even more of the body of Poland than did Catherine and our President condones, approves, and cooperates in the crime.

When Hitler demanded security we condemned him as an aggressor and usurper, but when Stalin does the same thing we are asked to close our eyes to the injustice and immorality of his act and hope for the best.

As heirs of the Declaration of Independence, the Constitution and the Bill of Rights, as believers in the principles of the Atlantic Charter we cannot sit idly by without a protest. We do not approve international injustice. Our years of sacrifice and labor were not spent to support Stalinist imperialism. The blood of our boys is surely not being shed to condone international immorality. What we condemned in Hitler we equally condemn in Stalin. We cannot build a world of peace upon the ruins of injustice.

We bring these things to your attention that you in turn may bring them to the attention of the people of the United States.

Trustees of St. Anthony's Parish, Toledo, Ohio: Anthony Pawlowski, Stephen Czolgosz, Max Grzegorzewski, Frank Chlebowski, Stan. Stygowski Jr., Vincent Donnelly, Michael Holewinski, Joseph Lechlak, Martin Szymczak, John Zajac; Rt. Rev. F. S. Legowski, Pastor.

Future International Air Trade and Travel Routes

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an important and informative address on the subject of international air trade and travel routes of the future, delivered by Mr. L. Welch Pogue, Chairman of the Civil Aeronautics Board.

I have received from the Public Printer a statement that it will cost $124.80 to print the address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTERNATIONAL AIR TRADE AND TRAVEL ROUTES OF THE FUTURE

(By L. Welch Pogue, Chairman, Civil Aeronautics Board, delivered at the first International Civil Aviation luncheon sponsored by the aviation section, New York Board of Trade, in New York, N. Y., on January 24, 1945)

I deeply appreciate the privilege of speaking to the New York Board of Trade. Your membership represents the active and vigorous business leadership of the very great city of New York. I prize the opportunity of discussing with so distinguished a group some plans and ideas relating to the future.

Sometime in the latter half of the twenties some men, fired with the courage of their convictions and willing to risk their money and careers in the establishment of commercial air services—a daring venture then, started in the Caribbean area our first small international air operation. From that nucleus grew, during the thirties, the very extensive system of American flag international air lines known as Pan American Airways. If we include the Pan American-Grace Airways, 50 percent of which is owned by Pan American and 50 percent by W. R. Grace & Co., the Pan American Airways System operated more route miles by far than the next largest international operator before the war. In 1940, American Export Airlines was authorized to operate a temporary service across the Atlantic, although its operations did not actually start until after the entry of the United States into the war.

Modern war called for air transport operations to serve theaters of war all over the world. The Air Transport Command was created in the War Department and grew to fill this need. It started with a small nucleus of personnel, many of whom were key officers and technical experts taken from the domestic air lines. And it had only a small number of transport aircraft, most of which were likewise taken from the domestic air lines. It wisely utilized, under contract, the "know-how" and the services of the air-line organizations themselves. Intelligently directed, the Air Transport Command has expanded until it is operating approximately 125,000 miles of routes every day, carrying enormous numbers of passengers and millions upon millions of pounds of cargo annually. As of a recent date, the Air Transport Command was operating across the North Atlantic alone approximately 65 trips daily.

In addition, the Naval Air Transport Service has likewise built up a very extensive operation serving naval establishments throughout the world.

These two services, plus the limited amount of commercial transoceanic international services which could be continued during the war, have, in one of history's twinklings, transferred the prospect of transoceanic passenger travel very substantially from the surface to the air. There will, of course, be many pleasant sea voyages hereafter as heretofore; but for the man whose object is to get there, the war has proved the safety of the air and the superiority of air travel in time saved. And speaking of safety, have any of you stopped to think recently of how crazy you would have thought your neighbor had he, 10 years ago, prophesied that it would be safe within a decade to cross the Atlantic by air? While submarines stalked the sea lanes, they drove their human prey into the air lanes. This war experience does not represent theorizing; it is the practical laboratory test which proves the case.

Alert to the very great possibilities of expansion and growth in international air trade and travel, the Civil Aeronautics Board, in 1943, consulted extensively all aeronautical interests, twice soliciting their views, as to the international air transportation routes which the United States should seek to operate in the future. After further consultation with all interested governmental agencies, and with the approval of the President, the Board made our proposed world routes public last June. If existing United States air routes established before the war are included, there are 20 world routes in all which were so announced. They do not include any routes, existing or prospective, between the United States and the contiguous territories of Canada and Mexico. These routes reach every continent and important region of the world. Europe with approximately 25 percent of the world's population and the important areas of east Asia, south Asia, and southeast Asia, including approximately 47 percent of the world's population, are reached by these new routes. Generally speaking, these routes are based upon commercial considerations. They represent the Board's judgment as to the best routes for airborne trade and travel prospects from and to the United States. With minor exceptions they constitute reasonably direct routes out from and back to our homeland.

About 100 applications were filed by American citizens to operate international routes. The Board has divided the world into four areas for the purpose of conducting hearings on these applications and reaching decisions in the cases. All applications in each area have been consolidated in a single proceeding. The areas are (1) the Latin-American, (2) the North Atlantic (reaching eastward as far at Calcutta, India), (3) the South Atlantic, and (4) the Pacific, including Alaska (and reaching westward as far as Calcutta, India), and Australia. Hearings have been held in the Latin-American, North Atlantic, and South Atlantic proceedings. Under the law, when the Board has reached its decision after a hearing in these international cases, that decision is submitted to the President. The issuance or denial of each certificate is subject to his approval.

The Board realized, of course, that many of the applications, and most of the additional proposed routes which were not in operation before the war involved air transportation to and through the air space of nations with which the United States currently has no operating air arrangements. But in setting these cases down for hearing and decision in a timely manner, the Board was following the necessary statutory requirement that findings of public convenience and necessity should be made as a result of hearings. This action by the Board was designed to permit the prompt inauguration of additional air carrier services abroad when time and conditions are appropriate. Obviously no services can be inaugurated on any of the new routes unless and until suitable arrangements have been concluded with the foreign nations concerned.

It is, of course, clear that after as well as before the war there will be many foreign air carriers operating in the international field. Under existing law, no foreign air carrier can operate to a United States point without a permit issued by the Civil Aeronautics Board after a public hearing and after approval by the President. Although there may be exceptions to this general rule, these hearings upon applications for permits by foreign air carriers would normally take place following the negotiation of suitable air transportation arrangements with the country whose air line seeks such a permit.

We are approaching, therefore, a period of great importance to this country in that the decision period is now almost upon us with respect to the applications of American

flag carriers. These applications will require the determination of many important issues such as the question of whether there should be more than one American flag carrier in the international field; if so, whether they should operate as much as possible in different world areas or whether there should be competition between American flag carriers; whether, if there is to be more than one, there should be any prohibition against a domestic carrier proposing to operate beyond the borders of the United States; and many related questions of an economic and political nature.

Although, as I have indicated, the United States has had a very considerable volume of international operations in the past—it led the world in this respect—the volume of operations in peace times was insignicant compared to what is in store in the future. We expect that international trade and travel routes can be opened up widely and rapidly after this war is over. These routes will give access directly to commercial objectives, unimpeded by shore lines, barriers, and bottlenecks which have plagued other forms of transportation in the past. The impact of air commerce of the future upon our economic, social, cultural, and political life will be enormous. We are riding the crest of a wave of discovery and invention which got under way a hundred or so years ago and which, we hope, is still accumulating force for a much greater future. Someone has said that transportation is civilization. In any event, civilization and this wave of discovery thrive and develop best when it is possible for the people everywhere to profit from the best that is thought and developed by every people elsewhere in the world. High speed, time arresting, world-wide travel, and the resulting acceleration in the exchange of ideas can be a powerful agent in stimulating the creative developments which are possible in the future.

It was under these promising prospects that the Chicago International Civil Aviation Conference was held last November and December. That conference achieved some of the greatest and most progressive steps ever taken in the field of aviation. Before this conference there had been two major attempts to organize the world, or portions of it, in the safety and technical fields of aviation. Neither of them had achieved the widespread acceptance necessary to meet the world-wide requirements of civil aviation for the future.

The first and most important of these attempts was the Paris Convention of 1919. Although an original signatory to this convention, the United States did not ratify it. It was not placed in effect in many important regions of the world. The other major attempt was the Habana Convention of 1928. This convention was expected to apply only in the Western Hemisphere but it has not been ratified by many important countries in this hemisphere. Each of these conventions related to safety and technical matters and neither of them undertook to provide in any way for the establishment of commercial air routes. Although each convention purported to grant so-called "innocent passage" to private aircraft, there was, in many cases, a good deal of red tape involved even in that limited class of international travel.

The Chicago conference produced, among others, five documents of chief importance which were drafted and opened for signature at the conference. The first of these was a new international air navigation convention. It represents one of the most outstanding contributions in the field of civil aviation ever achieved by an aviation conference and reflects the experience gained under the Paris and Habana Conventions. It represents a strictly modern, up-to-date attempt to provide for order and regulation in the safety and technical fields for all types of civil airplane international operations and, if accepted by the nations, will, for the first time, have organized the whole world with respect to the regulation of these very important matters. It provides for a world organization consisting of an assembly and a council. In the assembly each country is to have one vote. Twenty-one nations are to be represented on the council, eight of them nations constituting those of chief importance in air transport, five constituting those not otherwise included which make the largest contribution to the provision of facilities for international civil air navigation, and eight not otherwise included whose election will insure that all major geographical areas of the world are represented. In addition to the jurisdiction of the council over safety and technical matters, it has certain powers of investigation and reporting in other fields as well. It is also to be the repository for the recording of a good deal of statistical information regarding the operation of international air lines and of international agreements relating to air transportation between nations and between any nation and air lines of other nations.

A second document drafted and opened for signature at Chicago is known as the interim agreement. It provides, during the period (not to exceed 3 years) from now until the time when the international convention can be properly ratified by the countries of the world, for a temporary or interim world organization similar in structure to that provided for in the permanent convention. The seat of the interim council is to be in Canada.

The third is the so-called two freedoms document. The first of these freedoms is the privilege accorded by each signing nation to the aircraft operated in civil air transportation by each other signing nation to fly in transit through its air space without any additional special authorization. The second of these freedoms is the privilege accorded by each signing nation to the aircraft operated in civil air transportation of each other signing nation to make nontraffic stops within its territory. The purpose of a nontraffic stop is to take on gasoline and oil, to make repairs, to take refuge from storm, or to meet an emergency. I do not have the time here to appraise accurately the great value of these two so-called freedoms. They are really privileges mutually exchanged in order to promote the cause of international air transportation. Suffice it to say that they are, in my opinion, very great steps forward in connection with the establishment of international air routes; and that is true generally and not only with respect to a particular nation's operations. The second privilege, that of nontraffic stop, in effect throws open those important and much discussed air bases built during this war which will be needed for international civil air transportation so far as they do not have to be used exclusively for military purposes.

The important fourth paper produced at Chicago is the so-called five freedoms document. In addition to including the abovementioned two freedoms, this document also includes the right to carry traffic embarked in the home state to any other state in the world (the third freedom), the right to pick up traffic anywhere in the world destined to the home state (the fourth freedom), and the right to pick up traffic along the route in a foreign state and carry it to another foreign state (the fifth freedom). In the exercise of the so-called five freedoms, routes operated thereunder must be reasonably direct out from and back to the homeland.

The fifth document produced by the Chicago Conference is the so-called standard form of bilateral agreement. Realizing that, of course, not all countries will adhere to the "five freedoms" document and that even with respect to those that do so there may well be an interim period during which international air lines must be operated, some standard clauses for bilateral agreements providing for air routes were developed at Chicago and unanimously recommended by the Conference to all nations for use in any bilateral agreements authorizing such routes. The most important provisions of these standard clauses are: First, that discrimination against any country or its air lines is forbidden; second, the building up of air blocs providing for the exclusive use of air space by any nation in any part of the world it outlawed; and third, the making of international air-transport agreements whether between countries or between a country and an air line is required to be filed with the international body and made public. The conference thus unanimously voted to eliminate the era of secret agreements in the field of international air transportation.

It is too early to prophesy as to the extent to which these agreements will be accepted by the nations of the world. It is not too early, however, to express the very earnest hope and confident expectation that the interim agreement will come into force at a very early date. It will do that when 26 nations have confirmed their signatures to the United States.

As we contemplate the establishment of these important international air trade and travel routes of the future, whether pursuant to bilateral air-transport agreements between nations or eventually under the "five-freedoms agreement" or under some other international arrangement, it is appropriate to inquire about the effect of these routes on trade and travel by sea.

Mark well the point that in the long run the largest portion of international air transport business will be new business which has never before existed. The railroads had developed yearly average per capita railroad passenger miles in the United States to 114 by 1880; to 350 by 1915. But in a very short time the automobile created a whole new volume of traffic; before the war the average yearly per capita motor vehicle passenger-miles were around 1,500. Better and faster ships increased foreign travel by United States citizens from around 1 person annually out of 5,000 to about 1 out of 350 before the war. We do not know the limit of our capacity to trade and travel as the transportation medium improves and the rates go down. Thus a tremendous growth of entirely new business in international air trade and travel is sure to develop when the enlarged opportunity to use the service comes. And as fast travel becomes available to the businessman, his markets and his business expand. Bulk shipments following his business trips will, in all probability, as I shall explain later, go by ship and not by plane, thus enlarging, not diminishing, the business of our merchant marine.

I want to make it unmistakably clear that, as I have just indicated, I do not believe that the air trade and travel routes will be the only trade routes of the future over which the commerce of the world will move. Every new form of transportation, as well as creating new traffic, has diverted some traffic from older forms of transportation. To the extent that air transportation diverts traffic from surface vessels, it will initially consist principally of passenger traffic. When a greatly expanded network of world-wide airways is available, persons interested in speed who might otherwise travel abroad as first- or cabin-class passengers on steamships will have strong motives to go by air. The cost of traveling by air will be competitive with that of first- and cabin-class travel by sea; the time saved by air will range from days to weeks; the inducement to travel by air will be compelling; but the first- and cabin-class

sea travel which is destined to go to the air will, in the long run, be but a minor fraction of the total of international passenger air travel. New air passenger business will constitute the major fraction.

Some limited diversion of ocean cargo to the air will also take place, but it will not constitute more than a very small fraction of the sea total, so far as we can now see. Until international air cargo rates can compete economically with ocean shipping rates the percentage of diversion will be small. Of the 7,225,124 tons of exports from the United States to the United Kingdom in 1938, only 260 4 tons, or 0.004 percent, bore rates of more than 5 cents a ton-mile; over one-third of the total tons exported was shipped at less than half a cent a ton-mile. Air cargo rates up to now have been many times higher. It will be a long time, if ever, before air cargo rates will be able even to approach most of the ocean rates. Ocean transport, so long as it remains the cheapest means of freight movement in the world, must be counted upon to continue to transport bulk cargo. Air transportation will be obliged to be content with only a small amount of diverted cargo where time, competitive considerations, or unusual circumstances control the medium of shipment.

Thus, the diversion of passenger traffic, and the limited diversion of cargo traffic, to the air most decidedly does not mean a destruction of the United States merchant marine. Ships will still carry the bulk of the exports and imports of the United States.

In 1938 the United States merchant marine consisted of 27,155 vessels having a gross tonnage of 14,651,000. Of this total, however, only 1,575 vessels, having a gross tonnage of 3,550,815, were registered and engaged in the foreign trade. Sixty percent of the vessels engaged in the foreign trade, representing 54 percent of the gross tonnage, were in the freight services; 5 percent of the vessels, representing 14 percent of the tonnage, were tankers; and 22 percent of the vessels, representing 3 percent of the tonnage, had their services classified as dredging, ferry, fishing, oystering, pile driving, towing, wrecking, pilot boat, patrol boat, refrigerator, whaling, and miscellaneous. Thus, a total of 87 percent of the number of vessels, representing 71 percent of the gross tonnage engaged in the foreign trade are in services which stand to benefit from an increase in exports and imports brought about by increased world trade which, as I have already indicated, I am certain will be stimulated by the quickened movement by air of business mail and the swift transportation of businessmen throughout the world. I would like to stress here that, in my opinion, the new business which will be developed cannot be measured accurately by any formula applied to past business. As I have shown, this acceleration of business activity resulted from railroad operations. It was the same again when the automobile arrived. I prophesy with confidence that history will repeat itself in this respect when the airplane blazes the way for new kinds and volumes of trade.

Two hundred and five, or 13 percent, of the 1,575 vessels of the United States merchant marine engaged in the foreign trade carried passengers; these vessels had a gross tonnage of 1,047,632, or 29 percent of the 3,550,815 gross tonnage of vessels engaged in the foreign trade. Those 1,575 out of the total 27,155 vessels constitute the group which stands to have its first- and cabin-class passenger traffic subject to diversion to the air. That may appear to some of you as a large, and to others of you as a small number of vessels and amount of tonnage to be so affected. Of more interest to me at the moment, however, is the fact that to the extent that this diversion to the air is captured by American-flag air lines, it will be captured primarily from operators of foreign ships. So far as I know, the facts relating to this and certain related matters were for the first time placed in air transportation perspective in a recent study made by F. H. Crozier of the Civil Aeronautics Board.[1]

In the first place, first- and cabin-class sea travel constitutes only a portion of the total sea travel. In 1938, there were a total of 1,057,516 overseas sea passengers between the United States and other countries. Four hundred and ninety-five thousand five hundred and seven, or 46.9 percent, were second-, third-, or tourist-class; 562,009 were first and cabin class. We are dealing, therefore, with the effects of diversion upon roughly 53.1 percent of the total sea passenger traffic between the United States and other countries. The important fact in this possible diversion, however, is, as I have indicated, that it would not all come from our merchant marine.

In 1938 only about 25 percent of the gross revenue received for transporting passengers between the United States and overseas destinations was received by vessels of United States registry; foreign vessels received approximately 75 percent of such revenue. This was despite the fact that United States residents were contributing about 70 percent of the gross passenger revenue in overseas travel between this and other countries. These are general averages. Different areas vary widely. For example, in the trans-Atlantic region, vessels of United States registry secured only 9 percent of the passenger revenue although United States residents contributed 72 percent of the total passenger revenue for travel in this area; vessels of foreign registry secured 91 percent of the passenger revenue at the same time that foreign residents were contributing only 23 percent of the total passenger revenue for travel in the trans-Atlantic area.

A diversion then of even all first- and cabin-class passenger traffic to the air would have its principal effect upon foreign surface carriers rather than upon ou own merchant marine. If, as first- and cabin-class traffic is diverted to the air, United States air carriers step in and capture only one-half of the diverted traffic, there will be a net gain to United States interests. The initiative and resourcefulness of our air carriers should enable us to establish a merchant air fleet in keeping with the importance of the contribution which we make to world passenger travel.

Another important consideration in the penetration of sea by air travel is the probability that the revenues of ships serving United States overseas traffic which is normally attributable to first- and cabin-class travel are approximately 8 percent of the aggregate operating revenues of these carriers. The area of competition between air and sea in terms of total steamship revenues promises, therefore, to be relatively small in the immediate future.

Air transportation will not destroy ocean shipping or our merchant marine. It is not at all improbable that these limited adverse effects upon ocean shipping will never be noticed for the reason that the increased business activity which will be stimulated by air transportation will produce other new traffic in such abundance that the losses will be more than compensated for. Ocean shipping and air transportation are both destined to remain and both destined to grow.

[1] Overseas Air Service Patterns; Travel Distribution and Composition—All Areas: Report by F. H. Crozier, Chief, Research and Analysis Division, Economic Bureau, Civil Aeronautics Board, Washington, D. C., December 1944. The material in the next four paragraphs is drawn in large part from this report.

Final Decision on Iwo

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maj. George Fielding Eliot:

FINAL DECISION ON IWO IS SEEN UP TO THE INFANTRY, AS ALWAYS—BITTER FIGHTING PROVES AGAIN THAT PREPONDERANCE OF WEAPONS IS NOT ENOUGH—AND THE SUPERIORITY OF UNITED STATES GROUND FORCES IS THE GUARANTY OF VICTORY

(By Maj. George Fielding Eliot)

As inevitably happens, when the guns and the bombs have done all that they can do of their own power, the final decision on Iwo Island is being sought by the ground fighting team—the infantry, with artillery, air, and armored support.

The marines of the Fourth and Fifth Marine Divisions must kill the intrenched Japanese defenders, rooting them out of holes and caves, or slaughtering them in the open when opportunity offers. Rifles, grenade, bayonet, automatic weapons, and the supporting arms must work together in a great symphony of death—rising to the final crescendo when the last of Iwo's defenders are herded together in a final stand somewhere in the northern hills, or come out to meet their end in a last suicide charge after the Japanese fashion.

MAN ON THE GROUND DECIDES

On a large scale or a small, this is the end of all campaigns. The decision must be gained by the man on the ground. He needs the help of other arms; indeed, he cannot succeed without it. One of the great Japanese weaknesses in this war lies in their second-rate artillery, armor, and air-ground cooperation. Yet wherever their infantry has fought it has made us pay a bitter price to overcome it, even with the faulty and sometimes nonexistent support that it has had. That fact in itself should be sufficient testimony to the value of good infantry even in this war of machines.

The truth is that man is neither a marine animal nor a flying animal. He can travel on the surface of the sea, or he can fly in the air, but his ability to remain there is subject to the limitations of the machines by which he translates himself from his native earth to the unnatural element. It is on the surface of the earth that man lives, and has his being; there are his hopes, there his future. From the earth he draws his sustenance, and in it he will at last come to rest. It is on the surface of the earth that his great decisions of war and of peace are taken. This has always been so, and insofar as human prescience may judge, it always will be so.

Despite all the claims of all the magicians and soothsayers, this war is ending where every war in human history has ended—in final battles on the surface of the earth, fought by men on foot. These men bear and are accompanied by weapons that would appear strange and terrible indeed to the phalangite of Alexander, to the legionary of Scipio or Caesar, to the English archer who won the day at Crecy and Agincourt, or to the Swiss pikeman who humbled the armored chivalry of Charles the Bold. Yet the heir

of all these generations of sturdy and invincible infantry is the doughboy of today; the Marine on Iwo, the Highlander rooting the Huns out of the ruins of Goch, the Russian guardsman storming through the streets of Breslau. Sarissa and pilum, longbow and halberd have given place to the automatic rifle, the bazooka, the machine gun, and the mortar; but the bayonet still reminds us that even in the mechanized warfare of today, men still must have a weapon with which they can kill each other in hand-to-hand fighting.

The taking of Iwo will be complete when the enemy's infantry has been defeated or—as is more likely—destroyed. "Iowa Jima," said Vice Admiral Richmond Kelly Turner to a correspondent, "is as well defended a fixed position as exists in the world today. It is small, but better defended and better organized for defense than any island with which I am acquainted." And the admiral has made the acquaintance of quite a number of defended islands.

THE PRICE OF VICTORY

So once again we must pay the price of victory—in the blood of our bravest and best. Once again we relearn the grim lesson that war cannot be won merely by a preponderance of machines and material weapons. Such a preponderance is invaluable, and we are lucky, indeed, that we are able to provide it in so lavish a measure to our fighting men on their far-flung battle fronts. But it is not enough. It gives us victory at less cost, but not at no cost. It is precisely because the Germans no longer have enough men left to man their mechanical armament and still to provide an adequate force of good infantry that they are suffering defeat after defeat. It is precisely because the Russians not only have plenty of mechanical armament but also outnumber the Germans two or three to one in solid infantry formations that they are rolling on toward Berlin. It is precisely because our British Allies and ourselves are at last able to build up our infantry formations to a strength decisively superior to the Germans' in the west that we are beginning to gain ground, and will gain a great deal more ground in the immediate future.

And it is because, in the last grim analysis, the final test of the flaming crucible of war, the American infantry man—Army or marine—is a better fighting man than his Japanese opponent, that we are winning Iwo as we have won every other position which we have attacked since the first marines set foot on the shores of Guadalcanal back in the summer of 1942. We have a better Navy than the Japanese, we have more and better air power, we have better all-around armament, we have a better staff and better coordination of the several arms—but if we did not have better infantry, these things would not bring us victory.

Lincoln and Our Foreign Policy Today

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. WILLIS. Mr. President, in these days of overwhelming responsibilities and of swift changes in world affairs, in governments, in the very objectives of our citizens for their Government, it affords a refreshing bit of reorientation to pick up a speech lately delivered by the distinguished junior Senator from Michigan [Mr. FERGUSON]. The Senator from Michigan reviews for us the concepts of our predecessors in Government, whose minds were less troubled by the complexity of individual and governmental affairs with which we are confronted today, and who, it seems to me, were more likely, if not actually much more able, to see clearly many implications which appear but dimly to us. For this reason I have welcomed the opportunity to read the distinguished Senator's words, prepared for delivery near the tomb of Abraham Lincoln, in his city of Springfield, Ill., on his birth-date anniversary, February 12, 1945. I cherish for all my colleagues the same opportunity, and therefore ask unanimous consent that the address by the Senator from Michigan be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege and honor for me to talk to you tonight in Abraham Lincoln's memory. It is indeed fitting for us to pay tribute to this great man here in the city of Springfield, where he lived for almost a quarter of a century. As he practiced law here and rode out over the old eighth circuit with the lawyers and judges of his day, and as he lived the life of an active citizen participating in the civic and social activities of the community, he formed a great many strong and loyal friendships which clung to him through life and had a vital and indispensable part in his elevation to the high office of the Presidency. Springfield will continue to be rich throughout all time because of its historic association with him.

In Lincoln's day Springfield was a busy frontier city, the capital of a frontier State, deep in the heart of the middle valley of America. This middle valley played a great part in the fostering and development of our American democracy. The hardy pioneers who peopled its sweeping plains were devoted disciples of those principles of freedom, justice, and democracy which Lincoln championed with unceasing devotion. And it was from the lips of your most illustrious citizen, at the high tide of war, that the message went out to all the world that a government was determined to endure, based upon the immortal truth that under the laws of nature and of God all men were created equal and endowed with the sacred right of liberty.

Lincoln came to the Presidency in a tragic era. Under him the Nation was engulfed in civil war over issues which threatened our national existence. He had seen these issues unfolding and growing more and more critical long before he became President. He discerned more clearly than most of his contemporaries what a real threat to the integrity of the American union was contained in the problem of slavery and the fundamental question of State rights, which had become the paramount issue as the bitter antagonism between the North and South came to a grave crisis.

In 1858, right here in Springfield, he stated the problem in these words:

"A house divided against itself cannot stand. I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved, I do not expect the house to fall, but I do expect it will cease to be divided. It will become all one thing or all the other."

As he waited here in Springfield after his election and before his inauguration, he saw the threat of secession become an accomplished fact; he saw the Union broken asunder by the withdrawal of one State after another, and he was not able to lift a finger to stem the tragic tide. Then almost immediately following his inauguration the Nation was swept into civil war.

There are many evidences to show that periodically, from generation to generation and from century to century, mankind meets with the same great problems. This leads people to conclude that history repeats itself. And today American history is repeating itself, although not in precisely the same outward forms and events.

True, we are not engaged in a great civil war, testing whether this Nation or any nation conceived in liberty and dedicated to the proposition that all men are created equal can long endure. But we are at war again, the second time in 25 years. We are fighting today for a new application of the great truths for which Lincoln and the people of his time made immeasurable sacrifices.

All through history men have sought for the road to peace between nations and brotherhood between men.

Long before the time of Christ, statesmen talked of organizations, and they established leagues to preserve peace among states and to foster good will among men. The Chinese, the Greeks, the Romans all labored over the problem of securing peace by disarmament, by agreement, by the application of force to prevent and repress aggression. Christ was the supreme advocate of peace and brotherhood. The Peace Palace at the Hague, Woodrow Wilson's fourteen points, the League of Nations are modern evidences of this age-long quest of humanity for peace and brotherhood.

Back of every true interpretation of history must lie these two great purposes—to accomplish peace between nations and the brotherhood among men. Call these ideals if you will. Criticize them as fantastic and impractical. But they are the embodiment of the Sermon on the Mount, the real justification of Christianity, the ideals of the great world religions. They are the stars to which men must forever harness their destiny, if mankind is to be lifted above the savagery of incessant war.

The great modern attempt to organize the world to maintain peace and to work toward freedom and justice for all mankind began, of course, when Woodrow Wilson set forth for fourteen points, along with the technical points for ending World World No. 1. Wilson laid down the principles for a just and honorable peace for victor and vanquished alike, just as Lincoln sought a peace between the North and South, without revenge or bitterness:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us * * * do all which may achieve and cherish a just and lasting peace * * *."

And even as Lincoln saw the significance of his acts in wider service to mankind, seeking to achieve "a just and lasting peace among ourselves, and with all nations," so Wilson called for "a general association of nations," which he hoped would become the basis of peace and justice in the same way that Lincoln and the fathers of our country regarded the Union as the prime condition of peace between the States.

Thus it was in the fiery furnace of World War No. 1 that this modern practical plan for world peace was forged—the League of Nations. It proved inadequate for many reasons, but no doubt largely because the world at heart was not yet ready for it.

In 20 years men failed to perfect the machinery which might have saved the world; today we are paying the price of this failure, in the form of a second world war.

But now we believe that a new spirit is abroad, the firm conviction that if we do not find and follow the road toward an effective world organization, then mankind is doomed to a third world war. And that war, on a scale which modern science and air warfare will make possible, will level our vaunted civilization to the shambles and ruins which

mark the path of modern armies and air armadas.

So as we contemplate the grave emergency which our Nation faces today, engaged in a world-wide struggle for the very life of our Nation and the preservation of freedom and democracy, it seems to me that history is repeating itself; that there is a striking parallel between the situation in which we now find ourselves and the critical situation which faced the Nation in Lincoln's day. He prayed that the Nation might have a new birth of freedom. We fight today to give freedom to all men everywhere. The Atlantic Charter expresses the hope that a peace may be established under which all nations may dwell in safety and all men in all lands may live out their lives in freedom.

Lincoln exhorted the Nation to be dedicated to the proposition that "government of the people, by the people, for the people shall not perish from the earth." Today we battle to preserve popular government and to secure for all the nations of the earth, great and small, as the Atlantic Charter declares, the right to choose the form of government under which they will live, and the restoration of sovereign rights and self-government to those who have been forcibly deprived of them. And the Dumbarton Oaks Conference laid down the principle of the sovereign equality of all peace-loving states.

As is true of our Nation today, when Lincoln came to the Presidency he was faced with grave domestic difficulties and critical foreign relations. The South took up arms to justify its claimed right to a separate national existence; foreign nations had to decide whether they should recognize the Confederacy as a separate government. One of the severest tests Lincoln had to meet was to so handle our Nation's foreign relations as to influence or persuade the nations to refrain from recognizing the Confederacy as a separate government.

He felt himself, at the outset, totally unprepared to cope with the problems of foreign policy. He was appalled by the prospect of having to deal with foreign nations. To William H. Seward, his Secretary of State, he declared shortly before his inauguration: "There is one part of my work that I shall have to leave largely to you. I shall have to depend upon you for taking care of these matters of foreign affairs, of which I know so little, and with which I reckon you are familiar."

On another occasion he said: "I don't know anything about diplomacy. I will be very apt to make blunders."

Less than a month after the inauguration, Seward wrote that very unusual letter to Lincoln in which he stated that the administration was without a policy, either domestic or foreign, and urged that a policy should be adopted and then energetically prosecuted. There are people today in Washington and throughout the country who feel that right now there should be a clear and specific statement of our foreign policy. On January 10 of this year, I declared on the floor of the Senate, that "the time has come for the Senate to clarify its views in the interest of national unity on a strong effective foreign policy," and that "the Senate should pass a resolution embodying a clear minimum statement of principles to which every Member can subscribe who believes enduring peace depends on teamwork." Then I proposed such a resolution, to which I will later refer.

As in our own day, foreign relations during Lincoln's administration involved many purely technical problems. The North had to combat the sympathetic attitude of other nations toward the Southern Confederacy in its attempts to run the Union blockade; it saw the South receive substantial assistance from England, in permitting fast-running cruisers to be built in British ports, later to overhaul and destroy on the high seas unarmed steamers and freighters flying the United States flag. There was the continual struggle to prevent recognition of the Southern Confederacy by other nations. Lincoln and Seward strove to establish the fact that the rebellion was a purely domestic matter which was not subject to the laws of war. But the creation of the blockade involved the right to search foreign vessels on the high seas, and this could not be done except in time of war. Hence the Government abandoned the fiction of insurrection, recognized the fact of war, and proceeded to apply the rules of international law in order to define the rights and obligations of neutral nations.

There was the famous Trent affair, when Captain Wilkes of the United States Steamship *San Jacinto*, intercepted the British packet *Trent*, boarded it, and arrested and removed James Mason and John Slidell, Confederate agents, who were on their way to Europe to solicit aid for the Confederacy.

There were potential difficulties with France, England, and Russia over the situation in Mexico. The dwindling supply of southern cotton upon which the mills of England depended for their raw material, created wide-spread distress, unemployment, and unrest among the English working classes, and raised other difficult questions between Britain and the United States. Seward even went so far as to suggest that by fomenting a foreign war the North and the South might be united in a common cause, but this suggestion, of course, received no serious consideration.

As Isac N. Arnold observed, however, Lincoln at length impressed the leading traits of his character upon our foreign policy. Arnold, as you know, was a Member of Congress during the Civil War and one of Lincoln's closest friends and confidants. Of the development of American policy under Lincoln, he stated that frankness, straightforward integrity, patient forebearance, and unbroken faith in the triumph of the Union and liberty, based upon his trust and confidence in the Almighty and the American people, characterized his foreign policy, which was simple and thoroughly American; that our representatives were instructed to ask nothing but was clearly right, to avoid difficulty, and to maintain peace, if it could be done consistently with our national honor; that the record of the diplomatic correspondence of the United States during the critical years of this administration is one of which Americans may justly be proud.

Lincoln looked beyond the technical issues of foreign policy to the broader questions of human relations and associations. His paramount purposes to preserve the Union of the States was the deep underlying motive which enabled him to prosecute the war to a successful conclusion. Only in the preservation of the Union was it possible, as he saw it, to perpetuate our form of popular government in the world. He expressed his deep yearning for the preservation of the Union in his letter to Horace Greeley, in 1862, when he asserted that he would save the Union the shortest way under the Constitution; that his paramount object in the war was to save the Union, and was not either to save or destroy slavery; he even declared that if he could save the Union without freeing a single slave he would do it, but that, on the other hand, if he could save it by freeing all the slaves, he would that. "What I do about slavery," he said, "I do because I believe it helps to save this Union; and what I forbear, I forbear because I do not believe it would help to save the Union."

Lincoln was not the first American statesman to recognize that the preservation of the American Union was indispensable to the maintenance and perpetuation of government based upon the principles of freedom and democracy. Washington in his Farewell Address urged that the efficacy and permanency of the Union should be maintained, and that the Constitution in existence was sacredly obligatory upon all. Henry Clay in 1850 declared that the American Union was a sacred connection of the States, "which no human authority can dissolve or divorce the parties from." And Webster's words have a familiar ring to all of us, "liberty and union, now and forever, one and inseparable."

All joined in the one noble sentiment that only by the preservation and perpetuation of the American Union could government based upon the principles of freedom, justice, and democracy be preserved not only for our own people but for all the nations of the earth.

Lincoln went far beyond his predecessors, however, in his ardent devotion to these principles as the foundation of human association.

Thomas Jefferson was not thinking merely of the American people when he wrote in the Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

Lincoln was thinking in terms of all humanity when, in 1859, he declared that the principles enunciated by Jefferson in that immortal document "are definitions and axioms of free society, abstract truth, applicable to all men and all times." These principles, these self-evident truths, were to him the very breath of life.

He was thinking in terms of all humanity when, at Philadelphia on February 22, 1861, he stood on the very spot where these sentiments originated and were given to the world, and declared that he had never had a feeling politically that did not spring from the sentiments embodied in the Declaration of Independence. There he said that he had often pondered over the dangers incurred by the men who assembled there and framed and adopted that Declaration; that he had often inquired of himself what great principle or idea it was that kept this Confederacy so long together; he felt that it was not the mere matter of separation of the Colonies from the motherland, but that it was that sentiment in the Declaration of Independence which gave liberty not alone to the people of this country, but hope to all the world for all future time. It was that which gave promise that in due time the weights would be lifted from the shoulders of all men, and that all should have an equal chance. He wondered whether the country could be saved on that basis. If it could, he said that he would be the happiest of men in the world if he could so help to save it. "If it cannot be saved upon that principle," he asserted, "it will be truly awful. But if this country cannot be saved without giving up that principle, I was about to say I would rather be assassinated on this spot than surrender it."

So Lincoln's problem of the preservation of the Union and the perpetuation of the principles of freedom, justice, and equality led him to look beyond the domestic situation, beyond questions of technical diplomacy, to the very foundations of civilization. He saw union and democracy as the only real hope all men. America could be a pattern for all men. America could bea pattern for others. And, I am sure, if he were here to face the problems of our time, he would agree that the thing with which we must deal constructively and immediately is the formation of an enduring association of peoples capable of maintaining world peace and capable of extending the principles of freedom, justice, and equality—democracy—throughout the world.

The problem now is the same as that which he faced, but on a world-wide scale. The solution of our problem may require the application of the principles enunciated at the

Dumbarton Oaks Conference, just as Lincoln's problem could be solved only by the preservation of the American Union. But if the present-day problem is actually to be solved, it will require the application of those principles for which Lincoln struggled and literally gave his life.

These American historic principles, broadened so as to apply to the nations of the world, are embodied in different forms in the Atlantic Charter, the Senate document known as the Connally resolution, and the Dumbarton Oaks proposals. It is my earnest hope that as we study and endeavor to apply the principles laid down in these various documents we may in the end find the solution to the problem of world peace; that as Lincoln found the solution to his problem in the preservation of this Union, so we may find the solution to our problem in the actual formation and functioning of a union of the peace-loving nations of the world.

The Atlantic Charter is a declaration of the historic principles of liberty, justice, and equality to be applied to all the nations, great and small alike.

In January 1942, 26 nations subscribed to the common program of purposes and principles embodied in this joint declaration; and each of the 26 pledged itself to cooperate with the others that signed the declaration for complete victory over their enemies, in order to defend life, liberty, independence, and religious freedom, and to preserve human rights and justice in their own lands as well as in other lands.

The Atlantic Charter announced eight common principles in the national policies of the two countries, on which the President and Mr. Churchill declared their nations based their hopes for a better future for the world. These declarations provided that they would seek no territorial or other aggrandizement; that they desire no territorial changes except in accordance with the wishes of the peoples concerned; that all peoples should have the right to choose their form of government and that there should be the restoration of sovereign rights and self-government; that all states should have free access to the trade and raw materials of the world which are needed for their economic prosperity; that there should be economic collaboration between all nations to secure for all improved labor standards, economic advancement, and social security; that there should be an established peace affording all nations the means of dwelling in safety within their boundaries, assuring that all men in all lands may live a freedom; a peace which will enable all men to traverse the high seas and oceans without hindrance; and that all nations, for realistic as well as spiritual reasons, must come to the abandonment of the use of force.

In the third and fourth paragraphs of the resolution which I proposed on January 10, I called upon the United States Senate to declare that "the United States stands unreservedly on its historic American principles set forth in the Atlantic Charter, and intends to do its utmost to bring about the application of such principles throughout the world; "and that the United States will formuulate its post-war policies along diplomatic and economic lines which will exert its full influence toward universal application of these principles."

On that occasion I urged that, in order to bring about the application of these principles throughout the world, we should serve notice on other nations that those who are to receive the full post-war economic collaboration of the United States must live up to those principles in a reasonable degree.

By securing the world-wide application of the principles of the Atlantic Charter, I believe that Lincoln's dream for world-wide peace among all nations can and will be made to come true. The people of all nations must dedicate themselves to such principles to accomplish this.

When the Connally resolution was before the Senate, I was one of the sponsors of the amendment which called for the establishment, at the earliest practicable date, of a general international organization, based on the principle of the sovereign equality of all peace-loving States, and open to membership by all such States, large and smal, for the maintenance of international peace and security.

As that resolution was finally approved it declared the sense of the Senate to be that the war be waged to complete victory; that the United States cooperate with its comrades-in-arms in securing a just and honorable peace; that the United States join with free and sovereign nations in the establishment and maintenance of international authority with power to prevent aggression and to preserve the peace of the world; and that there be established at the earliest practicable date the international organization to which I have already referred.

In my resolution of January 10 I urged not only the formation at the earliest possible moment of a United Nations organization, but that there should be formed immediately a United Nations council to supervise, when necessary, the life of liberated territories until stable governments can be set up by the free choice of the people involved, and to deal with other diplomatic and political issues that may arise and cannot wait until a permanent United Nations organization can be formally ratified.

I further urged the Senate to declare that the permanent United Nations organization should be formed along the lines tentatively drafted at Dumbarton Oaks, and that the United States is prepared to accept its share of responsibility, even to the use of force, if necessary, to act within the framework of such an organization to keep the peace and prevent aggression.

I felt then and feel now that enduring peace depends upon the formation of such international organization, as a channel through which the people of peace-loving nations can merge their desires and their efforts to prevent future wars, and that such an organization must be rooted deeply in the very principles to which Lincoln was so ardently devoted, the principles of justice, freedom, and equality that have always motivated men of good will everywhere.

American must take the lead if we are to prevent a third world war. To do that we must have a foreign policy so strong, clear, and unified that no one in this country and no one in any other country can misunderstand it, and that has for its aim, the winning of the war, and second, the setting up of an enduring peace.

And, as I have said, these objectives can best be accomplished by the formation of an international organization along the lines suggested by the Dumbarton Oaks Conference.

The purposes of the organization proposed by that conference include the maintenance of international peace and security by taking effective measures for the prevention and removal of aggression or other breaches of the peace that would likely cause another world war; the development of friendly relations among nations and other appropriate measures to strengthen universal peace; the achievement of international cooperation in the solution of international problems; and the creating of a center for harmonizing the actions of nations in the achievement of these common ends.

The Dumbarton Oaks proposals define the principles upon which this international organization could be formed and outline the framework of such organization in considerable detail. Of course the proposals are tentative and incomplete, but they furnish a basis upon which we can work.

As we contemplate the part that the United States will have to assume in the formation of such an organization and the carrying out of its provisions and purposes, we see many difficult and complex problems which will have to be solved. But we can accept the axiom that there is no problem on earth which canont be solved if the proper willingness and skill are applied to it. Courage, tolerance, and insight are needed in the approach to any such problem.

In connection with the Dumbarton Oaks proposals, questions arise as to the treaty-making powers of the President by and with the advice and consent of the Senate; the power to declare war and the authority to recognize a state of war; and the new question of the use of force, if necessary, to preserve peace and prevent aggression.

The charter of the proposed organization would empower the security council, which it creates, to determine what diplomatic, economic, or other measures not involving the use of armed force should be employed to give effect to its decisions, and to call upon members of the organization to apply such measures, which may include complete or partial interruption of rail, sea, air, postal, telegraphic, radio, and other means of communication and the severance of diplomatic and economic relations. It would further provide that should the security council consider such measures to be inadequate, it should be empowered to take such action by air, naval, or land forces as may be necessary to maintain or restore international peace and security, and that such action may include demonstrations, blockade, and other operations by air, sea, or land forces of members of the organization. It also provides that the members of the organization for this purpose should make available to the security council, on its call and in accordance with a special agreement or agreements concluded among themselves, armed forces, facilities, and assistance necessary for the purpose of maintaining international peace and security; that such agreements should govern the members and types of forces and the nature of the facilities and assistance to be provided, and should be negotiated as soon as possible, and should be subject to approval by the security council and to the ratification by the signatory states in accordance with their constitutional processes.

My view is that the charter of the proposed peace organization containing these and other provisions should be submitted by the President to the Senate of the United States for ratification as a treaty, under clause 2 of section 2, article II, of the Constitution, which provides:

"He [the President] shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

My reason for saying this charter should be ratified as a treaty is that I believe it constitutes not merely an Executive agreement or compact that could be made by the President alone, but that it actually is a treaty. The Supreme Court of the United States has said that treaties require ratification when they are made between two or more independent nations with a view to the public welfare. Certainly under this definition the charter proposed by the Dumbarton Oaks Conference would be a treaty and require ratification by the Senate.

One of my purposes in drafting and proposing the resolution of January 10 was to provide that the Senate should exercise its full responsibility in relation to the negotiating and ratifying of treaties. The Senate, of course, cannot approve a treaty before it is presented in writing. And without the advise of the Senate the President cannot give assurances that the treaty he is negotiating will be acceptable to the Senate. Is our constitutional division of power in respect to the making of treaties to be an excuse for other nations to say they are forced to return to the old power politics, spheres-of-influence way of doing business, which has

always in the end led to war, and which if it leads to another great war may lead to the end of freedom and even civilization itself?

I do not think this need happen. But if we are to make certain that it will not happen through any fault of ours, the Senate should exercise its full responsibility under the Constitution, and advise the President, in broad but specific terms, what the Senate believes our foreign policy should be, and what kind of an association of nations to keep the peace we Americans believe in. We should discharge our responsibility under the Constitution, clarify our position beyond doubt as specifically and plainly as is possible, and count on the President to discharge his.

The acts to be performed under the proposed charter of the international organization in regard to the severance of diplomatic relations, the application of sanctions, the use of force, are political questions. They are questions of policy and therefore must be authorized by congressional acts, to be binding upon the American people. Congress alone has the power to raise and support armies and to provide and maintain a navy and to make rules for the government and regulation of the land and naval forces and to provide for calling for the militia to execute the laws of the Union, suppress insurrection, and repel invasion. Congress may provide for the extraterritorial use of force in future contingencies under its power to punish piracy and offenses against the law of nations. Congress has power to make all laws necessary and proper for executing treaties. Congress must decide whether the American people want any of our naval or military forces to be used by an international organization or to do any other act which will be binding on us as a people or a nation. These acts are beyond our treaty-making power or the power of the President. Both Houses of Congress and the President must exercise them, and they should be determined before a treaty ratifes an international organization.

We have had no means of enforcing international law. International law lacked effectiveness because there was no sure and certain sanction or remedy against those who broke it.

The international gangsters of aggression had a license from all nations except his helpless victim. It was only after other peace-loving nations arose in their righteous indignation, to save the overrun nation, that a world war was started.

The Security Council of Dumbarton Oaks Charter distinguishes between the force to be used by the international command and the regular armed forces to be used by a nation after a declaration of war by that nation.

The Security Council will have no power to declare war for the United States. The charter contemplates that the United States would have to declare war in the regular way, by act of Congress. Only a regular declaration of war would permit the President to use our armed forces to the full extent permitted by international law and to use the war powers permitted by our Constitution.

If this is to be our policy, then Congress should pass a law making available to the Security Council armed forces, facilities, and assistance necessary for the purpose of maintaining international peace and security. This law should specifically provide and govern the number and type of forces and the nature of the facilities and the assistance to be provided for the Security Council. And since Congress alone has the power to declare war, the law would have to further provide that such forces may be used by the Security Council when, under the vote as provided for in the charter, the Security Council found such armed forces should be used, with those of other nations, to maintain and keep international peace and security.

Before the United States could be a party to such an international agreement Congress would be compelled to pass a law giving our delegate or representative in the Security Council the same power as possessed by the delegates of the other major nations as members of the organization.

Our delegate, under the Dumbarton Oaks Charter, would be somewhat like an ambassador whose duty it is to learn the facts and to keep in touch with the President. The foreign policy of our country, up to the point of making treaties or breaching them, is in the hands of the President, and our ambassadors and ministers are his representatives. The delegate to such an organization would be a representative of the United States authorized by law to act for us. Congress could reserve the right to instruct our delegate and, of course, to remove him at will.

It would be only in those cases which arose like a hurricane that no instructions could be given, but certainly past history shows that the necessity for action does not come with such speed but only from situations which have continued over months or even years. However, we must be prepared for and provide for situations requiring the use of force to maintain or restore international peace and security following the happening of an event that will come like a hurricane, for it is such an event that worries some of our citizens and such contingencies must be met. Certainly such an occasion would be rare, if ever. Normally our delegate would be sitting with the other representatives in the Security Council in almost continuous session and there would be a staff of sufficient size to follow international developments and gather facts so as to be able to keep the President advised of current situations, and he in turn would keep Congress advised.

Prior to using force, we should be willing to use embargoes, cut off diplomatic relations, withdraw ambassadors and ministers, and freeze credits and moneys, if such acts are necessary to keep international peace and security. We have not found difficulty in doing this in the past, and I anticipate none in the future. But it will be the right of the organization to use military force when necessary that will make the organization an effective weapon to prevent aggression and world wars. Supporting justice there must be authority and force. It is the force the unjust fear, and the justice the just desire.

We must remember that we are going to form this international organization not only for the immediate future, but for many years to come. We do not anticipate any big wars immediately after we have won this one, but we must look ahead, 25 or 50 years hence.

Important questions have been left undecided by the Dumbarton Oaks Conference, such as the voting procedure in the security council, details regarding the organization and functions of an international court, and the size and type of the so-called trigger force, which is to be held immediately available to make possible the taking of urgent military measures by the organization. We hope the present conference has considered these and other questions which were left undecided. A further conference of the associated nations will have to be held in order to ratify the charter and the agreement provided for and to give the smaller nations their proper place. This is very vital, and I assume that the smaller nations will ask that they share in efforts that will be exerted in connection with the keeping of the peace.

There are other elements in our foreign policy which we might with much profit consider. There are many details in the Dumbarton Oaks proposals to which I have not even made reference, all of which are important to the proper understanding of the plan laid down and to its effective functioning. But we have made a fair start, we have exerted a noble effort, toward the formation of such an international organization as will insure, we fondly hope, the establishment and the maintenance of a just and permanent peace in the post-war world. It is the machinery of an organization and not merely men that will be needed. The people, however, as a whole must be back of such a plan to make it work.

I believe that the spirit of Lincoln lives and works today in the hearts of all Americans who are laboring together to solve this problem of international peace and security, and for the application of the principles of liberty, justice, and equality to all mankind. Our brief study of Lincoln's philosophy and ideals leads to the conclusion that the Atlantic Charter, the Connally resolution and the Dumbarton Oaks proposals all contain declarations in accord with his own convictions and to which he would have subscribed fully.

Let us, as Americans, here and throughout this broad land, now highly resolve that our dead on the battlefields of the world shall not have died in vain, that everywhere there shall be a new birth of freedom, and that the principles of liberty, justice, and equality shall not perish from the earth. Let us strive on to finish the work we are in and "to do all which may achieve and cherish a just and lasting peace * * * with all nations."

Collaboration of Chinese With Allies

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1945

Mr. DOWNEY. Mr. President, recently I had the honor to have a statement broadcast by the O. W. I. to the people of China. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As the Chinese theater of war is growing in importance in the over-all picture of this global war, there is a statement of special significance from China's general, Ho Ying-Chin. General Ho is speaking in his dual capacity as China's Chief of Staff and chief of the newly established supply depot at Junming. General Ho said that the Japanese were deploying up to 50 vital divisions on the Chinese mainland in a bid to stem a possible American landing on the coast. And he added the following cheering promise: "We are making a new disposition of troops and planning an effective offensive to collaborate with Allied movements toward victory."

It is certainly most gratifying to hear this resolve of our Chinese allies. Let us hope that General Ho's promise will soon be complemented by efficient and organized action. If we learn of such action, it will, in turn, stimulate us to try and help our Chinese allies even more. If the Chinese from the west and the Americans from the east actively cooperate in driving out the Japanese invaders, the fate of Japan will ultimately be the same as the fate of Germany. Germany's fate is sealed, because Allies from two sides are crushing the enemy. Let us hope that the promised offensive of General Ho will complement our own offensive in the same way.

Treatment of Prisoners of War

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I append hereto the following resolution recently passed by Somerville Post, No. 19, of the American Legion located in Somerville, Mass., with reference to the treatment of prisoners of war.

FEBRUARY 15, 1945.

Somerville Post, No. 19, the American Legion, in compliance with motion adopted at the regular meeting of February 1, 1945, your committee on resolutions submits the following:

"Whereas the military authorities in this vicinity have in their custody certain alien prisoners of war; and

"Whereas upon occasions groups of the prisoners, with the consent of said military authorities, have been transported at Government expense to attend parties and banquets conducted in their honor and for their enjoyment by organizations bearing hyphenated names and apparently of hyphenated allegiance; and

"Whereas such treatment of prisoners of war goes far beyond any provision of international law or treaty dealing with the subject and is in sharp contrast to the reported treatment accorded members of our armed forces who have become prisoners of our enemies; and

"Whereas one such group was recently entertained in such manner within our city in defiance of the expressed opposition of a large number of the citizens of this city and of our organization: Therefore be it

"*Resolved*, That Somerville Post, No. 19, the American Legion, Department of Massachusetts, Incorporated, in regular meeting assembled, in Somerville, on February 1, 1945, express its indignation at this continued pampering and coddling of those who so recently were actually engaged in killing our sons and brothers; and be it further

"*Resolved*, That the War Department instruct the military authorities in this area to discontinue such treatment of prisoners of war at once; and be it further

"*Resolved*, That copies of this resolution be forwarded to the War Department, to our Senators and Representatives in Congress, and to the local press."

Respectfully submitted.

ALBERT J. GOGUEN,
Chairman.

De Gaulle Incident

REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. LARCADE. Mr. Speaker, there has been called to my attention an Associated Press article dated Jacksonville, Fla., February 21, 1945, quoting in part a statement by my colleague and friend, Representative PRICE, of Florida, stating that he and a delegation of Members of Congress were snubbed by General de Gaulle, at an airfield near Paris, by the refusal of General de Gaulle to meet the delegation, and further, that I, speaking French, had carried on the negotiations, without success. Representative PRICE is quite correct in his statement except for the fact that the reason given and the circumstances are not mentioned.

In all fairness to General de Gaulle, I think it proper that I should explain to the House the circumstances surrounding this incident.

Our party was on its way to visit a hospital in Cherbourg and arrived at the D'Orsy Airport to board a plane, and noted a large military and official assembly on the field, and, upon inquiry, we were informed that General de Gaulle was expected to land at the field momentarily.

The members of the party having included in their itinerary a visit to General de Gaulle, decided that to save time, they would be glad to meet the general at that time.

I was delegated to make the arrangements for the meeting, and I contacted the officer in charge of the troops, and he advised that it would be quite agreeable for us to meet the general upon his arrival.

However, a few minutes later, prior to the arrival of General de Gaulle, the officer I had contacted returned with a superior officer, who, we were told, looked after "protocol" in the general's cabinet, and he explained to us that he was very much disappointed but that, according to protocol, it would not be proper for the general to receive us at the airport; however, that immediately upon the arrival of the general he would be delighted to arrange for a reception of our committee by General de Gaulle at his headquarters at Paris.

The majority of the delegation decided that since our plane was ready to depart, we would forego the invitation to return to Paris for the reception at that time. About that time the plane of General de Gaulle landed and he alighted and made a beeline to salute his troops, after which he entered a waiting automobile and was whisked away.

It is true that he passed within approximately 15 feet of where we were standing, but I know it to be certain that he was not apprised of our presence, as the officer with whom I had first spoken and his protocol aide did not contact the general.

Upon our return, having left my card with the protocol aide, I received a warm letter from General de Gaulle expressing his great disappointment at not having met the delegation, and expressing his warm friendship for our country and its citizens, recalling the ties which had bound the two countries together for so many years.

I conveyed the regrets to all of the Members who made up our delegation at that time, and I am of the opinion that General de Gaulle was not aware of our presence, and therefore, certainly no slight could have been intended by General de Gaulle to the delegation.

Threatened Strikes in Meat Packing Industry

REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. PRICE of Illinois. Mr. Speaker, the National War Labor Board Tuesday narrowly averted a major catastrophe in the meat-packing industry—a catastrophe which would have affected packing houses and consumers all over the Nation, as well as our fighting forces abroad. In my district, the Armour plant, represented by the C. I. O. United Packinghouse Workers, and the Swift plant, represented by the A. F. L. Amalgamated Meat Cutters, would have been directly concerned. The crisis was avoided, Mr. Speaker, by the War Labor Board releasing its decision on the national packinghouse labor dispute—a decision which Judge Vinson had held up for approximately one month after the Board had completed its deliberations.

I called public attention to this situation on February 7 when I released to the press a letter dispatched by me the preceding day to the Director of Economic Stabilization, suggesting my doubt, as to the necessity or wisdom of his intervention in War Labor Board procedures. On February 12 the Director replied by transmitting a copy of a press release he had issued on that day. I ask that these letters be annexed at the conclusion of my remarks.

Although the W. L. B. released the meat-packing decision last night, it was compelled to stay those portions dealing with money until the dispute as to procedure, between the Board and Director Vinson, is resolved. The crisis is thus averted only temporarily and may plague us again in a few weeks. It deserves the attention of the Members of Congress, including those Members in both parties.

The situation is this, Mr. Speaker. On May 12, 1943, Mr. Justice James F. Byrnes, then Director of Economic Stabilization, issued a policy directive clarifying the procedure and basis for the War Labor Board's handling of wage adjustments. That basis and procedure worked with reasonable satisfaction thereafter, the Board conforming its directives to the orders then outstanding. Later, Judge Vinson became the Director of Economic Stabilization, and the Board continued to issue its directives in the same manner. A year and a half passed. Suddenly, on last December 12, Judge Vinson decided that the procedure, which had worked so long and so well, was wrong, and would have to be changed. He wrote the War Labor Board accordingly.

Judge Vinson informs me, and has informed other Members of the House, that he has not changed anything at all. But this seems to me to be inaccurate. He has asked the W. L. B. to change its procedure and the form of its order which it had been using since May 1943. That

change is so vital that the W. L. B. maintains it cannot function under the new requirements. Hence, the problem which confronts us.

Mr. Speaker, the War Labor Board has settled hundreds, perhaps thousands, of labor disputes since May 1943. The threat to its orderly handling of cases is a threat to war production, a threat to organized labor, to employers, to our constituents abroad on the war fronts and to those in this country on the home front. The Congress must not and, I am sure, will not let these people down. It will, I am sure, guarantee the efficient operation of government and remedy any defects that may have recently come to the fore.

I understand, Mr. Speaker, that the House Committee on Banking and Currency will commence hearings next Tuesday on the proposed extension of the Stabilization Act. That subject covers the problem of the War Labor Board versus Judge Vinson. It will be beneficial to the people in my district and, I believe, to the people of the entire Nation, if the honorable members of that committee would consider this problem at the earliest possible moment in their hearings. Let us hope that they may guide the Congress and the administrative agencies involved to a restoration of efficient all-out production to win the war and a prosperous peace.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., Febrpary 8, 1945.

Hon. FRED M. VINSON,
Director of Economic Stabilization,
Federal Reserve Building,
Washington, D. C.

DEAR JUDGE VINSON: Within my district, at East St. Louis, Ill., are two large meat-packing plants, each of which employs more than 2,000 persons. One is a Swift plant organized by the A. F. of L.; the other plant is an Armour plant, organized by the C. I. O. Both of these plants, together with practically all the other slaughtering plants of the five largest meat-packing companies, are involved in a dispute case now pending before the National Labor Board. After 18 months of litigation, this case has apparently become lost in the doldrums created largely, I understand, by a letter which you sent the N. W. L. B. in December. The unrest in East St. Louis, with its loss of employee efficiency and threats to continuous production, has become so serious as to impel me to write you. If East St. Louis is typical of other meat-packing centers, I feel a national food crisis is upon us.

As I understand the situation, Congress by the Price Control Act of 1942, authorized and directed the President to stabilize prices and wages and provided that he might make adjustments to the extent that he finds necessary to aid in the effective prosecution of the war or to correct gross inequities. Congress authorized the President to carry out these provisions through such agency or officer as he should direct. The President thereupon, by E. O. 9250, established the Office of Economic Stabilization with a director instructed to develop a national economic policy and authorized to issue directives on policy to the Federal departments and agencies. The Executive order provided that any proposed increase approved by the N. W. L. B. and requiring a change in the price ceiling should become effective only if also approved by the Director. E. O. 9328 limited somewhat the type of wage increases to be allowed, specifically permitted promotions, reclassifications, etc., which would not furnish the basis for a price increase, and again authorized the Director of Economic Stabilization to issue directives to stabilize the national economy, to maintain and increase production and to aid in the effective prosecution of the war.

I understand that on May 12, 1943, the Honorable James F. Byrnes, then Director of Economic Stabilization, issued a policy directive noting the power of the N. W. L. B. to make noninflationary wage adjustments to aid in the prosecution of the war and to correct gross inequities, and specifically authorizing the establishment of wage-rate brackets. The directive, like E. O. 9250, specifically stated that wage adjustments affecting price ceilings would become effective only if also approved by the Economic Stabilization Director. The War Labor Board apparently operated under that directive successfully for the following 18 months, settling several hundred disputes with reasonable satisfaction. This period of successful operation was interrupted only by your alleged letter of December 12, 1944, in which I understand you request the N. W. L. B. to state in unequivocal language that proposed wage adjustments for promotions, reclassifications, etc., are not effective if they appreciably increase prices or the cost to the United States of war purchases.

Your letter appears to me to violate the provisions of E. O. 9250 and of your predecessor's May 12, 1943, directive, both of which state that wage adjustments affecting price ceilings shall be effective only if approved by you. Apparently you wish to shed this responsibility and give the O. P. A. veto power over the N. W. L. B., without review by yourself. Whether you intend to give the O. P. A. veto power on only promotions, reclassifications, etc., or whether you expect that veto power to cover other wage adjustments, such as those to aid in the effective prosecution of the war, to correct gross inequities, and to remove substandard conditions, is not clear. This doubt has filled the struggle between the agencies with confusion. I might also ask if your letter of last December, regardless of its meaning, was necessary or wise under present circumstances. It seems to have stopped the N. W. L. B. from processing major cases and has created more labor unrest than I have seen for many years.

We are on the verge of a great military victory in Europe. It is important that all the resources of our country be mobilized for victory abroad. The labor unrest which you seem to have created may have serious consequences and certainly tends to replace harmony with confusion and anger. I would therefore appreciate receiving, at your earliest convenience, your statement concerning the above, any interpretation which you care to make clarifying your December letter, and any suggestions which you have for removing the present confusion, restoring the N. W. L. B. to its usual power, and allowing the workers in my District and in other Congressional Districts to resume harmonious all-out production to win the war.

Sincerely yours,

MELVIN PRICE,
Member of Congress.

OFFICE OF ECONOMIC STABILIZATION,
Washington, D. C., February 12, 1945.

The Honorable MELVIN PRICE,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I have your letter of February 8, 1945, regarding the packing-house workers' wage case. I am glad to have your views in this matter.

In connection with the general subject matter involved in this and other cases, I have today issued a press release, a copy of which I enclose.

Sincerely yours,

FRED M. VINSON,
Director.

Fred M. Vinson, Director of the Office of Economic Stabilization, today issued the following statement:

"In view of recent comments with reference to wage adjustments of the so-called fringe variety and with reference to an alleged change of policy by this office, I want to clear up any misunderstanding regarding the national wage stabilization policy.

"In this connection, I wish to call attention to certain language in the President's hold-the-line order. This order has been in effect since April 8, 1943. It provides that the National War Labor Board may authorize "reasonable adjustments of wages and salaries in cases of promotions, reclassifications, merit increases, incentive wages, or the like, provided that such adjustments do not increase the level of production cost appreciably, or furnish the basis either to increase prices or to resist otherwise justifiable reductions in prices." My statement to the National War Labor Board was a restatement of, not a change in, this standard and a suggestion for a better procedure to effectuate the Executive order.

"Except for wage increases permitted under the Little Steel formula, increases designed to correct substandard living conditions, increases to the minimum bracket of sound and tested going rates, or rare and unusual increases in critical war production cases, all wage adjustments must be brought within the language of this clause. Otherwise, wage increases are prohibited by the President's order.

"In practice, adjustments under this clause have, for the most part, been confined to vacations with pay, shift differentials, severance pay, holiday pay, merit increases, automatic progression plans, and the reclassification of wage scales within a particular plant. These are the so-called fringe adjustments.

"Such fringe adjustments can be made only if they will not affect adversely our price stabilization program. This policy is not a new one. It has been a part of our wage-stabilization policy ever since the President issued his hold-the-line order on April 8, 1943. In my opinion, this policy is a sound one—the correction of wage inequities within the general level of existing prices.

"I realize, however, that in many individual cases such a standard may prove difficult to administer. Indeed, all wage standards are difficult to administer, and the practicability of each standard must be judged by balancing administrative difficulties against the importance of the object to be accomplished, the stabilization of wage and price level.

"I am sympathetic to any proposal which will ameliorate the administrative difficulties of our present fringe policy without impairing the objective established by the President's order. At present this office and the National War Labor Board, are attempting to fashion a better means to carry out this objective."

Thank God for Congress

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article

by Gen. G. M. Johnson, from his book entitled "But General Johnson":

The American legislative assembly is the least understood part of government. Everyone is clear as to what goes on at an election—even the more nefarious aspects of the ballot are known to the rank and file of the voters. A few days in a civil or criminal court will give a fair idea of what the judicial process is like, though the refinements of legal procedure will forever escape the layman. The job of the public administrator is understood in its essentials—he is at least a visible and articulate symbol of what he tries to do. But the Congress of the United State is a great enigma. No outsider can participate in it, no citizen can watch it in any realistic way, and no man or group of men can snub it with impunity.

The popular idea of Congress is, therefore, an erratic mingling of wisecrack and fantasy. This is developed from a variety of sources, most of them hostile and most of them wrong. First, in the American press—habitually critical, unfriendly, sometimes defamatory, and rarely constructive. This attitude is, indeed, required of it. Editorial columns are sustained by criticism and readers are attracted by controversy. Such public evils as we have are laid on the congressional doorstep. The good that Congress does dies with it. Did anyone ever read headlines announcing, "Congress rises to new heights of statesmanship," "Congress leaves an excellent record," or "Congress is to be commended on public law"? Whether or not the framers of the Constitution realized it, they established a governing body that was at once the savior and the scapegoat of the country, and so fitted it to the American political scene that, in spite of tremendous accomplishments, Congress can never expect anything but brickbats.

Congress lives, moreover, in an aura of controversy. It could not be otherwise because Congress is first and always a controversial body. It is in constant and violent disagreement with itself and with all other agencies of government. It can speak on policy only in two ways—by law or resolution. Its official history ends with the cold record of its journals. Beyond these Congress has no voice of its own. It therefore suffers badly in debate, because the vigorous personalities of its opponents—from the President down—can tell the country of its iniquities with no fear of cross-examination and little fear of backfires except an occasional veto, a jimmied appropriation, or a "ripper" bill.

Congress rarely turns out a perfect product in the sense that everyone affected by its work is satisfied. Inasmuch as it turns out an amazing number of products and every product tends to offend a different group, it builds up an enormous backlog of critics who constantly tell the world how badly we are governed. For the job of Congress is this: To do what every citizen wants done but what few groups of citizens want done. It is amazing how little interest there is in the sponsorship of public policy outside of Congress, itself. Innumerable groups are established for special purposes, but their secretaries are paid for intensive service in the interests of their memberships. There was no better example of this than the sponsorship of Public Law No. 603, as an executive from my staff emphasized before a congressional hearing:

"You understand, Mr. Chairman, that no one wanted this law except the people. That is the reason why you enacted it.

"The War Production Board didn't want it; the Army didn't want it; the Navy didn't want it. No one wanted it."

He might have added that not even small business wanted it—it wanted contracts and was far too frequently led by men of the Coxey's Army type.

And finally, the bands of the congressional spectrum are composed of a small nucleus of statesmen, a few constructive critics, a large and predominant bloc of watchful followers, and a scattering of "dead-end kids." There is, indeed, probably a higher proportion of leadership in the upper bands of the spectrum than is to be found in any private group of equal size. I doubt if there is another place where a large group of men assemble for a common purpose—either in public or private life—where there is an abler, more honest, and more distinguished group of men than in the Congress of the United States.

It is, nevertheless, the terminal bands of the spectrum that give Congress its place in public thinking and the lower end makes the best headlines, and therefore reaches the largest audience. But, more than anything else, Congress represents the difference between our way of life and that of our enemies. Congress is the American way. This must never be forgotten.

The lights that play upon the congressional picture determine the mood and action of Congress. Personal contacts with constituents is a powerful influence. I used to think that anyone who wrote or wired his Congressman on a public question was just a naive little fellow who had a sort of Alice in Wonderland idea of government. I was in error. The attention a Congressman gives to his mail and the influence of a timely batch of telegrams from the home folks are facts to be reckoned with in the legislative process. When a Member announces on the floor that he has 500 letters of protest against a bill, it is more convincing than any argument on the merits.

A Congressman is, moreover, most sensitive to his local political coloring. A representative himself, he wants to be represented at home. This is the crux of the Congressman's interest in appointments. It is more than the rewards of patronage that so frequently surround a change in administration. It is an effort to secure the best for his district and an environment that will keep him in office. It is not a mere plot to perpetuate himself but a measure of his success as a producer for his constituents and a matter of pride to himself. The people who elected him must be satisfied—that is what representative government is all about.

Treatment of German Prisoners of War

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent:

SPARTA, WIS., *February 20, 1945.*

Hon. W. L. STEVENSON,
House of Representatives,
Washington, D. C.

FRIEND BILL: The daily papers report that Senator MCFARLAND, of Arizona, has demanded an investigation of the escape of the German war prisoners from the Arizona prison camp. The account, which I read under an Associated Press February 12 Washington date line, stated that an Arizona resolution branded "as fantastic and highly improbable" an explanation that the prisoners had escaped through a 200-foot tunnel.

The camp commander of the Papago Park Camp was Col. William A. Holden, formerly of Sparta. Colonel Holden left Sparta some years ago and for years had charge of the veterans home at Waupaca, Wis. He was hand picked for that job by General Immell, who knew his capabilities as an officer.

I had the pleasure of serving for 17 consecutive years with Holden in the Wisconsin National Guard. I know him to be a man of integrity as an individual and exceptionally capable as an Army officer. Holden served with distinction in World War No. 1. He was decorated with the Croix de Guerre, the Silver Star, and the Purple Heart in World War No. 1. He was commander of the One Hundred and Twenty-eighth Regiment of the Thirty-second Division during its training in the South just prior to the declaration of war on Germany of World War No. 2.

I understand that Holden was detached from the command of this regiment and given the difficult assignment as commander of the prison camp solely because of his military record. Knowing Holden's background and the splendid service which he has rendered to this Nation, I think it is a crime that some unfounded and unsubstantiated rumors should step in to ruin a military career.

The article I read stated that war prisoners were being pampered. I believe that article. It happens that we have a prison camp within 12 miles of our home. I had occasion some months ago to talk to a brigadier general from the War Department who was inspecting this camp and who made the statement that the War Department itself was going out of its way to observe every last detail of the Geneva Convention Code. I don't doubt but that Holden's instructions were that he was to give these prisoners every consideration to avoid any criticism that Americans were mistreating prisoners of war. On the other hand, I know Holden's intense hatred for the Germans based on his own personal World War No. 1 experiences as a member of the First Division. To say that a man with that background would pamper the Germans is too ridiculous to necessitate comment. I mention it, however, because this matter is now involved in politics and I, for one, would not like to see a man of Holden's distinguished service thrown to the wolves.

I served for 12 years as a member of the Judge Advocate General's Department. I know that incidents of this kind are immediately investigated by the War Department. I assume that that was done in this case. The fact that Holden remained as camp commander convinces me that after the investigation the War Department exonerated Holden. If that is the fact, and it should be a very simple matter to subpena the War Department records or to compel the attendants of the officer in charge to testify to the facts, it should be an easy matter of proof.

Since dictating the foregoing letter I read an Associated Press dispatch under February 19, Washington date line, quoting Representatve HARLESS, of Arizona, to the effect that he had learned that only one of every four guard towers surrounding the camp was manned. He said "as a result of this inefficiency the escaping prisoners of war were able to dig a tunnel for some 200 feet under the very eyes of the guards." My comment to this is that the Arizona Congressman and Senator should get together on their stories. The one denies that there was a tunnel and the other says that there were no guards and that as a result of that, there was a tunnel. It is

true that these distinguished gentlemen are making the headlines, but what is more regrettable is that a man that has given distinguished service to his country is being crucified. I, for one, demand a fair deal.

What worries me about this situation is that with prejudices running high, it is such a simple matter to exaggerate and twist the facts. I am personally convinced that if the true facts are known the officer in charge will be completely vindicated. His splendid record of service demands, I believe, that the investigation be without prejudice and thorough. I am confident of the outcome. I will, personally, appreciate any action which you may take to insure that the investigation be conducted in a fair and impartial manner.

Sincerely yours,

LAMBERT.

Report Showing Progress and Statistical Facts Relative to the Administration of the Servicemen's Readjustment Act, Seventy-eighth Congress

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. RANKIN. Mr. Speaker, so many inquiries are being received by Members of the House relative to the loan title of the Servicemen's Readjustment Act, Seventy-eighth Congress—commonly referred to as the G. I. Act—that, as chairman of the Committee on World War Veterans' Legislation, I have asked the Veterans' Administration to furnish me with a report of what has been done to date concerning the application of that particular title of the law.

Under permission granted me to extend my remarks in the RECORD, I am inserting a letter which I have received this morning from Gen. Frank T. Hines, Administrator, Veterans' Administration, together with the report to which he refers.

The matter referred to follows:

VETERANS' ADMINISTRATION,
Washington, D. C., February 21, 1945.

Hon. JOHN E. RANKIN,
Chairman, Committee on World War Veterans' Legislation, House of Representatives, Washington, D. C.

MY DEAR MR. RANKIN: In accordance with the statement I made to the Committee on World War Veterans' Legislation on January 22, 1945, there is transmitted herewith part I of Report Showing the Progress and Statistical Facts Relative to the Administration of Public Law 346, Seventy-eighth Congress, June 22, 1944, Servicemen's Readjustment Act.

The portion of the report transmitted herewith relates to title III of the act. Title III contains the provisions relating to loans for the purchase or construction of homes, farms, and business property. Other parts of the report will be forwarded to the committee as the survey now in process is completed.

Very truly yours,

FRANK T. HINES,
Administrator.

REPORT SHOWING THE PROGRESS AND STATISTICAL FACTS RELATIVE TO THE ADMINISTRATION OF PUBLIC LAW 346, SEVENTY-EIGHTH CONGRESS, JUNE 22, 1944, SERVICEMEN'S READJUSTMENT ACT, MADE BY THE ADMINISTRATOR OF VETERANS' AFFAIRS, BRIG. GEN. FRANK T. HINES, TO THE COMMITTEE ON WORLD WAR VETERANS' LEGISLATION, HOUSE OF REPRESENTATIVES

PART I

Title III. Loans for the purchase or construction of homes, farms, and business property

The Servicemen's Readjustment Act of 1944, Public No. 346, Seventy-eighth Congress, was approved June 22, 1944. Since many of the provisions of the law affected the field operations of the Veterans' Administration as a whole, instructions were issued to all field offices on July 1, 1944, following the transmittal of copies of the act, announcing, among other things, that the operations incident to the provisions of title III concerning the guaranty of loans for the purchase or construction of homes, farms, and business property would be under the Director of Finance. It was emphasized that in making effective the provisions of title III, a program of collaboration and close cooperation with other Federal and State agencies and nongovernmental organizations would be followed.

Steps were taken promptly to establish units within the Veterans' Administration to administer the provisions of the act. A Loan Guarantee Division under the Director of Finance with subdivisions for home loan, farm loan, and business loan guaranties was officially established on July 1, 1944. Loan guaranty units were authorized at selected locations in field areas by instructions released October 19, 1944, to regional field offices.

To further facilitate administration of the act, loan guaranty agents are being assigned to each regional office or facility having regional office activities as promptly as appointments can be accomplished pending the establishment of Loan Guaranty Divisions in all offices.

The drafting of regulations to accomplish the intent of Congress was promptly undertaken. Since the regulations would be the basis of contracts affecting many individuals and business organizations, it was realized that they must be based upon sound principles of construction. This required an extensive study of many legal points, and the rendering of decisions thereon. It will be of interest to the committee to know that 14 Administrator's Decisions have been required to date on questions arising under Title III, copies attached.

In carrying out the intent of sec. 505 (a) of title III of the act providing that the administrator shall designate such agency or agencies, if any, as he finds equipped to determine whether the guaranty of a loan should be approved, it was necessary to coordinate the regulations with certain governmental agencies cooperating in the approval and servicing of loans. However, there has been retained in the Veterans' Administration the policy-making, the over-all control and the general supervisory functions, but every endeavor has been made to utilize the services available through other agencies to the greatest practicable extent.

After extensive consultation with officials of other Government agencies, representatives of lending groups and service organizations, regulations covering the guaranty of home loans were issued October 19, 1944. Regulations concerning the guaranty of loans for the purchase of farms and farm equipment were released on December 8, 1944. Regulations for the guaranty of loans for the purchase of businesses, etc., were issued December 20, 1944.

Copies of the regulations and the forms required for processing the loans were concurrently distributed to members of the Federal Reserve System, member banks of the American Bankers Association, National Association of Mutual Savings Banks, Mortgage Bankers Association and numerous other agencies primarily interested in the home loan program through the distribution facilities of their respective parent organizations.

The Department of Agriculture has been designated as the cooperating agency to aid in processing the guaranty of farm loans. In setting up the committees to assist with the farm loan guaranty, the Veterans' Administration utilized machinery of the Department of Agriculture rather than duplicating it by organizing new machinery in the Veterans' Administration. A Veterans' Advisory Committee will function in conjunction with the county agent's office. The membership of this committee will be the same as the Bankhead-Jones Farm Tenant Committee which has been in operation under the Farm Security Administration, with the addition of one member who must be a veteran and, if possible, a businessman.

Every effort has been made through the press to acquaint veterans with the procedure in procuring a loan. The Administrator of Veterans' Affairs announced to the press on October 19, 1944, the issuance of regulations concerning the guaranty of home loans with an explanation as to the procedure a veteran should follow in procuring a loan. Subsequent releases were issued explaining the procedure for procuring farm and business loans, and reports indicate the press has cooperated fully in using these releases.

The loan regulations and forms required for processing loans are made a part of this report, as also the Instructional Letter to Veterans' Administration field offices.

The following forms are for use in connection with the three types of loans:

All Types of Loans

1800: Certification of Eligibility.

Home Loan

1801: Loan Guaranty Certificate.
1802: Application for Home Loan Guaranty (combined form).
1802: Application for Home Loan Guaranty (duplicate).
1803c: Application for Approval as Appraiser.
1804: Explanation of Home Loan Guaranty.
1806: Loan Closing Statement.

Farm Loan

1821: Loan Guaranty Certificate.
1822: Application for Farm Loan Guaranty (combined form).
1822a: Application for Farm Loan Guaranty (duplicate).
1824: Explanation of Farm Loan Guaranty.

Business Loan

1841: Loan Guaranty Certificate.
1842: Application for Business Loan Guaranty (combined form).
1842a: Application for Business Loan Guaranty (duplicate).
1842b: Supplement to Application for Business or Business Realty Loan Guaranty (Ex. A).
1842c: Supplement to Application for Business or Business Realty Loan Guaranty (Executive B).
1844: Explanation of Business Loan and Business Realty Loan.
1845: Appraiser's Check Sheet.

General Use

1861: Loan Closing Statement.

Copies of the regulations and the forms may be had upon application to the nearest office of the Veterans' Administration.

Regulations covering the guaranty of home loans provide in effect that a veteran who desires to buy or build a home or to improve an existing dwelling will proceed in the usual manner of a person seeking a loan for such a purpose. The veterans will go to his bank, building and loan company, or other lending agency, or an individual lender. Either before or after the veteran and the lender reach a tentative accord, a request may be made of the nearest Veterans' Administration office for a certification of eligibility of the veteran and information as to the amount available for guaranty. The Veterans' Administration will issue in eligible cases the certification of eligibility and statement of the amount for guaranty. The Veterans' Administration will also name an appraiser from the list of appraisers who are qualified and reputable, and the agency to process the loan. Perhaps it is well at this point to again emphasize that the total amount that can be guaranteed by the Veterans' Administration is limited to a maximum of $2,000. This $2,000 guaranty can be made available to the veteran in one or more transactions so long as the aggregate of the transactions does not exceed the $2,000 maximum.

In any case wherein a principal loan for such purposes is approved by a Federal agency to be made or guaranteed or insured by it, and the veteran is in need of a second loan to cover the remainder of the purchase price or cost, or a part thereof, the Administrator may guarantee the full amount of the second loan, subject to the $2,000 limitation, provided such second loan does not exceed 20 percent of the purchase price or cost and the rate of interest is not more than 1 percent greater than that charged on the principal loan, and is not more than 4 percent.

Section 501 of the law requires that before the Administrator may approve a guaranty of a loan for the purpose of purchasing or constructing a home he must find (1) that the proceeds of such loan will be used for payment for such property to be purchased or constructed by the veteran; (2) that the contemplated terms of payment required in any mortgage to be given in part payment of the purchase price or the construction cost bear a proper relation to the veteran's present and anticipated income and expenses and that the nature and condition of the property is such as to be suitable for dwelling purposes; and (3) that the purchase price paid or to be by the veteran for such property or the construction cost, including the value of the unimproved lot, does not exceed the reasonable, normal value thereof as determined by proper appraisal.

The Treasury Department (Comptroller of the Currency) has modified its regulations to permit certain banking institutions to participate in this program and the Federal Reserve has relaxed Regulation W (relating to consumer credit) to liberalize the terms on which loans may be made for repairs and improvements on a home. The National Housing Agency, through the Federal Housing Administration, is cooperating in the program. Several of the States and the District of Columbia have in process plans for amending local laws if necessary so that insurance and other corporations may make loans guaranteed in whole or in part under the act.

It should be stated at this point that when the application is approved by the Administrator of Veterans' Affairs, the veteran and the lending agency are notified. The Loan Guaranty Certificate and copy of the application are returned to the lender with instructions as to closing the loan in a manner to make the guaranty effective. The lender then proceeds to close the loan by securing a certificate of title, obtaining signatures and acknowledgments, disbursing the funds as set forth on the loan closing statement and recording all proper instruments.

A Handbook for Lenders, Home Loans, has been issued by the Veterans' Administration for the information of persons and institutions making loans. The pamphlet covers matters of policy and procedure to be followed in connection with loans to veterans subject to guaranty pursuant to the provisions of the act. Also, a pamphlet entitled "Questions and Answers About Title III—Loan Guaranty for Homes, Farms, Business Under the G. I. Bill" is available for distribution to veterans who contemplate making a loan.

Regulations covering the guaranty of loans for the purchase of farms and farm equipment are, insofar as the real estate provisions are concerned, very similar to those issued in connection with the home-loan provisions of the act. In addition to real estate the law provides for loans to purchase, repair, improve or alter equipment, or to purchase livestock and other supplies necessary to the farming operation. In addition to the loans for the purchase or improvement of property, guaranty of a loan may be made for the purpose of paying off delinquent indebtedness or assessments if the place is to be used as a home. The total amount that can be guaranteed by the Veterans' Administration is limited to a maximum of $2,000 as in the case of all loan guaranties. Two or more veterans may join in a farming operation and effect a joint loan for that purpose. Under these conditions each veteran would be charged individually with his proportionate part of the guaranty. The total amount guaranteed may not be more than 50 percent of the loan, or in any event not more than $2,000 for each veteran. In cases of default under this type of loan, the veterans will be adjudged as if they were several debtors rather than one joint debtor.

Section 502 of the law requires that before the Administrator may approve a guaranty of a loan for the purchase of farms and farm equipment he must find (1) that the proceeds of such loan will be used in payment for real or personal property purchased or to be purchased by the veteran, or for repairing, altering, or improving any buildings or equipment, to be used in bona fide farming operations conducted by him; (2) that such property will be useful in and reasonably necessary for efficiently conducting such operations; (3) that the ability and experience of the veteran and the nature of the proposed farming operations to be conducted by him are such that there is a reasonable likelihood that such operations will be successful; and (4) that the purchase price paid or to be paid by the veteran for such property does not exceed the reasonable normal value thereof as determined by proper appraisal.

The Department of Agriculture has an advisory committee in each county whose functions will include advice and guidance to veterans with reference to such matters as where and how to get additional training if the veteran lacks the training and experience requisite to success in farming operations; the availability and cost of farms in the various counties; what are satisfactory and customary partnership and leasing agreements; what kind of farming set-ups are required for success in various localities of the country; approximate investments required for such set-ups; what are safe margins of indebtedness; the kind of credit needed and where and how to get such credit, etc.

The participation of the Department of Agriculture in the operation of farm-loan guarantees will require almost no change in the Nation-wide organization now in operation through the Agricultural Extension Service, Farm Security Administration, and the Farm Credit Administration.

Regulations governing guaranty of business loans are basically very much the same as those for home and farm loans and are circumscribed by the same limitations which provide that the maximum amount of guaranty for any one person is $2,000, and the interest charged on the loan may not exceed 4 percent. Business loans may be guaranteed not only for the purchase of buildings or real property but also to buy supplies, equipment, machinery, and tools normally used in connection with such occupation as the veteran plans to enter. Loans for inventory, stock, or working capital are not covered. In general, business loans must be secured by first liens unless a first lien is held by a Federal agency, in which case a second lien may be accepted so long as it amounts to not more than 20 percent of the purchase price and if the amount of the loan is under $500, the guaranty may be issued on an unsecured loan. Where a loan is made for the purchase of real property a standard real estate first mortgage will be taken as security. An appraisal by a qualified and designated appraiser will be required just as they are in connection with guaranty of loans for the purchase of homes and farms.

Where equipment is to be purchased the loan will be secured either by chattel mortgage or a conditional sales agreement. If two or more eligible veterans plan to enter business together, they may apply for guaranty of the same loan. In such cases the obligation shall be treated as separate and not as joint responsibilities. The guaranty under these conditions may not exceed the maximum of $2,000 for each borrower.

Section 503 of the law requires that before the Administrator may approve a guaranty of a loan for the purchase of a business he must find (1) that the proceeds of such loan will be used for payment for real or personal property purchased or to be purchased by the veteran and used by him in the bona fide pursuit of such gainful occupation; (2) that such property will be useful in and reasonably necessary for the efficient and successful pursuit of such occupaton; (3) that the ability and experience of the veteran, and the conditions under which he proposes to pursue such occupation, are such that there is a reasonable likelihood that he will be successful in the pursuit of such occupation; and (4) that the purchase price paid or to be paid by the veteran for such property does not exceed the reasonable normal normal value thereof as determined by proper appraisal. The procedure in applying for loans under this title is the same as that outlined for loans for homes.

The Veterans' Administration has consummated agreements for the utilization of the services of the Reconstruction Finance Corporation and the Smaller War Plants Corporation in the processing of business loans.

The following is an accumulative statement of operations as of February 3, 1945:

1. (a) Number of applications for guaranty received, 983.

(b) Number of applications for guaranty executed, 555.

(c) Number of applications for guaranty rejected, 132.

(d) Number of applications for guaranty on hand, 296.

2. Number of certifications of eligibility received, 6,614.

3. Amount of guaranty commitment, $993,470.93.

It has been the purpose of the Veterans' Administration to establish an organization capable of handling a heavy volume of applications and it is believed that the organization now set up will be able to do this. If need arises for change in the organization and in the regulations, such changes will be made promptly. It should be noted, however, that among the persons discharged from the armed services subsequent to September 16, 1940, there are many who are not yet established in permanent business or employment and who consequently are not in the market for the purchase of property. It should also be remembered that economic conditions are

not favorable for construction or purchase of homes or farm property on a large scale. While it is incumbent upon the Veterans' Administration to make every reasonable effort to advise veterans of their right to apply for guaranty of loans in proper cases, nevertheless there is a further obligation, in my opinion, upon the Veterans' Administration and public officials generally to see that veterans are not unduly pressed to undertake financial contracts which it is not to their best interests to assume. The Veterans' Administration has been pleased to note that private financial organizations are recognizing this responsibility.

Goodhue County, Minn., Draft Board Interprets Tydings Amendment According to the Intent of Congress

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, due to the confusion which has existed in agricultural sections of the country during the past 6 weeks, over the proper interpretation of the Tydings amendment, I am pleased to publish, as a part of these remarks, the clear cut and definite decision of the Selective Service Local Board No. 1, for Goodhue County, Minn., on the issues involved. The decision of the Goodhue County board to follow the law and the intent of Congress in determining the classification of essential agricultural workers, who cannot be replaced, merits the commendation of every American who believes in the theory that our Government is one of law and not of men. The Goodhue County board states that it will make its determinations in accordance with the law, but suggests that if the law is faulty in securing manpower for all war purposes, changes in policy should be made by Congress rather than by officials. The decision of the Goodhue County draft board follows in a letter to me from its clerk, Mr. H. E. Rardin. The other members of the board are, Mr. Anton Johnson of Zumbrota, and Mr. Elmer S. Burggren of Cannon Falls:

SELECTIVE SERVICE SYSTEM,
LOCAL BOARD, NO. 1, GOODHUE COUNTY,
Red Wing, Minn., February 19, 1945.
Congressman AUGUST H. ANDRESEN,
Washington, D. C.

DEAR CONGRESSMAN: After closely studying your letters and the CONGRESSIONAL RECORD, the local board together with the local appeal agents, who have concurred with us on our decision, have decided that we have been in error in the interpretation of the law. It was not so much the misinformation received but the lack of information that has led to the confusion. It appears very plain now that under the Tydings amendment the local board classifies a registrant in his relation to the farm and does not classify him as other registrants are classified—in relation to their industry compared to the need for men in the armed forces. After having decided that a man is necessary to agriculture the local board's work is completed. It then remains the duty of Congress either to keep that man in agriculture or change the law for him to enter the service.

The fact that the board agrees or disagrees with the Tydings amendment does not enter into the case at all. Until the law is changed an essential farm worker shall be exempt from service. Back in 1942, this board told State selective service that all men who were then left on the farms were essential and we could not take any more of them consistent with the agricultural policy at that time. Agriculture was then on the critical list, and furthermore there were sufficient men in industry to fill calls. With the war continuing and having drained all men in the ages 18 to 26 from industry it seemed the only logical thing to do, when the armed forces demanded more men from the 18–26 group, was to take men from that age group wherever we could find them. While the board was never directly instructed to take any certain man, we were instructed to "consider taking agricultural workers in the light of the President's findings."

Our decision has had the following immediate effect on the draft situation here. We recalled all induction notices of farm workers in the call for the 24th of February. We reopened all cases of the appeal board where the classification had been upheld in I–A and reclassified them back to II–C. All pending I–A registrants in agriculture were reclassified back to II–C. The total number affected by this action was approximately 300. The number of men now in I–A in this board is less than 100 and they are the group in industry in the age group 26–30.

* * * * *

The further induction of the agricultural worker in Goodhue County is now in the hands of Congress as the local board declared all agriculture workers essential to agriculture back in August of 1942 and they all come under the Tydings amendment.

Kindest personal regards,

H. E. RARDIN,
Secretary, Goodhue County Local Board.

Mr. Speaker, to further clarify the intent of Congress with reference to the Tydings amendment, I invite a reading of the Senate debate on the deferment of essential farm workers on pages 917, 918, and 919 of the CONGRESSIONAL RECORD, February 8, 1945. Senator TYDINGS and others took part in the discussion. These debates should leave no room for doubt as to the intent of Congress in passing the Tydings amendment. The Goodhue County board has followed the law, and I am hopeful that other boards in agricultural sections will promptly reach the same decision.

General Medical Hospital for Veterans in New Jersey

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. CANFIELD. Mr. Speaker, the American Legion, Department of New Jersey, has recently prepared a memorandum on the need of a general medical hospital—United States Veterans' Administration facility—to be located in New Jersey. The case, which is a strong one, will be supported by additional facts and figures now being correlated. The Legion's memorandum, prepared by Mr. William G. McKinley, chairman of its rehabilitation committee, follows:

New Jersey veterans of both World Wars, the Spanish-American War, and miscellaneous campaigns eligible for hospitalization under all existing Federal laws will require a general medical hospital of at least 1,000 beds within the next 5 years.

At the close of 1944 there were in Federal hospitals—all outside of New Jersey—543 New Jersey men receiving general medical care. Estimates indicate that with the close of the present war, the increase in World War No. 2 patients will become rapidly manifest. The American Legion of New Jersey estimates that in 1952 the minimum general medical requirement for New Jersey veterans will be 750 beds and projecting the need to 1972, the requirement will be 1,700 beds.

There is now located at Lyons, N. J., a United States veterans facility, but this is a neuropsychiatric institution which does not provide other than extreme emergency hospital care to other types of physical disorders. Such treatment must be found at other institutions, principally at the United States Veterans' facility at Bronx (New York City), N. Y., or at the Philadelphia Naval Hospital, Philadelphia, Pa., these being closest to New Jersey.

It has been the experience of the New Jersey American Legion that (1) arranging for hospitalization of general medical cases has been difficult, and (2) in many instances, veterans have declined the needed care because of a reluctance to go far from their homes. The difficulty in obtaining admittance to hospitals has greatly increased since the advent of the present war because of the increase in the number of World War No. 2 veterans now applying for treatment. Many veterans who have refused hospitalization because of reluctance to go far from home have aggravated their condition deferring proper treatment. In some instances death has resulted because of this neglect; particularly in cardiac and tumor cases.

Up to the present time, the American Legion of New Jersey has reluctantly withheld a militant advocacy of the need for a general medical hospital in New Jersey because the fact was not convincingly established that the number of New Jersey general medical cases were sufficient to prove in such construction. While it was undesirable to have New Jersey veterans sent out of the State for treatment, it has been the disposition of the New Jersey American Legion to cooperate with the United States Veterans' Administration and to join with other States in continuing their respective needs in obtaining new construction within reasonable communication limits.

Experience in this regard has proven unsatisfactory. In the last instance, New Jersey joined with Pennsylvania in urging the building of a general medical hospital which was to have been located in the Philadelphia area and within travel facility to South Jersey. The project was also intended to relieve the load in the Philadelphia Naval Hospital by releasing the contract beds of the United States Veterans' Administration. After securing the allocation of the hospital to Pennsylvania, the actual site was selected in Altoona; quite remote from New Jersey and without relieving the Philadelphia Naval Hospital load.

Studies of the hospital requirements for New Jersey veterans develop two positive conclusions; first, that the new load, which is now developing from World War No. 2 will be at least three to four times that of World War No. 1 for the same age groups and, second that the present upward trend of World War No. 1 cases will continue for at least 5 years before assuming a downward characteristic.

The present ratio of hospital cases for World War No. 1 veterans by general classification is: neuropsychiatric, 63 percent, general medical, 27 percent, and tubercular, 10 percent, and for World War No. 2 (applying World War No. 1 experience for 1923, the earliest available data) neuropsychiatric, 39 percent; general medical, 20 percent, and tubercular, 41 percent. (Note: Opinion of Army medical officers, so far as they will commit themselves, is that these percentages will be less as to tuberculosis and greater as to neuropsychiatric and general medical cases.)

Patient bed days per patient at present experience is: neuropsychiatric (nonmental), 63 days; neuropsychiatric (mental), 396 days; tubercular, 177 days; and general medical, 42 days.

At the close of 1944 there were 1,396 New Jersey World War No. 1 veterans, 432 New Jersey World War No. 2 veterans, and 183 New Jersey veterans of the Spanish War and miscellaneous campaigns in all hospitals both in and out of New Jersey, or a total of 2,011 New Jersey patients. These cases were classified as: neuropsychiatric (nonmental), 803; neuropsychiatric (mental), 473; tubercular, 195; and general medical, 543.

This indicates an annual turn-over of the present load as follows:

(a) General medical, 4,344 patients per year; (b) tubercular, 468 patients per year; (c) tubercular, 2,818 patients per year; (d) neuropsychiatric (nonmental), 2,818 patients per year; (mental), 437 patients per year.

Projecting this to the year 1952, the turnover can be estimated as follows:

	Patients per year, World War No 1	World War No 1	Total
A. General medical	3,024	3,040	6,064
B. Tubercular	336	1,869	2,205
C. Neuropsychiatric:			
Nonmental	3,450	2,807	6,257
Mental	464	253	717
Total	7,274	7,969	15,243

If an estimate of 6,100 New Jersey general medical patients is reasonable for the year 1952, it appears that to serve such a load, a minimum of 750 beds will be required. If estimates of requirements are extended to the year 1972, it appears that about 13,640 New Jersey veterans will require general medical service in that year and require about 1,700 general medical beds for this purpose. A request, therefore, for a 1,000 bed general medical hospital at this time seems entirely reasonable; with a prospective load of at least 75 percent of the patients coming from New Jersey.

The basic statistical data from which this memorandum was developed was obtained from annual reports of the Director, United States Veterans' Administration. Vital statistics—Special Reports, Bureau of the Census, United States Department of Commerce, and other sources researched for the American Legion, Department of New Jersey, by the division of veterans services, department of economic delevopment and the department of institutions and agencies, both State of New Jersey agencies. In addition recouse has been made to the national rehabilitation committee of the American Legion, to reports of the department service officer, American Legion, department of New Jersey, reports of the department rehabilitation committee of the American Legion, department of New Jersey, and to the experience of many individual post and county service officers in New Jersey.

WILLIAM G. MCKINLEY,
Chairman, Rehabilitation Committee, the American Legion, Department of New Jersey.
JERSEY CITY, N. J.

Commenting on New Jersey's need of a new veterans' hospital, the Paterson (N. J.) Morning Call says, editorially, in part:

If ever a State had an unchallenged right to a modern war veterans hospital for World War No. 2 veterans, it is this our own New Jersey. If ever a State was being given a run around by the administration at Washington in consistently side-tracking that right, it is this same original State of New Jersey, which from our American Revolutionary days of 1776 has played a leading role in the birth and preservation of our Nation.

The part, which our State has played through all the years since that great day of our Nation's birth, glorifies the pages of every American history. The same spirit of our New Jersey ancestors, who crossed the Delaware with George Washington, and drove the Hessians out of our State capitol in the most daring exploit of that first war for freedom, rides with their fighting Jersey sons today, now 500,000 strong, in this World War of liberation; and with our daughters, too, serving on every front with the valor of America's immortal patriot Molly Pitcher.

Yes, already half a million of our soldiers, sailors, and marines are sons and daughters of New Jersey. Thousands of them have already been wounded, many still hospitalized far away from their homes. Thousands more will return, their bodies broken, their minds shattered by the hell fire of modern battle. Every week they keep coming back to the land of their fondest dreams, only to discover if they are still under hospital care that they are shuttled off to some distant base hospital far from home, because New Jersey, once the hallowed seat of our Continental Congress, has no veterans base hospital to welcome them in.

The New Jersey congressional delegation is lending its support to the veterans' movement to obtain this needed hospital in our State and all agree the project should not be too little and too late.

Address of Brig. Gen. Frank T. Hines

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 23, 1945

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, at the Veterans of Foreign Wars commander in chief's biennial dinner to Members of the Congress who have served in the armed forces, Congressional Room, Statler Hotel, Washington, D. C., February 20, 1945:

Commander-in-Chief Brunner, Members of the Congress in the armed forces, distinguished guests, my comrades of the Veterans of Foreign Wars, it is a very great honor, Mr. Commander in Chief, which you have conferred upon me tonight in inviting me to address this distinguished gathering of Members of Congress who have served in our armed forces, and the other distinguished guests here assembled.

I consider it an excellent idea for the V. F. W. to have this dinner of the Commander in Chief's every two years at the beginning of a Congress, so that your officials may become acquainted with Members who are also veterans. This acquaintance can only lead to a better understanding of each other's problems, and closer cooperation in furthering the objectives in which all of you have such a profound and unselfish interest.

Although the age group of the Senators and Representatives here tonight would indicate that the overwhelming majority saw service in the First World War, yet there are a few Spanish-American War veterans present, and I am happy to note, some who have seen service with the armed forces in the present global conflict. Thus in point of service rendered in uniform, a period of close to half a century is spanned.

But of greater importance to veterans than this time element, is the fact that all of you bring first-hand experience of your own to aid in the solution of veterans' problems. I do not doubt that this fact alone has done much to provide the veterans of the present war with the most diversified and adequate benefits which have ever been made available to returning war veterans and their dependents, at any time in our history.

I want to take this occasion to congratulate the Veterans of Foreign Wars upon your unprecedented membership growth, which I understand, has now reached about 800,000.

I am told that about one-half million have become eligible to membership because of service in the present war, and that most of these new members are still in the armed forces overseas. Many are doubtless sons of your older members. I consider this affiliation a very fine thing. These new members will bring with them a vigor and enthusiasm which should add greatly to the effectiveness of an already strong and well-established organization.

Your greatly augmented and diversified membership should increase materially your ability to assist returning veterans in making necessary adjustments.

You know how valuable your cooperation in the past has been to the Veterans' Administration. I am confident you realize fully that such cooperation will be even more important in the future, inasmuch as the problems to be overcome are much greater than we have ever encountered before, both in the potential number of veterans to be served and the broad scope of the many benefits to be administered.

I have just had a comparison made between some of our major activities up to the end of last December with those up to the end of February 2 years ago. These comparisons reveal the extent of many of our problems, if it will be remembered that between these two dates our total personnel has increased only 14 percent—from about 46,500 in February 1943, to about 53,000 at the present time. Our activities in the meantime have increased manyfold. Some of the more important of these are as follows:

At the end of February 1943 we had had only 32,435 World War No. 2 disability claims filed. By last December 31 we had 612,745 such claims filed, an increase of nineteenfold.

By February 1943, we had only 8,050 death claims filed on account of service in the present war. By last December we had 87,687 such claims filed, an increase of more than tenfold.

By February 1943, we had only 18,588 National Service Life death claims filed. By last December we had 180,558 such claims filed, an increase of more than ninefold.

As of February 1943, we had adjudicated 21,619 disability and death claims of all types concerned with World War No. 2. Last December we had adjudicated 617,421 such claims, a twenty-eight-fold increase.

It should be kept in mind also that at the end of February 2 years ago we had no nonservice-connected hospitalization for veterans of the present war; no vocational rehabilitation to teach the disabled new ways of earning their living; and no G. I. bill of rights with its partial guaranty of home, farm, and busi-

ness loans, educational benefits and readjustment allowances as the unemployment benefits are called.

These activities as you are aware, have been superimposed upon the many which were already in existence, and, as I have just indicated, some of these latter have now been enlarged a great many times.

I think all of us realize that Veterans' Administration expansion is still in its initial stages, and that by far the greater part of it is yet to come, considering only the administration of laws now on the books.

Our most pressing problems at present are involved with womanpower rather than with manpower, as our most serious shortages and greatest future needs are in the fields of nursing, stenography, and clerical help rather than in administrative positions. An example of an expedient we have been forced to adopt, is that we are dictating thousands of letters in Washington which are sent hundreds of miles away to be transcribed.

Ways and means must be devised which will enable us to overcome present deficiencies in personnel, and to augument our staffs to meet our steadily increasing responsibilities. We earnestly solicit the assistance of the Veterans of Foreign Wars and other patriotic groups in the solution of these pressing problems.

Personnel shortages have been particularly acute in the nurses who care for disabled veterans in our hospitals, and unless something drastic can be accomplished in obtaining many additional nurses very promptly, this will present a real acute problem.

At the present moment, we need 1,000 additional nurses in order to fill existing vacancies in our hospitals. We have a number of thousands of hospital beds which will be completed by July 1 next, and we estimate that to staff these new beds adequately on that date, we will need 2,000 more nurses, or 3,000 altogether considering the existing vacancies.

We realize that the Army and the Navy are each endeavoring to recruit nurses for overseas service, and we earnestly hope they will fill their requirements. I would call to your attention that in this connection the Veterans' Administration is not in competition with these programs, because we are able to accept nurses which the armed forces may not. Our nurses do not have to meet the requirements in either age or physical condition which the armed forces specify.

Our nurses are obtained through Civil Service, but in order to meet the present emergency I have authorized the managers of our veterans' hospitals to accept nurses who make application to them. The employment will be steady for these nurses and of a character which should satisfy their desires to play a part in the war effort.

The young men who are now returning from war service and being transferred to our hospitals are the cause for our increased hospital load and our accelerated hospital-construction program. It should be kept in mind that these disabled veterans are the same young men who have been cared for in Army and Navy hospitals prior to their discharge from the service, and that they are entitled to the best care which it is possible for their Government to provide, in order that they may obtain the maximum of improvement.

We have lost many of our male hospital attendants to war plants and the armed forces. The Army has accordingly detailed to us about 5,500 limited servicemen, whom we are using on the level of attendants in our hospitals. But it should be kept in mind that these servicemen cannot take the place of nurses, that they can only assist the nurses, and that they work under the supervision of nurses.

The Benevolent and Protective Order of Elks have volunteered to assist us in a recruitment campaign for nurses through the activities of their local lodges, and I would welcome such assistance from the Veterans of Foreign Wars through the cooperation of your local posts. The efforts of the Elks have already brought us a considerable number of nurses, but our net gains have not been great, due to the continued loss of our younger nurses who volunteer for service in the armed forces.

I believe that if the Congress finds it necessary to enact legislation providing for the drafting of nurses, that provision should be made also to supply the requirements of Veterans' Administration hospitals in this same manner. I am confident that the Congress and the American people want their war veterans to receive the best possible treatment and care, of whatever type that may be adequate to their developing needs.

Our hospital and hospital-bed situation is as follows in round numbers: We have 89,000 beds of all types in 94 veterans' hospitals and homes, plus the use of 4,000 additional beds in the facilities of other Government agencies. We have 11,000 beds under construction, with funds available for 12,000 additional beds.

The independent offices appropriation bill for 1946, now under consideration, carries funds for 14,100 more beds, while the President has approved action by the Federal Board of Hospitalization authorizing us in principle another 8,000 beds. When these various programs are completed we will have the use of 138,000 beds of all types, which should meet our needs for the immediate future.

As of December 31, 1944, there were 74,881 of our beds occupied, of which total patient load 16,050 were veterans of the present war. It will be seen from these figures that we have considerable leeway at present in overall bed occupancy, although some of our hospitals in certain localities are full, while others could take many more patients if we had the hospital personnel to care for them.

The membership of our special medical advisory group of 15 eminent surgeons, physicians and medical specialists has now been completed, and it will hold its first meeting next week here in Washington. This group supplements the work of our several hundred eminent medical consultants in various parts of the country and our resident hospitals' staffs.

We have several hundred of our medical staff with the armed forces, but thanks to the generous attitude of the Army and Navy, these losses have been helped by their detail to us of a number of their own medical officers, many of whom had prior service with us.

For the most part, the young veterans of the present war require relatively short periods of treatment in our hospitals. This applies to all types, the average period of hospitalization to date among those discharged being 35 days. Of the 128,000 World War No. 2 veterans admitted for hospital treatment, but 16,050 remained under treatment as of December 31, 1944.

We have been receiving only a relatively few veterans of the present war suffering from pulmonary tuberculosis, running about 10 percent of the total World War No. 2 admissions, but we have been having difficulties with many of these patients who have been leaving our hospitals to return to their homes without consent of our medical officers. In these cases we notify the county health authorities so that precautions may be taken against the infection of the boys' families and neighbors. We do our best to persuade these boys not to go home, but under the law we are unable to prevent them from doing so if this is their desire.

We have not begun as yet to receive direct battle casualties in relatively great numbers, as it is the policy of the Army and the Navy to provide the wounded men with the maximum of care prior to discharging them from their own hospitals.

A study has been made of the men receiving service-connected disability pension as of November 15, 1944, at which time we had 321,300 cases on the rolls, and of this number 25,550, or 8 percent, had received their disabilities as a direct result of combat, although many of the others have seen service in combat zones.

I think you will agree that regardless of the cause of disability all of us want our disabled veterans to receive the highest possible type of care that we can give them, and I wish to assure you that we are doing everything within our power to attain this desirable end.

Incidentally, the number of World War No. 2 veterans receiving service-connected disability pension on December 31, 1944, was 350,062, as compared with 334,893 veterans of World War No. 1 receiving service-connected disability compensation on that date. It will be seen, therefore, that we are now making service-connected disability payments to a greater number of World War No. 2 veterans than we are to the veterans of World War No. 1.

High wages and manpower shortages are still holding down the number of disabled veterans of the present war who are applying for vocational rehabilitation in order to overcome the handicap of disability and have lost employability restored.

As of December 31, last, we had 9,359 disabled veterans of the present war taking training courses, of which 6,804 were in institutional training and 2,555 were being trained on the job.

When demobilization begins we expect that the number of disabled veterans entering vocational rehabilitation courses will increase very greatly. While taking such courses a man's pension is increased to $92 a month if single, with additional sums for dependents. This is not enough of an increase to induce many disabled men to leave jobs which may pay them several hundred dollars a month, as many are now making in war plants.

A graphic illustration of this situation is that we have sent out more than 150,000 applications to disabled men presumably eligible to receive training who have not even signed and returned the applications to us. However, many of them may enter training later, as the courses may run until 6 years after the end of the war.

Inasmuch as most of you participated actively in the formulation and enactment of the G. I. bill of rights, you recall that it provides three new types of benefits for World War No. 2 veterans, which are: Educational advantages; partial guaranty of loans for homes, farms, and business purposes; and readjustment allowances for unemployed veterans. Basic requirements for eligibility are 90 days' active service after September 16, 1940, and a discharge under conditions other than dishonorable.

As of December 31, 1944, 12,864 veterans were taking training or refresher courses provided, of which 12,589 were in institutional training and 275 were training on the job. As you are aware, we may pay up to $500 for tuition and other expenses at educational institutions, and the veteran receives a $50 a month maintenance allowance, or if he has a dependent, $75 a month.

Under this training program an eligible veteran is entitled to 1 year of training of his own choice, and if his education has been interrupted by his war service he is entitled to additional training for a period equivalent to the length of his service. If under 25 at the time of enlistment, his education is deemed to have been interrupted. We are not required to counsel and advise these veterans as to their courses—as we do under vocational rehabilitation—but we will gladly advise any veteran who desires this service from us.

The guaranty of loans by the Veterans' Administration under the G. I. bill of rights has been progressing more rapidly than heretofore, the chief emphasis still being upon

home loans. We had received up to February 17, 1,470 applications for loan guaranty, a break-down of which shows that 1,465 applications were for homes, 1 for a farm, and 4 for business purposes.

Up to February 17 we had issued guaranties on 884 loans, of which 880 were for homes, 1 for a farm, and 3 for business purposes, the guaranty commitments having been for homes $1,553,000, for farms $1,000, and for business purposes $4,700.

We have declined so far to guarantee 191 applications for home loans on the grounds that the price asked for the property was too high, and therefore did not meet the provision of the law which requires the purchase price shall not exceed the reasonable normal value as determined by proper appraisal.

The number of veterans who have been receiving readjustment allowances (unemployment benefits) provided under the G. I. bill is not considered excessive in view of the turn-over of workers and local employment conditions throughout the United States and in Puerto Rico.

During the month of September 1944 the largest number of veterans paid such allowances for any week was 5,464, and the increase has been gradual during the intervening weeks until the week of February 3, 1945, when 25,693 veterans were paid a total of $602,025. During the time the program has been in operation $7,157,621 has been paid including the self-employed, as well as those wholly or partially unemployed.

I have cautioned veterans not to apply for these allowances unless it is absolutely necessary. They are like one-way bank accounts—the money drawn out will not be replaced. When exhausted, that is the end.

In addition, veterans should keep in mind that benefits received under the G. I. bill shall be charged against any future adjusted compensation which may be provided for veterans of the present war.

You remember that an important provision of the G. I. bill was designed to provide a maximum of job opportunities for veterans, creating for this purpose a Veterans' Placement Service Board—of which I am chairman—to determine matters of policy relating to the administration of the Veterans' Employment Service of the United States Employment Service.

The Veterans' Employment Service is now functioning with a World War No. 1 veteran as chief, and we are hopeful that it will render the best possible service to unemployed veterans and to their prospective employers.

You are also doubtless aware that as Administrator of Retraining and Reemployment—which is concerned with policy in the post-war employment of both veterans and war workers—that I and my associates have been endeavoring to visualize this most vital problem of our post-war economy from an over-all long-range viewpoint.

Our conclusions boil down to this: Maximum or full employment for all workers is necessary in order that the returning veterans may be fully employed.

Under the auspices of the Retraining and Reemployment Administration, State committees have been established consisting of representatives of the United States Employment Service, Selective Service System, and Veterans' Administration to coordinate efforts of local communities in the establishment of veterans' information service centers in such communities which justify the establishment of such a center in addition to the offices of the United States Employment Service, Selective Service System and Veterans' Administration.

The primary function of these centers will be that of referral and dispensing of precise information providing one point of contact in a community so that the individual can go to the agency concerned to procure the services desired.

There are over 8,000 information service centers in the offices of the United States Employment Service, Selective Service System, and the Veterans' Administration as well as numerous community centers in the larger centers of population. It is expected that by this method it will prevent a veteran from being shunted from one agency to another as a referral center will know exactly where to send the individual for precise service.

I think all of us realize that veterans prefer jobs to pensions or unemployment payments. All of us—management, labor, and Government—will do our best as a team to provide the necessary jobs.

In conclusion I would like to say this: The war is unquestionably going our way, and there is no doubt about the ultimate victory of the United Nations. But as realistic war veterans we know that the war is far from over and that much hard fighting still lies ahead.

Let all of us then so conduct ourselves that when complete victory is finally won that each and every one of us will feel that he or she has played his or her full part, according to his or her abilities.

Mr. Commander in Chief, I want to thank you for the privilege of addressing your guests at this unusual dinner.

Sugar and Uncle Sam

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. CRAWFORD. Mr. Speaker, for the information of the Members of the House and the interested public, consisting of the women and others who are responsible for the maintenance of our home life insofar as foodstuffs are concerned and as related to sugar, and also the commercial users of sugar of the United States, I submit for the RECORD additional information pertaining to the outrageous conditions which prevail in Puerto Rico in connection with the harvesting and processing of the present 1945 sugar crop of that island.

This editorial has been taken from the Puerto Rico World Journal. The editor of this paper and the news reporters who serve the paper are, to my certain knowledge, quite well informed on the conditions which prevail in Puerto Rico with respect to the sugar industry, sugarcane growing, and sugar processing, and their statements are worthy of consideration by all who are interested in this subject and in this commodity.

I specifically direct attention to what the World Journal has to say about Governor Tugwell and the Popular Party. We are now reaping what we have previously been sowing in Puerto Rico. This is a matter which in my opinion should have the attention of the Committee on Insular Affairs of the House of Representatives and the Congress in general. It is now time for us to act.

The editorial follows

SUGAR AND UNCLE SAM

After nearly 5 years of constant advice to fight for their rights against employers bent only on exploitation of the masses, workers in Puerto Rico heard twice in recent days that they also have responsibilities. Señor Francisco Susoni last week issued a statement saying that "the worker must be made to realize what he must give in exchange for what he gets."

Last Saturday Governor Tugwell praised Susoni's words and added this unveiled warning to government and labor:

"Like many others, I am sure, I was regretful that after the victory in November there should spread throughout the ranks of workers a spirit of withdrawal and a feeling that now the government would support them.

"Puerto Rican leaders, I feel, now must combat this and show the way to ever greater efficiency in production."

Few close observers of the local political scene in the past 5 years will question the fact that the above statements come close to being revolutionary so far as the government's relationship with labor has been concerned during that period.

Meanwhile, sugar urgently needed to meet a critical shortage in the States and at fighting fronts remains unprocessed in Puerto Rico because the workers' demands have not been met by the Sugar Producers Association. We don't know how justified are the demands of labor in this strike, and we have no way of knowing whether the sugar people can or cannot meet those demands and stay in business. They say they can't unless Uncle Sam pays a big enough subsidy to offset their losses.

We do know, however, that both sides feel Uncle Sam should step into the picture with enough cold cash to make everything agreeable to all concerned. The unions say they will help the sugar producers to fight for a bigger subsidy.

Isn't it about time that Government leaders here told themselves that they also have responsibilities? For 5 years labor has listened to a one-sided story of how it has been exploited. Belatedly, high authorities issue a warning, praiseworthy to be sure, but obviously not destined to overcome 5 long years of propaganda aimed at securing labor's vote.

The past 5 years have seen labor here make great strides under the tutelage and assistance of the Government. That, too, is laudable and justified. Labor had far to go, and perhaps should go much farther. But it is ironic that all that progress should be sacrificed by the same persons who have worked so devotedly in labor's cause.

Government, aside from the merits of present issues involved in the sugar strike, has molded the worker's frame of mind to accept all and give as little as possible. Now, apparently, an attempt is being made to recover ground—to stave off widespread economic disaster.

And how do spokesmen for both sides hope to save the situation? Fight for a bigger subsidy. As spokesmen for both sides have said recently: "Uncle Sam won't let the people starve." That comes pretty close to being right. Uncle Sam won't let the people starve. It's wrong, however, if Uncle Sam is mentioned without taking into account that Mr. and Mrs. John Doe are being taxed heavily from their weekly pay envelopes to meet such demands as the present situation has created.

Since Pearl Harbor the war has cost the American taxpayer $238,000,000,000, Secretary of the Treasury Henry Morgenthau announced yesterday. Also, since Pearl Harbor, the war has put about $100,000,000 into the Insular Treasury. Some day Uncle Sam's bottomless barrel of cash is going to find a bottom. Let's hope that before then government officials here are going to realize their own responsibilities to their own people.

Government, through two highly competent spokesmen, has admitted its failure to educate the workers on their obligations to

the community. Government, through its various leaders—in political campaigns and out—has encouraged the feeling among the masses that the people would be cared for, that their interests came first at all times. That is proper and right, we believe, but while it sought to improve labor's standards government's lack of foresight or reluctance to face the facts of Puerto Rico's economic structure fostered this attitude of dependency among the workers.

We sincerely urge government here to make a strong effort—late as it is—to teach the people, after it learns itself, that the dole makes a perilous foundation upon which to build for progress and security.

Poll of Congress

EXTENSION OF REMARKS
OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD the report of a study made by Surveys, Inc., of New York, for Look magazine, a poll of congressional opinion on 21 questions of current interest.

It is not maintained that the results of this poll are conclusive. However, I believe the report will be of genuine interest to the Members of Congress and others, because of the indications of its findings of congressional opinion. It follows:

I. Do you believe the President's objective of 60,000,000 peacetime jobs is attainable?

	Percent
Yes	55.4
No	42.2
No opinion	2.4

II. Do you favor a guaranteed minimum annual wage for American workers?

	Percent
Yes	47.0
No	43.4
No opinion	9.6

III. A recent poll found that nearly half of the 17,000,000 wage-earners in American manufacturing industries look primarily to the Government to solve the post-war job problem. Another recent poll learned that Americans in all walks of life are overwhelmingly in favor of "taking the Government out of business after the war." Do you believe post-war full employment requires Government expenditures for direct work?

	Percent
Yes	48.2
No	45.8
No opinion	6.0

IV. Should Congress pass legislation providing controls of labor unions similar to the controls of business firms and organizations?

	Percent
Yes	77.1
No	18.1
No opinion	4.8

V. Should unemployment insurance coverage be extended to the employees of all business establishments?

	Percent
Yes	69.9
No	19.3
No opinion	10.8

VI. Should old age benefits start at 60 instead of 65?

	Percent
Yes	48.2
No	47.0
No opinion	4.8

VII. Do you favor socialized medicine?

	Percent
Yes	14.5
No	81.9
No opinion	3.6

VIII. After the defeat of Japan, do you favor reduction of personal income taxes in the lower brackets? In all brackets?

In the lower brackets:	Percent
Yes	59.0
No	12.1
No opinion	28.9

In all brackets:	Percent
Yes	55.4
No	26.5
No opinion	18.1

IX. Do you favor repeal of the excess-profits tax, after the defeat of Japan?

	Percent
Yes	55.4
No	28.9
No opinion	15.7

X. Do you favor requiring all young men to devote 1 year to military service in peacetime?

	Percent
Yes	49.4
No	36.1
No opinion	14.5

XI. Do you favor a 1 year's compulsory Government service for all young women?

	Percent
Yes	3.6
No	90.4
No opinion	6.0

XII. Do you favor our maintaining, after the defeat of Japan, a large navy, air force, and army?

	Percent
Yes	82.0
No	7.2
Large air force and navy	[1] 3.6
No opinion	7.2

[1] This 3.6 percent did not answer either "Yes" or "No" to the question; it receives this separate tabulation (rather than being included in "No opinion") because of its clear indication of a definite stand for which the phrasing of the question made no allowance.

XIII. Should the United States insist upon naval and aeronautical bases at strategic locations in the Pacific and Atlantic?

	Percent
Yes	96.4
No	1.2
No opinion	2.4

XIV. Should America's representative on the world security organization be authorized to vote with other nations in resisting aggression without first referring issues to Congress?

	Percent
Yes	44.6
No	45.8
No opinion	9.6

XV. Do you favor a constitutional amendment providing for treaty ratification by majority votes of the Senate and the House?

	Percent
Yes	61.5
No	34.9
No opinion	3.6

XVI. Do you favor governmental price guaranties and crop insurance to farmers?

	Percent
Yes	67.5
No	24.1
No opinion	8.4

XVII. Should the O. P. A. be continued for a temporary period after the defeat of Japan?

	Percent
Yes	61.5
No	30.1
No opinion	8.4

XVIII. Do you believe the Roosevelt administration is in favor of private enterprise?

	Percent
Yes	39.8
No	50.6
No opinion	9.6

XIX. Do you favor a constitutional amendment to abolish the electoral college and to provide for election of the President by popular vote?

	Percent
Yes	49.4
No	42.2
No opinion	8.4

XX. Do you favor a constitutional amendment limiting future Presidents to two terms of 4 years each?

	Percent
Yes	66.3
No	30.1
No opinion	3.6

XXI. After the defeat of Japan, should the war plants now owned by the Government be leased to private industry? Sold to private industry?

Results: Seventy-three and five-tenths percent believe that the war plants now owned by the Government should be sold to private industry. An additional 7.2 percent believe that they should either be sold or leased to private industry; 2.4 percent are opposed; 16.9 percent have no present opinion on it.

On the question of leasing the plants to private industry, in addition to the 7.2 percent who believe that they should either be leased or sold to private industry, 37.4 percent believe they should be leased to private industry; 8.4 percent are opposed; 47 percent have no present opinion on leasing them to private industry.

FEBRUARY 6, 1945.

Henry Clay

EXTENSION OF REMARKS
OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. O'NEAL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address, with accompanying letter, by the Honorable South Trimble on Henry Clay. Mr. Trimble, Clerk of the House, and formerly a Member of the House and a distinguished Kentuckian, is deeply interested in history as related to the Congress. His address was presented in the folklore hour of the Kentucky Society of Washington at the Willard on Friday evening, January 26, 1945, before the large audience present at the annual congressional reception tendered by the

society to the members of the Kentucky delegation. As one of them, I feel Mr. Trimble has made a real contribution both to our national and State histories.

The letter and address follow:

OFFICE OF THE CLERK,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 23, 1945.

Mr. CAMDEN R. MCATEE,
President, Kentucky Society of Washington, Washington, D. C.

MY DEAR MCATEE: When I received the invitation to address the Kentucky Society on January 26, I was a little surprised as I have not gone out at night since my serious illness of 4 years ago. Twenty years ago I would have been delighted to have accepted the invitation, but that day has gone forever.

I am not a historian in any sense of the word. However, within the last 2 or 3 years I discovered some historical mistakes of alleged historians made public by the press, two of which related to Henry Clay and Aaron Burr. I endeavored to correct both historical errors by diligent research, and I feel sure that I did correct both. Mr. Paul Brannon wrote a very interesting article about Frankfort, which is one of the most historic towns in the country, and in his article referred to Lafayette, the great French statesman, and to other noted men who had visited Frankfort. But in one paragraph he made the following statement: "Here the swashbuckling Burr strode the streets to answer the charge of treason with Henry Clay, the great pacificator, at his side to defend him."

This article was published in the magazine Kentucky and circulated in every State in the Union. I knew it was a slanderous statement and I immediately wrote to the State Journal, which reproduced his article, stating that there was not a scintilla of truth in this statement and that it slandered the name of Henry Clay. This started a raging controversy through the columns of the State Journal, and many attacked me and defended Mr. Brannon's statement, with the result that after a lapse of 6 months I compiled a history of this episode which was published in the State Journal and covered an entire page. This article was subsequently published in the CONGRESSIONAL RECORD and those who are interested enough may find this copy in the files of the daily CONGRESSIONAL RECORD of December 2, 1943, page 10352, on file in the Congressional Library.

I will not be able to appear in person and deliver an address on Henry Clay, but am sending you a brief history of outstanding events in his life and, if you think proper, you may read it to the society.

Sincerely,

SOUTH TRIMBLE.

HENRY CLAY

Henry Clay was born in a district, known as The Slashes, in Hanover County, Va., April 12, 1777. He attended the public school for a short time, acquiring a knowledge of spelling and arithmetic, which was the basis of his education since he never had any college training. He studied law in a prominent lawyer's office in Richmond, Va. When he was 20 years of age he obtained his license to practice law, and then chose to go to Lexington, Ky., to make his future home, and to practice law.

Clay was a wealthy man of his day, and when he arrived in Lexington, which was then a town of about 1,800 people, he bought a farm immediately adjoining the town and built a beautiful home, calling it Ashland. His great-great-granddaughter owns and lives in this residence today. The remainder of his farm has been developed into the residential portion of Lexington.

Henry Clay was the pioneer fine stock breeder in Kentucky, being the first man who ever imported purebred horses, cattle, and sheep to the blue grass regions. At the age of 29 he was elected to the State House of Representatives in Frankfort. While serving in that legislature, a vacancy occurred in the United States Senate because of the resignation of Senator John Adair, and Clay came to the Senate and served the unexpired term of approximately 4 months. He then returned to Kentucky and was again a candidate for the State legislature, something almost unprecedented for a United States Senator. He was elected, and was also elected Speaker of the Kentucky House of Representatives. It was not very long before United States Senator Buckner Thurston resigned, and the legislature again elected Clay to serve out the unexpired term of approximately 3 months. When he arrived in Washington the first time as a Senator, he was not of the constitutional age of 30 years, but his reputation had preceded him and no Senator had the temerity to question his age. Therefore, he took his seat, the only Senator on record who was ever sworn in before he was 30 years of age.

On his return to Kentucky, after serving out his last term in the United States Senate, Clay was a candidate and was elected to the Twelfth Congress. The most remarkable thing about Clay's entire career was that he was elected Speaker the first day he entered the United States House of Representatives, something that never had happened before and will never happen again. He was elected to the Thirteenth Congress, and again was elected Speaker. He resigned from the Thirteenth Congress while he was Speaker, because he was appointed by the President as one of the commissioners to negotiate the Treaty of Peace with Great Britain after the War of 1812, and Langdon Cheves, of South Carolina, was elected Speaker. Clay was elected to the Fourteenth Congress and was elected Speaker again. He was elected to the Fifteenth Congress and elected Speaker. He was elected to the Sixteenth Congress and again elected Speaker. He resigned from the Sixteenth Congress, for what reason I have never discovered, and John W. Taylor, of New York, was elected Speaker in his place. Clay was out of the Seventeenth Congress, during which Philip P. Barbour, of Virginia, was the Speaker, but Clay was elected to the Eighteenth Congress and was elected Speaker again, a circumstance which would not happen in this day and time.

Clay was elected to the Nineteenth Congress and his term began on the 4th of March 1825, the same day that John Quincy Adams was inaugurated. He did not qualify as a Congressman because Adams appointed him Secretary of State.

In the Presidential election of 1824 Henry Clay, of Kentucky, Andrew Jackson, of Tennessee, William Crawford, of Georgia, and John Quincy Adams, of Massachusetts, were candidates. When they counted the electoral vote in a joint session of the House and Senate no one candidate received a majority of electoral votes. In such event the Constitution provides that the House elect one of the three candidates receiving the largest number of electoral votes. As Henry Clay was the fourth man, receiving 37 electoral votes, he was eliminated in the election. The Constitution also provides that in a situation of this kind each State has but one vote and the dominant party in the delegation controls that vote and the successful candidate must get a majority of all the States.

Under normal political conditions, with Adams living in Massachusetts in the far east and with Crawford, Jackson, and Clay in the South and West, Jackson would be elected. However, Clay at that time was Speaker of the House and the most powerful man in the Nation next to the President, as he appointed all the committees and chairmen of those committees, and could make changes at will. He and Jackson were viciously antagonistic toward each other and were not on speaking terms. Clay did not want to see Jackson elected, so he threw all of his powerful influence into the contest, with the result that Adams was elected. Adams was elected on the first ballot, and it is absolutely certain that Henry Clay was responsible for his election. It was at this time that Adams appointed Clay Secretary of State, which position Clay held for 4 years. Clay's political enemies charged him with trading his influence in the election of Adams for the job of Secretary of State, but such was not the case. He was more powerful as Speaker of the House than he was as Secretary of State, and his successful efforts in electing Adams were the result of his bitter antagonism toward Jackson.

When his time expired Clay returned to Kentucky. Subsequently another vacancy occurred in the United States Senate, and Clay was again elected to the Senate. He was a candidate to succeed himself and he was reelected and reelected until at the age of 75 he died in office on June 29, 1852.

In the Presidential election of 1828 Jackson defeated John Quincy Adams, who was a candidate for reelection, and, in 1832, Clay was a candidate against Jackson's reelection but was defeated. In 1844 Clay was again a candidate for President and was defeated by James K. Polk.

Clay was elected Speaker of the House of Representatives six times, or more than any other man. There have been but three other Speakers elected four times—Stevenson, of Virginia; Clark, of Missouri, and Cannon, of Illinois.

Incidentally, Kentuckians have been elected Speaker in more Congresses than have Members from any other State. However, Massachusetts has elected more Congressmen Speakers than any other State. The Members from Kentucky who served as Speakers and the number of terms follow: Clay, 6; White, 1; Boyd, 2; Carlisle, 3.

CLAY-MARSHALL DUEL

During the troubled years in pioneer days of Kentucky when Clay and Marshall met on the dueling grounds, two of the most famous men in Kentucky met in mortal combat. The events that led up to the duel began when Henry Clay introduced in the Kentucky Legislature a resolution "That Thomas Jefferson is entitled to the thanks of his country for the ability, uprightness and intelligence which he has displayed in the management of both our foreign relations and domestic concern."

The hostility between Clay and Marshall was of long standing. Their debates on the floor of the House were exceedingly abusive and vitriolic. Marshall was a Federalist but was branded a Tory and he opposed the Jefferson resolution. In the discussion both employed their matchless power of vituperation and invective. Ultimately Marshall lost his head and bluntly called Clay a liar. Clay, then 10 or 12 feet away, darted forward with arms uplifted, beside himself with anger. Members interposed. Clay struggled to get free. They were separated by General Riffe, a giant of a man of German extraction, who entreated, then threatened, "Come, boys," he said, holding them off, "no fighting here. I vips you both." Turning to the House, Clay apologized. He would not have taken the liberty, he said, had his opponent been a man of honor.

This was too much for Marshall, who rose and yelled, "It is the apology of a poltroon." That night Clay sent Marshall a written challenge, which was accepted with a prompt and tart reply. Clay asked his friend, Colonel Moore, to be his second and to secure for him a brace of pistols on which he could rely; also to procure some of the best powder adapted to such an occasion.

At last came the fatal day. On Thursday, January 19, 1809, in the cold early morning the principals with their surgeons, seconds and a few friends, crossed the Ohio River at Louisville, and selected an eligible spot of

ground just below Silver Creek in Indiana, as there was a law prohibiting dueling in Kentucky. The surgeons stood by with cases open; the seconds consulted together gravely; pistols were examined, 10 paces measured off, and amid awesome silence slender, fair-haired Henry Clay faced in mortal combat tall and swarthy Humphrey Marshall. A moment of suspense, a tightening of the trigger finger, then shots came quickly upon the words "Attention! Fire!"

Clay remained steady, but Marshall staggered. Clay's ball had grazed his abdomen, and given him a slight wound. On the second round Clay's pistol snapped; there was only one shot, but Marshall fired without effect. On the third, Clay staggered—and his shot went wild. Marshall had given him a flesh wound in the thigh.

"Mr. Clay insisted on another fire very ardently," said the seconds, "but his situation, resulting from the wound, placing him on unequal grounds, his importunate request was not complied with."

The affair was over. Colonel Moore and Major Campbell, the respective seconds, reported, "We deem it justice to both gentlemen to pronounce their conduct on the occasion, cool, determined, and brave in the highest degree."

Henry Clay exclaimed, "Thank God, Humphrey is only slightly wounded!"

So ended the Clay-Marshall famous duel.

CLAY-RANDOLPH DUEL

One hundred and eighteen years ago—April 8, 1826—Henry Clay, Secretary of State, and John Randolph, United States Senator from Virginia, fought a duel on the Virginia side of the Potomac River, a few miles above the National Capital. Senator Randolph had the reputation of being one of the best pistol shots in the country. His friends claimed he usually hit whatever he shot at. It is also said that Secretary Clay had similar skill.

The duel was the result of rough language used on the floor of the Senate by Randolph. He referred to Clay's alliance with President John Quincy Adams as a union of the "blackleg and the Puritan"—the "Blifil and Black George."

Gen. James Hamilton, of South Carolina, one of Randolph's seconds, gives this interesting description of the bloodless duel between the two distinguished gentlemen:

"The night before Mr. Randolph sent for me, I found him calm, but in a singularly kind and confiding mood. He told me that he had something on his mind to tell me. He then remarked: 'Hamilton, I have determined to receive, without returning, Clay's fire; nothing shall induce me to harm a hair of his head; I will not make his wife a widow, nor his children orphans. Their tears would be shed over his grave; but when the sod of Virginia rests on my bosom there is not one in this wide world, not one individual, to pay this tribute upon mine.' His eyes filled; and, resting his head upon his hand, we remained some moments silent. I replied: 'My dear friend, I deeply regret that you have mentioned the subject to me; for you call upon me to go to the field and see you shot down, or to assume the responsibility, in regard to your own life, in sustaining your determination to throw it away. But on this subject a man's own conscience and his own bosom are his best monitors. I will not advise; but, under the enormous and unprovoked personal insult you have offered Mr. Clay, I cannot dissuade. I feel bound, however, to communicate to Colonel Tatnall your decision.'

"He begged me not to do so, and said he was very much afraid that Tatnall would take the studs and refuse to go out with him. I, however, sought Colonel Tatnall, and we repaired about midnight to Mr. Randolph's lodgings, whom we found reading Milton's great poem. For some moments he did not permit us to say one word in relation to the approaching duel; and he at once commenced one of those delightful criticisms on a passage of this poet, in which he was wont so enthusiastically to indulge. After a pause, Colonel Tatnall remarked: 'Mr. Randolph, I am told you have determined not to return Mr. Clay's fire; I must say to you, my dear sir, if I am only to go out to see you shot down, you must find some other friend.' Mr. Randolph remarked that such was his determination. After much conversation on the subject, I induced Colonel Tatnall to allow Mr. Randolph to take his own course, as his withdrawal as one of his friends might lead to very injurious misconstructions. At length, Mr. Randolph, smiling, said: 'Well, Tatnall, I promise you one thing: if I see the devil in Clay's eyes, and that, with malice prepense, he means to take my life, I may change my mind'—a remark I knew he made merely to propitiate the anxieties of his friend.

"Mr. Clay and himself met at 4 o'clock the succeeding evening on the banks of the Potomac. But he saw no 'devil in Clay's eye,' but a man fearless and expressing the mingled sensibility, and firmness which belonged to the occasion.

"I shall never forget this scene as long as I live. It has been my misfortune to witness several duels, but I never saw one, at least in its sequel, so deeply affecting. The sun was just setting behind the blue hills of Randolph's own Virginia. Here were two of the most extraordinary men our country in its prodigality had produced, about to meet in mortal combat. Whilst Tatnall was loading Randolph's pistol, I approached my friend, I believed, for the last time. I took his hand; there was not in its touch the quivering of one pulsation. He turned to me and said: 'Clay is calm, but not vindictive; I hold my purpose, Hamilton, in any event; remember this.'

"On handing him his pistol, Colonel Tatnall sprung the hair-trigger. Mr. Randolph said, 'Tatnall, although I am one of the best shots in Virginia with either pistol or gun, yet I never fire with a hair-trigger; besides, I have a thick buckskin glove on, which will destroy the delicacy of my touch and the trigger may fly before I know where I am.' But, from his great solicitude for his friend, Tatnall insisted upon hairing the trigger. On taking their positions, the fact turned out as Mr. Randolph anticipated: his pistol went off before the word, with the muzzle down.

"The moment this event took place General Jessup, Mr. Clay's friend, called out that he would instantly leave the ground with his friend if that occurred again. Mr. Clay at once exclaimed that it was an accident and begged that the gentleman might be allowed to go on. On word being given, Mr. Clay fired without effect. Mr. Randolph discharged his pistol in the air.

"The moment Mr. Clay saw that Mr. Randolph had thrown away his fire, with a gush of sensibility he instantly approached Mr. Randolph and said, with an emotion I never can forget: 'I trust in God, my dear sir, you are untouched. After what has occurred, I would not have harmed you for a thousand worlds.'"

Grasping the other in a fervent handclasp, Randolph, in happy good humor, said: "You owe me a coat, Mr. Clay. You will observe that your bullet went through the tail of my coat in the vicinity of my hip." Whereupon the Secretary of State pleasantly replied, "I am glad the debt is no greater."

In the meantime all Washington was excited over the possible outcome of the duel between these two famous men. Mrs. Clay, with heart half broken, was wondering whether she was going to be a widow and her children fatherless. President Adams was speculating about the probable loss of a mighty good Secretary of State. But the most worried man seems to have been William Henry Harrison, then a Member of the Senate from Ohio, and subsequently President of the United States. He and Clay were great cronies, and both lived on F Street not far from where the National Press Club now stands. These two men were real neighbors and thought the world and all of each other. For little more than an hour, Harrison had paced up and down his parlor floor, eargerly awaiting some word about the duel. Glancing out of the window he observed Clement Dorsey, a Maryland Congressman, passing down the street. Hoisting the window, he yelled for Dorsey to come into his house. "Mr. Clay is dead," sadly remarked Harrison. "He was to have returned by 4 o'clock, and here it is 5 and no signs of him. Yes, yes, he must be dead. Poor Henry Clay." But at that very moment Clay appeared on horseback, turning the corner of F Street at Fifteenth, Harrison rushed out of the front door, and with the tails of his dressing gown flying in the wind, he raced up the street to meet Clay, and warmly embraced him when he dismounted from his sweating horse.

According to Ogle Tayloe, one of Clay's close friends, Mr. Clay, sometime after Randolph's death told him that years before the duel he had been warned by close friends to be on the lock-out for trouble with Randolph. They claimed that Randolph was determined to fight a duel with him, asserting that he had made the statement that he "preferred to be killed by Mr. Clay to any other death."

The story goes that more than 100 years ago when Washington was a country town, a small creek ran down Constitution Avenue; there were no paved streets, just plank sidewalks, and in the winter time when rains washed out the sidewalks foot logs had to be put in so that only one person could cross at a time. Henry Clay was going down to his hotel, and John Randolph was going to the Capitol when coincidentally they met on either end of the foot log. Randolph threw up his hands, exclaiming, "Clay, this is John Randolph and I have the right-of-way; I never get out of the way of a damn rascal!" Clay backed off, bowed very suavely and politely and said, "Mr. Randolph, this is Henry Clay and I always get out of the way of a damn rascal, and you have the right-of-way."

After the bloodless duel on the Potomac, Randolph and Clay became bosom friends. Randolph, in failing health and on his way to a hospital in Philadelphia, stopped off in Washington to hear Henry Clay make his farewell speech in the Senate. At Randolph's request, he was brought to the Senate from his hotel on a cot to hear the speech.

Fellow citizens of Kentucky, I regret more than I can tell you that conditions were such that I could not be present in person and deliver to you an extemporaneous address on Henry Clay. While for the last 30 years I have resided in Washington, my heart is in Kentucky and I always look forward with pleasure to my visits to Frankfort three or four times a year. In conclusion I want to add an excerpt from James H. Mulligan's beautiful poem, In Kentucky, which expresses my sentiments.

The moonlight falls the softest in Kentucky;
The summer days come oftest in Kentucky;
Friendship is the strongest,
Love's light glows the longest,
Yet, wrong is always wrongest in Kentucky.

Life's burdens bear the lightest in Kentucky;
The home fires burn the brightest in Kentucky;
The sun shines ever brightest in Kentucky;
The breezes whisper lightest in Kentucky;
Plain girls are the fewest,
Their little hearts are truest.
Maidens' eyes the bluest in Kentucky.

Rents—Public Versus Private

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Joseph H. Deckman entitled "Rents—Public Versus Private," which appeared in the February 1945 issue of the Home Builders Monthly:

RENTS—PUBLIC VERSUS PRIVATE

(By Joseph H. Deckman)

Public housing exponents continually misuse, as their strongest argument, the fact that private enterprise cannot rent a four-room housing unit for $12 per month.

By clever mixing of this truth with the myth that public housers can produce such housing, the general public has been led to accept the biggest financial hocus-pocus of this century. Actually, only a mere handful of public housing units are rented for $12 per month for public exhibition and consumption. In fact, it is a stated policy that not more than 25 percent of the units in any one project shall be rented at graded rents.

For every one of these units there are hundreds of public housing units renting at more than $30 per month, and all of them are made possible through staggering public subsidies.

When confronted with the $12 per month rent for a four-room dwelling, private enterprise always truthfully states that it cannot rent at this figure and pay all expenses plus a normal business profit.

In like manner, it holds true that public housers cannot rent a four-room dwelling for $12 per month without the aid of enormous subsidies furnished them by the taxpayer through the Public Treasury.

To show how enormous these subsidies are and how unfair it is to condemn private enterprise on the basis of comparing rents the way public housers do it, the following comparative table of rents is given.

Charges which go to make up private rents will be shown in one column and compared to them will be the subsidized items of public housing rents which are necessary to reduce the rent of a four-room unit to $12 per month.

In the case of private rents the items will be subtracted to arrive at a fair comparison to the $12 rent, while in the case of public rents the subsidized items will be added for a comparative full rent.

Rents will be based on an average cost of construction by both private and public operations. A 25 percent lesser cost for private housing than public will be used. This differential is based on factual testimony presented to the Burton Senate subcommittee, which proved that private enterprise can build from 25 percent to 40 percent less than public housers.

It is pointed out that the housing units in this example are entirely comparable to the minimum standard housing constructed in the majority of cases by public housing.

Space heaters for heating, untiled baths, and minimum equipment in kitchens are specified. Under the usual conditions of comparison, the cost of this minimum standard type public housing unit would be compared to a private unit with a central heating plant, tile bath, and more expensive kitchen equipment. Even with these former handicaps of comparison, private housing has been repeatedly proven to be constructed at a considerably less cost than public.

The rent for private housing is taken at a figure which is high enough to make a good investment for such a property.

A rent of $12 for the public unit is taken as the minimum rent which is boasted about.

The public housing considered in this example is permanent public housing built under the United States Housing Act of 1937, as constructed in this city of Washington.

From the accompanying rent analysis it is clearly shown that public housers are resorting to the worst type of fabricated falsehoods, when they maintain that public housing is the least costly method to the taxpayer for housing the low income groups. The same can be said of their unfair methods of comparing public subsidized rents to full private rents.

The comparison as made here is not entirely a true one, as many other subsidies enjoyed by public housing are not stated in given amounts of monthly rent.

The largest and most important unstated subsidy is the outright gift to public housing of the cost of land and construction. This subsidy is normally covered up by the scheme of using the annual subsidy of interest and amortization as a book transaction which pays off the original cost. This subsidy is annually taken from the taxpayer after the original project cost has already been spent so it does not pay off anything. The subsidy is actually used to write down rents for the purpose of producing low rental housing. The whole transaction is similar to taking money out of one pocket and putting it in another and by so doing deluding oneself into thinking a debt is paid off by this manipulation.

Another cost to the taxpayer is the progressive annual interest which has to be paid on moneys borrowed through deficit financing to make the annual subsidy payments.

Other indirect subsidies to public housing and costs to private enterprise are the franking privileges of the mail, governmental printing rates, legal services for Congressional hearings and other business, and the cost of information and propaganda departments.

By present public housing methods huge sums of public money are being expended at a higher cost than is necessary and without achieving adequate housing for the indigent.

Thus this immense distortion of the truth and financial chicanery is being perpetrated at both the expense of the taxpayer and the indigent citizens.

A COMPARATIVE RENT ANALYSIS

Public rent

Based on a four-room unit at a cost of $4,000 per unit:

Subsidized rent (assumed to include overhead, repairs, and maintenance), $12 a month.

Subsidized items:

Taxes, real estate ($1.75/cw. on 85-percent of cost), $5 a month.

Sixty-year financing (3-percent interest and amortization), $13 a month.

Management cost (13 percent of rent collected), $1.56 a month.

Insurance (80 percent of cost), 42 cents a month.

Cost of debt service on total cost of $4,000 at 2 percent per annum, average interest compounded for a sound life of 35 years for the structure, $9.86 a month.

(This is necessary due to deficit financing of the Federal Government. The figure is arrived at by taking the first year monthly charge of $6.67 and averaging it with the thirty-fifth year monthly charge of $13.06. It is to be noted that a 59-year life is not used even though a substantially higher monthly cost would be shown. This has been done to eliminate any criticism of showing partiality to private enterprise, despite the fact that public housing is amortized on a 59-year basis to obtain its low rents and in order to justify its existence.)

Total additions, $29.84.

Total comparable rent to full private rent, $41.84 a month.

Private rent

Based on a four-room unit at a cost of $3,000 per unit, or 25 percent less than the public cost.

Full rent (includes all finance charges, repairs, maintenance, taxes, and profit), $35 a month.

Items to be deducted:

Taxes, real estate ($1.75/cw. on 85 percent of cost), $3.70 a month.

Twenty-year financing (5½ percent interest and amortization and insurance at $7 per month per $1,000), $21 a month.

Management cost (5 percent of rent collected), $1.50 a month.

Total deductions, $26.20 a month.

Total comparable rent, $8.60 a month.

Eight dollars and eighty cents a month is the private rent which should be used when a comparison is made to the $12 a month subsidized public housing rent. This rent includes profit, repairs, maintenance, social security, and other Federal taxes.

It is significant to note that the $8.80 rent of private housing is approximately 26 percent less than the subsidized $12 rent of public housing. In like manner the $41.84 public housing rent is approximately 19 percent greater than the $35 private rent. This is true even though all subsidies are not reflected and the public housing rent has the decided advantage of being based on the low interest rate of 3 percent with 59-year financing.

If private builders had low interest rates and longer financing, their full rents would unquestionably be less than the so-called economic rents of public housing.

On the basis of a true comparison of private and public rents it can be seen that the least costly and most efficient method to clear slums and house the low-income groups is to set up machinery whereby private enterprise finances and constructs all housing and pays all taxes without any public subsidy.

This can be accomplished through a public agency clearing slums and selling them to private enterprise at a fair value based on a maximum rent that can be charged. Any write down in land is not a subsidy to the builder but is a subsidy to the owner of slum property and a cost chargeable to the general public for slum elimination as is now the case with public housing.

The subsidy needed for rent relief is the function of public welfare and is given to the low income or indigent tenant for rent purposes and can in no way be termed a subsidy to the builder.

It is admitted by the National Association of Housing Officials, that it is the function of public welfare to provide rent assistance for the indigent. On page 19 of the pamphlet, Housing for the United States After the War, the statement is made concerning rents in public housing, "it is the responsibility of public welfare agencies to assure that families needing general assistance will be able to pay such rents."

By this it is meant that public welfare shall pay the tenant's economic rent if necessary, even though private enterprise can meet this rent for comparable housing.

If private enterprise can build for less and manage for less than public housing and public welfare is to render rent relief for the needy, the paramount question is, Why is there any need for public housing?

It should be quite obvious to anyone confronted with the facts that private housing coupled with public welfare is the only solution to housing low income groups.

Through this method all land and housing will remain on the tax rolls, and income

taxes from private enterprise profits will aid in caring for the unfortunate. Only the needy will be subsidized by rent relief and only one cost, that of rent relief, will be borne by the taxpayer. Furthermore, the public debt will be decreased, as deficit financing will not be needed. Also, greater tax revenues will aid in balancing the budget, which is a necessity to avert ultimate financial chaos.

A sound economy will provide jobs and prosperity which will raise wages and the standard of living of the working classes and in turn will result in less need of rent relief to a shrinking number of indigent citizens.

Last but not least the threat of State socialism through Government ownership of the homes of the citizens will be dispelled by a true American approach to a problem which has stumped every other nation of the world.

The Truth About Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, Mr. J. Pope Dyer, head of the department of government, Central High School, at Chattanooga, has spent years studying the problem of juvenile delinquency and is one of the Nation's foremost authorities on criminology and juvenile delinquency.

Since all of us are interested in this problem, I am pleased to include herein an address delivered by him on February 9, 1945:

A friend of mine tells about going into a restaurant recently which was located near a railroad depot. It was early in the morning, about 4 or 5 o'clock. My friend sat down at one of the tables and near him sat a group of girls. A newsboy came in and yelled, "Paper! Paper!" One of the girls said, "We can't read and we don't enjoy the pictures." To which the newsboy replied, "Well, then, smell it. It's about half baloney anyway." I realize that when we start talking about the subject of juvenile delinquency that so much has been said and so much has been written that the average listener says that I am not interested because a very high percentage of it is all baloney.

If we should go back into the early history of our Nation and study the criminal careers of the notorious criminals we would find that the outstanding examples of adult crime started in acts of juvenile delinquency. John A. Murrell is quoted to have said, in the book In Outlaw Years by Coates, that his mother taught him to steal and rob at the tender age of 8. It is of interest to recall that the most dangerous and desperate criminals of the past decade—"Pretty Boy" Floyd, Alvin Karpis, "Baby Face" Nelson, John Dillinger, and the Barker brothers—all started their careers of crime as juvenile delinquents. Mr. J. Edgar Hoover makes the statement in his book, Persons in Hiding, that the most cunning and cruel criminal with whom he has had to deal was "Ma" Barker. It does not take a finished criminologist to recall that she was the mother of four sons, and that from almost their infancy she taught them to steal, to rob, to kill, to plan a getaway, to case a job, and to kidnap. All of you will remember that these sons, one by one, were killed by law-enforcement officers, and she paid the supreme penalty while shooting it out with the agents of the F. B. I. in Ocala, Fla.

I should like to relate a story which I believe would serve as a typical example to explain most cases of juvenile delinquency. A few years ago in New York City, a ruthless young killer named "Two Gun" Crowley was parked in a New York City park. A policeman came up and asked to see his driver's license. He pulled his gun and killed the policeman. Later he was surrounded in his apartment by a great number of police who were exchanging shots with him. He paused long enough to write this statement, "In my bosom is a heart that would do no person any wrong." He was caught, tried, and sentenced to be electrocuted. In Sing Sing Prison he said, "This is what I get for defending myself." In his book, Meet the Murderer, Lewis E. Lawes says that Crowley was the only man that ever ate his last meal during his time as warden of Sing Sing Prison. Crowley is quoted to have said: "Warden, when I was a child we were too poor to have turkey; when I became a youth I was too busy dodging policemen to eat a decent meal, and now when I have the chance I am going to eat one decent meal before I die."

From the statistics of the F. B. I. we learn that juvenile delinquency is on the increase. It is said that the increase is some 50 or 60 percent among girls and some 8 or 10 percent among boys. The chief offenses among girls seem to be ungovernability and sex offenses. For boys it seems to be in the field of larceny and particularly the stealing of automobiles. It is agreed by sociologists and criminologists that most of the delinquency occurs near military camps and in towns that have had mushroom growth—in other words, communities that have had an abnormally high growth in population without adequate means to deal with this increasing population from the point of view of education, recreation, or law.

Experts tell us that these juvenile delinquents are about the same size physically as their companions of like age. They furthermore tell us that from the standpoint of intelligence that the delinquents are not exceptionally low but that educationally they rank about 2 or 3 grades lower than the normal student. Experts also tell us that they have had very little religious or moral training. To be specific Judge Tatum of Nashville, Tenn., recently stated that of the approximately 5,000 cases of juvenile delinquency that had come before him in his court, in the past 5 years, that fewer than a dozen of these delinquents were regular attenders of Sunday school and church and that only about 5 of their parents regularly attended Sunday school and church. We might be a little premature in stating that regular attendance at Sunday school and church is almost an immunity against juvenile delinquency. However, this statement would not be greatly exaggerated.

The chief causes of juvenile delinquency can broadly be classified as economic, educational, emotional, and those growing out of faulty home training. In practically all cases of juvenile delinquency we find that the offenders come from homes where poverty prevails. We find the youthful offenders, in most instances often play truant, are openly opposed to attending school, antagonistic to their teachers and notorious violators of the rules of the school which they seldom attend and are retarded to such a degree that they are obviously, radically maladjusted. These same juvenile delinquents come from homes where both parents are irresponsible, incompetent to successfully rear children and do not possess either the ability or the desire to give their children the benefits that are necessary to make good citizens. In many instances the parents are too eager to make money, to have a good time in riotous living, or have such a selfish point of view that they are not willing to pay the price of being proper parents. Most experts in the field of juvenile delinquency are stating that the big problem is the problem of adult delinquency rather than juvenile delinquency

It might be appropriate that I give some of the possible solutions. We need more youth centers to take care of the spare time of the unregulated and unguided youth of our communities. This is one of the means of bettering our community recreational opportunities. Many cities such as Moline, Ill., and even our own city have these centers. The one chief indictment is that they have been inclined to become meccas for jitter-buggers rather than offer a program enough to meet the recreational needs of a differentiated mass. In the beginning of this war, every community had air-raid wardens. Every community now needs the services of these same men to play with the needy children.

The second solution seems to lie in the field of improved educational offerings. Every child is entitled to the fullest education that he is capable of assimilating, taught by a competent, sympathetic teacher and learning under a curriculum that is broad and flexible enough to meet the emotional, scholastic, and vocational needs of every student.

Every child is entitled to be born in a home where there is sufficient income to give him the needs of a decent living. A great criminologist recently said that the juvenile delinquent was underfed, underclothed, and under-understood by parents, teachers, and law enforcement officers. We need above everything else parents who are willing to give daily careful instruction, moral and religious, to their children. The most difficult task in the world is to be a competent parent. In many communities there must be established schools for spoiled parents such as the one that San Francisco has.

Juvenile delinquency is a challenge to every parent and community. It cannot be eliminated, it can be reduced by all the forces in the community working together. It is a national problem. Miss Crowell has challenged us in her few lines:

"So long as there are homes to which men turn
At close of day,
So long as there are homes where children are,
Where mothers stay.
Where love and loyalty and faith are found
Above the sills,
A stricken nation can recover
From its greatest ills."

North Dakota Topped United States in 1944 Series E Sales

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, to many Members of this House and many people in this Nation the name North Dakota suggests nothing but a frigid cold country famous for blizzards and low on production. There can be no denying the fact that there are days of extreme low temperatures in North Dakota. Yet when measured over

a span of 12 months, it is possessed of one of the most inspiring and pleasing climatic conditions of any of the Northern States.

There have been times in the past when this Congress was asked to come to its rescue in those periods of excessive drought in North Dakota and in most portions of the Middle West, and the people of the State of North Dakota will remain eternally grateful to the Congress of the United States and its benevolent help in those drastic periods.

The people of North Dakota are deeply concerned today with the development of the Missouri River and its tributaries. This Congress will be called upon to pass an appropriation bill in due time which involves the development of the Missouri River Valley. By the passage of this appropriation, no State in the great empire of the Northwest will be a greater beneficiary than will North Dakota, because by bringing to the State irrigation and reclamation, now so long overdue, never again thereafter will the Congress probably be called upon to assist in another drastic drought period. The people of North Dakota will take care of themselves from there on.

With a population of only 700,000 people and no war industries of any character, North Dakota tops all other States in the Union in series E bond sales in the year 1944. Under the privilege of unanimous consent, I here attach a record of percentages covering several States in the Union on their records of E bond percentage sales:

NORTH DAKOTA TOPPED UNITED STATES IN 1944 SERIES E SALES

WASHINGTON.—North Dakota led all States in percentage-of-income sales of War bonds, series E, in 1944. Its sales of $66,100,000 (issue price) represented 11.12 percent of income.

Iowa ranked second with a percentage of 10.91 in sales of $281,700,000, Nebraska third with a percentage of 10.68 (sales of $138,600,000) and Montana fourth with 10.48 percent (sales of $59,000,000).

The figures made public Monday were given in testimony of Treasury Department officials before the House Appropriations Committee in connection with the Treasury Department's appropriations bill.

Other States ranged in this order:

South Dakota 10.39 percent on sales of $56,800,000; Oregon 9.92 percent, $170,000,000; Minnesota 9.81 percent, $262,400,000; Wyoming 9.67 percent, $25,700,000; Michigan 9.34 percent, $705,800,000.

The percentages were based on national income statistics of the Commerce Department.

Resolution of North Central Dairy Cooperative, Mansfield, Ohio

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at annual meeting of North Central Dairy Sales Cooperative at Mansfield, Ohio, February 9, 1945, and at the annual meeting of the Richland County Farm Bureau Cooperative Association at Mansfield, February 15, 1945:

Whereas farmers are asked to keep 1945 production up to 1944 levels; and

Whereas 1944 record production was obtained largely because of unusually favorable weather and by whole families working 70 to 100 hours per week to compensate for shortages of machinery and manpower; and

Whereas machinery shortage and transportation difficulties are more serious than in 1944; and

Whereas many older men who worked up to or beyond their limit in 1944 will not be able to continue that expenditure of effort; and

Whereas since the 1944 season many essential young farmers have been taken from the farms for military service; and

Whereas herds of dairy cattle are being sold because of the loss of nonreplaceable labor necessary to keep them; and

Whereas there is evidence of intention to continue removing essential men from farms, thus forcing still further liquidation of livestock and increasing the acreage of land which will be idle in 1945 for lack of custom machine work ordinarily performed by these skilled young farmers; and

Whereas this induction of nonreplaceable essential farmers has taken place without regard for the provisions of the Tydings amendment to the Selective Service Act; and

Whereas, in spite of the best efforts of those farmers remaining, and the most favorable weather possible, it is certain that production in Richland County in 1945 cannot be maintained at the 1944 level: Therefore be it

Resolved, That this situation be called to the attention of national and State selective service officials and to our Senators and Representatives in Congress; and be it further

Resolved, That it be emphasized that no special dispensation is asked for farm boys because they live on farms, but only because of their essential status as nonreplaceable skilled men in the highly complex business of modern food production; and finally be it

Resolved, That this resolution is submitted for the purpose of presenting the facts facing farmers in Richland County, Ohio, who are producing to the limit of their ability but who cannot maintain production without a certain minimum of skilled labor which is rapidly being lost as a result of present policy.

Inter-American Conference on Problems of War and Peace

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Edward R. Stettinius, Jr., Secretary of State of the United States of America and Delegate of the United States of America, delivered at the plenary session of the Inter-American Conference on Problems of War and Peace, in the Chamber of Deputies, Mexico City, Thursday, February 22, 1945:

Mr. President and fellow delegates:

I

It is an honor and a privilege for me to address on behalf of the Government of the United States this conference of American Republics on the problems of war and peace. I bring to you the most cordial greetings of the President of the United States and of my great predecessor, Cordell Hull.

We have met here in beautiful and historic Mexico City because we—the peoples of the new world—are at an historic juncture in our own affairs and in our relationship to the rest of the world.

The vital interests of the American Republics are equally involved in winning the war and in making the peace.

The United States Government looks upon this conference in Mexico City as a meeting of decisive importance. Our unity has been greatly strengthened by our wartime collaboration. Now it is our task to advance this unity still further both for the war and in our political, economic, and social collaboration in the tasks of peace.

I wish to reaffirm to the representatives of all the governments assembled here that the United States Government regards the good-neighbor policy and the further development of inter-American cooperation as indispensable to the building, after victory, of a peaceful and democratic world order. I wish also to reaffirm the belief of the United States that this democratic order must be built by all nations, large and small, acting together as sovereign equals.

II

I have just had an extraordinary experience that has driven home to me more sharply than ever before the significance of the fact that the world is now truly united in time and space.

A week ago I was in Moscow where I paid a brief visit after we had completed our work at the Crimea conference. Moscow is over 15,000 miles away by the route I came. In the short time since I left Washington I have traveled 24,000 miles on the business of war and peace. I have flown over the North and South Atlantic Oceans and over points on five of the world's six continents—Europe, Asia, Africa, and North America and South America. I have come from a conference about war and peace conducted on the shore of the Black Sea to another conference about war and peace meeting 10 days later in Mexico City.

Both are concerned with essentially the same problem. For they are no longer purely European problems of war and peace, or American problems of war and peace, or African, or Asian problems of this character. War anywhere in the world today threatens war throughout the world. Peace anywhere in the world today requires a whole world at peace. The prosperity and well-being and security of the peoples of the American continents is bound up with the proseprity and well-being and security of the other continents and islands of the earth.

For a long time we relied for protection upon the oceans which surround these continents. Now we know that there are no barriers of sea or air or land that can separate us from the rest of the world. We have learned our lesson in two successive world-wide conflagrations which have destroyed our sons, consumed our wealth, and interrupted our peaceful and creative purpose as disastrously almost as though their battles had been fought upon our prairies or in our cities.

And we are sure now what it is that must be done. It is not enough to stop war at our coasts—nor on the oceans that lie beyond

our coasts. War must be stopped at the point, whatever point it may be on the surface of the earth, where war begins.

III

Toward that end we worked at the Crimea Conference. Toward that end we are assembled here. May I, before I address myself directly to the tasks of this conference, say a few words about the meeting in the Crimea.

You have all read the communiqué of the Crimea Conference. You know that the unity of the three powers represented there was greatly strengthened, both for the war and for the peace.

A full measure of credit for this result belongs to the President of the United States, whose vision, courage, understanding, and creative purpose were never displayed to better advantage. I want also to pay tribute to the other two heads of government, Marshal Stalin and Prime Minister Churchill, and to the Soviet and British Foreign Secretaries, Mr. Molotov and Mr. Eden, with whom I worked in such close, friendly, and effective collaboration at the conference. They have rendered distinguished service to the United Nations cause.

I reviewed the achievements of the Crimea Conference with the President of the United States when I met him again 3 days after we had left the Crimea. It is the President's firm conviction that the results of the Crimea Conference have greatly advanced the basic objectives of United States foreign policy.

My purpose tonight is to speak to you of our hopes of what may be accomplished here in Mexico City and of these basic objectives of our foreign policy.

IV

The earliest possible final defeat of the aggressors who plunged the world into war and so gravely threatened the security of this hemisphere is, I am sure, the first objective of the other American republics, as it is of the United States.

Military matters are, of course, not in my field, but it was generally agreed at the Crimea Conference that the military plans completed there in the closest cooperation by the Chiefs of Staff of the three powers—and the continuing three-power staff meetings there provided for—will shorten the war and thus save the lives of tens of thousands of United Nations fighting men.

Here at Mexico City the American republics have met to consider what further steps we can take together to that same end—helping to shorten the war.

The solid foundations of the wartime collaboration of the American republics were laid at the conferences of Montevideo and Buenos Aires in 1933 and 1936 and at Lima in 1938. In meetings at Panama, Habana, and Rio de Janeiro after the outbreak of this war the intention and the capacity of our countries to implement our solidarity was fully demonstrated. We have acted together in accordance with the Declaration of Habana that an act of aggression against any American state is an act of aggression against all of us.

The American republics since 1940 have succeeded together in building up the defenses of this hemisphere to an extent never before dreamed of. Their military forces have cooperated in the war. They have increased greatly the military might of United States and other United Nations armed forces through their production of strategic materials that were transformed in our factories into the fleets of planes and tanks and ships which are carrying the war to the enemy.

The only hope that remains to the Nazi and the Japanese is that the United Nations might now relax their efforts in the belief that the war is as good as over. It is thus more important than ever before that we maintain and strengthen this active wartime collaboration of the American republics.

I have high confidence that our discussions here will result in cooperative action that will hasten the day of final victory.

V

The second major point I wish to make is this: I am certain that all of our countries will support as absolutely necessary to the future of the world and of this hemisphere the strong and sweeping policies toward Germany agreed upon at the Crimea Conference. This is what was agreed upon: "We are determined to disarm and disband all German armed forces; break up for all time the German General Staff that has repeatedly contrived the resurgence of German militarism; remove or destroy all German military equipment; eliminate or control all German industry that could be used for military production; bring all war criminals to just and swift punishment and exact reparation in kind for the destruction wrought by the Germans; wipe out the Nazi Party, Nazi laws, organizations, and institutions; remove all Nazi and militarist influences from public office and from the cultural and economic life of the German people; and take in harmony such other measures in Germany as may be necessary to the future peace and safety of the world. It is not our purpose to destroy the people of Germany, but only when nazism and militarism have been extirpated will there be hope for a decent life for Germans and a place for them in the comity of nations."

So far as the United States is concerned, this is a fundamental of our foreign policy. The world may rest assured that the United States, in full agreement with our allies, is inflexibly resolved upon whatever steps may be necessary to insure that neither Germany nor Japan will ever again have the military or industrial capacity to make war.

We of the Americas have another responsibility to fulfill in the destruction of nazi-fascism—a responsibility common to all of us. During the war we have through close cooperation achieved encouraging success in combating Axis economic and political penetration and in preventing Nazi and Fascist sabotage. But we have much yet to do. We still face the danger of secret-Nazi-Fascist infiltration into the political and economic life of this hemisphere.

The Axis leaders will, of course, attempt to escape the consequences of their crimes. We must be constantly on the alert for the flight to this hemisphere of Nazi funds and Nazi underground leaders who will seek to find a refuge here that can serve as a base for an ultimate comeback.

The people of the United States are confident that the American republics will join in whatever cooperative measures may be necessary to stamp out utterly every vestige of Nazi influence in this hemisphere. That must be our unalterable purpose.

VI

At the Crimea Conference the Soviet Union and Great Britain joined the United States in a declaration on liberated Europe. This declaration provides for joint action by the three governments to assist the liberated peoples during the temporary period of instability in Europe to destroy the last vestiges of nazi-ism and fascism and to create democratic institutions of their own choice.

The Three Powers thus pledged joint action to uphold the right proclaimed in the Atlantic Charter of all peoples to choose the form of government under which they will live and the restoration of sovereign rights and self-government to those who have been forcibly deprived of them by the aggressor nations.

This is a third fundamental purpose of United States foreign policy. We intend to make our full contribution toward the building of a world in which the right of every nation to develop free institutions according to its own desires will be upheld. We look upon this purpose as part of the American faith which we have sought to practice in our relations with other peoples.

The United States will not shirk its responsibilities in seeing to it, so far as it is within our power, that this purpose is achieved.

The declaration on liberated Europe adopted at the Crimea Conference is animated by much the same spirit and purpose as the good-neighbor policy. We recognize that all nations are interdependent and that no nation can achieve peace and prosperity alone. We believe that all nations are equal before the law and that the equal rights of all nations, large and small, must be upheld.

VII

We are assembled here to discuss the creation at the earliest possible moment—and before the end of the war—of an international organization to insure the peace of the world, by force if necessary. This is a fourth major objective of United States foreign policy, as I am sure it is of the other American republics.

Largely because of the vision and leadership of Cordell Hull, we were able to lay the foundations last fall at Dumbarton Oaks. These proposals setting forth a plan for such an organization were agreed upon by the United States, the Soviet Union, Great Britain, and China. Since then these proposals have been studied and discussed throughout the world.

At the Crimea Conference the last obstacle to calling a United Nations conference to adopt the charter for such a world organization was removed. The Soviet Union and Great Britain there agreed to the proposals presented by the President of the United States for voting procedure in the Security Council.

The United Nations Conference, toward which we have been constantly striving, has therefore been called to meet at San Francisco, Calif., on April 25, 1945, just 9 weeks from now. Invitations will be issued as soon as we have completed our consultations with China and France, who have been invited to join in sponsoring the conference.

The Dumbarton Oaks proposals recognize that the world organization has two tasks: First, to prevent aggression; and second, to reduce and remove the causes of war through close political, economic and social collaboration among all peace-loving peoples.

The proposals are designed to prevent lawless power politics and to use the power of the great nations in the interests of the peace and freedom of all nations. They are based squarely upon the principles of the Atlantic Charter and of the United Nations declaration, and they draw heavily upon the ideals and practices of the inter-American system, to which the statesmen of the American Republics here present have contributed so much.

The agreement reached on voting procedure at the Crimea Conference recognizes the two essential elements of a successful world organization—unity of action by the great powers who alone have the military and industrial strength to prevent aggression; and the equal sovereignty of all nations, large and small, who must act together to create the essential conditions of lasting peace.

We have met here in order to carry further our discussions of the world organization before the United Nations conference at San Francisco. We will not, of course, in this inter-American meeting take decisions on questions of policy that will be explored by

all the United Nations together at San Francisco.

However, we should, I believe, examine what steps need to be taken to strengthen the inter-American system for the major role which it should play in the world of the future.

Let me remind you that the Dumbarton Oaks proposals recognize the value, within the framework of a general organization, of regional arrangements for promoting peace and security.

The United States Government believes that the stronger we can make the inter-American system in its own sphere of activity the stronger the world organization will be.

VIII

There is another statement of purpose in the Atlantic Charter which was reaffirmed at the Crimea Conference—the purpose to build a peace which will afford assurance that all men in all the lands may live out their lives in freedom from fear and want.

I can assure you that the United States does not regard this as a rhetorical assertion of vague intentions. We regard it as a necessity if the United Nations are to build a peace that will endure.

We cannot, of course, accomplish this purpose overnight. We can accomplish it only by establishing the world organization and by continuing and ever-closer collaboration among the nations of this hemisphere and among all nations toward a rising standard of living and wider opportunities for all men and women, regardless of race, creed, or color.

The United Nations, which have fought so successfully together against the Axis in this war, must join together in the years after victory in waging war with equal vigor and unity against hunger, poverty, ignorance, and disease. The accomplishment of this purpose is the fifth of the fundamental objectives of United States foreign policy to which I have referred tonight.

Consideration of the practical steps that we can take together toward this end is part of the business of this conference, as it was in the Crimea and as it will be at San Francisco.

Here in Mexico City we are particularly concerned with the application of this policy in the Western Hemisphere.

The United States intends to propose and support measures for closer cooperation among us in public health, nutrition, and food supply, labor, education, science, freedom of information, transportation, and in economic development, including industrialization and the modernization of agriculture.

We are also faced with the immediate necessity of preparing to meet the many problems of transition from our wartime economic collaboration to the methods of peacetime collaboration.

It is the fixed purpose of the United States Government to undertake, in cooperation with the other American Republics, to reduce to the minimum the inevitable dislocations of this transition period.

Adjustments will be required in the production of some strategic commodities, the output of which has been stimulated greatly by the common war effort. My Government hopes that a program can be agreed upon by the nations here represented which will provide a basis for accomplishing this adjustment in such a way as to protect the economics of the American republics.

The war has placed many restrictive controls upon normal trade. During the transition period, which will begin after the defeat of Germany, we should relax these artificial wartime restrictions as rapidly as our primary objective of winning the war makes possible.

We must seek also positive measures to promote constantly rising levels of international trade among the nations of this hemisphere and among all nations—much higher than we ever enjoyed before.

Economically sound industrial development and the modernization of agriculture are essential to sustain these higher levels of trade and to fuller employment and rising standards of living.

This requires arrangements to assure reasonably stable rates of exchange and to promote international investment in profitable new enterprises which will increase the productive capacity of the countries of the Western Hemisphere as well as in other parts of the world.

We should take the necessary international action at the earliest possible moment. Supplementary measures of various kinds are also required on a national level to encourage foreign investment. In our country we propose to extend our operations in this field, making full use of the facilities available, including the Export-Import Bank.

By collaborating in these economic and financial measures and combining them with our programs of mutual technical assistance in industry, agriculture, labor, cultural relations, public health, nutrition, and their related fields, we can achieve together the rising standard of living that we all seek.

IX

The nations of the world today are face to face with an historic crisis and an historic opportunity—an opportunity greater than any offered to all the generations of men who have preceded us.

We of this generation for the first time have it truly within our power to build a lasting peace and to build it in such a manner that a new world of freedom and opportunity for all men can actually be realized within the foreseeable future.

The achievement of these tasks is the joint responsibility of all peace-loving nations, large and small. A special obligation also rests with the great powers which are carrying the main burden of the war. Effective and continuing collaboration among themselves and with other peace-loving nations is essential both to victory and to peace. That sacred obligation was recognized and met at the Crimea Conference.

It is equally true that neither victory nor peace can be won without the full support of the American republics and without effective and continuing collaboration among themselves and with the rest of the world. That sacred obligation we must recognize and meet here at Mexico City.

We know that without the contributions that have been made by the American republics in the war the United Nations could not defeat the Axis aggressors.

This American strength—this strength of the New World—must also be built into the structure of peace if that structure is to endure.

I am thinking not only of the factories and farms and mines and forests—of all the developed and still undeveloped wealth of these western continents.

I am thinking not only of the power and the will of our nations to use this wealth for the good of all the people.

I am thinking also of those beliefs for which Americans of all our countries have lived and fought—beliefs that form for our peoples an unbreakable core of unity.

We believe in the essential worth and integrity and equal rights of the individuals and of individual nations, large and small.

We believe in the people and therefore in the right of the people to govern themselves in accordance with their own customs and desires.

We believe in peace, not war, and we have sought to practice peace, not war, in our dealings with each other and with countries in other parts of the world.

Let us recognize that this hour of our greatest opportunity is also an hour of danger and difficulty. We can as easily lose this opportunity as we can seize and use it. This is partly because our old enemies, aggression and tyranny, are now able to use for the corruption and oppression of the minds of men the very science that we seek to use for the enlightenment and freedom of men. So long as nazi-fascism exists anywhere in the world—or if it is ever permitted through disunity or indifference on our part to reestablish itself anywhere in the world—our peace and freedom are endangered.

Victory in this war will not of itself resolve the difficulty nor banish the danger. The months and years immediately ahead will see the supreme test of the faith that has always animated the American peoples and of the abilities and energies that have built the American nations.

I cannot escape the feeling that these are the times for which all that has gone into the making of the history of the Americas up to now was but the preparation.

The beliefs that have united the American peoples with each other can now unite them with the other freedom-loving peoples of the world. The unfinished pattern of the American purpose can now be completed in the larger fabric of a world purpose.

To this task and to this opportunity I ask the representatives of the nations represented here to join in dedicating ourselves.

I am reminded of the words of Abraham Lincoln to the Congress of the United States at a critical moment in the history of my country. They are words which might well be engraved in the hearts of all of us at this hour. He said: "Fellow citizens, we cannot escape history. We will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation. * * * We—even we here—hold the power and bear the responsibility."

That is what Abraham Lincoln said.

If we succeed—and as Americans who pioneered two virgin continents and founded here a new civilization, we know that all is possible—if we succeed, future generations will look back upon this conference in Mexico City, and the conference in the Crimea and the United Nations Conference in San Francisco as among the great historic milestones on the road to a lasting peace and a new world of security and opportunity for all mankind.

Unity on What?

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1945

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by one of my constituents:

UNITY ON WHAT?

EDITOR, OHIO STATE JOURNAL:

The political publicist, oral or in print, is effusively exhortative on the necessity of unity back of a foreign policy. Well, unity on what? Every mature person who has got anywhere in his personal affairs first swept his personal problems free of cobwebs, laid down a clear objective, sloughed off the nonessentials and concentrated his energies on achieving the desired result.

Sure we want unity back of our foreign policy. But what has there been that we could rally round? We have had the Atlantic Charter that assumed to set a standard but it has been a banner and nothing else.

And now when pinched in the pull and haul of power politics and caught in the melee of internal clashes of factions in the shattered nations, without implementation for the carrying out of its objectives, it leaves us in the position of the professor whose dog got into a street fight. All he could do was to dance around and yell "Desist."

We have had no forthright clear-cut foreign policy to rally round.

But now VANDENBERG's great speech and those of Dulles and Dewey have charted a course we can understand. Definitely fix by treaty between the United States, Britain, Russia, and France the control of the conquered Axis Nations so that their slumbering hate cannot be implemented for war hereafter, and then go ahead with the formulation of a peace structure that will work.

And here the objectives of the Atlantic Charter represent the aspirations of America. No one that thinks straight assumes for a minute that any rabbits can be pulled out of a hat. It is human nature, not an inanimate pile of cogs of a machine, that our artificers have to work with. And the blood bath has worked no regeneration in spirit, be the man white, yellow, black, or red. National security, markets, access to or control of raw materials will be the pawns on the chessboard. And these divergent issues are to be channeled into harmonious working under an over-all control for the common good. Some problem, gentlemen, and much give and take in the offing.

The big job is to ease men everywhere back into productive conditions, clear the road so they can go about their daily work to which they are accustomed and take care individually of their present and future. How much overturn of forms of government will come about is on the lap of the gods.

It is hard to see that coalitions along the line of common interest will not take place. The big problem will be to dovetail these into harmonious working of over-all control.

For the present, for those of us who are harangued about unity and are asking unity about what? VANDENBERG's great speech further clarified at Detroit, Dewey's at Washington, and Dulles, at Detroit, have charted a course that is in line with the practical horse sense of America.

FREDERIC C. TUTTLE.

GRANVILLE, OHIO.

The Forty-first Leads the Way

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Roseburg (Oreg.) News-Review, which relates the combat history of the gallant Oregon National Guard:

Sixteen major assault-invasions launched by United States forces against the Japs in 1944, four—or one-quarter of the total—were sprung by the famed Forty-first Infantry Division. Such is a report released from the Army's public relations department, recounting the valiant exploits of the division composed almost entirely from the State of Oregon and including the Douglas County company of the Oregon National Guard.

One of the best war correspondents who accompanied the Forty-first in its Hollandia landing, declared the Oregon troops to be "the finest division in the United States Army," while relating to this writer an off-the-record account of that campaign. He had seen our military forces in many areas, but for coordinated teamwork, physical fitness, and high morale it was his opinion that the Forty-first was unexcelled by any similar force in any combat area.

His opinion of the Forty-first is substantiated by the fact that President Roosevelt conferred unit citations upon the Forty-firsters three times—a record no other division has attained in the Pacific war.

The amphibious attacks and subsequent conquests of Aitape, Hollandia, Wadke, and Biak were accomplished by the Forty-first, according to the Public Relations Department release. Twelve other Pacific invasions in 1944 include Saidor, the Marshalls, the Admiraltys, Saipan, Guam, Noemfoor, Sansapor, Morotai, Palau, Leyte, Ormoc, and Mindora.

"The Forty-first, commanded by Maj. Gen. Jens A. Doe, is the most veteran outfit in the Southwest Pacific, now serving its thirty-fourth month overseas," says the Army statement. "In addition to the aforementioned actions, the division, in 1943, participated in the jungle fighting at Buna, Sanananda, and Salamaua. During the latter campaign the Jungleers established a world record for continuous foxhole fighting by enduring 76 consecutive days and nights without relief or surcease."

Many of our boys from the Forty-first are still in the combat area. An increasingly large number have been coming home on furlough, under the rotation plan, but a substantial proportion are still in the fight, the division having the record of being kept in a combat theater longer than any body of troops in the history of the American Army.

Some, particularly men who have been transferred as officers into other units, are participating today in the march to Manila.

It is interesting to note that two Oregon outfits have had a major part in Philippine history.

Fred Wright, of Reedsport, recently sent us quotations from the tri-weekly newspaper Freedom, published on the island of Luzon in 1899. The quotations concern the charge of the famed Second Oregon Volunteers, of which Company B was composed principally of Ashland and Roseburg National Guard men under the command of Capt. John L. May, Ashland; Lieut. Frank B. Hamlin, Roseburk, and Lieut. Jerry Thornton, Ashland.

Freedom said:

"Say, stranger, did you see the Oregons make that charge Saturday morning, when so many of them went down under the withering fire from the enemy? You did not? Well, then you missed something worth a journey around the world to see. You may read of it now and in years to come, for history will record no more valiant work, but as long as you live you will never fully know what the love of country and home will inspire brave men to do. Go out over the field and note the position of the Second Oregon Regiment and the enemy entrenchments, especially the latter, with their shot and shell defying strength; stand there and imagine you hear the bugle call to arms and see the blueshirts rise up like magic from behind their entrenchments and charge across that open field in the very teeth of a storm of Mauser lead. Note that the enemy is completely under cover with every advantage on their side as they fire volley after volley into the line of charging blueshirts at short range. See the men from the Webfoot State fall under the murderous hail, and still keep coming without thought of turning back. Brave men, true soldiers; being shot down by the well-protected rebels and still charging right up into their very strongholds. And see, as the line of blue gets nearer, the enemy's position gets too hot and they break and run. See them go. See them fall. For the Oregons have carried Old Glory on to victory."

Such was the writer's description of the Battle of Malabon, fought 45 years ago by fathers and grandfathers of the boys from Oregon who have for the second time cleared the path for Philippine freedom and independence.

The Forty-first has been true to the glorious traditions handed down by their forebears. They have written a record page in the history of the Oregon National Guard.

The man largely responsible for that achievement did not live to glory in the honor attributed to his men. Gen. George A. White gave to the Forty-first its inspiration. He trained the men in teamwork and coordination. His patience and his great knowledge of military affairs, his prophetic vision of modern warfare, went into the preparation of the Forty-first for the victories which it achieved in the face of seemingly insurmountable obstacles. Death called him away before he could lead his men into battle, but the name of Gen. George A. White is written into the victories of Aitape, Hollandia, Wakde, and Biak, the difficult stepping stones to today's great Pacific victories.

Drafting of Agricultural Workers

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. GILLIE. Mr. Speaker, the current drafting of large numbers of our agricultural workers has caused widespread concern among all who realize the importance to our war effort of fulfillment of our increased food-production goals.

In this connection I am pleased to call to the attention of the Members of the Congress the following letter from a man in my district who is not a farmer but who realizes the vital job our farm operators are doing and must continue to do if our armed services are to be adequately fed, and if we expect to feed our civilian population and fulfill our overseas food commitments:

Congressman GEORGE W. GILLIE,
Washington, D. C.

DEAR SIR: The nature of my occupation brings me in close contact with hundreds of farm families in this community, and I therefore feel it my duty to join with the many of these people who have already expressed their feelings to you, urging you to use all influence at your command to prevent the drafting of essential young farmers into the armed forces until it has been established beyond the shadow of a doubt that this is absolutely essential to the successful prosecution and winning of the war.

We all realize that the needs of the armed forces must be met without fail and that, if this is the only way in which it can be accomplished, then it must be so. But we also believe that the continued capacity production from the farms of our Nation is a most vital factor in attaining victory and I, in the many contacts with farmers which my work brings me daily, have found dozens of cases in this immediate vicinity where production on these farms will halt completely, or be cut to less than half of the present level, if these

farm workers between the ages of 18 and 25 are called into military service. To me, the prospects if this is allowed to happen, are alarming.

I am not a farm owner or a farm worker, and this procedure will not directly affect me or any members of my family. However, I am deeply concerned about it as an American. I personally have twice volunteered for service with the armed forces and have been rejected both times because of some spots which appeared on my X-ray. Civilian physicians have checked this repeatedly, have observed me closely over long periods of time and have given me signed statements, declaring that the condition of my lungs is not dangerous. My work takes me out-of-doors in every sort of weather and entails considerable exposure, but I have been absent from my duties only 1 day in the past 6 years because of illness. Among other things, I have had considerable experience in the men's clothing field, have a number of years of experience in the postal service, have experience in photography and typing, and am a Red Cross first-aid instructor. I understand that the armed forces have great need for men with experience along these and numerous other lines. I am sure there are thousands of others like me, who because of very slight physical defects, are rejected from the services. We realize that we, who have these slight defects, would probably be unsuited for front-line duty, but with the services needing men so badly, would it not be possible to fill in the ranks in the proper places with these experienced men and thereby prevent the wholesale drafting of experienced farm workers and the crippling of our agricultural production?

I realize that the service with the armed forces would mean great sacrifice in many ways, but I am sure that all of us would be happy to make these sacrifices if given the opportunity to serve to the limit of our capacity, and thereby prevent this draft of men from our farms and the crippling of farm production.

We, of course, have no means of knowing the exact needs of the armed forces as have you who are informed in detail on these matters, and we are therefore simply expressing these, our sincere convictions, and trusting that you who represent us will give every consideration to these matters and put forth every effort toward the best possible solution of these pressing problems.

Thanking you kindly, I am,

Very sincerely yours,

_____.

Dying Hero Doesn't Regret His Sacrifice

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from an article appearing in the Holton Recorder, February 19, 1945:

First Lt. Lawrence L. Beach died November 18, 1944, in a hospital in Belgium of wounds received in Germany on November 17, according to word received from the War Department to his wife, Mrs. Ragena Beach, at Manhattan, Route 4, on December 12. Lieutenant Beach was with the Fighting First Division, Company B, Sixteenth Infantry, and had been wounded three times since D-day. Lieutenant Beach had just been made company commander and a letter to his mother on November 4 stated:

"I hope I get my captain's rating, as I have been first lieutenant long enough, 2 years. Keep writing, Mom, and take care of my wife and baby and love them just the same as if they were me until I return, and if you ever think there might be a possibility that I shouldn't return and in case I don't, please remember I told you, and I'll tell you now, Mom, if this war lasts forever, and I fail to return, I want you to know that I won't feel sorry for myself but happy to know I had a part although so very small, in keeping Nazi domination and tyranny from American homes and families. You can never realize what the conquered people and the anti-Hitler Germans (and believe me there are plenty anti-Hitler) have gone through the past years. Russian women 15 to 65 are working on railroads in France; all young people between 18 and 30 practically either taken to Germany proper or sent to some factory to work. Everything of any real value taken from the French and Belgium homes, no pay for nothing. Believe me I'm an American and can share in beating this sort of ruling into defeat and destruction for all time. Take care of yourself, Mother, and remember I'm thinking of you always. I thought of you many times, when we liberated towns and the people came to us disregarding German fire and some of their friends being killed while standing and cheering us, and then women and men of all ages who were left in the town crying and clapping their hands and kissing us and shaking our hands. Giving us all kinds of fruit and drink. Maybe you think one don't think of home then. General Bradley is quite a general. He came down to the First with General 'Ike' to congratulate this outfit on our part of the landing. I am fine and getting fat and getting Jerries.

"Write often.

"All my love,

"LAWRENCE."

What Is the Influence of Farm Labor on Maximum Food Production?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following table indicates the wide variation in the daily and the monthly farm-wage rates in the 48 States:

Annual farm wage rates and index numbers, by States, 1944

State	Per month		Per day		Composite rate per month [1]	Indexes of composite rates (1910-14=100)
	With board	Without board	With board	Without board		
Alabama	$33.60	$46.20	$1.86	$2.33	$42.60	237
Arizona	94.30	131.00	3.87	4.93	86.50	276
Arkansas	41.60	57.40	2.21	2.79	52.30	241
California	133.00	169.00	5.90	7.27	145.00	360
Colorado	84.80	116.00	4.28	5.37	90.80	284
Connecticut	78.10	119.00	4.05	4.98	98.90	328
Delaware	64.70	89.20	4.14	5.11	83.10	263
Florida	48.30	68.70	2.43	3.42	60.50	266
Georgia	30.30	43.00	1.79	2.18	38.90	225
Idaho	117.00	149.00	5.45	6.39	120.00	315
Illinois	73.70	93.40	3.97	4.76	83.10	291
Indiana	60.90	83.00	3.52	4.26	71.90	283
Iowa	84.90	106.00	4.56	5.46	91.80	280
Kansas	73.10	96.40	4.55	5.41	83.80	305
Kentucky	43.60	58.90	2.44	3.13	55.60	266
Louisiana	35.00	49.90	2.06	2.51	46.30	241
Maine	84.30	120.00	4.59	5.59	105.00	242
Maryland	55.90	76.80	3.56	4.33	72.70	344
Massachusetts	81.10	122.00	3.93	4.98	102.00	317
Michigan	68.80	97.80	4.01	4.95	82.90	287
Minnesota	77.90	101.00	4.22	5.41	85.40	270
Mississippi	33.30	46.40	1.90	2.45	43.50	240
Missouri	55.30	72.20	2.95	3.66	60.40	263
Montana	110.00	137.00	5.48	6.36	116.00	293
Nebraska	80.50	103.00	4.50	5.46	88.90	288
Nevada	105.00	133.00	4.72	5.66	101.00	249
New Hampshire	74.10	114.00	4.02	5.08	97.00	311
New Jersey	81.30	116.00	4.10	5.09	96.20	356
New Mexico	71.90	94.80	3.59	4.21	75.90	288
New York	76.40	107.00	4.10	5.08	90.80	304
North Carolina	41.00	55.60	2.37	2.82	50.90	275
North Dakota	98.60	124.00	5.62	6.84	109.00	315
Ohio	55.60	78.70	3.49	4.32	68.40	260
Oklahoma	57.90	80.00	3.55	4.03	74.70	284
Oregon	125.00	160.00	5.94	7.00	138.00	373
Pennsylvania	56.80	84.30	3.38	4.21	70.70	282
Rhode Island	86.40	124.00	4.06	5.16	106.00	354
South Carolina	29.60	41.20	1.56	1.94	36.30	235
South Dakota	87.10	111.00	4.59	5.54	94.60	288
Tennessee	36.50	50.40	1.87	2.34	44.60	237
Texas	61.20	82.70	3.30	3.80	74.10	305
Utah	109.00	137.00	4.33	5.16	109.00	286
Vermont	75.80	103.60	3.82	4.86	91.80	278
Virginia	43.50	59.10	2.58	3.16	54.90	287
Washington	132.00	173.00	6.45	7.84	149.00	372
West Virginia	44.40	61.50	2.30	2.93	54.00	213
Wisconsin	70.90	98.50	3.68	4.66	82.50	258
Wyoming	96.50	130.00	4.26	5.29	100.00	267
United States	74.00	85.70	3.46	3.93	78.00	315

[1] Weighted average of all classes of payments. Daily rates were multiplied by 20 to obtain approximate monthly rates.

You will note that farm labor is over three times as much as it was in 1910 to 1914, the base period used in figuring parity, although this labor cost is not considered in arriving at the parity prices of the farm products. This table is from the official agricultural report, though I have arranged the States alphabetically for convenience of study.

Result of Soldier Ballots

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am submitting herewith a timely editorial from the Janesville Gazette, of Janesville, Wis.:

SOLDIER BALLOTS

During the last Presidential campaign many hot words were passed back and forth over the soldier vote. Republicans and southern Democrats insisted that men in uniform should be given a chance to vote the full State ballot. New Dealers charged that the soldiers would be robbed of their vote and that Mr. Roosevelt might be robbed of the election unless Congress substituted an abbreviated Federal ballot.

Now the full returns are in and they leave no doubt whatever who was in the right.

Approximately 2,800,000 men in uniform cast their votes by means of the much-maligned State absentee ballots in the last election. This is a remarkably high total considering the difficulties involved. It is by all odds the largest vote ever cast by fighting men in time of war.

By contrast the use made of the highly touted Federal ballot was pitiably small. Of the 8,000,000 ballots printed, only 109,479 were used—an insignificant fraction of the total solider vote cast. Apparently the Federal ballot made a greater contribution toward making the paper shortage more acute than to anything else.

If this proves anything at all, it is that the men in uniform have a marked preference for voting the full State ballot when they are given the chance. And it has also raised the question whether the Federal ballot was worth all the trouble and expense it involved. Certainly if the United States is confronted with another wartime election—which heaven forbid—it would be better to prepare for it by improving State absentee ballot laws than by relying on a Federal ballot.

Discrimination in Employment

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. HAND. Mr. Speaker, there is now pending in the House H. R. 2232, a bill to prohibit discrimination in employment because of race, creed, color, national origin, or ancestry. Its purpose is to put into form of permanent law that equality of opportunity to work, and to achieve a decent standard of living which I had always supposed to be one of the foundations of our great Republic, and which is certainly essential to the unity, strength, and health of our future.

You will note that I stress the word "opportunity." I do not believe it is the Nation's function to guarantee the comforts and happiness of its citizens, but I do sincerely believe that our Constitution directs us to preserve for all our people the chance to work, live, and pursue happiness, free from discrimination, prejudice, or improper control from any source.

Mr. Speaker, the very nature of Americanism is the protection of the vital rights of minorities, both with respect to their political freedom, and their rights as individuals to live self-respecting lives. Among those important minorities are 13,000,000 Americans who are Negroes. Seven hundred thousand of them now serve in the armed forces, and millions are producing in our war plants. The future of these Americans depends largely on the wisdom with which we now act.

I, for one, will welcome the opportunity to support the bill. I hope that history may record that the Seventy-ninth Congress was responsible for this great social advance in America.

The Duty of Americans To Win the Peace

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1945

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. J. H. Blundell, regional information executive of the O. P. A., before the Lions Club in St. Louis, Mo., November 15, 1944.

I find that the address is slightly longer than can be printed without an estimate under the rule, so I have requested an estimate from the Public Printer, who says that it will cost $117 to print the matter. I ask that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This generation has had its rendezvous with destiny—the generation that was too soft, too weak; the generation that was bred in the lap of luxury, that Hitler bet would never fight; found its soul at Pearl Harbor.

How surely, how courageously, how eagerly this generation of Americans kept its rendezvous with destiny has already been written indelibly upon the pages of history. On Bataan Peninsula, at Guadalcanal, Salerno, and Anzio, on the beaches of Tarawa and Saipan, and among the hedgerows of Normandy—there is history's evidence. Every day new chapters are being written—today in the Philippines and at the Siegfried line; tomorrow, in Berlin and Tokyo.

But Berlin and Tokyo will not be the final chapters in this brilliant history. Strange as it may seem, the gallant authors of these magnificent chapters will not have the privilege or opportunity of writing the closing and final chapter. Destiny has assigned that rendezvous to you and me.

Despite the fact that history repeats itself, it has taken the American people a long time—a century and a half and six wars—to learn that wars must be won at home after the enemy has been defeated abroad. Throughout our history we've never lost a war—nor won a peace.

It has taken us a hundred and sixty-eight years to learn that war is inevitably followed by inflation; that inflation is inevitably followed by deflation; that deflation is inevitably followed by depression; and that depression loses wars already won.

War, inflation, deflation, depression—that's the history lesson it took us so long to learn. Let's take a quick glance at a few pages of history. They are not pretty to read. We've forgotten about them because we don't like to be reminded of our ingratitude to those who died for us. But just in case we might forget again, let's see what the voices of history tell us.

Valley Forge. Does it make you proud when you hear the words? Proud? No. Every man should hang his head in shame because Americans and not the British were responsible for Valley Forge. Why? Listen to a part of a committee report written in 1776: "This committee, taking into consideration the unbounded avarice of many persons, by daily adding to the now almost intolerable exorbitant price of every necessary and convenient article of life * * * which at this time of distress, unless a speedy and effective stop be put thereto, will be attended with the most pernicious and fatal consequences."

It was the greed of some of our own American people who caused the little handful of patriots at Valley Forge to freeze, hunger, bleed, and die. General Washington could have had food and clothing and heat for his men except that a wagonload of supplies cost a wagon full of paper money.

Did we learn anything from Valley Forge? Did we profit from the lesson of history? Did another 89 years teach us anything? Listen:

"The houses of the most prosperous planters were found denuded of almost every article of furniture and in some sections women and children accustomed to luxury begged from door to door. * * * In the larger towns the weary soldiers found business prostrate except with the sutlers in full possession now that the merchants were ruined and these sutlers were amassing fortunes through profiteering without shame." (I had never heard the word "sutler" before. We call them war profiteers and black-market operators now. But let's go on). "There was no shipping in the harbors where the piers were decaying rapidly. Cows were feeding on the vacant lots and grass was growing between the paving stones in the principal streets. Warehouses were deserted * * * banks had closed their doors * * * the insurance companies had failed * * * the one hope for restoration was the resumption of normal activities in the country, the cultivation of the plantations as of old."

Yes. Eighty-nine years after Valley Forge, that was the America to which those brave soldiers on both sides came home after the War between the States. It's not pretty, is it?

By 1914 we had grown up as a nation. The industrial revolution had come to America. Little business had become big business. We were smart in the ways of money and economy. We knew how to produce and provide jobs. Let us see how smart we were.

We finally learned that war always caused inflation and we decided to do something about it. So we set up a few controls, a few brakes on the American economy for war. Only a few. And what resulted?

From 1917 to 1920 the American war costs were $32,000,000,000 actually spent. But calculations based on 1913 prices or 1930 prices indicate that little more than half of that amount would have been spent had it not been for wartime inflation. Without such inflationary price increases the taxes during the war and the Government indebtedness after the war would have been much lower.

But let us talk in simple terms. Do you remember those $25 silk shirts? Four dollar

shoes you paid $20 for? The long lines at the grocer's waiting to get sugar and to pay 29½ cents per pound for it when they could get it? Sure, you remember those things. Had we learned anything?

No. We even did away with the few brakes we had immediately on the signing of the armistice. Then what happened? Prices went higher. Anticipating continued increases, merchants scrambled for inventories, bid against each other in order to stock their shelves and storerooms so they could benefit and profit from the higher prices.

Inflation didn't end with the armistice. The cost-of-living index continued to rise, until in 1920 it reached 200 from a 1914 level of a hundred. When the armistice was signed, the cost of living stood at 160. It rose 40 more points after the war had ended.

Wholesale prices which rose from an index of a hundred in 1914 to 190 at the time the war ended continued to increase until 1920 when they stood at 225, or 125 points above the 1914 level.

Industrial prices, which form the backbone of our economy, rose 200 points from 1914 to the armistice. They levelled off for a few months and they skyrocketed even more until they reached 250.

Now, some businessmen may say, What's wrong with high prices? Let's see what happened as a result of these good prices. In 1919 corporation profits were $6,500,000,000; in 1921 there were no corporation profits in this country. In 2 short years, the reserves built up during the war had not only been wiped out but profits had turned to losses. Factory pay rolls which increased greatly during the war continued to increase through 1918 and in the year following, amounted to $240,000,000 per week; within 1 year the weekly take-home pay of factory workers was reduced to one hundred and fifty million, or nearly a hundred million less in 1921 than in 1920.

Let's see what happened to the farmer who could and did get one to two hundred dollars an acre for his land during the war. When the farmer prospers, everybody prospers, so we should be able to learn something from looking at the condition of the farmer's income.

He was pretty well off during the war. Annual farm income in 1918 amounted to $9,000,000,000. This income held fairly firm until the latter part of 1919. But when the cost of living and wholesale and industrial prices had not quite reached their peak, and when corporation profits and factory pay rolls were still increasing, the farmer's income began to drop. That should have been warning enough that something was about to pop, but apparently it wasn't. For farm income really started down in a hurry. During 1919 and 1920 it fell from the peak from nine billion to three billion.

That's the story of how well we learned our lesson. We got a smattering of knowledge and knew that war brought on inflation, and we tried to do a little something to prevent war inflation; when the war ended, we went back to our economic philosophy that Providence had blessed this Nation with unending security, and we went merrily on our way. We hadn't learned that inflation brings on deflation and that inflation is followed by depression.

The deflation of the 1920's which followed the wild inflation of the war ultimately resulted in depression. Need I describe that depression? It is unnecessary to spend the time here telling you something you know so well and so much about. Our time can be better spent in looking ahead.

There are some experts who maintain that war without inflation is an economic impossibility, that it is inevitable, an unavoidable consequence, too much money competing for too few goods; this is the explanation offered by some of those who insist nothing can be done to avoid inflation. Even after a century and a half and six wars they still maintain before we were forced into this present conflict that we should allow the natural laws of economics—supply and demand, etc.—to take care of things.

But there were some who said it must not happen again and who were determined to do something. The Congress and the President began to work as soon as inflationary tendencies became apparent. Our defense program created millions in new money and it wasn't long before Pearl Harbor shut us off from many vital war materials. Our production program began to demand nearly every factory and worker and it was no longer possible to produce many peacetime commodities. With more money and fewer goods we would have been on the high and wide road to inflation had it not been for the farsightedness of the Congress and the Chief Executive.

It is unnecessary to discuss in detail the various measures passed by the legislative branch of our Government or the Executive orders issued by the President. All of you recall the War Powers Act, the Stabilization Act, the Price Control Act. Let's look at the record of this war briefly.

For more than 2½ years we have all been trying to maintain a stable economy and, in general, our efforts have been successful. Since the spring of 1942, industrial prices have risen only 3 percent. During the same period the cost of living—prices of items purchased by the average middle-income family—has risen only 9 percent. Nearly all of this 9 percent occurred during the early days of the war when we were trying to get our economic feet on the ground. For the past 18 months there has been little or no increase.

There were some who said this might be done, but only at the expense of many of our economic groups. Let's see about that.

While prices have been held in line, corporate profits have increased nearly $5,000,000,000 over 1939 * * * and that's after taxes. In fact, they were greater last year than in that golden era we recall as 1929. Farm income last year was $13,000,000,000 compared to four and a half in 1939. Weekly earnings of factory workers were less than $462,000,000 in 1939—only a little more than that in 1929—but last year, in spite of wage controls, factory workers in this country took home every week of the year $800,000,000.

Now who's been hurt by price control?

That's an astonishing record and will be so recognized by future historians. Have you wondered how we were able to make such a record? Here are the reasons:

a. The tremendous productive ability of American farmers and American industry, even in wartime, which in addition to our huge war production, has provided $90,000,000,000 worth of consumer goods and services during the past year.

b. The patriotic desire of the American people to save their money, invest it in War bonds instead of spending during wartime.

c. The basic honesty of the American people which has kept the vast majority of them from patronizing the black market.

d. The Government stabilization program authorized by Congress, in the Stabilization Act.

It is under that act that the Office of Price Administration has the responsibility for the actual pricing of 8,000,000 products and services and the establishment of rents for 14,500,000 dwelling units. Without past experience and in many instances forced to use trial-and-fail, trial-and-success method, it has been a tremendous job. Naturally, there have been mistakes, delays, and irritations, but the job has been done and prices and rents have remained stable.

We have come a long way, but we've got a long way to go before the over-all job is complete. Like every businessman in America you are interested more with the future than the past. Like every father in America you are interested more in what can be done to provide a better country for those younger Americans who are every day meeting their destiny without hesitation. Like every citizen in America you are making this country one in which all "four freedoms" can be enjoyed by even the humblest among us, including the freedom from want.

Being businessmen, fathers and good citizens, you want to know about the job that lies ahead, and what might be done to overcome our economic enemies here just as those boys of yours are so gallantly overcoming our enemies abroad.

Our job here at home is twofold.

We must, first of all, continue to hold the line. The danger is not past. That danger is complacency on the part of our people. With victory in sight there may be a tendency to let up, to ease off, to let go, to cash our bonds, buy another car (if we can find one), spend our savings, maybe even pay a little more than the ceiling price for some desirable. We dare not. What would you say if our soldiers, sailors, or marines should conquer the Philippines, get to Manila, and say, "It looks like it's about all over * * maybe we can take it easy from here on? Or, if the boys in Germany should say, "We're nearly to Berlin, it's only 300 miles farther, so let's take it easy and coast the rest of the way"?

The answer is apparent. You wouldn't like it. Suppose those same boys hear that we are letting up, that because of our apathy and complacency, the cost of living starts up, and they know that every cent increase means fewer cents in those small allotment checks which are keeping their wives and kids from having to accept charity. You know what they would say. They wouldn't like it either.

We owe it to them to see that the line is held until all danger to their monthly allotments is past. What less could we do for them?

The second part of this twofold job is to discharge the trust and confidence those boys have placed in us to make certain they will return to a secure nation. Secure from want, from unemployment, bread lines, bonus marchers and all the other evil results of the unpardonable sins of apathy and complacency we committed after the last war.

That's our job. What are we going to do about it? Here's what you can do about it.

In the first place, you as individuals can refuse to buy anything above the legal ceiling—and everything you buy has a ceiling. In order to do that you must compare the prices quoted you with top legal prices and refuse to pay more. And you can get your families to do the same thing.

You have the leadership necessary to get this job done. You can carry the message to your friends, neighbors, and business associates. You can, as individuals, set an example for the people of your community which will be an inspiration for the entire country.

If that can be done individually, imagine what you might accomplish as a group with the benefit of organization. Your club has prestige, the esteem, and confidence of the people of the city, because you are organized for a worth-while purpose—to contribute to the welfare of the community. Why not put that force behind your Government's program to hold down the cost of living? Why not enlist in the fight to protect your serviceman's monthly allotment?

Here's a suggestion you might take under serious consideration. Why don't you enlist with your local war price and rationing board as price-panel assistants? They need you and your effective leadership. They are men just like you. They are giving their time faithfully and without compensation.

As price-panel assistants you can contribute greatly to this war here at home. You can do more than that. You can assist overworked and short-handed merchants in the

understanding of regulations with which they must comply if we are to win this fight.

Talk about the contribution to the war effort? You have the opportunity of starting something here which very likely would be followed by many other clubs over the country and with momentum might even get every club in America behind the fight. Think it over.

That's the first part of the job. But it is not enough if we just hold the line—if we only prevent further increases in the cost of living and then pat ourselves on the back and say we have done the job and let it go at that. We have to remember the lessons of history.

Do you think for a moment that we could live with ourselves, go to sleep at night with a clear conscience if we permit a repetition of what has happened after every war in which this Nation has engaged? Are you willing to welcome back our boys from the fighting fronts after they have finished their job and have them find business prostrate, with the war profiteers in full possession, amassing fortunes through profiteering without shame, or do you want them to return to this country to find no shipping in our harbors, where the piers are decaying, where cows are feeding on the vacant lots and the grass is growing between the paving stones in the principal streets? Do you want them to return to find empty warehouses, closed banks, failing insurance companies?

I know you do not want that but I am wondering if we have finally learned our lesson well enough, and if we are going to be sure it won't happen again. If we haven't learned that lesson and if we permit even a small part of the 4,000,000 men now fighting overseas to come home and find that we have forgotten them, may the Lord have mercy upon us.

There has been a lot of talk about keeping America American. Many people have said we should see to it that our boys come back to the things they left and the kind of country they sailed from to fight for. I don't believe they are going to be satisfied with that much alone. I know you and they are going to want and demand a better America than the one they knew before.

What does all this mean? It means that we have a sacred responsibility, that we too have a rendezvous with destiny.

And that brings us to what we must do to get the second part of our job done. According to the Department of Commerce, if we produce only as much as we produced in 1940 we will have 19,000,000 unemployed in this country. For in 1940 we produced 30 percent less than we are now producing. We don't want to go back to 1940 in any respect. In fact, we cannot go back. We have to go forward.

There is only one answer and that is full production in our factories and on our farms. Without full production in our factories, labor cannot purchase the products of the soil. Without full production on our farms, farmers cannot purchase the products of our factories.

I could give you many examples of the latent markets we now have for consumer goods, housing, and exports. It has been estimated that there is a present demand for a million and one-half houses a year as soon as materials are available, and that this market will hold firm for at least 10 years. When you stop to consider that for every man working on one dwelling there are nearly two men in the industry employed to furnish him with the material and equipment needed to construct that house, you get some idea of what full production means to America's future. Think along this line further—it isn't hard to visualize the employment which would be created if we provide every home in America with an electric ice box, radio, washing machine, new plumbing, paint and wallpaper, if every farm home in America could be provided with electricity, which in turn would create a huge demand for electrical appliances.

This is not the vague dream of economic theorists but it is the cold-blooded calculation of farsighted businessmen.

If we are to go forward, achieve full production—which will mean full employment, and we all know it will be absolutely essential to the future welfare of this Nation, there are several steps which must be taken.

In the first place, we must continue the team work of industry, labor, agriculture, and Government, which has been developed during the war. We must not go back to the days of open warfare between labor and capital, between agriculture and labor, the days of monopolies, cartels, and other practices which prevent free enterprise and full production.

Second. During the critical period of reconversion and the period immediately following the peace, we must continue to maintain a stabilization program so long as the threat of inflation is even remotely apparent; until the natural laws of economics can again become operative.

Third. The Congress must enact tax laws which will encourage the greatest possible investment of risk capital and which will discourage the hoarding of savings of corporations and individuals.

Fourth. Competitive free enterprise must be protected and encouraged in every possible way.

Fifth. Particular encouragement must be given to small business because small business is in the heart of competition.

Sixth. Farm income must be kept at its present high level.

Seventh. Social security benefits must be increased and broadened.

Eighth. We must provide for a broad and vigorous program of housing and slum clearance.

Ninth. Major works program must be developed to provide for reforestation, flood control, irrigation, highways, medical centers, hospitals, schools, and recreation facilities.

Tenth. Exports must be given every encouragement because one of our three greatest markets in the post-war era will be our exports to foreign countries, many of which are so badly in need of the products of our factories and our farms.

Eleventh. We must get rid of restrictive controls, so necessary during the war and post-war period, as soon as it is safe to do so.

If we are to maintain full production, provide jobs, avoid a depression, and create a prosperous America, this program must have the assistance and backing of businessmen throughout the country.

With full production in this country we can increase consumer expenditures to such an extent that the American people can purchase 40 percent more food than was purchased in 1940. We can buy 45 percent more clothing than we bought in that year. We can increase our purchases of electrical equipment by 55 percent, household furniture by 70 percent, and the farmers of America will be able to purchase 50 percent more farm machinery than they did in 1940. We will be able to construct 250 percent more new buildings than we built in that year.

If we go back to 1940 production, as we will if our manufacturers insist on 1940 prices; or, in other words, if we are going to operate on the theory of minimum production at a maximum price instead of maximum production and distribution at the lowest possible cost per unit, we are going to have a situation in this country which will not only rival but will exceed the depression of the early 1930's.

Here's what 1940 production will do for us: In that year there were 9,000,000 unemployed. In 1943, with war production at peak levels, we have had less than 1,000,000 unemployed. Since 1940 the growth in our population has provided us with 2,500,000 additional workers. In the meantime productivity of industry and technological improvements have grown steadily. Therefore we will be able to produce our 1940 volume with 8,000,000 fewer workers. On this basis, if we go back after the war to 1940 production when we had 9,000,000 unemployed and with two and a half million new workers plus 8,000,000 replaced by increased productivity and technological improvements, we will find ourselves with 19,000,000 unemployed.

That's the final chapter yet to be written in the history of this generation, which had a rendezvous with destiny. That's the chapter which has been left for you and me to write. If we keep our rendezvous as well, as courageously as the younger members of our generation have kept theirs, we will deserve and receive the gratitude of the millions of young Americans whose sacrifices have caused our meager contributions to pale into insignificance and future historians will record that one generation of Americans did not forget the lessons of history.

On the other hand, if we do not keep that rendezvous, if we become complacent and apathetic, the blood will be on our hands, and I pray again that when we meet those boys face to face the Lord will have mercy on us.

Bypassing of Japanese-Held Islands

REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. HOFFMAN. Mr. Speaker, from a mother's home whose boy was reported missing when the PT boat on which he was serving was sunk by our own bombers there comes a letter calling attention to the statement of Admiral Halsey, made the other day when he said in substance "Let the Japanese starve to death slowly and painfully on these bypassed islands." The letter follows:

I have just finished reading an article in the Chicago Tribune regarding a press conference held by Admiral Halsey. In this conference the admiral was asked what the plans were regarding the islands that have been bypassed. To this the admiral replied, "Let the Japs starve to death slowly and painfully."

I have a son in the Navy who has been missing since April 1944. He is being carried in the missing status because there is a possibility he reached one of these bypassed islands. Now, I beg of you, Mr. HOFFMAN, to tell me what hope we parents can have for our boys who are stranded on these islands. Is this to be their reward for serving their country? We certainly owe them more than that. It just made me sick to my stomach to read Admiral Halsey's remark—and yet he is being looked up to as an outstanding personality. I wonder what the rest of the parents think of this statement. We are given to understand there are tens of thousands of Allied men on these islands who have no doubt nothing more to look forward to than starving to death slowly and painfully along with the Japs.

My husband served in World War No. 1 not just as a soldier but as an engineer, serving 52 days on the firing line crawling through the mud. He has three major battles to his credit. Now his son serving in the Navy on

a PT boat—and this boat destroyed by our own Allied planes—is left no doubt to die on these islands with our enemy. I wonder sometimes what this world is coming to—and why we so carefully raise our sons—just to sacrifice them for such treatment.

This is not just a letter from a crank; I am the mother of this boy, and I beg of you, Mr. HOFFMAN, to let us parents be given some hope or assurance that something will be done to give them some help. I intend to follow this through. This is my son being deserted by his country and now I am going to fight, if I have to, for him. * * * Hoping to have some real authentic word from you, that we can feel our boys will receive some help, I remain.

Of course, I assume the answer is that Admiral Halsey did not mean exactly what he said, and that they will follow the same policy that has been followed by the Navy up to this date, that when one of our flyers goes down and is lost, every possible effort is made to rescue him. Nevertheless, that statement creates dismay.

Gold Reserve Ratios Should Be Maintained

REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. ENGLE of California. Mr. Speaker, I would like to call to the attention of the House the attempt which is being made by the Federal Reserve Board to obtain the approval of the Congress for lowering the gold reserve requirement to 25 percent. Heretofore, and since the passage of the Federal Reserve Act of 1913, the gold reserve requirement has been 40 percent against Federal Reserve notes in actual circulation and 35 percent against Federal Reserve bank deposits. I am opposed to changing these figures.

It is stated that the need for currency is growing so rapidly that out of the vast store of gold available for backing Federal Reserve notes, only some four billion dollars worth remains unused and that by the end of this year, at the 40 percent figure, the note expansion will have reached its maximum. In other words, the gold reserve requirement seems to provide an automatic stopping point for the expansion of Federal Reserve notes. Without such a check inflation would be inevitable.

Now, I am not a banker, and it is quite beyond me to explain the intricacies of high finance. But one thing seems plain—if we begin chiseling at this 40-percent reserve requirement it is only a question of time before we will be asked to entertain a further request for 15-percent, 10-percent reduction, or perhaps to remove the reserve requirement entirely. Then we will have a 100-percent-managed paper currency without gold to give it stability.

Mr. Speaker, if this idea should prove startling to the Members who still are old-fashioned enough to like the tinkle of gold and silver coin, and who feel that financial safety rests in convertibility, they should know the thoughts of Gov. Marriner Eccles, of the Federal Reserve Board. At a recent hearing before the Senate Banking and Currency Committee on S. 510, companion bill to H. R. 2124, which contemplates this reduction in the reserve figure, Governor Eccles is said to have made an all-out statement in favor of 100-percent-managed currency, sneered at the value of gold and silver as currency backing, and stated that as far as he was concerned the 25-percent figure is "a concession to orthodoxy"—he obviously would as soon it would be zero.

Now, in all the history of the world, all schemes for managed currency without metallic backing have been foredoomed to failure. All of them have ended disastrously and left the unfortunate countries who experimented with managed currency impoverished and often in the throes of revolution. The story of John Law of the Mississippi Bubble is still only too fresh. Every device of finance was used by Law to maintain his system—the pledging of taxes, the convertibility of his paper money with Government bonds, and a score of other tricks. He lacked but one thing—sufficient gold and silver to redeem his paper. As is well known, when this was realized and the nebulous nature of his security was comprehended the resulting catastrophe plunged the French people into poverty and despair.

Mr. Speaker, every proponent of managed currency since Law has sung the same tune—his system is infallible—no politics will be permitted to sway those controlling the currency—but the end is always the same—disaster. It scarcely should be necessary to remind you of the German currency inflation after the last war, which wrecked the German economy, paved the way to war and created a new class of rich speculators at the expense of the poor and the middle classes.

The ego of the financiers who advocate parting from gold and silver is beyond belief. That they think they can manage a nation's finances successfully where all others have failed shows more than just self-confidence; it shows a colossal disregard for the plain lessons of history and for the welfare of the people.

Mr. Speaker, I suggest that Mr. Eccles' name be changed from Marriner Eccles to John Law Eccles so that his historic tie with that famous financier may be understood by all.

If an archeologist were to dig up a pot of gold in an ancient Cretan palace, he could spend it for current goods and services—but if he should find a sheaf of promissory notes of that day, they would be of no more monetary value than so many shinplasters.

Gold and silver endure while financial systems erected without them are ephemeral.

One would think, according to Governor Eccles, that no money is good except Federal Reserve notes. If we get short of currency, why not issue more against the Treasury silver that lies dormant at West Point, much of which has no issue against it? That, and the four billions in gold should carry us quite a while.

The facts are that the need for any gold or silver reserve at all irks the financiers of the Maynard Keynes school as it automatically puts a deadline on currency expansion. Zero reserves would mean unlimited power to inflate the currency. And, Mr. Speaker, it is easier to run a printing press than a gold mine.

There may be another reason than the one given—to permit necessary currency expansion—for starting this entering wedge to reduce the reserve requirement—perhaps our 40 percent requirement looks too fat compared with the lean reserves agreed on at Bretton Woods. Perhaps this is a move to make the comparison less odious.

It should be remembered that there is a school of banking which believes that the public only will be protected against flagrant mismanagement of the currency if we have 100 percent gold and silver backing, plus free convertibility and free circulation of gold and silver coins. This, of course, is the extreme conservative position. But it would obviously be safer than the zero position. Whatever faith the people have in our Government, and it is properly tremendous and abiding, the statement that our money is as good as the Government regardless of whether or not it has behind it gold and silver reserves, manifestly is not entirely true. The value of Government obligations frequently has fluctuated, while the Government itself has endured. Sound metallic backing of the currency stabilizes against undue fluctuation.

Mr. Speaker, if, as the Federal Reserve experts claim, it is necessary to expand the currency beyond the point permitted by the 40 percent gold reserve requirement, I propose an alternative which I believe will be sounder and more effective. I have this afternoon introduced a bill authorizing the revaluation of our gold stocks to $56 per ounce. This will increase the dollar value of our gold in precisely the same proportion and permit issuance of the same amount of currency as would be possible by reducing the reserve requirement from 40 percent to 25 percent.

Already the foreign gold markets reflect prices as high as $58 per ounce for gold. When the price of gold was raised to $35 per ounce we merely met the foreign prices. It is time to do so again. Such a revaluation will add greatly to the purchasing power of other countries and aid them materially to buy our much needed goods immediately following the cessation of hostilities. It will help balance the national debt and will, in my opinion, have other beneficial results.

I hope that when the House Banking and Currency Committee considers my bill to continue existing gold reserve ratios required to be maintained against Federal Reserve notes in actual circulation and Federal Reserve bank deposits by increasing the monetary value of gold, it will give serious thought to this alternate proposal.

Rural Electrification

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. RANKIN. Mr. Speaker, I rise to protest most vigorously against the ruling of the War Production Board with reference to extending rural electrification to the farmers of this country. They require now that all these extensions be based entirely upon animal units, and when they do that that excludes the great bulk of the American farmers.

This is the greatest wheat-growing country in the world; it is the greatest corn-growing country in the world; it is the greatest cotton-growing country in the world; it is the greatest barley-growing country in the world; and on the production of those crops to a large extent depends the very life of this Nation. Yet, under this ruling of the War Production Board, those farmers are not considered for rural electrification unless they can show a certain number of animal units.

As a matter of fact, a great many people who have large numbers of cattle keep them penned up and have to get cottonseed from the South, corn from the West, or wheat or barley from the Middle West with which to feed them, yet they can get rural electrification, and the cotton, wheat, corn, and barley farmers, who are supporting the country and whose sons are fighting our battles in this war, are excluded.

That ruling, or order, of the W. P. B. should be changed at once. I am inserting a letter of protest I wrote the W. P. B. on this proposition:

HOUSE OF REPRESENTATIVES,
COMMITTEE OF WORLD WAR
VETERANS' LEGISLATION,
Washington, D. C., February 19, 1945.

Mr. EDWARD FALCK,
Director, Office of War Utilities, War Production Board, Washington, D. C.

DEAR MR. FALCK: Please accept my thanks for your communication of February 13, 1945, relative to the desire of the 4-County Electric Power Association, Columbus, Miss., to construct 67 miles of rural power lines in Choctaw County, Miss., to serve some 320 consumers.

It seems to me that the War Production Board overlooks the fact that cotton farmers, wheat farmers, and corn farmers, are just as essential to the war effort as are the raisers of hogs, sheep, and cattle; and I see no reason why they should be discriminated against in permits for the construction of rural-power lines.

Under the present regulations, the man who has a certain number of livestock may have a power line extended to his home; but the man who raises the feed to feed that livestock, and who in all probability needs electricity even worse than he does, is left out in the dark.

The same thing applies to the cotton farmer. I wonder how the W. P. B. thinks we could conduct this war without the crops produced by the cotton farmers—to say nothing of the sons they are furnishing to the service.

If every cotton farmer were to fold up and quit, we probably could not carry on the war for another year, as result of the shortage in those necessary war materials manufactured from cotton, including the explosives with which our men are fighting.

It may not have occurred to the W. P. B., but there are 1,000 pounds of seed in every bale of cotton. That 1,000 pounds of seed contains 22 gallons of the finest vegetable oil produced. Every man in the service eats something prepared with, or containing, cottonseed oil, practically every day, and probably every meal—just the same as do the rest of the 130,000,000 Americans. The balance of this 1,000 pounds of cottonseed is transformed into cottonseed meal and hulls—the finest dairy feed in the world.

Yet, the man who has a dairy herd, or a herd of beef cattle to feed, and who is using cottonseed meal and hulls for that purpose, may have a power line extended to his home, while the man who is producing the material with which those cattle are fed, whether it be cottonseed, wheat, or corn, is denied service under these regulations.

I realize that you are not responsible for this regulation, but being head of the Power Division of the W. P. B., I am writing to urge that you take the proposition up and get the regulation amended so that it will not discriminate against those farmers who are growing wheat, corn, and cotton and other essential crops.

As you know, I represent a cotton-growing district. Our cotton farmers are contributing just as much to the war effort, and just as many of their sons to the firing line, as any other class of people in the country; and I want to see them given equal treatment under these regulations affecting the extension of rural power lines to their homes.

Please take this proposition up with the Chairman of the War Production Board, and see if you cannot get these regulations so amended as to render justice to the cotton, the wheat, and the corn farmers of the Nation.

Sincerely yours,

J. E. RANKIN.

Midnight Curfew in California

REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. HAVENNER. Mr. Speaker, I have received a number of inquiries from constituents in California concerning the purposes and expected effects of the midnight curfew "request" which becomes effective tonight throughout the United States.

Apparently the word "request" is a misnomer, as the proprietors of all entertainment establishments operated for private profit have been notified that failure to comply with the terms of this pronouncement will result in drastic penalties.

It has been officially stated that the purpose of this so-called request is primarily to conserve critically needed coal for vital war industries and for civilian needs, and also to alleviate the manpower shortage and burden upon transportation and other facilities.

Patriotic Californians will have no quarrel with these announced objectives, provided they can be attained by the enforcement of this edict. But, Mr. Speaker, the State of California, with the exception of a few areas, has been declared exempt from the provisions of the recent "Brown-out" order, because it was officially determined that curtailment of electric lighting in most of the sections of my State would not result in conservation of coal or other essential fuels. The electricity used throughout the greater part of California is produced by water power. And this hydroelectricity is also widely used for heating.

So, Mr. Speaker, if the announced primary purpose of this curfew "request" cannot be served by its enforcement in my State, it is very natural that many businessmen out there should wonder why they must be subjected to the financial sacrifices which it will entail.

Proprietors of motion-picture theaters and bowling alleys, which are largely patronized in the post midnight hours by servicemen and swing-shift workers in war-industry plants, inform me that the contribution to available manpower for employment in the war effort resulting from midnight closing of their establishments will be practically negligible, as many of their employees are classified by the Manpower Commission as unemployables for essential industries.

I heard on a radio news broadcast the other evening a statement that the head of the Prohibition Party in America had acclaimed the curfew order as a long deferred step toward the enforcement of wartime prohibition in this country.

I do not understand that the Congress has included in its delegation of extraordinary war powers to the executive branch of the Government any authorization to enforce prohibition without further legislative action.

Mr. Speaker, I believe that the Congress and the people of all parts of this country where the midnight curfew will not accomplish its announced objectives are entitled to further clarification of this order.

The Wrong Tree

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. HOFFMAN. Mr. Speaker, the Michigan Legislature is barking up the wrong tree with its Resolution No. 8, as my reply, which follows, will indicate:

FEBRUARY 20, 1945.

Hon. FRED I. CASE,
Secretary of the Senate,
Lansing, Mich.

Hon. NORMAN B. PHILLEO,
Clerk, House of Representatives,
Lansing, Mich.

DEAR SIR: Michigan House Concurrent Resolution 8, forwarded to Congressmen and inserted in the CONGRESSIONAL RECORD, would

be funny had not the interpretation, the maladministration, of the Selective Service Act, resulted in so many tragedies.

The resolution urges the Congress "to enact legislation protecting farm labor as critical in the war effort, which action should be taken immediately to forestall a possible emergency, due to the recent ruling of Selective Service."

The Congress passed that kind of legislation when it enacted the Tydings amendment, which provides that—

"Every registrant found by a selective-service local board * * * to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained."

The Congress cannot anticipate either misinterpretation or maladministration by administrative officials.

The present confusion and injustice stems from the fact that the President took it upon himself to ignore the Tydings amendment; to say that those who were exempt under its provisions should be drafted if needed for the war effort. That he had no right to do.

Under the amendment, when the local board finds that a registrant is necessary to and regularly engaged in an agricultural occupation, it should automatically defer him, "so long as he remains so engaged and until such time as a satisfactory replacement can be found."

A week ago last Thursday, General Hershey, in my office, in the presence of Lieutenant Colonel Berry, gave as his excuse for ignoring the Tydings amendment, the President's demand that 900,000 men were needed for the service, and he asked me what I would do under like circumstances.

My reply was that, no matter how many men the President or the Army and the Navy demanded be drafted, I would not go out upon the highways, to the farms or the factories, and kidnap or shanghai them in disregard of the law; that if, under the terms of the act, they were not available, I would ask that the act be amended; that, in any event, if I was on a local board, I would follow the law as written and exempt those who fell within the provisions requiring exemption.

I agree with the members of the legislature in their conclusion that there is grave danger of a possible emergency. In my opinion, it is due to the recent misinterpretation of the Selective Service Act.

Further legislation is not the remedy. If the legislature will call upon Governor Kelly, Brig. Gen. LeRoy Pearson, and the brigadier general's representatives, like Major Luscombe, who have been giving local boards improper instructions, the situation, except as to those who have already been drafted illegally, will be remedied.

The acts of General Hershey, of Brigadier General Pearson and some of his subordinates should be made public, and they should be compelled to correct, without equivocation, without evasion, the erroneous instructions they have given local boards.
